"The above passages are a fair sample of the arguments put forward against the pending river and harbor bill. This association holds no brief for projects not within its territory. As regards the projects included in the bill along the Atlantic seaboard district, we do unhesitatingly assert the value and extreme importance of the physical connection between the great navigable rivers of that district and the great industrial cities within it, such as will provide the means of economical and practicable modern barge navigation. This problem is entirely distinct and apart from that of providing for the trans-Atlantic liners in specified harbors, or the assisting of coastwise navigation through harbors of refuge. Such projects are of local importance and stand or fall on their own merits. The intracoastal waterway project must be considered as a whole, and any statesmanlike view of the growth of commerce must suggest the advisability of adopting a general plan and proceeding in accordance with it. We do not expect the whole work to be realized to-day or to-morrow, but it does seem reasonable that step by step it should be carried along to final completion; and having in mind the density of population and preponderance of commerce in the territory interested, it seems only fair that for this great territory the Government should be willing to adopt at a reasonable rate of progress a project of which the total cost, as estimated by the Government engineers, will be less than one-third of the cost of a canal of the same standard dimensions built by the State of New York alone for connecting the Great Lakes traffic with the seaboard interstate traffic contemplated by the commercial interests united in this association.

In order that there may be no misunderstanding as to the present scope of the Atlantic Deeper Waterways Association, which, I repeat, is a voluntary organization with no paid agents to agitate for it, I insert the resolutions passed by the last two conventions, one held in the North, at New London, Conn., in 1912, and the other and last held in the South, at Jacksonville, Fla., in 1913.

RESOLUTIONS ADOPTED AT NEW LONDON, 1912.

We, the members and delegates of the Atlantic Deeper Waterways Association, representing all the States of the Atlantic coast region, from Maine to Florida, inclusive, in fifth annual convention assembled in New London, Conn., do hereby reaffirm to the American people, to the States and municipalities within our territory, and especially to the Congress of the United States our recognition of the need and our demand for the completion of improved connecting protected waterways, owned and operated by the Nation, along the entire Atlantic coast.

Within the Atlantic coastal region, comprising all the original American colonies, are now located more than one-third of the total population of the United States, and an even greater proportion of its commerce, industry, and wealth.

Within these coastal States are situated the most densely populated industrial communities of the country and the most rapidly increasing centers of population. Congestion of population, industry, and commerce require, as their remedy, larger, better, and cheaper facilities of transportation. It is now time that such be provided within the Atlantic coastal territory.

The existing lines of railways, splendid as their equipment unquestionably is, and rapidly as it is being expanded, are now, and have been for years past, unable during certain periods to handle the amount of traffic offering with assurance of quick transit, safe delivery, and minimum cost.

Under these conditions it becomes imperative to seek additional means of transportation, and these are provided by our coastal bays and sounds, if connected through the short spaces of intervening lowland by modern sea-level canals, freely operated as public highways.

It has been suggested that the ocean is sufficient for the coastal traffic. In reply it may be stated that our Atlantic seaboard is a lee shore; that it is lined with dangerous shoals; that these shoals are blackened with the wrecks of thousands of ships, and bear the bodies of many thousands of American mariners; that the average annual loss is more than 200 human lives and $4,000,000 in property; that this loss in two decades equals the cost of our proposed waterway chain; that, meantime, coastwise shipping is disappearing from the seas, coastwise insurance steadily rising, and coastwise commerce declining. The ocean does not provide the needed facilities of cheap coastwise transportation.

With this statement of facts it is hereby—

1. *Resolved*, That we congratulate the Atlantic States upon the favorable report and survey of the Army Engineers now reported to Congress, at the insistence of this association, proving the feasibility of its project.

2. *Resolved*, That we demand the adoption and construction of the Atlantic intracoastal waterway as a national project, and the continuous appropriation by Congress of funds sufficient for its early completion.

3. *Resolved*, That we commend the initial step taken by Congress in the river and harbor act passed at the recent session, which contained a provision adopting that link in the proposed intracoastal waterway extending from Norfolk, Va., to Beaufort Inlet, N. C., and carrying an appropriation immediately available of $500,000 for the purchase of the Chesapeake & Albemarle Canal, and an additional $100,000 for the improvement and maintenance.

4. *Resolved*, That we demand of Congress at its next session an act acquiring the Chesapeake & Delaware Canal, one of the most essential links in the whole intracoastal chain, one of the most feasible to improve for modern requirements, and the next in logical order of progress northward, all of which is fully shown by the recent report of the United States Army Engineers. And, in event of failure to negotiate a satisfactory contract for the purchase of the canal, we favor the immediate condemnation thereof by the Government or the construction of a canal over an alternative route.

5. *Resolved*, That we demand of the next Congress the adoption of the New Jersey sea-level canal project, thus connecting southern waters with those of New England and New York.

6. *Resolved*, That we urge steady progress northward and southward at every session of Congress until the entire route shall be opened to traffic.

7. *Resolved*, That to provide safe passage through the Hudson River for vessels from the Lakes through the Erie Canal, and to establish a feasible connection with the intracoastal waterway, we advocate early completion of the improvement of the upper Hudson as the approach to the Erie Canal, and also of the East River and lower Hudson and Harlem Rivers and the opening of Bronx Kills and Little Hell Gate.

8. *Resolved*, That we advocate the authorization by Congress of a survey for the extension of the intracoastal waterway northwardly from Boston to such point on the coast of Maine as may be deemed desirable and feasible.

9. *Resolved*, That we demand the adoption of a national policy of waterway improvement which shall gauge the amount of the appropriation according to the commerce, existing and prospective, that will be served by such improvement.

10. *Resolved*, That the Atlantic intracoastal waterway, exceeding as it does in its commercial importance all other projects of waterway improvement, deserves and should receive the means for its completion in a ratio at least equal to that accorded to projects in other sections of the United States.

RESOLUTIONS ADOPTED AT JACKSONVILLE CONVENTION, 1913.

We, the delegates and members of the Atlantic Deeper Waterways Association in sixth annual convention assembled in the city of Jacksonville, Fla., congratulate the business interests of the entire Atlantic seaboard upon the favorable reports of the Government engineers with respect to the projects advocated by this association.

Six years ago we formed our organization in order to work for a better recognition of eastern waterways in the National Congress. Elsewhere in the world there existed no chain of natural bays and sounds along the coast line comparable with those extending along the Atlantic coast of the United States from New England to Florida navigable by deep-draft barges and freight carriers of every description and requiring nothing more than a few short connecting artificial waterways to bring them all together into one great transportation system, with all its attendant advantages in the economical carriage of bulk cargoes, in reducing the cost of maintenance, insurance, and power, and in relieving the needs of the busiest and most closely settled portion of our country.

The construction of these short connecting waterways and their dedication to public use was urged by our association from its beginning. The feasibility of the plan was self-evident. Small canals had been built in the infancy of the Republic over routes closely approximating those we advocated. But unfortunately, having been acquired by other interests unfriendly to their development, or having been unable to form such connections as would permit the issuance of

through bills of lading, they had remained in their original state, while the progress of commerce and industry left them far behind, utterly unsuited to modern traffic requirements.

We called upon Congress for instruction to the Army engineers to survey and report upon routes for an intracoastal waterway to run from Boston, Mass., to Key West, Fla., passing through the bays and sounds and connecting into one system the many great navigable rivers that drain the Atlantic slope.

The reports of the engineers have confirmed our judgment as to the feasibility and desirability of the Atlantic intracoastal waterway, and have recommended that the project be undertaken by the United States Government.

The several links in the intracoastal chain of waterways from Long Island Sound to St. Johns River, Fla., have received favorable reports through the Chief of Engineers United States Army recommending their construction. It now only remains for the people and the commercial interests of the Atlantic seaboard to insist that Congress shall follow the recommendations of the engineers and authorize the construction of these several links.

One of the links, that from Norfolk, Va., to Beaufort, N. C., has been adopted by Congress. One of the early canals, the Chesapeake & Albemarle, constituting a section of this link between the Elizabeth River, Va., to Albemarle Sound, N. C., has been purchased by the Government and is now being operated as a free waterway. This Norfolk-Beaufort link is to have a minimum depth of 12 feet, with appropriate widths.

With this recital of facts, the desires of the Atlantic Deeper Waterways Association for immediate progress toward the realization of its purposes are formulated in the following preamble and resolutions:

"Whereas the Chief of Engineers United States Army has reported to Congress that 'it is advisable for the United States to buy the Chesapeake & Delaware Canal at a cost not exceeding $2,514,290, and to then enlarge it to a sea-level canal 12 feet deep and 90 feet bottom width, with the least interference practicable to existing traffic, at a cost of $8,000,000,' with provision for subsequent enlargement to 25 feet depth and 125 feet bottom width; and

"Whereas the Chief of Engineers has further recommended to Congress that it provide for the construction of 'a lock canal of 12 feet depth and 90 feet bottom width across the State of New Jersey from New York Bay to Delaware River, provided the State of New Jersey will promptly secure and donate to the United States all rights of way necessary for a 125 feet bottom width, 25 feet depth sea-level canal along the same route, and provided that the 12-feet depth canal construction work be carried on in such a way as to allow of a greater development to a 25-feet depth canal whenever such development is found advisable'; and

"Whereas the State of New Jersey has provided by law an appropriation of $500,000 for acquiring the necessary right of way and has caused the same to be surveyed and marked; and

"Whereas by the completion of the New York Barge Canal at a cost approximating $130,000,000 and the Cape Cod Canal at a cost of $12,000,000 both expected to be opened to traffic during the year 1915, New England waters and the Great Lakes will be connected by inland waterways with New York Bay; and by the completion of southern projects recommended and authorized similar communication will be opened northward as far as the head of Chesapeake Bay and the early connection of these great waterway systems is imperatively called for:

"*Resolved*, That we demand of Congress the immediate acquisition of the Chesapeake & Delaware Canal at the price fixed by the Chief of Engineers, and in default of an agreement of sale by the present owners the acquisition thereof to be promptly effected by condemnation proceedings;

"*Resolved*, That we demand the insertion of an item providing for this purchase in the next rivers and harbors act, with a sufficient allowance for beginning the work of improvement.

"*Resolved further*, That we demand of Congress the approval of the New Jersey canal project and the insertion in the next rivers and harbors act of an item sufficient to begin the work and to secure the donation of the right of way from the State of New Jersey.

"*Resolved*, That we approve as an essential part of the intracoastal waterway the improvement of the East River and the construction of the Harlem or Bronx Kills Channel as heretofore recommended in the report of the Army engineers.

"*Resolved*, That we urge the early completion of the improvement heretofore authorized of the upper section of the Hudson River between Hudson and Troy, so that the same shall be completed at least contemporaneously with the completion of the Erie Barge Canal. We further recommend that Congress authorize a supplemental survey of the upper section of the Hudson River, with a view of providing a still deeper channel up to the city of Troy. We further recommend the improvement of the Hudson River from Spuyten Duyvil, at the entrance of Harlem River, to the Battery, heretofore recommended by the Army engineers.

"*Resolved*, That we recommend the construction of a canal between Fishers Island Sound and Bissells Cove on Narragansett Bay, thereby avoiding the dangers of navigation around Point Judith and affording a safe inside route between Narragansett Bay and Long Island Sound.

"*Resolved*, That this association is committed to the construction of an intracoastal waterway from the St. Johns River to Key West an integral part of the system, and as a part of such route it recommends the purchase of the existing canal of the Florida Coast Line Canal & Transportation Co., in so far as the interests of the United States may be subserved by the purchase of such canal and its appurtenances.

"*Resolved*, That we commend to the entire Nation the paramount importance of the Atlantic intracoastal waterway among the engineering projects now under consideration by Congress as a necessary factor in the economic development of that section which is most thickly populated, has the greatest industrial output, uses the greatest bulk of raw materials, and needs the greatest supply of food from distant points.

"*Resolved*, That the present condition of neglect in the matter of eastern waterways, the high cost of transportation due to obstructive tolls and inadequate facilities, the great loss of life and property in coastwise traffic, the prohibitive rates of marine insurance, and shrinking tonnage of coastwise shipping alike call for immediate approval of the Atlantic intracoastal waterway and rapid progress of the work through generous appropriations by Congress.

"*Resolved*, That we call upon business interests and trade organizations throughout the United States, and especially in the seaboard States, for such united and persistent support and agitation of these demands as will result in their sure recognition at the next regular session of Congress."

Commission to Codify Mining Laws.

EXTENSION OF REMARKS
OF
HON. EDWARD T. TAYLOR,
OF COLORADO.

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 21, 1914.

On the bill (H. R. 15288) to provide for a commission to codify and suggest amendments to the mining laws, and for other purposes.

Mr. TAYLOR of Colorado. Mr. Speaker, this is one of the most important bills that there is before Congress for the development of the West, and more particularly the mining industry. This measure has been urged by the mining interests of the United States for at least 20 years.

I have set forth in the report that I have prepared upon this bill sundry resolutions and reasons given by various associations of mining men, as well as prominent mining engineers, and I feel that this information is so important that it ought to be presented to the House, and I will give the substance of that report, which is as follows:

This bill was referred to the Interior Department, and the Secretary reported thereon as follows:

DEPARTMENT OF THE INTERIOR,
Washington, April 11, 1914.

Hon. MARTIN D. FOSTER,
Chairman Committee on Mines and Mining,
House of Representatives.

DEAR DR. FOSTER: In reply to your request for opinion respecting H. R. 15288, a bill to provide for a commission to codify and suggest amendments to the general mining laws, I inclose copy of my report of February 12, 1914, addressed to the Committee on Mines and Mining, United States Senate, upon S. 4373, a somewhat similar measure. You will note that S. 4373 provides for a commission of three members, while H. R. 15288 provides for a commission of five members. A proviso to section 2 of S. 4373 is to the effect that the proposed code "shall not deal with lands containing deposits of coal, oil, gas, phosphates, or soluble potassium salts." H. R. 15288 does not contain this provision. It was inserted in the Senate bill for the reason that the deposits named occupy a somewhat different status from other minerals with respect to formation, methods of mining, and use of the minerals.

As you are aware, the department has recommended legislation peculiarly adapted to the development and disposition of coal, oil, gas, phosphates, and potassium, which bills are now pending before the Senate and House Committees on Public Lands—S. 4898 and H. R. 14094. I am therefore of the opinion that section 2 of H. R. 15288 should be amended by adding the following:

"*Provided*, That said code shall not deal with lands containing deposits of coal, oil, gas, phosphates, or soluble potassium salts."

Cordially, yours,

FRANKLIN K. LANE.

A similar but not identical bill was introduced in the Senate, and referred to the Secretary of the Interior, who reported thereon as follows:

DEPARTMENT OF THE INTERIOR,
Washington, February 12, 1914.

Hon. T. J. WALSH,
Chairman Committee on Mines and Mining, United States Senate.

MY DEAR SENATOR: I am in receipt of your letter of February 9, 1914, transmitting for report a copy of S. 4373, a bill designed to provide for a commission to codify and suggest amendments to the general mining laws. The bill provides that the proposed code shall not deal with lands containing deposits of coal, oil, gas, phosphates, or soluble potassium salts. Various recommendations for amendments to the general mining laws have been suggested by this department from time to time, and there seems to be more or less desire on the part of those connected with prospecting or mining for certain amendments to the law. The codification of all laws relating to the location, development, and disposition of such mineral lands would also, in my opinion, be desirable. I believe that the investigations and findings by such a commission as is provided for in this bill would be of material value to Congress, and have therefore to recommend that the measure be enacted.

Very truly, yours,

FRANKLIN K. LANE.

For 25 years there has been a general dissatisfaction with the mineral-land laws of this country. The Interior Department has many times recommended changes. The American Institute of Mining Engineers, the Mining Metallurgical Society of America, and the American Mining Congress have all been for many years persistently urging a revision of our mineral-land laws. Protests from all over the West have been presented to Congress and various public gatherings annually, and a few isolated efforts have been made to secure relief; but no concerted or systematic effort has been made to revise, systematize, and bring up to date the mineral-land laws. Many able addresses have been delivered and profound papers read, and the mining public generally concede many evils, absurdities, and obsolete provisions in the mining laws; but no body of men has ever been authorized to revise or codify them, and the Interior Department, the Bureau of Mines, and the committee have deemed it best to recommend the creation of a commission, to be appointed by the President, of high-class men, of recognized experience in the mining industry and mining laws, to make a thorough and exhaustive investigation of this subject and report their conclusions to Congress.

It is believed that this commission should and will hold public hearings in the principal mining communities of the West and Alaska, and give ample opportunities for full expression by the public of their experience and the wisdom derived from years of observation.

While various individual bills have been introduced from time to time, the mining men of the country are apparently of "the conviction that no tinkering or patchwork revision can afford any perceptible

relief. The present mining laws as a whole are hopelessly at variance with the geological realities of ore-deposit structure, and also with the practical operation of prospecting and mining. Moreover, their various parts are so interdependent that it is practically impossible to correct individual faults without revising them as a whole." (Report of Edmund B. Kirby on Mining Law Revision, at New York meeting, February, 1914.)

The American Mining Congress at its annual session held in Spokane, Wash., on November 25, 1912, appearing at pages 80 to 81 of the report of the proceedings is the following:

"MEMORANDUM.

"The American Mining Congress, representing the mining industry of the United States and Alaska, asks that Congress shall undertake a general revision of the mineral-land laws.

"IMPERFECTIONS OF THE PRESENT LAWS.

"The mineral-land laws of the United States and Alaska, framed in 1872, and interwoven with a mass of supplementary State legislation, differing in every State, fail to meet the present requirements of the industry. Moreover, they have developed various evils, the injurious effects of which are steadily increasing. These have become so serious as to retard the development of mining and to create dissatisfaction and complaint everywhere.

"At every annual session of the American Mining Congress during the past 12 years the prevailing discontent with the present code has been voiced by various resolutions calling attention to its evils and asking for the correction of this or that feature of the laws relating to mineral claims located upon the public domain. Such complaints steadily increasing in volume have found expression not only in the mining congress but also in the press of the mining communities, all the mining journals, in the societies of mining engineers, and, in fact, through every medium available for the expression of public sentiment. They have nevertheless been without result, for the reason that the mining laws are largely interdependent, and it is difficult, if not impossible, to correct one fault without straightening out the entire code. Moreover, the States affected, some of which have often attempted to make improvements, find that nothing effective can be done without the action of Congress. In short, patchwork is impossible and a general revision is necessary.

"DIFFICULTIES OF THE WORK.

"Since the problems involved in the work are peculiar to the industry and are unusually difficult, it is evident that their satisfactory solution will require the aid of the most experienced judgment, together with a free and direct expression of views by the mining communities themselves. Among the many questions which will arise during a revision are the following, which will illustrate the nature of the work:

"SOME OF THE PROBLEMS.

"The apex law, with the uncertainties of title and litigation caused by it. The latter includes not only the conflicts caused by the extra lateral right, but also those occasioned by the consequent shapes of claims and the overlapping of lines.

"The creation of a definite procedure for acquiring rights to those claims in which the mineral is not near the surface and where discovery must in consequence be long deferred.

"Tunnel locations and the uncertainties of title caused by them in neighboring claims.

"The present nonobservance of the law of discovery.

"The partial or complete nonobservance, through various expedients, of the law of assessment.

"The location of an unlimited number of claims by one individual.

"Locations by proxy.

"REASONS FOR REVISION NOW.

"A general revision now will be particularly timely because of the public interest in conservation and the new legislation now under consideration for timber, oil, phosphate, and coal lands; also power sites. To omit the 'mining code' from any program for the betterment of laws relating to natural resources would be to pass by the field where relief is most urgently needed."

Hon. Horace V. Winchell, of Minneapolis, Minn., at the New York meeting of the American Institute of Mining Engineers, last February, read a very learned and lengthy paper on the subject "Why the mining laws should be revised." A few of the reasons which he gave and elaborated upon were in substance as follows:

(1) That the present mining law was not planned for the kind of mineral deposits or mining conditions that we have to-day; that the law of 1866 and amendatory act of 1872 applied primarily to fissure veins, and has never been adapted to the other forms of deposits.

(2) That the present law discourages prospecting and discovery and development of new mines.

(3) That one of the features of the present mining law, which seems to be not only criticised but almost universally condemned, is the "apex" or "extralateral" right, by which the miner is allowed to follow his vein beneath the surface of land owned by another. The Hon. D. W. Brunton, of Denver, former president of the institute and also president of the American Mining Congress, in his presidential address to the latter, uses the following language:

"It is a most unusual thing for a mine to find its way into the producing stage without having to fight one or more 'apex' lawsuits, and all because our legislatures in 1872 gave us the most archaic law that was ever placed on the statute books. No other nation possesses such an antiquated, absurd, and irrational mining law, which, no matter what it was intended to do, has only resulted in a continued expense and annoyance to mine owners and big fees to lawyers and experts. * * * One of the most disastrous effects of this continuous litigation is to frighten capitalists away from mining investments, because observing eastern investors have learned that the discovery of a new mine carrying rich ore is almost certain to be the beginning of the most expensive and interminable litigation."

(4) There seems to be an almost universal demand for a modification of the law that will permit of an appeal to the courts from the decisions of the land-office officials in metalliferous mining cases.

(5) A provision of the law requiring notices of mining claims to be filed with the General Land Office or some duly constituted Federal office. It is asserted that Uncle Sam has been a very careless custodian of the mining property and that the United States Government to-day does not possess either records or maps showing what portions of its mineral lands have been appropriated by valid mining locations.

(6) There is a wide discrepancy between the law pertaining to lode claims and placer claims. As an illustration, the law at present provides a limit to the time within which patented quartz claims may be attacked for fraud or irregularities of location, but makes no such provision for patented placer claims. Contests have been brought against placer patents 25 years after their issuance. The law should provide the same protection for placer as for lode claims.

(7) It is asserted that the present statutes are defective in permitting the location of an unlimited number of lode claims in any district and not requiring actual and useful development. Many promising mining claims, and even mining districts, have been smothered for years by this practice. Mr. Winchell also mentions many other irregularities that it would seem ought to be and would be remedied in a general mining code.

The essential features of the general mining laws of the United States were determined over 40 years ago, when the total production of mineral substances in this country did not amount to more than $300,000,000 per year. Since that time the value of the total mineral output has increased to $2,250,000,000 per year, a sevenfold increase. This growth has in part resulted from the discovery and utilization of many mineral substances not previously known to be of any economic value. Since these substances were not within the purview of the original law, no provision was made for their development, and only through the use of strained and forced constructions of the law has it been possible to develop such deposits at all. It is frequently stated by mining men of wide experience that for the past two decades the mining industry of the Western States has developed in spite of rather than through the aid of the general mining law. Nor is this all, for the nature of the ore deposits of the mineral substances contemplated in the original law was but little understood at that time, the great amount of scientific study which has since been devoted to them having at that time only just begun. Furthermore, certain deposits which have since been nearly exhausted were at that time the center of attention and were considered to be typical, though they have since been discovered to actually be somewhat unusual. As a result it has been found that the general mining law is not even well adapted to those mineral deposits to which it was intended to apply, and the mining industry as a whole is in much the same situation as a manufacturer obliged to attempt to carry on his present business with the equipment regarded as satisfactory 40 years ago.

Of all the defects of the general mining law, the most serious is the present uncertainty of title of a locator to the mineral land he claims. This works an especial hardship on the prospectors and men of small means by whom the discoveries of new mineral deposits are chiefly made. Such men rarely can command sufficient capital to develop to their full extent the mineral deposits which they have discovered, and are obliged to sell their claims to individuals or corporations of greater means. In buying such a claim the purchaser not only has to take into consideration the possibilities as to whether the deposit may prove, on development, to be of great or small value, but must also consider whether the title of the prospector to the deposit may not prove to be invalid, and the whole investment be lost. The prospector often thus obtains for his discovery but a fraction of the sum he otherwise might receive, and not only becomes discouraged from attempts to make further discoveries, but in him is engendered a feeling of discontent and resentment which is not only bad for the individual but for society as a whole. In addition the development of new mining districts is powerfully hampered to an extent which can best be appreciated by quoting the words of a well-known engineer, who at a recent meeting of the American Institute of Mining Engineers stated publicly that he would not recommend to any of his clients the purchase of any mining properties in the United States so long as opportunities for investment can be found in Canada and Mexico because of the uncertainty of title which here exists.

The method proposed in this bill creating a commission of five men, skilled in the knowledge of the mining industry and the laws governing it, who shall, without compensation other than the payment of their necessary expenses, hold hearings in the principal mining centers, consider the needs of the situation in this country, as well as the results attained under the laws which govern the industry in other important mining countries, and submit to Congress a report together with a suggested code for enactment into law is one which has the unqualified approval of this committee and also of the Secretary of the Interior Department. The matter is so complex and the preservation of all existing rights while providing for the easier development of the public mineral lands requires so much careful study that Congress can not afford to devote the necessary time required for the preliminary work. It is also necessary that the commission shall visit the principal mining districts and hear the views of the men actually engaged in the labor of the development and operation of mines, so that the law, when finally enacted, shall as completely as possible meet all the needs and desires of the mining population as a whole. The provision that the commissioners shall serve without compensation insures that the work shall be done with reasonable promptness and dispatch, and men of small means will undoubtedly be willing to serve on such a commission, since many such men have already devoted much time and effort to bring about a revision of the law.

The vital importance of this matter is not alone measured by the 2,300,000 men engaged in the mining industry and the $4,500,000,000 worth of products which results from their labors, but rather by its effects on the whole of our people. More than half the freight hauled by our railroads is the product of the mining industry, and of the $20,000,000,000 worth of manufactured products annually produced in this country almost the whole involves the employment of metallic mineral substances. Indeed, it may truly be said such substances perform for the commerce and industry of the Nation much the same function which the blood performs for the maintenance of the body. The committee believes that this bill will meet with the hearty approval of prospectors, miners, operators, and the people generally everywhere, and we sincerely trust that it will pass.

The bill with the committee amendment would read as follows:

[H. R. 15288, Sixty-third Congress, second session.]

"A bill to provide for a commission to codify and suggest amendments to the general mining laws.

"*Be it enacted, etc.*, That the President shall appoint a commission of five members, who shall be selected because of their recognized experience in or knowledge of the mining industry and mining law, and who shall serve without compensation.

"SEC. 2. That it shall be the duty of the commission so appointed to prepare for the information and use of the President and Congress a tentative code of laws providing for the location, development, and disposition of mineral lands and mining rights in the lands of the United States, including the Territory of Alaska, as in the opinion of the commission are best adapted to existing conditions and will correct defects or supply deficiencies in existing general mining laws: *Provided*, That such code shall not deal with lands containing deposits of coal, oil, gas, phosphates, or soluble potassium salts.

"SEC. 3. That the commission shall hold public hearings in the principal mining centers in the western United States and Alaska, invite and receive suggestions and opinions bearing upon or relating to existing mining laws or desirable amendments thereof, and may also consider the laws and experience of other countries with respect to disposition and development of mines and minerals.

"SEC. 4. That within one year after the passage of this act, at which time the said commission shall expire, it shall submit to the President full report as to its operations, conclusions, and recommendations, including in or transmitting with said report a tentative code of mineral laws, as provided in section 2 hereof, and as soon thereafter as may be practicable the President shall transmit the same to Congress with his recommendations.

"SEC. 5. For the payment of the actual and necessary expenses of the commission, including traveling expenses and the services of a secretary and other necessary employees, the sum of $25,000, or so much thereof as may be necessary, is hereby appropriated out of any money in the Treasury not otherwise appropriated."

While I realize the force of the remarks of the gentleman from Illinois [Mr. MADDEN] as to the necessity at this time for economy—and I am willing to go as far as he or any other Member of this House is in the direction of economy—at the same time I feel that there could be no more economical or better expenditure of money than the investment of the small amount provided for by this bill. In fact, I have been criticized for not providing a salary for the commissioners. The commissioners ought to have a salary, and I feel that it is a mistake to provide that they should do this work for nothing. At the same time the Director of the Bureau of Mines and the Mines and Mining Committee were so exceedingly anxious to have this commission appointed that I put that provision in the bill. I earnestly hope that when the present financial stringency caused by the European war is over that the House will not only permit me to pass this bill, but will authorize a reasonable and fair salary to be paid to the commission for doing this work that is of so much importance to the West.

Emergency Revenue Legislation.

EXTENSION OF REMARKS

OF

HON. WILLIAM H. HINEBAUGH,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the income of revenue, and for other purposes.

Mr. HINEBAUGH. Mr. Speaker, I am opposed to this bill. A war tax in time of peace can not be justified. Our people are already overburdened by unnecessary taxation.

Extravagant and reckless appropriations made and proposed by this Congress could easily be cut down to meet the situation created by the war in Europe.

It is proposed to raise $100,000,000 by means of this bill. According to the reports of the Secretary of the Treasury, the Government now has $75,000,000 on deposit in the various banks of the country.

The estimated deficit in the customs revenue for the month of August is approximately $8,000,000, but the estimate so far in the month of September indicates that for this month it will not exceed $2,500,000.

Mr. Speaker, what possible harm could be done the banking institutions of the country by gradual withdrawal of from two to five million each month for the next six months of the Government deposits in the national banks?

Thirty million dollars has recently been saved by eliminating the "pork" from the rivers and harbors bill. Ten millions more could be retained in the Treasury by defeating the proposed shipping bill, the propriety of which, to say the least, is doubtful.

If, however, as the Democratic leaders claim, the passage of this bill at this time is necessary, why jam it through the House under a cloture rule in seven hours without the right of amendment? Mr. Speaker, had we been permitted to offer amendments to this bill I should have offered an amendment to strike out the section which imposes a tax on insurance premiums and in its place would have offered a substitute providing a tax of 10 cents on all catalogues issued by the great mail-order houses of the country. The tax proposed on insurance premiums will not yield more than $1,500,000 annually, and must be borne by the poor man, whose average policy does not exceed $1,500. The adoption of my amendment would produce immediately $1,800,000 annually, and would be paid out of the excessive profits of the great billion-dollar corporations.

WHY THE MAIL-ORDER HOUSE SHOULD BE TAXED.

That the mail-order houses draw more from and contribute less to local, State, and National taxation is an oft-repeated claim that is proven by the mere knowledge of the methods under which they do business. That they are well able to afford a tax that would make them bear their share of public expenses is shown by figures.

During the debate on the trade commission bill Senator LIPPITT said, in part:

Sears, Roebuck & Co., of Chicago, a mail-order house, consists of a number of people who have united their resources into a corporation which now has a capital of $58,000,000. In 1913 it did a business of $91,357,000. In the first four months of that year its business increased from $39,359,000 to $41,808,000, an increase of $2,449,000, or at the rate of $7,347,000 per annum.

Another union or combination of people in the same manner, the Montgomery Ward Co., made sales for 1913 of $39,725,000.

So rapid has been the growth of the business of these concerns, especially since the establishment of the parcel post, with its C. O. D. and other special features, that those who have watched the methods of the mail-order houses for years estimate that the three largest Chicago houses—the two named and the Chicago House Wrecking Co., owned by the Harris brothers—will do an aggregate business during 1914 of $360,000,000.

As an evidence of the growth of this business during the current year the following is quoted. It is from testimony before the Judiciary Committee of the House, given by M. L. Corey, secretary of the National Retail Hardware Association:

Last night I passed down one of your streets and my attention was called by a gentleman who is the traffic manager of one of the Chicago houses. I asked him what he was doing here. He said he was here to see the Postmaster General; that their business had increased to 42,000 packages per day, and he was here to make arrangements to carry these packages. That means 474,000 packages every week and 29,124,648 packages a year. Do you wonder what is the matter with the small town?

The foregoing is from the record. Mr. Corey explained in conversation that the increase was in parcel-post packages for the first three months of the year, and that was before the ruling of the Postmaster General under which mail-order catalogues became mailable as parcel-post matter.

As to the methods under which this business has been built up, it may be said that the Chicago House Wrecking Co. started as a seller of the building materials used in some of the structures of the Columbian Exposition, but that the name still fits, although it has since developed into an enormous general mail-order house, may be judged by the following, which is quoted from an advertisement of the company inserted in a farm paper:

It is estimated that about 10,000 merchants annually meet with business disaster. This is why our company exists. If the stock is sufficiently large and the goods are new and desirable, they find their natural way to our great 40-acre plant for distribution at a small added profit to our thousands of customers, who in this way get the benefit of the wonderful bargains. In many cases our prices do not even represent the original cost of production. We stand foremost in our line. We recognize no competition. That's why we are called "the great price wreckers."

Before a New York association of retailers a representative of the National Association of Retail Druggists read a letter purporting to have been written by Montgomery Ward & Co., in which it was flatly stated that they expected the mail-order houses to drive all small-town merchants out of business and that the only recourse for the latter was to become farmers.

The largest of these mail-order houses has stated that its catalogues go into one-third of the American homes, on the basis of five to a family. Of a population of an estimated 95,000,000 that would mean over 6,000,000 catalogues of this one house. However, the frequent issues of catalogues make an estimate of 18,000,000 per year conservative, not counting the millions of special lists, and so forth.

In a letter written to a Member of the House by the secretary of the National Retail Hardware Association the following occurred:

I have before me two Sears, Roebuck & Co. catalogues; one received March 12, postage 27 cents; the other March 23, parcel post 8 cents; a difference of 19 cents. I have three other catalogues from Chicago mail-order houses, all by parcel post, and all showing corresponding reductions.

Several students of the problem estimate that the three leading mail-order houses are saving from one and one-half to two million dollars per year by the ruling of the Postmaster General which placed catalogues under the parcel-post classification.

Who gets it may be judged from the following, the substance of a newspaper article that appeared in many papers throughout the country, but originating with the Chicago Tribune:

Julius Rosenwald, president of a mail-order house, will pay the largest Federal income tax of anyone in Chicago. His return was filed during the 30 days' extension of time, which ended to-day (April 1), and showed an income of $1,100,000 for the 10 months ending December 31, 1913. This would be on a basis of $1,320,000 per year.

Commenting on this, the Journal of the National Association of Retail Druggists said:

Mr. Rosenwald's income for three weeks exceeds the amount paid to the President of the United States as a salary for a full year. There has been much said about the collection of the income tax at the source. Probably you will agree with me that it would be better if Congress paid more attention to the source of the income.

It is said that there is more parcel-post mail going out of Chicago than originates in the three States of Ohio, Indiana, and Michigan. Aside from the exclusive mail-order houses, the great department stores and chain-store trusts are almost feverishly developing catalogue business. It has been stated that the Siegel-Cooper-Greenhut Co., of New York, frequently send a carload of parcel-post mail in a day; that the old-established house of Boggs & Buhl, of Pittsburgh, now has a mail-order business equaling its local trade; that the Rothchilds Co., of Chicago, is doing a catalogue business of a million dollars per month; and that there are 200 establishments in the United States doing a catalogue business exceeding $500,000 per year each. Nearly all of this is taken from the dealers in the small towns and villages, and by methods akin to those briefly related in the foregoing.

Thus it would seem that the time and conditions are opportune to place upon this, what seems to be rapidly developing into a universal distributing monopoly, a just portion of the financial burden of government.

Mr. Speaker, it is proposed in Schedule A of this bill to practically reenact the stamp-tax feature of the Spanish War act. Had it been possible under the rules of the House to offer an amendment I should have presented the following amendment for the consideration of the House:

Insurance (marine, inland, fire): Each policy of insurance or other instrument, by whatever name the same shall be called, by which insurance shall be made or renewed upon property of any description (including rents or profits), whether against peril by sea or on inland waters, or by fire or lightning, or other peril, made by any person, association, or corporation, upon the amount of premium charged, one-half of 1 cent on each dollar or fractional part thereof: *Provided*, That any person, association, or corporation shall be entitled to rebate or refund upon the return premium paid upon the cancellation or return of any policy of insurance or other instrument by which insurance shall be made or renewed, as provided herein, to be paid by the warrant of the Secretary of the Treasury upon the Treasurer of the United States out of any money arising out of the internal taxes not otherwise appropriated: *And provided further*, That purely cooperative or mutual fire insurance companies, carried on by the members thereof solely for the protection of their own property and not for profit and premiums upon reinsurance, shall be exempted from the tax herein provided.

The reason for this amendment is so ably presented by Hon. O. B. Ryon, formerly of the Insurance Department of the State of Illinois, that I am pleased to make his statement a part of my remarks.

The act of Congress of June 13, 1898, entitled "An act to provide ways and means to meet war expenditures, and for other purposes," by Schedule A (stamp taxes) and upon page 16 of the printed copy of the act, provided as follows:

Insurance (marine, inland, fire): Each policy of insurance or other instrument by whatever name the same shall be called by which insurance shall be made or renewed upon property of any description (including rents or profits), whether against peril by sea or on inland waters, or by fire, or lightning, or other peril, made by any person, association, or corporation, upon the amount of premium charged one-half of 1 cent on each dollar or fractional part thereof: *Provided*, That purely cooperative or mutual fire insurance companies, carried on by the members thereof solely for the protection of their own property and not for profit, shall be exempted from the tax herein provided.

The administration of the act of 1898 was productive of very serious and probably unintentional injustice to the fire insurance companies. Instead of a tax of one-half of 1 per cent the companies paid eight-tenths of 1 per cent upon their actual premiums during the time the Spanish War tax law was in force. This occurred because no provision was made for credit in case of policies canceled or returned "not taken."

Every fire insurance policy issued in the United States, so far as we are advised, contains a provision that it may be canceled under certain conditions at the instance of either the company or the insured, and in such cases a portion of the premium is returned. The act of 1898 made no provision for this condition, and the department permitted no credit whatever for such return premiums, and the amount involved was very considerable.

The report of the president of the National Board of Fire Underwriters, May 28, 1914, for the business for the year ending December 31, 1913, shows at Tables 1 and 3 the gross premiums in the United States for the year 1913 were $474,000,000 and the net premiums $324,000,000, or, in round numbers, $150,000,000 of return premiums, being about one-third of the gross amount written. It does not appear to require any argument to indicate that it is grossly unfair and contrary to the spirit of all tax laws to require the payment of any tax whatever upon these premiums which, as a matter of fact, do not remain the property of the companies, but are returned to the premium payers by reason of the contract obligation.

By the ruling of the department the act of 1898 was so construed as that direct-writing fire insurance companies were not entitled to any credit whatever in the payment of the tax provided by the law upon premiums paid for reinsurance, but the reinsurance companies, that is, those accepting from direct-writing companies portions of their business, paid the same tax as the company initially receiving the business. The result of this ruling and the operation of the act of 1898 was double tax upon a very large amount of premium. It seems obvious either that the direct-writing company should receive credit for the tax upon premiums paid for reinsurance or that the premiums of reinsurance companies should not be taxed. Let me illustrate:

The Home Insurance Co. of New York writes for one of its clients a policy charging a premium of $500 and attaches to the policy revenue stamps for $2.50. It immediately reinsures in the Aetna Fire Insurance Co. one-half of its liability and pays the Aetna one-half of the premium, or $250, and receives from the Aetna Insurance Co. a policy for one-half of the Home Insurance Co.'s liability for an express consideration of $250 with a revenue stamp of $1.25.

There is involved in this transaction but a single risk, and the premium is only distributed to cover the divided liability. It should pay but one tax, but actually, instead of $2.50, it pays $3.75. There should be some provision in the law to cover this contingency, because in 1913 the stock companies of the United States paid in interchange of business of the character above mentioned, in the way of revenue, about $70,000,000, and under the act of 1898 the result would have been the double taxation of about $70,000,000 of premiums.

It was undoubtedly the intention of the Congress in preparing the act of 1898 to require fire insurance companies to pay upon their net or actual premiums, not upon sums of money which remained temporarily in the hands of the company, but subsequently, by reason of the terms of the contract issued, were returned to policyholders.

If it is the present purpose of the Ways and Means Committee to report substantially the provisions of the act of 1898 upon this subject in the bill now under consideration, it seems obvious that there should be an amendment giving credit under proper conditions for these return premiums and exempting reinsurance.

It was no doubt the intention of the Congress by the act of 1898 to provide only for the taxation of the premium income of the fire insurance companies, but the practical application of the law was to impose a very much greater tax than that intended by the Congress.

The act of the Illinois Legislature providing for a tax of 2 per cent upon the gross premium receipts of foreign fire insurance companies furnishes a very striking example of this injustice in the taxation of fire insurance premiums.

The act was construed by the Supreme Court of Illinois, and we quote in part from the opinion in the case of the German Alliance Insurance Co. *v.* Van Cleave (191 Ill., 410):

In the construction of the act effect is to be given to the intention of the legislature, and that intention appears to be to levy a tax on the gross income of foreign fire insurance companies.

The object is to require such companies to pay at designated times a tax of 2 per cent on the gross receipts of their business for the previous calendar year.

There is no dispute as to the meaning of the word "gross," and it is conceded that it means the whole or entire amount of premiums received for business done in this State during the year. The word "gross" is not opposed to "net," and its ordinary meaning is the entire amount of the receipts of a business after deductions for the expenses and charges of conducting the business. It is claimed on one side that the legislature meant by the gross amount of premiums the entire premiums received for furnishing insurance indemnity during the year, while on the other side it is insisted that they meant to include all the money which goes to the insurance company, although paid under an agreement for refunding upon the cancellation of the policy, and although the policy is canceled and the insurance ceases and the money is refunded. If it is true that the part of the premium unearned and returned to the insured is a premium for business done, it is equally true that if the whole premium were returned and there was in fact no insurance the money would be premium for business done. According to the argument which would include premiums returned on canceled policies, if the insurance company should issue a policy and receive a premium and at once cancel the policy and return the premium, it would have done the amount of business represented by the policy, and the amount received would be a premium for insurance business done. We do not think the language used will bear that construction. The merchant would not think of including in the gross receipts of his business any sales of goods with the privilege of return on the part of the purchaser where they are in fact returned. In such a case there is in the end no sale and no business done in any proper sense. So in the case of an insurance policy for a definite period with an agreement that it may run any portion of that period and then cease; if the policy is canceled and the insurance ceases, there is no insurance business for the remaining portion of that period.

The premiums returned are not paid as a liability of the insurance company or as a charge or expense of conducting the business, but because one party or the other avails of the option and terminates the insurance. An insurance company would not be authorized to omit from its statement any part of premiums received merely on the ground

that policies might be canceled in the future; but where they have been in fact canceled and the money returned the entire or gross premium rates can not by any fair interpretation include the moneys so returned. The 2 per cent collected by the insurance superintendent and paid under protest is upon moneys which do not inure to the benefit of the insurance companies in any manner, and which are not premiums for furnishing fire insurance or indemnity to holders of policies. The apparent purpose of the act is to levy a tax on gross income and not upon money which is not in any sense revenue to the insurance companies.

The opinion very clearly indicates the infirmity found not only in the Illinois law under consideration but in the act of Congress of June 13, 1898. If the contemplated act can not be so amended as to absolutely eliminate further taxation of stock fire insurance companies, it should be amended to exclude from its operation return premiums and amounts paid for reinsurance.

It will be noted by Table 3 of the report of the president of the National Board of Fire Underwriters that in the year 1913 the stock companies in the United States paid $8,500,000, or 2.62 per cent, on their net premiums written, these payments being made to the several States in which the companies transact business.

In view of the fact that not all of the property in the United States is insured, these taxes are upon only a part of the taxable property, but for the benefit of everybody, and it might also be suggested that since the year 1898 the companies have been subjected to a Federal income tax, which is a very serious burden and should be entitled to some consideration from the Congress in the proposed emergency tax.

There appears sufficient reason for excluding stock companies, as well as mutuals, from the provisions of the proposed emergency tax laid, but absolutely no reason can be discovered for the double taxation which resulted from the act of 1898, and which would again result from a reenactment of that law without the amendment suggested.

Reclamation Projects.

EXTENSION OF REMARKS
OF
HON. CARL HAYDEN,
OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 29, 1914.

Mr. HAYDEN. Mr. Speaker, under the leave granted to extend my remarks in the RECORD I include the following letter:

DECEMBER 12, 1913.

The honorable the SECRETARY OF THE INTERIOR,
Washington, D. C.

SIR: Pursuant to your request made at our conference yesterday, I hereby present in writing the arguments that I then advanced in favor of permitting homestead entrymen under reclamation projects to receive patents for the entire area of their entries.

By a letter addressed to the president of the Salt River Valley Water Users' Association you have notified all entrymen that it is the intention of the department to establish 40 acres as the farm unit under the Salt River project. Your conclusion that 40 acres is all that may be reasonably required for the support of a family on irrigated lands in Arizona would indicate that this area will also be fixed as the farm unit under the Yuma project.

Such an order, when issued, will prevent the future entry of the vacant public lands now included in these projects in any larger areas than 40 acres, and to this no one can object, because you are acting clearly within the discretion given to the Secretary of the Interior by the reclamation act.

The effect of such an order will not, however, bear equally upon all lands heretofore entered under these projects as homesteads. The act of June 23, 1910, provides that upon the acceptance of satisfactory proof of residence, improvement, and cultivation, entrymen under reclamation projects may assign any part of their entries to other persons, who may receive patents in their own name. As a result of this act, all of the homestead lands under the Arizona projects may be divided into two classes: First, the lands where the entryman has received a certificate that his proof of residence, improvement, and cultivation is satisfactory, and, second, the lands where, by reason of a failure to obtain water for irrigation, it has been impossible to make such proof up to the present time.

Most of the entrymen under the Salt River project have been able to make satisfactory proof to the department and have obtained certificates that will permit them to assign their excess holdings for a compensation. The same is true of almost half of the entrymen under the Yuma project. But the unfortunate entryman who has not to date succeeded in having his proof accepted will be forced to relinquish all above 40 acres to the United States and can receive nothing for his improvements. He may have cleared the land, leveled and bordered and ditched it. He may have built fences and houses at great expense while waiting for the water to come, but there is nothing that he can do except to select the particular 40 acres that he will retain as his home.

If the order fixing the farm unit is delayed for another year and the contemplated lateral system is fully completed under each project at an early date, then most of the entrymen in the second class will be able to make the proof required by law. Certainly within two years practically everyone would be able to save his right to sell his excess holdings. To issue such an order immediately will, therefore, cause great hardship to many worthy settlers who, through no fault of their own, have been unable to comply with the law, and they are the very class of men that the department ought to be the most anxious to assist.

Section 4 of the reclamation act reads:

> That upon the determination by the Secretary of the Interior that any irrigation project is practicable he may cause to be let contracts for the construction of the same, * * * and thereupon he shall * * * limit the area per entry, which limit shall represent the acreage which, in the opinion of the Secretary, may be reasonably required to support a family upon the lands in question * * *.

In the years 1903 and 1904 the Secretary of the Interior did determine that the Salt River and Yuma projects were practicable, and he did cause contracts to be let for their construction. He did not, however, limit the area per entry, as provided by the act. It may be that he was advised that under the law he must permit homestead entries under these projects, but certainly he could not have been criticized if, following the plain and mandatory provisions of the act, he had written a letter to the local land officers in Arizona directing them not to receive entries of more than 40 acres for public lands included within the limits of the Salt River and Yuma projects. The entryman would have been helpless, because his filing would not have been received for a larger area.

It may be argued that the Secretary could not obtain satisfactory information at that time upon which to base a decision as to the size of the farm unit. It is the same land, the same climate, and the same water was running in the streams. Large areas of land had long been in cultivation under both projects. All the necessary data could have been quickly assembled. It was his duty to make some kind of a decision, and his failure to do so gave every entryman the right to believe that ultimately he would receive a patent for all of his entry.

It will certainly not be claimed that the author of the reclamation act or any Member of Congress who voted for it had in mind that the word "thereupon" would be construed to mean 10 years, nor will any reasonable man insist that it was the intention of Congress that the provision fixing the farm unit should be retroactive. By what authority of law did the department say to the entryman, "You may enter 160 acres of land subject to reduction in area at the pleasure of the Secretary of the Interior?" There may be a technical answer to this question, but it certainly is not such an answer as would occur to the mind of the average homesteader. To my mind it was the plain duty of the Secretary of the Interior, in order to protect the rights of prospective entrymen, to determine the area per entry at the earliest possible date. This he failed to do, and the prospective entryman therefore lost that which ought to have been preserved for him and which could have then been preserved without doing injustice to anyone. It is too late now, because in the meantime the actual settler has been upon the land and thus acquired equitable rights which in all fairness ought to be recognized.

The maps which I exhibited clearly demonstrate that most of the homestead lands in the Salt River and Yuma Valleys are located on the outskirts of the projects at the greatest distance from the towns, railroad stations, schools, and churches. These lands are situated at the ends of the poorest roads, and the farmers are therefore handicapped in marketing their products. The assessed valuation of the patented lands nearest the homestead entries indicates that the average value of the unpatented land under the Salt River project is not over $60 per acre, and not over $45 per acre under the Yuma project. You will remember that I presented a letter from the Arizona tax commission certifying that all property in my State is assessed at its full cash value, and that the total assessed value of all

property has been raised from $142,624,635 to $379,005,740. The raw lands that have been obtained by the homestead entrymen can not, therefore, be said to be worth $100 per acre or even more, as has been represented by the Director of the Reclamation Service.

It can not be successfully argued that it is necessary to reduce the farm unit to 40 acres in order to compel the division of large areas into smaller tracts, because this process is going on at a rapid rate as the result of the natural demand for small farms. In 1902 about 1,200 men owned all the land included in the Salt River project. By 1909 the number of landowners had increased to 1,892, and in 1912 the number had grown to 3,048, a gain of 66 per cent. In the same four years the average holding was reduced from 59 to 40 acres. I am reliably informed that the number of landowners under the Salt River project is now more than 4,000, and I am confident that the area of the average farm is not over 40 acres. I can see no necessity for the use of force when the natural law of supply and demand is already accomplishing the purpose.

I willingly admit that a man who obtained his land at $1.25 an acre from the Government is better able to pay the charges due for the cost of the project than one who has purchased land at $100 an acre from a private owner. The latter must pay interest on his mortgage and make payments on the purchase price. The sums due to the reclamation fund must come out of a much narrower margin of profit. There is also no doubt but that many men are trying to farm more land than they can successfully cultivate with the limited capital they possess. If a man has nothing but his two hands and a team of horses, it will be easier for him to produce the sum required to meet the reclamation charges on 40 acres than on a quarter section.

But after all most people have common sense, and they learn by experience. The unsuccessful farmer always has creditors who want their money, and the man who is land poor must sooner or later dispose of most of his holdings to pay his debts. Among the 90,000,000 people in the United States there are an ample number who are willing and able to pay a fair price for western irrigated land, so it is not difficult to find purchasers. Of course, everyone would like to see ideal conditions immediately established under all of the reclamation projects, but any attempt to prematurely force the division of large holdings into smaller tracts by paternalistic regulations is bound to meet with resentment from a class of men who are firmly convinced that they know more about the proper conduct of their own business than any Government official. Is it not better to let questions of this kind settle themselves? The world was not made in a day.

Permit me to say that no one except the officials of the Reclamation Service has asked that the farm unit be reduced to 40 acres. On the contrary, every organized body of water users is on record as being opposed to the reduction in area of homestead entries under reclamation projects made prior to the passage of the act of June 25, 1910. In the suggestions made at your request by the representatives of the water users' associations present at the conference held in your office last May the following recommendation was made:

> That land entries, under the reclamation act, should not be subject to reduction after bona fide entry.

At the annual meeting of the National Federation of Water Users, held at Salt Lake City in September, 1912, the following resolution was adopted:

> We recommend that the following law be passed: Land entries under the reclamation act of June 17, 1902, of 160 acres or less made prior to June 25, 1910, shall not be subject to reduction to a lesser farm unit than the acreage entered; and that on all projects containing lands in private ownership the maximum farm unit to be allowed be immediately established by the Secretary of the Interior.

The officers of the Salt River Valley Water Users' Association have repeatedly requested the department to make no reduction in the area permitted to be entered in the absence of designation by the Secretary of the farm unit. As one example I will quote from a resolution passed by the board of governors on April 23, 1913:

> We further believe that in justice to those homestead entrymen within the Salt River project who filed on their lands previous to the passage of the act of June 25, 1910, the unit should not be reduced below 160 acres.

The only reason, therefore, for the reduction of the farm unit to a lesser area than the maximum permitted under the reclamation act is that it is the duty of the Department of the Interior, representing all of the people, to protect the inchoate rights of future entrymen. As I have already pointed out, this duty should have been performed immediately after it was determined that the project was practicable. To make such a reduction after 10 years have elapsed violates the established rights of actual entrymen.

If the surplus lands above 40 acres in each entry are to be taken away from the entryman, may I inquire who is going to get them? Not his minor children, because the law does not permit them to enter land. This land will go to the first man who enters the door of the local land office on the day that the land is declared open to entry or, if a drawing is held, to the lucky man at the lottery. When the homesteader was sweating in the sun grubbing up mesquite roots, and when he was spending his hard-earned money on other improvements he thought he was doing something for the benefit of his wife and children, that their condition might be improved. But he was not doing anything of the kind. He was working for the benefit of some unknown nebulous person, now a part of the general population, who will appear on the appointed day to take from him the fruits of his labor. This person has endured no hardships; he has not waited, year after year, in the hope that water would soon be brought to his land, only to suffer disappointment again and again. He goes on the land obtaining free of cost all of the improvements that have been made, and secures, unearned, all of the increase in real estate values that have accrued during the past 10 years. To do this thing may be lawful, but it does not comport with my idea of simple human justice.

On another occasion I presented this subject to your predecessor in office, and thereafter in a letter addressed to the Director of the Reclamation Service, dated March 3, 1913, he said:

> With regard to the size of farm units applicable to homestead entries made prior to the act of June 25, 1910, I am of the opinion that these entries should be treated on exactly the same basis as private-land holdings are treated in the same reclamation project. Indeed, private-land holdings and homestead entries included in the same reclamation project should be treated alike with respect to farm units unless exceptional circumstances appear calling for different treatment.

I am sure that on careful reflection you will agree with Secretary Fisher in this statement. Why should the homesteader be penalized merely because you have the power to do so? As to the Arizona projects, the conclusion is inevitable that no water should be furnished to lands in private ownership in excess of 40 acres to any one individual, or else the homesteader should be permitted to retain the full area of his entry.

Secretary Fisher further stated:

> Homesteaders who entered prior to June 25, 1910, appear to me to be in a different situation from those who entered since the passage of the act of that date, and these equities should be recognized by giving them the benefit of all doubts as to the size of the farm unit "reasonably required for the support of a family." If I were clear as to the technical statutory authority to do so I would enter a general order providing that entries made prior to June 25, 1910, should be treated on the same basis as private lands in the same project. A difference of opinion exists, however, among my advisers upon this question, and I find that I have not time available before the close of the administration in which to give the subject sufficient consideration to justify entering such an order.

All that I am asking you to do is to give the homestead entryman the benefit of any doubt that there may be in your mind or the minds of your advisers.

If you do not feel that under the law as it exists you can conscientiously issue a general order directing that all homestead entries made prior to June 25, 1910, shall not be reduced in area, then I invite your attention to the inclosed bill which will amend the law to that effect. I am satisfied that, with no opposition from the department, it will not be difficult to convince Congress of the justice of such a measure.

Yours, very respectfully,

CARL HAYDEN,
Member of Congress from Arizona.

Importations—Comparison of 11 Months Under Democratic Tariff and Republican Tariff.

EXTENSION OF REMARKS

OF

HON. JAMES R. MANN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 26, 1914.

Mr. MANN. Mr. Speaker, the Department of Commerce has just issued a circular letter showing importations of various articles for the 11 months ending August 31, 1914, while the Democratic tariff was in effect, as compared with the 11 months ending August 31, 1913, while the Payne tariff law was in effect.

This statement shows that importations have greatly increased under the Democratic tariff law, and the statement shows the following increases in importations under the Demo-

cratic tariff law over what they were under the Republican tariff law for the 11-month periods:

Increase in importations.

Cattle	$11,968,347
Corn	9,775,179
Oats	7,984,053
Hides and skins	13,523,927
Fruits and nuts	8,201,183
Leather and tanned skins	5,926,782
Meat and dairy products	30,453,388
Paper, and manufactures of	5,452,729
Flaxseed	7,741,139
Vegetables	4,791,525
Wool, unmanufactured	30,136,171
Wool, manufactures of	22,596,828
Sugar	8,829,374
Cotton, manufactures of	5,056,927
Fertilizers	5,026,772
Fish	3,239,031
Silk, manufactures of	3,441,080
Wheat	1,473,040
Sheep	483,546
Butter	1,517,019
Eggs	928,680

The Department of Commerce has also just issued a statement showing importations for the eight months of the calendar year 1914 ending with August 31 as compared with the similar period in 1913. The statement includes the month of August, which is the first month of the European war and when shipping on the sea was most deranged.

For the eight months of 1914 we increased our importations over the same period of 1913 from the following countries by the sums named:

Argentina	$26,196,590
Australia	7,391,082
Belgium (decrease)	858,984
Brazil	3,576,631
Canada	$26,803,044
China (decrease)	728,335
Cuba	13,376,519
France (decrease)	7,141,653
Germany	1,830,854
India, British	3,974,854
Italy	1,170,248
Japan	10,818,211
Mexico	10,652,160
Netherlands (decrease)	1,128,745
Russia (decrease)	1,899,626
United Kingdom	18,593,245

The statement also shows that while for the eight months our importations from Canada increased from $78,786,141 in 1913 to $105,590,085 in 1914 our exports to Canada in the same eight months fell off from $282,993,099 to $219,960,317. The increase of imports from Canada and the decrease of exports to Canada probably represent a normal condition as the result of the Democratic tariff law, as our relations with Canada could not have been much affected by the European war, even in the month of August.

The figures speak for themselves and are an unanswerable and terrible indictment of the Democratic tariff policy, which plainly favors the producers of foreign countries at the expense of those of our own country.

Emergency Revenue Legislation.

EXTENSION OF REMARKS

OF

HON. JACOB JOHNSON,

OF UTAH,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. JOHNSON of Utah. Mr. Speaker, I find myself compelled to protest against the enactment of House bill 18891 into law; first, because I believe it to be unnecessary and because of its imposition of an unnecessary burden upon the American people; and, secondly, if necessary, that the revenue to be raised should be obtained from a different source and in a different manner. In the first place, to extract from the American people the sum of $105,000,000, or more than $1 from every man, woman, and child of the Nation, under the guise of a war tax or emergency revenue legislation, at a time when our Nation is at peace with the world, is a novelty in the political or financial history of the American Nation, and one to be developed for the first time by the Democratic Party, and for the express purpose of obscuring the dismal policy or, in other words, the results of the dismal policy of said party. The financial stress, if indeed there be a financial stress at the present time, is the direct result of the extravagant manner in which the Government of this Nation has been administered. By your appropriations you have appropriated about $1,100,000,000, a sum far in excess of any appropriations heretofore made by any Congress of this Nation. You have sought in every way to hamper, obstruct, and retard private business and to replace the same by governmental agencies; you have involved the Government in the undertaking of the constructing and maintaining of railroads, marine insurance, the ownership of shipping, the conducting of the banking business, and many other private enterprises, properly the subject of individuality and not governmental in their nature. You have loaned to the banks of this Nation $75,000,000 of Government money at 2 per cent interest, and which money is subject to demand, and we are informed by the newspapers that the banks are charging and receiving from 8 to 24 per cent interest on this money from the borrowing public. And yet you propose by this bill to leave said amount of Government money in the hands of the banks and extract, under the guise of taxation, from the people the additional sum of $105,000,000 more money. In other and plain words, you propose to abstract from the people the sum of $105,000,000 to be loaned to the banks at 2 per cent interest, so that said banks may reloan the same to the people at from 8 to 24 per cent interest.

Mr. Speaker, I can not become a party to any such transaction. If the Government needs the money, let it withdraw the $75,000,000 which it has on deposit in the banks; let it withhold the $35,000,000 appropriated for the construction of railroads, the $10,000,000 appropriated for insurance, and the millions intended for the purchase of ships and return to the economical principles of the Republican Party. You of the other side of the aisle are in power, you are responsible for the legislation of this Congress, and you must abide the verdict. Notwithstanding your pledge of economy to the people, you have greatly increased the numbers of officials of the various departments of the Government, raised the salaries, and revolutionized the system of Government service; you have added millions of dollars to the expenses of the administration; you have cut off the principal sources of revenue of the Government, and now propose to recoup the same by a direct tax upon the people.

Under the Payne tariff law the receipts from the tariff proved sufficient to meet the expenses of the Government and at the same time a sufficient protection to American industrial pursuits, but you repealed that law and enacted the Underwood law in its stead. The effect of the Underwood law has been to increase importation and to decrease exportation, to decrease the receipts of the Government, to destroy American industries, and to leave the American laborer without employment. You now find yourselves in the predicament which your policy invites—a failure.

The Democratic Party went into power upon the general promise that they would better the conditions which had existed in this country under Republican rule. For years they had preached that labor was oppressed, that business was shackled, and that if the Democratic Party once went into power it would reduce the cost of living, increase wages, bring business expansion, and widen our markets. They went into the campaign joyfully preaching the doctrine of the "new freedom." The President declared that what the men of this Nation needed was to sharpen their wits in competition with the rest of the world, that what was needed was to break down the tariff wall.

Well, we have now had a little more than nine months' experience under a Democratic tariff law and the "new freedom," and what is the result? Will any man in this Nation outside of a padded cell or a Democratic office say that he would not like to change the conditions that exist to-day for the conditions which existed for 16 years under Republican rule?

Remember that while the Democratic Party went into power on the 4th of March, 1913, that the Underwood tariff law did not go upon the statute books until the 3d day of October, 1913. However, the shadow of Democracy had its effect upon business even before President Wilson was inaugurated. Here are some of the results of a Democratic administration that was to bless the Nation with unexampled prosperity.

I compare 1913 and 1912, although during 1913 we had but 3 months of the Democratic tariff law and 10 months of Democratic administration, but even that much Democracy is strikingly different in the results.

The bank clearances in 1912 were $4,175,000,000 greater than in 1913. On the last day of January, 1913, the United States Steel Co. had orders for 7,850,000 tons of steel. On January 1, 1914, it had orders for 4,250,000 tons; on the 1st day of June, 1914, it had orders for 2,675,000 tons. What could tell a more distressing story?

Steel is one of the great business barometers of the Nation. To-day more than one-third of the steel mills in the entire country are closed.

To-day the steel production in this country is 40 per cent below normal.

To-day there are $150,000,000 invested in idle steel mills.

To-day there are a million idle men in the iron, steel, and associated industries, representing a daily pay roll of more than $2,000,000.

To-day there are 275,000 miners in this country out of work who in Republican times were earning $750,000,000 annually.

To-day there are 242,000 idle freight cars, the largest number in the history of this Nation. When the Republican Party went out of power there were none.

To-day there are more than 500,000 railroad men out of employment that were receiving more than a million dollars per day in wages when Woodrow Wilson was inaugurated.

To-day the wage earners of this Nation are losing more than $5,000,000 every 24 hours. There are 2,000,000 idle men in this Nation to-day. We are facing the awful problem of unemployed everywhere.

Every day that the Democratic Party has been in power we have bought more from the foreigner and sold him less. We have lost more than half a million dollars each day in trade.

Every day the Nation has gone in debt half a million dollars.

Every day the number of unemployed has increased.

Every day mills and factories have closed.

The new Democratic tariff law immediately closed more than 60 per cent of all the shingle and lumber mills of the State of Washington, threw 8,000 men out of employment, and the mills are closed now. It immediately opened the mills of British Columbia that for months had been closed, and they have been running full capacity ever since, and 90 per cent of their output is sold in the United States; yet the prices have not been reduced. Agricultural products are being shipped to this country from Canada. Eighty carloads of potatoes were shipped to Detroit in one week. Coal is being shipped to Montana and other points. More than $2,000,000 in wages each month is now being taken from the American workman in this country and given to the Chinaman, the Japanese, and the Hindu in British Columbia.

During the first six months of the present Democratic tariff law 33,000,000 pounds of tin plate, valued at $1,034,000, was imported into this country—ten times as much as was brought into this country during the last six months of the Republican tariff law.

This Nation during the six months under a Democratic tariff used less tin plate than it had during the last six months under a Republican tariff. This means $1,000,000 in work and wages taken from the men who work in industries of this country and given to foreign labor. Thousands of tons of foreign steel manufactured by foreign cheap labor are going into San Francisco and Seattle. Thousands of tons of pig iron are coming into those ports from China, produced by labor paid from 6 to 8 cents per day.

Thousands of tons of cotton ties are going into the ports of Galveston, New Orleans, and Savannah to be used by the southern cotton planters.

During the last month of the Republican tariff law the Pittsburgh Steel Co. that manufactures cotton ties paid to its workmen $194,000 every two weeks. Now it pays to these workmen $14,000 every two weeks. The rest of this pay roll—$180,000 every two weeks—has been taken from them and given to the foreigner. More than 3,000 men that worked for this company are out of employment, wondering how they are going to earn their daily bread; and the above is a very fair sample of nearly all the mills and manufacturing establishments of the East. Only a few days ago the National Tube Co., of McKeesport, Pa., closed, throwing out of employment 2,500 men. Their work and their wages have been taken from them and given to the foreigner. Many of the factories are running on half time and many are closed.

During the first three months of 1914 under a Democratic tariff law our sale of cotton goods to the foreigner decreased $1,200,000. Our purchases during the same period increased $2,100,000, or a balance in favor of the foreigner of $3,300,000.

During the first three months of 1914 our imports of woolen and worsted goods were $7,664,370 under a Democratic law; during the first three months of 1913 they were $2,254,010 under a Republican tariff law. In three months after the Underwood law went upon the statute books Bradford, the great woolen and worsted center of England, increased its sale of these goods to the United States 280 per cent. Comparing this year with last year, during the month of March the amount sold abroad at the port of New York alone decreased $11,000,000. During the month of April at the same port it decreased $12,000,000 or a loss in our foreign markets of $23,000,000 in two months at this one port alone. Our imports increased for the same two months in the same port over $26,000,000.

Our tremendous loss of trade is shown more strikingly still when we remember that our imports of materials used in manufacturing has decreased in the first six months under the Underwood law more than $48,000,000. Each month since then the figures show a still greater loss.

During April, 1914, the last month for which figures are available, as compared with April, 1913, we bought from the foreigner $36,000,000 more and sold him $37,000,000 less, or a balance in favor of the foreigner in a single month under the Democratic law of $73,000,000. During the first six months under the Underwood law our foreign trade decreased more than $100,000,000 as compared with the first six months under the Payne law.

Our imports since the Underwood law has gone upon the statute books in six months has increased 37 per cent. Our exports during the same six months has decreased 31 per cent. This shows the result of sharpening our wits in competition with the cheap labor of foreign nations. All this increase of imports and decrease of exports means that much less work done at home. It is estimated that every million dollars increase in imports and every million dollars decrease in exports means a thousand idle men in this country. To pay for all this increase of imports we are sending abroad hundreds of millions of gold until we are upon the very verge of a panic, and would have had a panic but for the Treasury coming to the rescue with $500,000,000 of Government money.

Let us look upon the new tariff for a few moments as a revenue producer. I find that during the first six months of the new tariff law, as compared with the old tariff law, our revenue has decreased $25,000,000, notwithstanding the fact that more than $35,000,000 was collected from the income tax, not theretofore collected. During the same period the excess of expenditures over receipts has been $37,000,000. During the same period next prior thereto, under a Republican tariff, the excess of receipts over expenditures was $7,500,000. But a Democratic administration means an empty Treasury.

My Democratic friends, your policy is a failure; your Underwood tariff bill will not produce the revenue which you predicted upon its passage, but it has destroyed a great part of the American industries. It is the fallacy of free trade, and if continued will reduce the American Nation and its people to a level with the Asiatic nations and races.

Upon what theory do you justify the collection of $105,000,000 from the people of this Nation to be invested by the Government in railroads, ships, insurance, and banking? Is there any excuse for such a tax for such purposes? I am unable to discover any justification for such action. If you will confine the activities of the Government to its legitimate functions, you will have ample revenues for that purpose, without the necessity of further burdening the people with additional demands. I am not unmindful of the claim made by some of the Members of this House that the necessity for this proposed additional tax, called a war tax, is made necessary by reason of the war now existing in Europe, but it must be remembered that the American Nation is not a party to such war. We are at peace with the whole world, and I hope that we may forever remain so. Then, why call this a war tax? In 1898 we levied a similar tax, but that was at a time when we were at war with Spain. To-day we are at peace with the world. Why a war tax?

The facts are, Mr. Speaker, that immediately upon the Democratic Party coming into power it proceeded to enact the Underwood law and repeal the Payne tariff law; that the said Underwood tariff law has been found to be deficient in every respect in so far as it proposes to supply revenue for the running of the Government, and has proven, as we said that it would, disastrous to the business of the Nation. It next attempted to reform our banking and currency system and to tinker with finance and credit, and to such an alarming extent was this tinkering carried on that to avoid a panic Congress was requested to authorize the Secretary of the Treasury to issue $500,000,000 emergency currency, and the Treasurer of the United States, to avoid or prevent such panic, distributed to banking institutions throughout the United States large sums of the Government's money. The business of the Nation was much disturbed and harassed, confidence destroyed, and general distrust created, and now it is proposed to remedy the evils by the collection of a war tax from the people to the amount of $105,000,000.

How can anyone look upon these facts and figures without serious apprehensions? But such is the price which the people must pay to have the affairs of this Nation controlled by the Democratic Party. In conclusion, Mr. Speaker, I most solemnly protest against the enactment of the pending bill into law.

To Aid in Developing Denatured-Alcohol Production on the Farm, and its Use for Light, Heat, and Power and Other Industrial Purposes.

EXTENSION OF REMARKS

OF

HON. JOHN J. CASEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 24, 1914,

On the bill (H. R. 17855) to provide an industrial alcohol commission, under the direction of the Secretary of Agriculture, for the purpose of aiding the development of denatured-alcohol production by farm distilleries, and its uses for light, heat, and power and other industrial purposes.

Mr. CASEY. Mr. Speaker, four years ago this month one of Pennsylvania's distinguished sons addressed a gathering of over 5,000 people at Chestnut Hill, Philadelphia, on "Agricultural distilleries and industrial alcohol development." The Speaker was the Hon. William T. Creasy, master of the Pennsylvania State Grange, the great progressive farmers' organization of over 80,000 members of the Keystone State. It was an occasion, Mr. Speaker, on which this official leader and spokesman of the farmers of Pennsylvania was expected to present from the grange standpoint the attitude of the farmers on one of the fundamental farm questions, and to declare the grange policy in regard to that question. He chose for his subject, as I have said, "Agricultural distilleries and industrial alcohol development." The presentation of the farmers' side of the question and the agriculture importance of denatured-alcohol distilling on the farm was clear and conclusive.

That speech, Mr. Speaker, impressed me with the importance and significance of denatured alcohol as a farm proposition. After my election to Congress I questioned Mr. Creasy again on the subject. His explanation of the need of additional legislation on this question, his description of the possibilities of this product, his explanation of what small denatured-alcohol stills on the farm would mean to the farmer, as well as to the consumer, and the vast benefits the liquid fuel buying public would enjoy from this industry, still further impressed me with the importance of the subject, and I decided to use my best efforts to secure the needed changes in the law. This was accomplished by the passage of the amendments to the denatured-alcohol laws in the Underwood tariff act of October 3, 1913, except that at that time no provisions were made to assist in the development of the industry. This, I believe will be accomplished by the enactment into law of the bill introduced by me in the House on July 11, of which the following is a copy:

A bill (H. R. 17855) to provide an industrial alcohol commission, under the general direction of the Secretary of Agriculture, devoted to aiding in developing denatured-alcohol production in farm distilleries, and its use for light, heat, and power and other industrial purposes.

Be it enacted, etc., That there shall be established under the general direction of the Secretary of Agriculture an industrial alcohol commission, composed of a commissioner and assistants, for the following purposes:

First. To establish a bureau of information and educational publicity covering all questions relating to industrial alcohol.

Second. To conduct experimental and research work in the industrial uses of alcohol.

Third. To build and operate for demonstration purposes one or more industrial alcohol-distilling plants composed of small low-proof stills on farms in combination with a central redistilling denaturing plant, as provided for in the revised denatured alcohol laws of the act of October 3, 1913.

The commission shall be conducted under such regulations as the commissioner, with the approval of the Secretary of Agriculture, may prescribe. The commission shall be for a term of five years from the date of passage of this act.

SEC. 2. That the commissioner of industrial alcohol shall have been identified with industrial alcohol development, particularly in its relation to agriculture; that he shall be appointed by the President, with the advice and consent of the Senate, and shall hold office during the life of the commission, or for a term not exceeding five years, unless sooner removed by the President upon reasons to be communicated by him to the Senate, and he shall be entitled to a salary of $6,000 a year.

SEC. 3. That the Secretary of Agriculture, at the request of the commissioner, may appoint an assistant commissioner and such experts and clerks as may be necessary to discharge such duties as the commissioner shall direct.

SEC. 4. That no demonstration distillery or distillery group provided for in this act shall be built and operated in any community unless a part of the cost of the central plant is subscribed locally and a sufficient number of farmers within a radius of 5 miles of the proposed central distillery to insure the practical success of the demonstration agree to install on their farms small low-proof stills and operate them on such terms and conditions as the commissioner of industrial alcohol, with the approval of the Secretary of Agriculture, may prescribe.

SEC. 5. That for the purpose of carrying out the provisions of this act there is hereby appropriated, out of any money in the United States Treasury not otherwise appropriated, the sum of $40,000, or so much thereof as may be necessary.

SEC. 6. That this act shall take effect immediately on its passage.

Mr. Speaker, I have called particular attention to this speech of the master of the Pennsylvania State Grange because not only in Pennsylvania, but in Maine, our most northeasterly and in Washington our most northwesterly States, in the grain sections of the Mississippi Valley, and in the mountain sections of Colorado it was accepted by the farmers as the opening gun of the grange campaign to make the manufacture of industrial alcohol on the farm possible.

Mr. Speaker, one great step forward was taken on this important question when this Democratic Congress, during the last session, passed the Underwood tariff law of October 3, 1913, which contained an amendment to the denatured-alcohol laws of 1907. Before the passage of that amendment these laws were considered a farce by the farmers of the country. But the elimination of the "joker" in the act of 1907 is not considered sufficient. More than that is required to encourage the development of this industry. The farmers who are directly interested in this question desire an industrial alcohol commission, under the supervision of the Department of Agriculture. This commission shall conduct experimental and research work in the industrial uses of alcohol, and to demonstrate the practical value of the revised denatured-alcohol laws passed during the last session it shall build and operate one or more industrial distilling plants, composed of low-proof stills, on farms in combination with a central redistilling plant, as provided for in the revised law. It shall also conduct publicity campaigns, so that the farmers may be able to secure the information gathered by the commission and also get the full benefit of the demonstration plants.

The farmers do not mean, not for a minute, that the Government shall pay all of the expense of this undertaking. It is clearly specified in the bill I introduced in the House, which is known as H. R. 17855, that no demonstration distillery, or distillery group, provided for in the bill shall be built or operated in any community unless a part of the cost of the central plant is subscribed locally.

In this undertaking, as in every great movement directly requested by the American farmers, a spirit of fairness is displayed. This great body of producers move slowly, yet with precision. They have learned that cooperation is the best policy. They have watched the foreign farmer manufacture denatured alcohol and have noted the interest displayed in the undertaking by foreign governments.

They realize that this Government, particularly the present administration, is foremost in every movement that will aid in the development of American products, trade, and commerce, and believing in our methods of fair dealing, they, through their Representatives, have asked for additional laws, that the way may be securely opened to them, so that they may enjoy all the benefits now enjoyed by the farmers of foreign countries in the development of this very important part of a scientific system of agriculture. I do not believe we can afford to deny this request. I believe it is our duty to render every possible aid to the American farmers. To attempt to describe what these brave, tireless, and faithful producers did in time of war and in peace would be almost impossible, except to say that they have been the pioneers who cleared the lands in order to make our great cities possible.

FARMERS' COMMITTEE ON DENATURED ALCOHOL.

The question of denatured alcohol is considered by the farmers of the country to be of such importance to them and to the people of the country that they have selected a special committee, which is known as the committee on denatured alcohol. This committee is composed of C. B. Kegley, master of the Washington State Grange and president of the Conference of Progressive State Granges; W. T. Creasy, master of the Pennsylvania State Grange and chairman of the executive council of the Conference of Progressive State Granges; H. L. Loucks, of South Dakota, vice president of the Conference of Progressive State Granges and formerly national president of the Farmers' Alliance; H. F. Baker, president of the Farmers' Mutual Fire Insurance Co., of Michigan; W. C. Shaffer, of Quakertown, Pa., an expert on industrial alcohol and its relation to agriculture; and G. P. Hampton, Washington representative of a number of State granges and, as I understand, one of the pioneers in denatured-alcohol work in this country and one whose knowledge of the subject was obtained first-hand by a special trip to Europe for that purpose. These men, Mr. Speaker, are unanimous in their statements that this Congress, by its action during the last session in amending the denatured-alcohol laws of 1907, gave to this country as good a denatured-alcohol law as that of any other country, but that the additional legislation provided for in my bill is necessary to overcome the difficulties incident to the beginning of the industry.

The experts of the farmers' committee, Messrs. Hampton and Shaffer, were in Washington in an advisory capacity almost continuously during the time Congress had under consideration the amendment to the denatured-alcohol laws, which I have previously referred to, and I believe every Member of the Senate and the House and all others who took an active interest in that legislation have a high appreciation of the valuable assistance these experts gave to those who were active in shaping this legislation. Mr. Creasy made frequent trips to Washington to consult with them. I was frequently invited to be a party to their councils during the consideration of this important question, and it would not be amiss for me at this time to say that I have met no men who were more thorough masters of their subject or more devoted to the interests of those they represented than were these men, and I feel that it is an honor, Mr. Speaker, after enjoying such confidence and cooperative intimacy, that these men, the spokesmen of over 80,000 farmers of my State, should desire that I present their claims to Congress. And it shall be a pleasure for me to use my best efforts in endeavoring to impress upon my colleagues the absolute need of the legislation provided for in my bill in order to make workable and carry into effect the splendid denatured-alcohol laws now on the statute books, as amended during the last session of Congress.

The desire for this legislation is general among the farmers of the Nation. The newspaper comments, the letters, and telegrams which I have received from all sections of the country plainly indicate that many others besides the farmers are interested in this question. The American public, ever alert, is actively concerned.

I have been asked probably a hundred times why, after amending the law, does Congress delay in providing the means necessary to prove its workability?

It appears to me that further delay on the part of Congress in acting upon legislation of such public importance may likely create unrest among the farmers of the country.

Since my bill was introduced in the House the farmers of Washington have become very much interested in this question, and in response to their requests the Congressman at large from that State, Mr. FALCONER, has introduced a bill similar in scope to my bill, except that his bill calls for an appropriation of $100,000 instead of $40,000 as provided for in the bill I introduced.

The reports which I have received indicate that the sentiment in favor of this legislation is the same from Maine to California. The farmers have submitted their case to Congress, and, believing that merit will be found in their request for additional legislation covering the great field of industrial alcohol development, they believe that within a reasonable time Congress will grant their request. But should there be unjustified delay, an attempt to pass over without requisite consideration, it is only reasonable to expect that there will be dissatisfaction among these sturdy pioneers of the country.

They realize that powerful monopolies are vitally interested in preventing competition with kerosene and gasoline in supplying liquid fuel for light, heat, and power, and the same forces might try to prevent any competition with wood alcohol for solvents in the manufacturing arts.

It is admitted even by the most pessimistic that denatured alcohol is a better fuel than either gasoline or kerosene, a better solvent in the arts than wood alcohol, and the abundant supply which will be made possible by the passage of this act causes concern to these monopolies. The supply under the regulations I have outlined will be unlimited. It never can be monopolized.

Besides, the passage of the law will open a new source of revenue for the farmer. It will allow him to use nearly all his products now ruthlessly going to waste. There will be no impoverishment of the soil, but it will be a mighty factor in soil conservation, because farm experts have declared that the farmer can grow any amount of starch and sugar that may be wanted for any purpose in the world. And not a pound of it can take any fertility from the soil. All of these things considered, Mr. Speaker, convinces me that the opening of the small still on the farm under strict Government supervision will mark a new era in industrial alcohol development. It will lessen the toil; it will give the country the cheapest and the best of all liquid fuel for light, heat, and power; it will permit the profitable utilization of farm waste and otherwise unvaluable crops, and, above all, it will bring to the farmers of the country the natural method of preserving soil fertility. It shall always be a sure safeguard against glutted markets and injured crops.

Mr. Speaker, I desire to say the committee representing the farmers previously referred to have prepared a statement or memorial in support of the legislation provided for in my bill H. R. 17855, and, while not a member of the committee, it was my privilege to be consulted while the memorial was being prepared, and therefore I can claim with propriety to be unofficially a part of the committee. It expresses my views, and it most assuredly conveys the sentiments of the farmers of the Nation.

It should be read carefully by every Member of the House and Senate. In order that they may have every opportunity to do so, I shall request that it be printed as a House document. It is my conviction that no Member can read the memorial without realizing the justice of the farmers' expectation.

I have also received a number of very instructive and interesting communications bearing on this question. Two of these letters from Mr. Shaffer, of Pennsylvania, are, in my opinion, especially valuable. I believe a careful perusal of them will give a vivid description of the far-reaching effect such legislation will have upon the farmers, as well as the general public. I will insert them as a part of my remarks:

LETTER FROM W. C. SHAFFER.

QUAKERTOWN, PA., *July 15, 1914.*

HON. JOHN J. CASEY,

House of Representatives, Washington, D. C.

DEAR MR. CASEY: Yours received in due time, and in acknowledging same regret that I am obliged to send you this without the definite results I expected from the experience attained at distilleries now working or who have tried to work under the law for making denatured alcohol, which you were so good as to assist in bringing into existence.

From hearsay I am advised that these distilleries are meeting with some difficulties in getting such satisfactory results as were expected. This, however, as I understand, is not the fault of the regulations, which can be changed without further legislation, but it is due to antiquated and inadequate equipment and principally to the want of proper knowledge respecting the type of apparatus and of methods evolved in the practice derived from the experience of years through which the European farm distillers were obliged to pass before attaining their present success.

I will cite you, for illustration, an instance in which the apparatus employed was secondhand—that of a successful American whisky still. But this equipment, even with the addition of a doubler, could not, with the methods employed, turn out in one operation spirits of the required strength for denaturing. My informant states that the best that could be attained at this establishment was 145° alcobol (72½ per cent). The law requires it to be at least 180° (90 per cent) for all purposes, except that rum may be denatured for tobacco at 150° (75 per cent). For industrial purposes and economical distribution denatured alcohol of less than 90 per cent would have little market value, because wanting in heat units and not being a sufficiently good solvent for its principal uses. Commercial alcohol is of 94 per cent and 95 per cent (188°–190°). For this reason I can see no benefit in changing this feature of the law. In fact, I believe the new law, in so far as it goes, is more liberal than the laws of any country where alcohol is treated as a source of revenue, and that it is broad enough to meet all the requirements of any farmer desiring to install a still for denatured alcohol, because of its provision for central stills to finish the product at the required strength.

PROMOTING SCHEMES.

All stills recently erected in the first Pennsylvania and the first New Jersey districts are, I am informed by revenue officials, equipped for making alcohol from molasses only, and depend on imported raw material. These stills are represented to be farm propositions, but none of them has thus far been equipped for handling domestic farm produce, such as potatoes, fruits, etc., in making alcohol for denaturing. So, in my opinion, neither of these distilleries can be classed as a farm proposition, such as we had in mind when advocating the passage of the law. It would seem that every one (of these) thus far erected has been launched as a shrewd scheme to enrich the promoters, or else as purely commercial enterprises, and without considering the agricultural end at all, and that neither one of these promoting classes provides the stills with facilities to render them an effective agency in conserving waste, low-grade, or damaged farm produce, nor as a means of furnishing a cheaper stock food, or of providing an additional market for domestic farm produce. The Quakertown still is now in the hands of the courts, and if the stockholding farmers succeed in securing this property—which their money paid for—they propose to make it an up-to-date farm and central still, such as was contemplated in the passing of the act.

BARRIERS TO PROGRESS.

Lacking financial aid and means of disseminating that definite and comprehensive knowledge which the European Governments so freely bestow on those of their subjects considering the installation of farm stills, it becomes very difficult to introduce this industry on American farms, and under present conditions the aid of promoters seems to be indispensable. But stock promoters as a class always demand and get their full share (generally the biggest) before the enterprise is in operation. They seldom risk money of their own. If when they see no further chances of personal profits before realizing on or disposing of their individual stock holdings, they throw the uncompleted plant into litigation or retain menacing control. But eventually an uncompleted, unsuccessful, or inoperative plant is placed into the hands of inexperienced and frequently plundered stockholders, while the knowledge that such a plant remains idle and unproductive becomes widely spread and scares others about to engage in the business from entering into arrangements to build these stills, and thus delay the introduction of that up-to-date farming which this industry would hasten.

Yet another retarding influence the farmer meets in investigating the use of the still as an agricultural business proposition is the difficulty he encounters in securing reliable and accurate information concerning the cost of apparatus, installation, and equipment. He can hardly obtain an address where suitable apparatus can be procured. After many inquiries, lasting over seven years and in all parts of the country, I have yet to find in America a supply house or manufacturer where efficient apparatus, such as is used on European farms, can be purchased.

It is true that several coppersmiths were willing to make such machinery, but stated that, not being familiar with modern European practice, they could not guarantee successful operation unless working drawings and other data was furnished, and could give no figures as to cost of apparatus, nor for operation.

Suitable apparatus is hard to select from European catalogues (printed in a foreign language), and are all wanting in such description of the details and operation that a novice needs to acquire, a knowledge sufficient to enable him to make an intelligent estimate of the requirements. Nor do they contain a comprehensive table, giving the running expenses, amount of water required, and other necessary details in such a manner that from a study of their tables calculations can be made from their figures, whereby the ordinary American inquirer would be able to figure out for himself the necessary data to meet the conditions or circumstances prevailing in any locality economically.

Before the big concerns and the trust absorbed and monopolized the business many manufacturers of stills were capable of giving the information and furnishing all the required data. But the coppersmiths not in the combination were so hampered with Government restrictions and red tape imposed in the supervision of the whisky business that even now, with restrictions removed by law, the memory of past experience with revenue authorities causes them to hesitate and hold back, and they seem to have lost all interest or knowledge in the art of making apparatus for distilling industrial alcohol corresponding to that so common in Europe.

But perhaps the greatest drawback in the way of the rapid introduction of the still on American farms is the inertness or want of interest (I am not yet quite ready to call it ignorance or incompetence) upon the part of those charged with the duty of instructing and replying to inquiries respecting farm distilleries. Farmers considering the advantage of erecting farm stills, knowing that great sums of money have been spent by the Department of Agriculture in investigating the industry, and that the department has made many experiments, published a number of bulletins, and other printed matter on the subject, think that the department, with its trained observers and experts, has the best opportunity to acquire the most complete fund of accurate and comprehensive knowledge of the art obtainable. They therefore depend upon it to furnish them the information desired or required. But upon inquiry at that source the farmer receives bulletins, reports, and other matter, which, while interesting, absolutely ignore the principal benefits of and the reason for establishing the farm still as seen within the horizon of the successful up-to-date European agriculturist.

The department in conducting its experiments (of doubtful value for purpose intended) employed the regular American machinery and methods employed in making whisky under the supervision of regular American distillers, apparently rejecting the consideration of the modern methods in vogue on a European farm. Their experiments resulted in no startling advance in the process of making an American intoxicant, and as the by-product of the still as a stock food was not considered, nor the influence of alcoholic fermentation on the life, propagation, and distribution of injurious parasitic growth and insect pests, they resulted in no advance in the production of a cheap stock food, made no new markets for farm produce, in no wise helped to utilize the waste, low grade, or damaged products of the farm, nor did they in any way help to conserve or increase the fertile elements of the soil. In no way did they show how industrial distilleries on the farm would help the land to increase its yield, which is year by year diminishing through our present methods of farming. If they had commenced where the European farm distiller left off, or if they had only duplicated the present European practice, instead of sticking to the old plan of making a good potable beverage, and if they had fed cattle on the slops and determined the value of a balanced ration made from distillery residue and ascertained the relative value of fresh as compared to dry slops as a ration, then the American people might have had some adequate return for the liberal sums spent in the investigations. We might by this time have arrived at the balance of live stock to be economically maintained on the farm to increase and insure the continued fertility of the land without spending vast sums for artificial fertilizers and thus double the yield per acre on the average, as has been done in parts of Europe, and at the same time free ourselves from the necessity of depending on far distant lands for the meat we eat and the grain we consume, the supply of which in case of war can only be assured by the overwhelming strength of our Navy. Had they done this we would have been relieved of the necessity of annually sending large sums of money abroad for potash and nitrogenous salts to be used as an artificial fertilizer, and the annual recurrence of insect and other injurious pests would be gradually wiped out, while the necessity of spending large amounts of money to protect the growing crops from their ravages would be greatly diminished if not entirely done away with.

How far the Revenue Department restrictions will affect the industry is, in my opinion, yet to be determined. It is true that the officials, confronted with an entirely new condition, are not yet familiar with the requirements, nor can they with their present knowledge render much assistance in interpreting the regulations, which are not easily understood in their present form. The officers, being compelled to learn the ramifications of the income tax, have not had time to post themselves on the farm-distilling end. But of this I feel sure that the commissioner is in favor of the cause, and that he will do all that he can to further it consistent with his duty in protecting the principal source of revenue (tax on distilled spirits), and I believe the law as it is restricts any future commissioner from placing insurmountable obstructions in the path of the forward march of the industry.

FEDERAL COMMISSION.

From the above it would seem that there are many important factors tending to retard this industry, and it is my opinion that under present conditions Government help is required if we expect to see the rapid introduction of the still on American farms. In view of the past experience with the Agricultural Department, I do not think an appropriation to the department would be of any great help to the cause unless a new bureau were formed and run under the supervision of a true friend of the new industry. The fact is, it looks to me that this department has already too many ramifications and covers so many activities that I should hesistate in advising that any of the existing bureaus be burdened with more duties. I rather favor the appointment of a special commission, composed of friends of the cause, to investigate and recommend the best means of distributing the knowledge required to promote this industry, said commission to be empowered to call upon and receive from the different departments and experiment stations facilities, service, and means to experiment, all independent of the control of any other department or bureau. I was in high hope that several demonstration farm distilleries would by this time be in successful operation, but without Congress establishes the commission and provides the necessary assistance, it will be a vain hope. And now, warmly appreciating your good work, and with best wishes and always for the cause, I am, sincerely,

Yours to command, W. C. SHAFFER.

SECOND LETTER OF W. C. SHAFFER.

QUAKERTOWN, PA., *July 25, 1914.*

Hon. JOHN J. CASEY,
House of Representatives, Washington, D. C.

DEAR MR. CASEY: I am forwarding this as a supplement to mine of the 15th, and hope the matter presented herein may prove of interest, if not lend aid in clearing away the difficulties now obstructing the installation of denatured alcohol stills on the farms of our country.

A number of persons have been abroad to study the industry, with a view of its introduction here, and interesting reports have been made as to the great benefits derived by farmers and the public at large where farm stills have been in operation. But the investigations upon which these reports were based were mainly, if not altogether, conducted in summer. The stills being closed during that season would prevent such investigators witnessing the various activities and methods of conducting the industry while in actual operation or to note the paramount importance attached to the successive steps taken in the comprehensive system of utilizing the residue of the still to benefit the land and stimulate the raising of live stock as an essential part of farm distilling.

A detailed knowledge of these practices would have enabled these investigators to acquire that enlightened comprehension of European farm practice and methods necessary to produce like results here. But the reports, in so far as being an aid to the farmer intending to install such a still is concerned, are of little value and are misleading in reference to the most important value and function of a still for making denatured alcohol in the farm industry.

Literature freely distributed by our Department of Agriculture concerning agricultural stills and farm practices which should govern their operation have not accomplished the desired end, if the purpose of their issue was to instruct the farmers how to obtain the equipment and to practice successful methods in the employment of this the most effective of all agencies for fructifying his soil, increasing his yield per acre, utilizing his waste and unmarketable harvestings, to reduce his expense for artificial fertilizers, and to insure profitable return in exchange for the money expended in installing a still.

With the exception of a few transient passages, all matter printed in the English language I examined, in the expectation of securing data or other matter illustrating the advantages and benefits a farmer might derive from the operation of a still, absolutely ignored the fundamental and only economic reasons justifying a farmer in erecting a still for making denatured alcohol, while volumes in English easily obtained treated upon the alcohol itself, its uses, and the raw materials from which it may be produced. All such may be interesting and stimulate further inquiry, but such documents are of little, if of any, value to furnish the real particulars or data necessary to sucessfully compute how to meet varying conditions and other requirements, a knowledge of which is essential preliminary to the erection of a denatured-alcohol still intelligently.

THE FARMER MUST HAVE THE FACTS.

The farmer wants to know what present or eventual gain or advantage he may expect to secure before going to the expense of installing apparatus for making denatured alcohol from the limited supply of raw material economically available in his own selected locality, also where and how to procure the required equipment or to obtain satisfactory advice, information, and assistance whenever required for successful operation or any other cause. He desires access to comprehensive tables or other pertinent matter which will serve as a standard for close approximation, and which will enable him to intelligently calculate and determine for himself the cost of equipment, operation, water and fuel supply, capacity, and other particulars which are essential factors necessary to consider in the formation of estimates covering expenses, profits, and other advantages to be expected through the operation of such a still.

I know of no place in America to-day prepared or equipped to furnish detailed or definite information or other matter of the character required for the erection or operation of a small farm still for making denatured alcohol profitably.

Therefore the establishment of a common central or national bureau with facilities for analysis and experiment, and for the collection and distribution of data, advice, and other particulars of interest to those contemplating the erection of a farm still is, in my opinion, a prerequisite to the general or speedy introduction of the same in this country. Such a bureau should be a Government bureau, independent of department control. At all events, it should follow the successful methods and practice of the great German distilleries bureau whenever conditions justify or warrant.

The Agricultural Department experiments on this line, from which so much was expected, and the results from which were so anxiously awaited for years, although conducted on a small scale, followed the methods and were influenced by the economic factors that govern the practice in the operation of large stills and concentrated units for the profitable manufacture of potable spirits from high-grade raw material, whereas the farmer's interests require and his profits are necessarily derived from the employment of small units easily operated in widely scattered localities from low grade or inexpensive material.

If our Agricultural Department, like the European departments, had studied this industry as purely agricultural, and not as a manufacturing one, it must soon have recognized the tremendous influence and power for good the operation of small and scattered stills would, as in Europe, exert upon the welfare of the Nation. It would have conducted its experiments and studies after the approved and superior methods which have resulted in such great material benefit to the nations practicing them. Before the department began its investigations Europe was already enjoying the beneficent rewards resulting from the influence of the farm still in stimulating its agricultural elements to the profitable production of crops and live stock, as shown by increasing the average yield per acre, and the great annual addition to the number of farm animals maintained for human consumption.

The department pursuing its investigations should have rejected the unsuitable American practices and machinery whose principal efficiency lies in the production of whiskey in large distilleries. Or if it were unwilling to follow German practice it should have began where Germany left off and studied the subject with a view of promoting agriculture and its allied industries (treating the alcohol as a profitable by-product) and widening its field of inquiry so as to include the final disposition of the slops, and investigated the combined and ultimate effect of the different steps in the farm distilling industry upon the

general welfare, and particularly the influence it would exert upon the individual farmer in conserving better farming, the right proportion of stock, and the fertile value of his lands.

The soil is our most valuable asset, and its preservation and improvement for successful cultivation or other profitable agricultural use is the principal if not the only good and legitimate reason for the department's existence, and the only excuse for its vast and ever-increasing expenditures.

INCREASED YIELD OF CROPS.

Quoting the Agricultural Yearbook and other Government publications, it is shown that in 1889 there was appropriated for the department $1,716,010, and that the total gross value of farm products for the year reached the sum of $2,460,107,454, or $1,433.62 for every dollar expended; while in 1912 the appropriation had amounted to $16,900,016, or nine and eighty-four one-hundredths times as much as in 1889, and the gross value of production had not increased proportionally, and was only $9,342,790,149, or $552.83 for every dollar expended, and but three and seventy-nine one-hundredths times the production of 1889. If the same ratio of expense to production would have prevailed in both years, the yield of 1912 would have reached the enormous value of $24,228,200,937, or $14,885,401,788 more than it did in fact.

In Germany with its naturally poorer soil and climate, the average production of wheat per acre for the 10 years 1890–1899 was 24.5 bushels per acre, and for the following 10 years 1900–1909 the average had grown to 28.9 bushels per acre, an average increase in 10 years of 4.4 bushels per acre. In the United States for the first 10 years quoted, 1890–1899, the average yield was 13.2 bushels per acre, and the average grown from 1900 to 1909 was 14.1 bushels per acre, an increase of nine-tenths of a bushel. Compare this to the German increase of 4.4 bushels of wheat per acre.

In Germany the increased yield for oats for the same period was 10.7 bushels; in the United States, 3.2 bushels. This shows the German increase to be 7.5 bushels more per acre than our own.

In Germany the increase for barley for the same area and period was 5.9 bushels; in the United States, 2.1 bushels. This gives Germany an increase of 3.8 bushels more than the United States.

Rye in Germany showed an increase in same area and period of 4.7 bushels; in the United States, 1.8 bushels. An increase for Germany of 2.9 bushels more per acre than the United States.

The average yield of potatoes per acre in Germany for the 10 years 1900 to 1909 was 200 bushels. The average for the United States, same area and period, was 91.4 bushels, or a German average production covering that period of 108.6 bushels more than that of the United States—more than twice as much. The acreage yield in Germany had increased in 1913 to an average of 235.8 bushels, whereas in the United States the acreage yield had fallen to an average of 90.4 bushels, or 1 bushel less than the 10-year average.

Considering these figures and those in the tables (printed at end of letter) in connection with the history of farm stills in this country, I, who have devoted time and money in active missionary work toward promoting their introduction, am somewhat skeptical as to the advisability of placing the future of the industry into the uncontrolled hands of the same persons who directly supervised the activities of the department in handling the farm or agricultural stills heretofore, and who, while provided with abundant means and facilities for comprehensive investigation in laboratory and field, enjoying the privilege of selecting their own skilled experts to work out their own ideas, had not during the seven years of time elapsed caused the erection or operation of a single farm still for denatured alcohol on an American farm. Nor has there been evolved from all their activities any satisfactory or sufficient reason why this industry—which is more important to the welfare of the Nation and its agricultural interests than all the whisky industries combined—should languish as it does here now, or why it should flourish as elsewhere, even though it may be in countries where it labors under the disadvantages of smaller supply and more expensive raw material.

In the department's literature I have failed to find any explanation as to why the agricultural still in European countries had become many times more widely employed and produced many more times the quantity of alcoholic spirits—approximately four times—than all the stills for making potable alcohol exclusively combined. Nor have they furnished the reason why the European Governments felt justified in paying bounties, or the equivalent, for the alcohol produced in these farm stills to foster the industry, and to all who were complying with certain requirements respecting capacity and disposition of the slops, and yet denied the same reward to all other distilleries.

For some reason to me unknown the early interest in this industry manifested by the department withered and died or became dormant, while the American people are yet awaiting the long-expected benefits to be derived from the denatured-alcohol farm still, and are wondering how it is that the German farmer, with naturally inferior soil and poorer climate, manages to harvest, on an average, such enormous crops, acre for acre, with greater profits, as compared to our own meager yield for the same acreages.

For some time past European Governments have recognized the paramount importance of profitable agriculture, and the perpetual conservation of the fertile elements of the soil to their national welfare and existance, and were also convinced that there was but one way to bring about such a desirable consummation, and that was to offer persuasive inducements to the individual cultivators or community of farmers to practice the most approved modern methods in which the alcohol still and disposition of the slops became the most important factor.

For awhile it was feared that the introduction of many small farm stills might interfere with the thorough collection of revenues derived from the manufacture of potable spirits, but it soon became apparent that the universal extension of the industry would justify any outlay or risk they might be able to make or take, because of the much larger returns received and the general benefits derived from increased yields of flocks and fields, and the creation of many new industries and enterprises following the introduction of this great conserving industry and one which was exerting unexpected restraint on monopoly, and uncontrollable influence in freeing these nations and their people from their dependence upon foreign countries, or the intolerable exactions of trusts for liquid fuel, food, and expensive fertilizers.

Our necessities for the farm still is every year becoming more urgent and acute, on account of frequent failing of crops or forage over large areas and insufficient meat supply. We have already been obliged to stretch forth our hands across the Torrid to South Temperate Zones to snatch from British colonies, Argentina, and other countries the means to allay the pangs of hunger.

FARM-LABOR BALANCE WHEEL.

Our present methods of farming provide no balance for labor in profitable employment during all seasons of the year, which is a great impelling cause of flow of rural labor from country to city. An adequate supply of farm labor is consequently not always available, or within easy reach at the most critical time, and the farmer is obliged to spend precious time, as well as money, in scouring the country to secure transient, and often inefficient or worthless, help to harvest the crops—the fruits of his year of toil. The farm still and its allied industries would act as a balance wheel to fill up the gaps in the constant employment of rural activities. The two industries are complementary—farming being mainly a summer and distilling a winter occupation.

After a full consideration of all the elements affecting the present condition of the industry in the United States I do not think that one would be justified in stating that it is making that progress the Nation's welfare and agricultural interests are warranted in demanding, if we consider the awful possibility of war, with its blockades, in connection with our greatly increasing consumption as compared to our annual production and the great additional drain which will of necessity be imposed upon it for food by a large and probably increasing emigration, remembering that even now the ratio for increase in home consumption is greater than that of our production of food materials, a conviction is forced upon us that we have at last arrived at the point where the future source of food supply must be given deliberate consideration, lest we be menaced with the sufferings, destruction, or disturbances which always accompany a scarcity of food. Should we have a war in a year of short or insufficient supply the prices of food necessary to maintain life would be lifted and soar way beyond the reach of great masses of our people to the detriment of all. As a Nation we should be in perpetual condition to use every means that can be made available in times of peace to help our people in times of war or famine and to perpetuate the general welfare regardless of any large interests or big business combinations whose monetary or other interests may be affected adversely.

FOLLY FOR CONGRESS TO DELAY ACTION.

To hasten progress and speed up the installation of farm stills upon our farms and orchards I would suggest that a Government commission be appointed composed of persons favorably identified with their introduction in the past and friends of the farm—not the manufacturers—end of the industry, whose duty it should be to investigate and direct the character of experiment and research necessary to procure, publish, and furnish the required data and information for the farmer's use and instruction. Give our farmers reliable data, and under prevailing conditions, with the present economical pressure, and the assurance that the Government will render every aid to those following the industry consistent with its just powers, and the American farmer will be as quick to make use of this great industry for his own betterment as the farmer of any other nation. No emergency legislation now pending in Congress is more important and it is folly for Congress to delay action.

In the meantime please accept my thanks for your interest and valuable assistance to the great cause. If I can be of any service to you, command and I will render good measure if possible. Finally, with best wishes for your success and happiness, I am,

Sincerely, your friend,

W. C. SHAFFER.

TABLES REFERRED TO IN MR. SHAFFER'S LETTER.

Table showing production of principal farm products of the United States, 1913, as compared to 1912 and other years as given.

[Compiled from Yearbook, 1913, Department of Agriculture.]

Crop of—	Yield of 1912.	Yield of 1913.	Increase, 1913.	Decrease, 1913.	Farm value of shortage, Dec. 1, 1913.
	Bushels.	*Bushels.*	*Bushels.*	*Bushels.*	
Corn	3,124,746,000	2,446,988,000	.....	677,758,000	$468,330,778
Wheat	730,267,000	763,380,000	33,113,000	.....	.....
Oats	1,418,337,000	1,121,768,000	.....	296,569,000	116,255,048
Barley	223,824,000	178,189,000	.....	45,635,000	24,505,995
Rye	35,644,000	41,389,000	5,745,000	.....	.....
Buckwheat	19,249,000	13,833,000	.....	5,416,000	4,089,080
Potatoes	420,647,000	331,525,000	.....	89,122,000	61,226,814
Sweet potatoes	55,479,000	59,057,000	3,578,000	.....	.....
Flaxseed	28,073,000	17,853,000	.....	10,220,000	12,253,780
Rice	26,054,000	25,744,000	690,000	.....	.....
Cotton	[1] 13,703,000	[1] 14,116,000	[1] 413,000	.....	.....
Tobacco	[2] 962,855,000	[2] 953,734,000	.....	[2] 9,121,000	1,167,488
Hay	[3] 72,691,000	[3] 64,116,000	.....	[3] 8,575,000	106,587,250

[1] Bales. [2] Pounds. [3] Tons.

Farm animals on farms in the United States Jan. 1, 1914, compared to years given.

	Year.	Head.	Head Jan. 1, 1914.	Increase head.	Decrease head.	At price Jan. 1, 1914.
Horses	1910	21,040,000	20,962,000	.....	78,000	$8,526,960
Mules	1913	4,386,000	4,449,000	63,000	.....	.....
Milch cows	1910	21,801,000	20,737,000	.....	1,064,000	57,392,160
Other cattle	1907	51,566,000	35,855,000	.....	15,711,000	489,083,430
Sheep	1903	63,965,000	49,719,000	.....	14,246,000	57,553,840
Swine	1911	65,620,000	58,933,000	.....	6,687,000	69,544,800

Farm value of shortages: Crops, December 1, 1913, $794,416,233; farm animals, January 1, 1914, $682,101,190; total diminished value of production, $1,476,517,423.

If the same amount and kind of material as shown in the next to last column in the table above representing decrease of production in 1913 on the farms of the United States were to be transported by rail, it would furnish carloads as follows:

For the grain, seed, and potatoes, 1,124,720 carloads of 1,000 bushels capacity each; for the hay, 577,666 carloads of 15 tons each; for the

tobacco, 304 carloads of 30,000 pounds each; for the horses and cattle, 674,120 carloads of 25 head each; for the sheep and swine, 209,330 carloads of 100 head each; making a total of 2,586,140 carloads.

Average yield in bushels per acre of different crops grown in the countries named, in 1913.

Crop of—	United States.	Germany.	United Kingdom.	Austria.	France.	Excess of German yield over United States in 1913.

TO SAVE THE PROFITS OF AGRICULTURE.

Mr. Speaker, the evidence I have submitted herein and in the farmers' memorial which I have inserted as part of my remarks and which I have asked to be printed as a House document, demonstrates conclusively the great national importance of the legislation provided for in my bill. Its importance to the consumer in assisting to reduce the high cost of living; to the manufacturer in furnishing a cheap, indispensable solvent and raw material in the industrial arts; to those using power in furnishing an unlimited supply of the best of all liquid fuels; and to agriculture in soil conservation, in providing profitable use for otherwise unsalable crops, can not be overestimated, and I earnestly hope that Congress will see the importance of passing this bill at this session.

Our consul general in Germany has testified in his official reports that the denatured-alcohol laws in Germany were enacted to "save the waning profits of agriculture," and that "for every reichsmark of cost the German Empire and its people had profited tenfold by the stimulus which had been given to agriculture and the industrial arts." As a Nation, Mr. Speaker, we are 50 years behind Europe in the development of this great benefit to agriculture, and this Congress, true to its reputation as a people's Congress, loyal to the best interest of agriculture, should right the wrong of this delay by the speedy enactment of this legislation. This, Mr. Speaker, is the reasonable demand and expectation of the farmers of my State and of the Nation.

DENATURED ALCOHOL PRODUCTION ON THE FARM.

Memorial presenting the farmers' position in support of an industrial alcohol commission as provided for in a bill (H. R. 17855) introduced in the House of Representatives by Hon. JOHN J. CASEY, of Pennsylvania, July 11, 1914, by C. B. Kegley, master of Washington State Grange; William J. Creasy, master Pennsylvania State Grange; H. F. Baker, president Farmers' Mutual Fire Insurance Co., of Michigan; H. L. Loucks, Watertown, S. Dak., vice president conference of Progressive State Grange; W. C. Shaffer, Quakertown, Pa.; and George P. Hampton, of New York, Washington representative of Pennsylvania, Kentucky, South Dakota, Nebraska, Colorado, Idaho, Oregon, and Washington State Granges.

The object of the proposed legislation is to give the necessary aid to demonstrate the practical value of the amendments to the denatured-alcohol laws of the act of October 3, 1913.

The original denatured-alcohol law of June 7, 1906, was intended by Congress, as a review of the committee hearings and speeches in Congress will show, to be of special benefit to agriculture. But as the Bureau of Manufactures of the Department of Commerce and Labor, in Special Consular Reports, No. 51, states:

"Contrary to general expectation, it did nothing toward facilitating manufacture on a small scale in such agricultural distilleries as are operated very generally in Europe. However, in the following year an amendatory act was passed, approved March 2, 1907, which was intended in part to remedy this defect in the original law."

The evidence of the CONGRESSIONAL RECORD and other official documents is equally conclusive that the amendment of 1907 was claimed by Congress to have been enacted for the benefit of agriculture. Farmers generally so accepted it, and their confidence that at last they had been given a square deal in the matter was strengthened, first, by an appropriation by Congress to provide for pioneer demonstration distilleries and educational and research work; and, second, by the actual installation of an experimental plant and the opening of a school of instruction by the Agricultural Department.

That was seven years ago, and the farmer has had absolutely no benefit from it. Either the law was defective and the efforts to make farm denatured-alcohol distilling successful not sincere or the advantages claimed for industrial alcohol distilling on the farm did not exist or were grossly exaggerated.

A review of the facts and evidence shows:

1. That powerful monopolies are vitally interested in preventing any competition with kerosene and gasoline in supplying the liquid fuel demand for light, heat, and power, or any competition with wood alcohol in supplying the demand for solvents in the manufacturing arts.

2. That denatured alcohol is a better liquid fuel than either kerosene or gasoline and a better solvent in the arts than wood alcohol; that an abundant supply of denatured alcohol is the one thing these monopolies have to fear, and that the supply of denatured alcohol, if farm industrial distilleries are allowed to develop, is not only unlimited but can not be monopolized.

The development of industrial alcohol distilling on the farm is a menace to the oil and wood-alcohol monopolies, and, considering the enormous amounts of the monopoly profits at stake, it is natural to assume that every effort has been made and will continue to be made to prevent such development.

An examination of the amendatory act of March 2, 1907, will show that it was not only a "gold brick" for the farmers, but that it was drafted with the plain intent of benefiting the large distillers.

Section 1 was ostensibly for the benefit of chemical manufacturers, but in a final "Provided" its real intent is shown to have been to give the Tobacco Trust special advantages in securing tax-free rum for flavoring chewing tobacco.

Section 2 provides for the establishment of central denaturing bonded warehouses, which the development of the past seven years shows have been of immense serviceability to the industrial alcohol trust.

Section 3 provides for the simplification of the regulations for manufacturing in large distilleries and for the shipment of the alcohol in tank cars, in bond, to any denaturing warehouse. The development of the past seven years shows that this also has been of great benefit to the industrial alcohol trust.

Section 4 is the farmers' "gold-brick" section. Its purpose would seem to have been to fool the farmers into helping to get the other sections enacted, in the belief that they were getting something of real value. But, intentionally or unintentionally, they were deceived, and it remained for this Congress at its first session to amend the law so that it would be of real worth to the farmers.

THE PLAN OF FARM DISTILLING PROVIDED FOR BY THE NEW LAW.

While it had become quite generally known that the farm distillery provisions of the denatured-alcohol laws were defective and actually operated to prevent the manufacture of industrial alcohol on the farm, it was not generally understood what the defects were or what were the essentials of a practical plan for farm distilling. The defects in the old law and the far-reaching industrial importance of the new which entirely removes them will be better understood by noting the essential features of a practical plan for operating farm distilleries, viz:

1. Small, low-proof stills on the farms of varying capacity to meet the needs of each farm under the lock and seal of the Internal-Revenue Service.

2. Central plants of not less than 300 gallons daily capacity, to which the low-proof spirits from the small stills of the surrounding farms can be sent to be redistilled and denatured. In addition to redistilling the low-proof spirits received from the small-farm stills, these central plants, to insure their commercial success, must have the right to make alcohol direct from farm products.

3. Tank wagons for the transferring in bond of the low-proof spirits of the small-farm stills to the central redistilling plant. Denaturing is impracticable until after redistillation in the central still, and the method adopted for distilling in the small-farm stills and transferring their spirits direct to the redistilling plant must be such as to insure the internal-revenue control necessary to guard against fraud.

4. The manufacture of industrial alcohol from the waste products of the farm is impracticable unless such manufacture is entirely free from many of the rigid regulations that rightly govern the production of tax-paid spirits. The taxes on distilling apparatus would be burdensome on the small industrial farm still, and the tax on the manufacture of stills, which even the repairer of a single still would have to pay, would make the cost of the repair of the farm still excessive. Farm distilling must be made as inexpensive as possible to make it, and the farmer must be free to operate or to discontinue operation when he chooses. Therefore the regulations rigidly defining the material to be used, the percentage of alcohol that must be derived there-

from, and the time of operation, can not apply to this class of distilleries without effectually blocking their development.

These essentials were all barred under the old law, but the new law removes all restrictions, and the new regulations prescribed by the Commissioner of Internal Revenue are as broad and liberal as this new act of Congress. So far as the law is concerned, the way is now open for practical development.

FEDERAL DEMONSTRATION.

But to leave the law as it stands, without providing means to demonstrate its practical value, is to convince the farmer that again, as it is now being asserted, he has been "gold-bricked" and fooled with more legislation of no benefit to him.

Wherever the farmer has shown a disposition to take hold to operate under the new law, he has found it impossible to get reliable information and has met such a mass of skepticism and doubt that he has been discouraged from taking the initiative. The argument is unanswerable—that if the leaders in Congress had faith that the law would do what is claimed for it they would have provided for the necessary demonstration and educational work.

Other farmers who appreciate the practical value of the new law realize that in the face of powerful monopoly opposition and a general feeling of doubt they are powerless to do much until the pioneer demonstration work has shown conclusively that the law is all right, and that the practical commercial possibilities are all that are claimed for them. They look to the Government to do this and to Congress to provide the

EFFECT ON GASOLINE INTERESTS.

Prior to the passage of the new law the news items and press dispatches, telling of the scarcity of gasoline and the steady advance in price and deterioration in quality, were frequent. But now that the law makes farm operation practical and the abundant supply of denatured alcohol liquid fuel an early possibility, thus menacing the liquid-fuel monopoly, the press dispatches tell a different story. The duplication of articles (see appendix) in newspapers in all parts of the country, to the effect that the "gasoline output is increasing yearly" and that "there is no need to worry over a substitute for motive power for motors," shows a common origin and that a general publicity bureau is at work.

In direct contradiction to this new publicity policy of the gasoline interests is the statement of Joseph A. Anglada, chairman of the metropolitan section of the Society of Automobile Engineers. The following quotations are taken from an address delivered by him before the automobile school of the West Side Young Men's Christian Association of New York on May 20 last:

"The subject of motor car fuels of late has been receiving a great deal of attention on the part of the engineering profession and, to some extent, by the public. In fact, the unsatisfactory quality of 'gas' now available has become a topic of almost everyday discussion. Prof. Magruder, of the Ohio State University, stated a few months ago that if all the gasoline engines in the country now in use were to run at their rated horsepower for 10 hours a day, the known gasoline supply would last about 30 days. In other words, if the gasoline engines in use were run at their maximum horsepower, the amount of gasoline available would be sufficient only to run them one hour a day for about a year.

"This puts to rest the popular impression that the high price and low grade of present-day gasoline is due mainly to trade combinations and artificial restrictions of output. At various meetings of engineering societies held during the past few years at which representatives of fuel producers were present, it was authoritatively demonstrated that the grade of fuel obtainable from crude petroleum must necessarily decrease in quality and increase in price, due to the restricted amount of available crude oil suitable for the production of gasoline. It must also be considered that the increase in the number of engines using gasoline means an increase in the quantity of lubricating oil necessary for the operation not only of these engines but other machines, contrivances, and devices used for industrial and household purposes. Differently expressed, the production of lubricating oil from crude oil has also served to reduce the quantity of crude material for the manufacture of gasoline.

"Experiments conducted by the United States Government, as well as foreign Governments and independent laboratories, are conclusive in establishing the fact that any gasoline or kerosene engine on the American market can operate with alcohol as a fuel without any structural change whatsoever.

"An engine designed for gasoline or kerosene will give about 10 per cent more power when operated on alcohol, provided the necessary modifications are made. An engine specially built for alcohol will give from 20 to 30 per cent more power than is obtainable from a regular gasoline engine of the same size. Because of the increased efficiency obtainable from a standard size of engine using alcohol, the cost of production per horsepower will be less than that of gasoline or kerosene engines of the same class.

"Furthermore, the deposit of carbon in an alcohol engine, if the proper grade of lubricating oil be used, is impossible, while gasoline and kerosene engines can not be used without having the interior parts become 'sooty,' with a resultant loss of power. Another factor which counts in favor of the alcohol engine is the fact that its exhaust is not as hot as that from a gasoline or kerosene engine, thus minimizing the danger from ignition and the possibility of burning the lubricating oil, the latter being a decided advantage over gasoline and kerosene engines.

"In conclusion, it will be interesting to note that the subject of alcohol as a fuel is now receiving primary consideration by some of the world's leading engineering organizations. In England the Imperial Motor Transport Council has formed an alcohol motor fuel committee, composed of internationally famous scientists, and in France the Automobile Club of France, in collaboration with the Society of Automobile Engineers in this country, has undertaken the scientific development of an engine for conducting experiments to determine the best features of construction and factors regulating an engine to operate to the greatest advantage on alcohol."

IMPORTANCE OF FARM INDUSTRIAL DISTILLING TO AGRICULTURE.

Our consul general at Berlin, in a special report, stated:

"The law governing the industrial uses of alcohol was enacted in 1887, and by reason of its underlying causes and practical results is worthy of study as an example of intelligent, farseeing fiscal legislation.

"The landowning class, which included the influential nobility, urgently demanded legislation which would save the waning profits of agriculture.

"It was accordingly decided to make alcohol for industrial uses as cheap as possible and to promote by all practical means its production and consumption in this country."

And after 17 years of trial our consul general, in the same special report, states:

"The wisdom of the system established by the law of 1887 has long ceased to be a question of debate. For every reichsmark of revenue sacrificed by exempting denatured alcohol from taxation the Empire and its people have profited tenfold by the stimulus which has been given thereby to agriculture and the industrial arts."

The Commissioner of Internal Revenue, the Hon. John G. Capers, accompanied by the chief chemist of the bureau, made an official investigating trip to Europe in the summer of 1907, and in his annual report for the year ending June 20, 1908, gave a detailed report of his investigations. The report says:

"There were in operation during the year 1906–7, however, 13,837 agricultural distilleries, of which 5,871 used potatoes as a raw material and 7,966 used various kinds of grain. These distilleries produced, in round numbers, 86,000,000 gallons out of a total production of 101,000,000 gallons, of which 78,000,000 gallons were made from potatoes.

"They must use exclusively as raw material grain or potatoes grown on the farm or farms of their owner or owners and must use all the residues or by-products as feeding materials or fertilizers on the same farms. They are all fairly good-sized plants, capable of producing high-proof alcohol in continuous process and with a daily capacity of 120 to 400 gallons proof spirit."

Speaking of the development of use in the United States the report says:

"The use of denatured alcohol for purposes of fuel, light, and power in this country is increasing, notwithstanding the relative cheapness of petroleum products, as the necessary appliances for such use are being manufactured and introduced and the merits of alcohol as a source of energy brought to the attention of the public.

"The greatest ultimate advantages to be reaped from the denatured-alcohol law, however, are its benefits to agriculture in the shape of increased diversification of crops, enhanced productiveness of unfertile soils, and utilization of what would be otherwise waste crops or by-products of crops.

"The one thing we need in our country in this matter more than anything else is the reduction of the cost of making alcohol. The Germans, after 40 years of experience and experiments, use cheap potatoes, while we are yet compelled to use high-priced grain. Our western country—the Dakotas, Nebraska, Minnesota, Montana, Iowa, and Kansas—will be the first to produce alcohol from potatoes and farm molasses, the by-products of the sugar beet."

All who have visited Germany to make a study of agricultural distilleries and the benefits German agriculture has derived from these agricultural distilleries, and the value of alcohol as a fuel and important factor in that country's manufacturing development, bear the same testimony. From no disinterested source do we find a dissenting voice.

DOES NOT IMPOVERISH THE SOIL.

As to the immense advantage of alcohol manufacture, as a factor in soil conservation, equal unanimity of opinion exists among men of science. Dr. H. W. Wiley, formerly chief of the Bureau of Chemistry, Department of Agriculture, in testifying before the Ways and Means Committee of Congress at the free alcohol hearings, said:

"The farmer can grow any amount of starch and sugar that may be wanted for any purpose in the world. There is no limit to the amount of starch and sugar which the farmers of this country can grow, and not a pound of starch or sugar takes one element of fertility from the soil. It is a pure gift of God, and if He had not meant it to be used, I suppose He would not have given it to the world. So there is no limit, in my opinion, upon the capacity of the farmers of this country to supply the materials for making ethyl alcohol."

Prof. S. Lawrence Bigelow, of the University of Michigan, in a paper on denatured alcohol in the Popular Science Monthly said:

"It is not too much to say that if we arrange all the liquids known to us, in the order of their general usefulness, water—which heads the list, of course—will be followed immediately by ethyl alcohol * * *. Made by the growth of plants utilizing carbon dioxide and water from the atmosphere, it contains nothing but carbon, hydrogen, and oxygen. All the rest of the plant may be returned to the soil, which thus is not impoverished. It is the best method known to us to-day to store the sun's energy."

So much for the scientific side of the question, and the evidence of great practical success in Germany. Surely this is enough evidence to show that the legislation was wise, and that under right conditions agricultural distilleries can be and are being rapidly developed.

THE REAL BEGINNING.

State Master William T. Creasy, of the Pennsylvania Grange, speaking for the grange organizations generally to a gathering of 5,000 farmers at Chestnut Hill, Pa., on "Agricultural Distilleries and Industrial Alcohol Development," in concluding his address, said:

"The building and operating of the first denatured alcohol farm distillery will mark the real beginning of this great industrial development that shall bring to every farming district and every farm the full benefit of this great advance in farm betterment. Industrial alcohol farm distilleries properly established mean all modern improvements in the rural home, the lessening of the toil of the farmer's wife, the cheapest and best of all liquid fuels for light, heat, and power, and the profitable utilization of waste and otherwise unsalable crops, and, above all, the natural method of preserving soil fertility.

"Those who study the possibilities of farm industrial alcohol distilleries purely from the standpoint of alcohol production fail to realize their great importance. In the big central distilleries making potable alcohol is the all-important thing, and the by-products are of minor importance. In the small farm distilleries conditions are reversed—the feed and fertilizing features are most important and the alcohol the less important product. So true is this that there are doubtless places in the United States where it would even pay to operate industrial alcohol distilleries if the denatured alcohol had to be sold at a merely nominal price. The local farm distillery in fact will be one of the farmers' best profit producers and a sure safeguard against loss from glutted markets and injured crops."

The industrial advance made possible by the amendment to the denatured alcohol laws providing for industrial alcohol distilling on the farm may be summarized as follows:

The conservation of soil fertility.

The utilization of waste products of the farm.

Modern improvements in the rural home.

An abundant meat supply. (See appendix, "The Farmer and the Meat Supply.")

Freedom from monopoly control of liquid fuel for light, heat, and power.

An unlimited fuel supply for the automobile.

Cheaper alcohol for industrial purposes.

The development of new industries.

Natural enforcement of scientific farming; the profits of farm distilling being directly proportional to the adoption of the best methods of crop rotation in combination with stock raising and scientific soil conservation.

As long ago as 1908 the Commissioner of Internal Revenue, after a visit to Europe, showed in his annual report the requirements for farm-distillery development and urged the farmers to be patient. On this point he said:

"It must necessarily require much time and work for this development, but if the farming community in different parts of the country, instead of becoming impatient for direct and immediate results, will extend earnest sympathy and cooperation to the scientific workers in the several State experimental stations and in the Federal departments engaged in the problem, much greater progress will be made."

The farmers were patient, but no results came from departmental activity. Congress remained indifferent to the needed changes in the law until this Congress, at its first session, amended it. This constructive legislation now needs to be supplemented by an appropriation for demonstration or educational work.

In 1907, when the original law was amended, ostensibly for the benefit of the farmer, the pioneer demonstration work was undertaken by the Government, and money was appropriated therefor by Congress. But the farmers got no benefits, because the law—for them—was inoperative. Now they are told that the new law enacted at the first session of this Congress is a good law, and their reasonable expectation is that Congress at this session will provide the means to demonstrate that it is a law of genuine practical value to farmers. If Congress does not do this, why should they not believe they have been given another "gold brick."

Congress appropriates millions and hundreds of millions of dollars to improve our waterways, to irrigate our dry areas, to reclaim marshes and deserts, to build canals, to reforest our mountains, and to aid commerce in many ways. But, in proportion to the amount, no appropriation Congress was ever called upon to make was more far-reaching in its effects, or more directly affected all the people, than would this appropriation for the pioneer work in farm denatured alcohol distillery development. And the amount is not millions or even hundreds of thousands, but only $40,000.

This Congress, after years of neglect and failure to do anything, amended the law to make it workable. Can it now afford to adjourn without making the small provision necessary to demonstrate the practical value of the new law?

APPENDIX.

A. The New Denatured Alcohol Law—Marked Effect on the Policy of the Gasoline Interests.

B. The Farmer and the Meat Shortage, by George P. Hampton.

APPENDIX A.

THE NEW DENATURED-ALCOHOL LAW—MARKED EFFECT ON THE POLICY OF GASOLINE INTERESTS.

Prior to the amendment of the denatured-alcohol laws removing the jokers from the law which prevented the making of fuel alcohol from waste farm products it was a moot question among automobilists whether the advance in the price of gasoline and deterioration in quality was due to the adoption of a policy by the oil interests to boost the profits of their monopoly or to a relative scarcity, due to the great increase in consumption in proportion to production. The oil interests certainly encouraged the idea that the supply was overtaxed and that the use of lower grade fuel was inevitable.

The Literary Digest, October 8, 1910, states that "the present severe tax on the gasoline supply has caused it to be announced by the largest company supplying gasoline that it could no longer guarantee its supply of 64°—it already having been reduced from 76°—and Mr. Thomas White, one of the greatest authorities in this line, believed it to be inevitable that we will have to accept 58° or 59° in less than two years.

That was over three years ago. No appreciable change in the tone of these gasoline news items was noticeable until after October 3, 1913, when Congress passed the act amending the denatured-alcohol laws. Then a change came over gasoline news—increasingly optimistic as to an ample supply. The following, which appeared quite generally in the automobile sections of papers throughout the country on the 20th of this month (June, 1914), is a fair sample of the efforts now being made to show that previous reports were erroneous:

"GASOLINE OUTPUT INCREASING YEARLY—NO NEED FOR ANY WORRY OVER A SUBSTITUTE FOR MOTIVE POWER FOR MOTORS.

"Probably the most unfounded topic among motorists to-day is the supposed catastrophe of losing gasoline as a motor-car fuel. Whenever they meet the one live topic is the practicability of benzol, alcohol, condensed natural gas, or other mediums as a gasoline substitute.

"Apparently the motorists seem to be dreading that the petroleum from which gasoline is produced will soon give out. That their fears are unfounded is evident by the increased amount of gasoline being produced from petroleum and the increased mileage being secured per gallon.

"According to an investigation by a leading automobile authority there are 1,700,000,000 gallons of automobile gasoline refined each year, and only 2,000,000 motor cars to use it.

"Chemists employed by large gasoline refiners claim they are doubling the gasoline production by improving refining methods, which have replaced the wasteful ways of a few years ago.

"Besides, automobile manufacturers are now adopting methods by which they are perfecting every part so minutely and scientifically that every possible ounce of power is secured from a gallon of 'gas.'

"With the increased production of gasoline and steadily increasing mileage the motorist need fear no immediate loss of fuel."

If the facts are as above stated, then there was no justification for the steady advance in price and lowering of grade of gasoline of the past two years, and the oil interests stand convicted of imposing upon the automobile public unwarranted monopoly prices. If the mere passage of a law making denatured-alcohol competition possible has such marked effects in changing the policy of the gasoline interests, what would be the effect of actual competition? This is an important thing for liquid-fuel users to consider.

CHEAP FUEL FOR THE AUTOMOBILE.

The dependence of the automobilist on a fuel steadily advancing in price and deteriorating in quality is a menace which will be instantly checked by the establishment of a Federal industrial alcohol commission as provided for in House bill 17855. Every increase in the supply of alcohol fuel and reduction in price will intensify this effect. The price of denatured alcohol in the future will affect the price of gasoline and will depend on the extension of and degree of perfection reached in farm denatured alcohol distilling. Both alcohol and gasoline will reach their lowest price level when farm distilling has become an established part of good farming and alcohol becomes the by-product in a highly profitable method of stock raising and soil fertilization. Cheap denatured alcohol through the development of farm distilling is the one possible guaranty which the automobilist has for a permanent supply of cheap fuel.

THE COMMON INTEREST OF THE AUTOMOBILIST, MANUFACTURER, AND FARMER.

In securing the rapid development of farm distilling the interests of the automobilist and the farmer are one. The future cheap supply of fuel for the automobilist, for scientific farming, and for the maintenance of soil fertility—the very foundation of national prosperity—are indissolubly united; and the interest of the manufacturer who uses alcohol in manufacturing is hardly less important. The prospect of competition with the supply from farm distilleries will quickly affect the present supply, and decline in price will be fast or slow according as farm distilling is developed.

APPENDIX B.

THE FARMER AND THE MEAT SHORTAGE.

[By George P. Hampton, Washington representative, Progressive State Granges.]

The disposition to blame the farmers for the high cost of living is strikingly shown by the letters and articles in the press on the meat famine. From the meat packer to the man in the street, every one is ready to tell the farmer how to remedy the shortage, and the comments on his mental capacity for not seizing the great opportunities for profit in the present high prices are, to say the least, far from complimentary.

That the average householder, under the stress and irritation of steadily rising prices and consequently enforced lowering of the quality and quantity of the family meat supply, should go off half cocked and form opinions based on mere surface evidence, is perhaps to be expected. But the farmer has a right to expect that those who claim to speak authoritatively would not be so misled but would get down to the economic causes of the shortage and present some convincing evidence of the changes necessary to bring about the desired increase in production.

The farmer has no prejudice against making money. Prove that raising stock is profitable to him and that he will not be at the mercy of the packers, and he will raise stock. Is there money in it, as a permanent proposition? This is the only question that an intelligent farmer can allow to determine his action in the matter.

Dr. Rawl, of the Bureau of Animal Industry of the Department of Agriculture, has pointed out that farmers will not, to any extent, produce a crop for which there is not a ready market; that with few exceptions the older farming sections have been poor markets for animals on the hoof; and that often there is no market at all for animals in small lots—the only kind of a market that is worth much to the farmer. Our packers, who now recommend our farmers to raise two or more steers a year, are the very ones, who, by their policy of compelling the retail butchers to buy of them, destroyed the local markets which made stock raising profitable to the farmer. The packers reaped a rich harvest owing to the sacrifice price at which the farmer had to sell his stock during the early years of the meat monopoly. With the farmer's local market and profits destroyed he quit raising stock, and now the consumer—and the packers themselves, perhaps—have to pay the price for this "future-be-damned" plan of controlling the meat supply. The packers have sowed the wind. The consumers are reaping the whirlwind.

Allow the monopoly of cattle to continue and high prices for meat are inevitable. Restore local slaughtering and competition among the butchers of every local community, and the meat supply from the farm will increase.

But the present cattle shortage is the result of years of exploitation, and to insure the restoring of cattle to the farms on a sufficiently large scale and rapidly enough to affect the price of meat in the near future, some extra and powerful inducement must be offered to the farmer to get him to move en masse in this direction.

This incentive the farmers now have. The bountiful supply of cheaper meat wanted by the consumer, the cheap liquid fuel wanted by the automobilist, the cheap fertilizer necessary to maintain the soil fertility required for an increased food supply, and the market needed by the farmer for his waste and otherwise unsalable crops, all are made possible by a subsection of the new tariff act, the far-reaching consequences of which have been largely lost sight of in the consideration given to the tariff and the income features of the act. This is the section amending the denatured-alcohol laws, removing the obstacles to making industrial alcohol on the farm. Its significance in affecting the meat supply is found in the fact that farm distilling is primarily a stock-feeding proposition, and that unless the farmer makes stock feeding a part of his farming he can not, except in rare cases, make farm distilling pay. But with a still of a size to suit his farm and stock in the right proportion to his still, there is a big profit, provided there is a free market for his stock and the product of his still. This development only awaits a reasonable appropriation by Congress to meet the cost of pioneer demonstration work and establish a bureau of information.

HIGH COST OF LIVING DUE TO MONOPOLIZED MARKETS.

But whatever benefits the farmer may receive from the rebuilding of stock raising as a part of the new farming, there is no way for the consumer to share in a cheaper meat supply, except by the restoration of free market conditions. The question of free markets is primarily the consumer's concern. For while monopolizing the market robs the farmer of the profits which alone will induce him to produce, it robs the consumer of his living. A monopolized meat market is a high-priced market, and if the monopoly affects the farmer enough to make him quit raising stock, the price of meat must go up as the supply diminishes and remain up until profits induce the farmer again to raise stock.

There is no way to remove the responsibility for the shortage in the present meat supply from the packer. The policy of the past has been to destroy competition, monopolize business, and dictate prices, both to the producer and to the consumer. The people are now reaping the fruits of this policy. Possibly the packers themselves are now feeling its destructive effects, and if it is true that they have developed their business to where they can handle it on a 2 per cent margin, including all by-products, there is no doubt they can hold their trade in a free market. If they are wise, they will try to restore the old conditions of free markets and in every way to aid and encourage the raising of stock again on the farms as a part of the modern scientific method of farm industrial distillery development. The cooperation of the consumer and the packer with the farmer in the rapid development of farm denatured alcohol distilling is the sure way to end the meat famine and will result in benefit to all.

Performances of a Great Party in 18 Months—Achievements of the Democratic Party in Sound and Helpful Legislation.

EXTENSION OF REMARKS

OF

HON. EDWIN Y. WEBB,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 19, 1914.

Mr. WEBB. Mr. Speaker, the Democratic Party has been in complete power something less than 19 months, but in that short time has made history rapidly. During the transition period from 1909 to 1913 it made promises to the people as to the tariff, the currency, the trusts, and many other propositions, which, during the last year and a half, have been religiously redeemed. The Democratic Party looked upon its promises as debts contracted with the people, and when honored by the people with their votes and confidences, they began at once to pay their debts, and in less than two years have paid off every one of them. The Republican Party prior to 1909 lived in a land of promises which, not being kept, left the people to "die of hunger." They attained power on a promise of downward revision which was kept by the enactment of a tariff higher than the old Dingley law. Their promises were lightly made, frequently made, and quickly forgotten. The Democrats did not promise much, but did much; they recognized that performances, not promises, retain friends and set in at once to redeem their word. The result is a record of legislative achievement worthy of a party of patriots and of the commendation of a patriotic people.

THE PEOPLE'S DEMANDS.

The elections of 1910 showed that the people were awake and that they proposed to realize their demands for a long list of changes, some of which were as follows:

1. The right to buy as well as to sell in a competitive market.
2. Fair prices in an open market for their crude products.
3. A lowered cost of living.
4. The destruction of monopolies.
5. The destruction of gambling in agricultural products.
6. The control of Wall Street gambling in stocks.
7. The valuation of railroads and telephones.
8. A remedy for overcapitalization.
9. A corrupt-practice act with "teeth" in it.
10. Regulation of campaign expenditures and contributions.
11. An end of railroad rebates and discriminations.
12. A systematic development of good roads.
13. Development of our waterways.
14. A wider play for the postal savings banks.
15. A more extended system of parcel post.
16. An income tax.
17. An employers' liability law.
18. A more rigid control of injunctions.
19. A better banking system.
20. A correction of the evils of civil service.
21. An end to the corporate grabbing of our national resources.
22. A prison term for plutocratic offenders against law.
23. An American marine other than a subsidized system.
24. A more comprehensive system of agricultural schools.
25. A more rational immigration law.

ANTECEDENT WORK OF A DEMOCRATIC HOUSE.

The Democratic Party began its good work in the Sixty-second Congress, when it only controlled the House of Representatives, by introducing and passing the following laws, which later led the people to intrust it with full control of the Government:

1. The House of Representatives revised and liberalized the rules of the House so as to give the representatives of the people freedom of speech and action.

2. It authorized investigations of certain executive departments of the Government and of certain industrial combinations, including the United States Steel Corporation, the American Sugar Refining Co., and the Shipping Trust, the Beef Trust, and the Money Trust.

3. It passed a bill providing for the publication of campaign expenses before and after elections and fixed a limit on the election expenses of Senators and Representatives.

4. The Democratic House, by a vote of 237 to 39, passed a resolution referring to the various legislatures for ratification the proposition of amending the Constitution so as to provide for the election of United States Senators by a direct vote of the people.

5. It admitted Arizona and New Mexico to statehood.

6. It passed a resolution which forced the President to abrogate the Russian treaty.

7. It passed a bill to establish agricultural extension departments in connection with agricultural colleges in the several States.

8. It passed a bill providing for stricter laws and regulations to promote the safety of passengers at sea.

9. It passed a bill "to protect American trade and American shipping from foreign monopolies."

10. A bill creating a Department of Labor.

11. On the passage of supply bills it has saved the National Government millions of dolalrs.

12. A bill providing for an excise tax on incomes.

13. The Alaskan civil government bill, creating a legislature of one house.

14. It passed many other measures of great general and local importance, such as bills providing for a parcel post; Government aid to public highways and post roads; revision of our patent laws; and a resolution for the appointment of a commission to investigate foreign rural credit societies, with a view to the inauguration of a sound system of easier agricultural credits.

15. Trial by jury of indirect contempt.

16. Relief of post-office employees from the executive gag rule.

17. And a bill to stop midnight injunctions.

The Democratic victory in the elections of 1912 was an indorsement by the country of the work of the Democratic House of Representatives and of the declared policy of the party as to future legislation. In the elections this year the work of the administration, composed of a Democratic President and a Democratic majority in each branch of Congress, will to some extent be passed upon by the people. All interest centers in the verdict of the people. A leading newspaper, in reviewing the work of the Democratic Congress, to determine what the verdict should be, concludes that "they have fought the good fight and they have kept the faith." That "this Congress has a record of achievement in behalf of the average man that entitles it to the warmest commendation and that should guarantee another sweeping Democratic victory at the polls in November."

Another leading newspaper, in advising the voters this year to stand by the Democratic Congress, concludes that the Democratic House "has justified the confidence of those of us who hailed it with so much hope." This writer continues:

> This Congress has revised the abuses out of an extortionate tariff. It has imposed an income tax which lifts part of the burden of taxation from poverty to wealth. It has enacted a banking and currency law for which the American people have been striving for nearly 20 years. Whatever differences of opinion there may be about the administrative details of this measure, all financial authorities agree that under it this country can not have another panic like those of 1873, 1893, and 1907.
>
> In addition, this Congress has destroyed the lobby. In the matter of Mexico it has scrupulously avoided all semblance of jingoism and demagogy. Taking its work as a whole, the Congress that is still in session has achieved the most important record of constructive legislation of any Congress in 50 years.
>
> In spite of mistakes and shortcomings, we can recall no previous Congress that so fully kept its faith with the people, no previous Congress that was so little controlled by sordid special interests, no previous Congress so free from scandal and manipulation and treachery to the public welfare, no previous Congress that so fully embodied the theory and responsibilities of representative government.

This newspaper goes on to say that it—

> would not advise a man who believes in a Payne-Aldrich tariff to vote for another Democratic Congress. It would not advise a man who believes in government by Wall Street and special privilege to vote for such a Congress. It would not advise a man who believes in secret lobbies and in treaty-breaking and in hidden subsidies to vote for such a Congress. It would not advise a man who expects an immediate millennium to vote for such a Congress. But if any Congress in a generation has earned a vote of confidence at the polls it is this Sixty-third Congress now in session in Washington.

I quote this editorial conclusion for the reason that it aptly expresses my own. The reforms that were begun by the Democratic House in the Sixty-second Congress have, by the aid of a Democratic President and a Democratic majority in the Senate, been carried forward in this present session until the pledges made by the Democratic Party to the people have been written into the statute law of this Nation.

The following brief review of legislation by this Congress will illustrate how well the Democratic Congress has kept its promise to the people:

CHARGE OF INCOMPETENCY REFUTED.

It had been repeatedly charged by Republicans that it was not safe to entrust the Government to the Democrats for the reason that they lacked the capacity for constructive legislation.

This Democratic Congress found itself surrounded by the paid lobbyists of special interests, who were seeking to influence legislation in behalf of their clients just as they had done in the past. Following the fearless attack of the President, Congress drove these lobbyists from the Capitol and then proceeded to offer such well-considered bills for the revision of the tariff, for currency reform, for an income tax, and other subjects of legislation that they not only received the support of the Democrats, but of Republicans and Bull Moosers as well. With such unmistakable indorsement as this it is needless to further refute the charge.

PANIC PROPHECY.

Republican orators, both great and small, freely prophesied business disaster as the sure result of Democratic success. The Wilson administration has completely revised the rules of business without the usual and heretofore inevitable panic. It has taken from the special interests their fostered monopolies and compelled the trusts to sell to our own people as cheaply as to the people of foreign lands. It has wiped out the old and antiquated currency system and enacted a new one under which you get your money when you need it without having to first apply to Wall Street. It has passed an arbitration act for the settlement of controversies between labor and capital, which has already been successfully employed in preventing great strikes that would have tied up the entire railroad business of the Nation. Democratic success has proven itself to be a preventive of panics.

The following further review of legislation by this Congress will illustrate how well the Democratic Congress has kept its promise to the people:

1. TARIFF PROMISES REDEEMED.

The motive actuating the Democratic Party in revising the tariff was that of the public good. Republican revisions, as a rule, considered the welfare of the protected interests as paramount and the interest of the people as a mere incident. The Democrats put the people above every other consideration and presented the country with a tariff for revenue. Promises were redeemed (1) by an enlarged free list, (2) by lower duties on other goods, and (3) by an income tax.

THE FREE LIST.

All foodstuffs were made free, including wheat, corn, wheat flour, semolina, corn meal, bread, biscuits, wafers, eggs, fresh beef, veal, mutton, lamb, lard, fish, pork, hogs, cattle, sheep, bacon, hams, potatoes, bananas, rye, rye flour, salt, and sugar.

Besides these, the free list was enlarged so as to include agricultural implements, bituminous coal, coke, bagging for cotton, cash registers, sewing machines, typesetting machines, typewriters, shoe machinery, cement, hemp, flax, hoop iron, band iron, bar iron, railroad iron, pig iron, barbed fence wire, fence wire, baling wire, iron ore, sole leather, upper leather, patent leather, split leather, belting, harness and saddle leather, boots and shoes, harness, cut nails and spikes, wire nails, horseshoes and nails, needles, tacks, printing paper, logs, timber, boards, lumber, fence posts, shingle bolts, shingles, hubs, wagon blocks, oar blocks, heading blocks, clapboards, laths, pickets, palings, staves, ship timber, broom handles, wood pulp, and wool.

COMPARISON OF FREE IMPORTS.

Our total imports for the three years last past of articles free of duty were as follows:

June 30, 1912, total free valuation	$881,670,830
June 30, 1913, total free valuation	987,524,162
June 30, 1914, total free valuation	1,127,592,690

This last valuation comprises the operation of about three months of the Payne law and nine months of the new law. Of these free imports foodstuffs in crude condition amounted to $201,851,983 in 1914, or about 17.80 per cent of the total free import, as against $180,127,316 in 1912. Free corn brought in 11,843,193 bushels between October 3, 1913, and June 30, 1914, hardly worth mentioning in comparison with the 2,858,000,000 bushels of home-grown corn. Free wheat brought in 168 bushels during the same period, while our production was 930,000,000 bushels. No free flour was imported, nor any corn meal. Two hundred and four thousand six hundred and eighty dollars worth of free bread came in, $1,041,540 of sago, tapioca, and so forth.

Cement	$121,070
Lime	383,171
Eggs	1,050,502
Hemp	$1,472,460
Flax	2,572,095
Bagging	584,593
Fresh fish	2,481,037
Herring	2,498,135
Mackerel	1,390,396
Iron ore	4,466,347
Pig iron	3,112,158
Scrap	220,220
Machinery	844,455
Needles	481,631
Printing paper	10,365,043
Salt	304,826
Potatoes	1,231,732
Lumber	12,188,310
Railroad rails	312,061
Belting leather	3,200,307
Upper leather	2,597,534
Other leather	2,471,220
Boots and shoes	336,770
Other manufactures of leather	234,360
Beef and veal, fresh	15,140,173
Mutton	1,112,294
Pork	537,946
Bacon and hams	383,669
Prepared meats	1,676,360
Cream	585,572
Milk	1,056,230
Laths	1,067,070
Shingles	1,791,245
Wool	45,524,495

All the above free imports are for the period from October 3, 1913, to June 30, 1914, except wool, which covers a period from November 30, 1913.

The influence of these importations has not been sufficient to batter down the high prices buttressed by 50 years of protection, but they have been felt in many localities and will in time be felt generally. Our total import of foodstuffs, free and dutiable, amounted to $474,000,000, while our farmers will receive nearly $11,000,000,000 for their total farm products in 1914. An industrial class that can cash a check for $11,000,000,000 a year turns up its nose at a half-billion-dollar competitor.

DUTIABLE IMPORTS.

Nearly every other import was left on the dutiable list, but the rates were cut materially. Raw wool had been paying a duty of about 44 per cent; this was put on the free list. Changes on manufactured woolens were made as follows:

Cloth from 94 per cent to 35 per cent.
Blankets from 73 per cent to 25 per cent.
Flannels from 93 per cent to 25 per cent and 30 per cent.
Women's dress goods from 102 per cent to 35 per cent.
Knit fabrics from 85 per cent to 35 per cent.
Clothing from 80 per cent to 35 per cent.
Webbing from 60 per cent to 35 per cent.
Shawls from 79 per cent to 35 per cent.
Brussels carpet from 76 per cent to 25 per cent.
Tapestry Brussels from 62 per cent to 20 per cent.
Treble ingrain from 64 per cent to 20 per cent.
Two-ply carpet from 62 per cent to 20 per cent.
Stockings from 94 per cent to 30 per cent and 40 per cent.

Reductions on cotton goods were as follows:

Cotton cloth from 43 per cent to 25 per cent.
Waterproof from 50 per cent to 25 per cent.
Handkerchiefs from 60 per cent to 30 per cent.
Clothing from 50 per cent to 30 per cent.
Collars and cuffs from 64 per cent to 30 per cent.
Plushes from 55 per cent to 40 per cent.
Stockings from 75 per cent to 50 per cent.
Shirts and drawers from 60 per cent to 30 per cent.

Further reductions:

Rice paddy from (pound) ¾ cent to ⅝ cent.
Rice, uncleaned, 1½ cents to ¾ cent.
Rice, cleaned, 2 cents to 1 cent.
Common brick, 25 per cent to 10 per cent.
Fire brick, unglazed, 30 per cent to 10 per cent.
Tiles (square foot), 4 cents to 1½ cents.
Common china, 55 per cent to 35 per cent.
Rockingham ware, 40 per cent to 30 per cent.
Fish in tins, 30 per cent to 15 per cent.
Green apples (bushel), 25 cents to 10 cents.
Lemons (pound), 1½ cents to ½ cent.
Oranges, 1 cent to ½ cent.
Shelled almonds, 6 cents to 4 cents.
Bottles, 60 per cent to 45 per cent.
Spectacles, 50 per cent to 35 per cent.
Hay (ton), $4 to $2.
Telephone wire, 40 per cent to 15 per cent.
Structural iron (pound), four-tenths cent to 10 per cent.
Cast-iron pipe (pound), one-fourth cent to 10 per cent.
Hollow ware, 1½ cents to 10 per cent.
Chain, 45 per cent to 25 per cent.
Printing presses, 30 per cent to 15 per cent.
Steam engines, 30 per cent to 15 per cent.
Circular saws, 20 per cent to 12 per cent.
Hand and mill saws, 25 per cent to 12 per cent.
Kitchen utensils, 40 per cent to 25 per cent.
Lime (hundredweight), 5 cents to 5 per cent.
Matches (gross), 6 cents to 3 cents.
Poultry (dead), 5 cents to 2 cents.
Butter, 6 cents to 2½ cents.
Cheese, 6 cents to 20 per cent.
Paints reduced 50 per cent.
Potato starch (pound), 1½ cents to 1 cent.
Other starch, 1 cent to ½ cent.
Granite (cubic foot), 10 cents to 3 cents.
Vinegar, 7½ cents to 4 cents.
Furniture, 35 per cent to 15 per cent.

Hundreds of other reductions were made in character the same as those already outlined. There was no question but that the tariff had been reduced and a new era of business freedom—of business opportunity—opened to the United States. Republicans predicted disaster, but were as poor prophets as they had been poor promise redeemers. President Wilson, the great Democratic leader, promised a new freedom to business coupled with a greater prosperity, and both the freedom and the prosperity have been realized.

THE INCOME TAX.

Coupled with these great tariff reductions went another great achievement, the passage of the income-tax law. Great fortunes were made to bear their just proportion of the burdens of taxation. Taxes were shifted from consumption to wealth, and a more perfect harmony established between burden bearers.

REVENUE REDUCTIONS.

With these sweeping reductions of the tariff corresponding reductions in revenue were expected. It was estimated that the receipts from customs the first year would amount to $270,000,000, as against $318,000,000 for 1913, the last year of the Payne law. The revenue from customs, however, exceeded our expectations and yielded $292,000,000 in 1914, or $22,000,000 more than the estimate, or an actual falling off from the Payne collections of about $27,000,000, instead of a falling off of $49,000,000 as had been estimated.

The receipts from internal revenue, exclusive of the corporation and income taxes, for the fiscal year 1914 were about $309,000,000, or a falling off of $3,000,000 from the estimate, but were equal, despite this falling off, to the internal-revenue receipts for the last year of the Payne law.

The receipts from the corporation and income taxes amounted to $75,000,000. It may be safely assumed that the collections from these sources for the year 1915 will be $100,000,000. The miscellaneous receipts of the Government approximate $57,000,000.

The total revenue at the passage of the tariff law was estimated at $736,000,000, but the actual receipts were but $733,000,000. In other words, the new tariff working but nine months produced a revenue but $3,000,000 short of the estimate, and $2,000,000 of this shortage came from miscellaneous receipts. The reduced tariff proved to be an adequate revenue producer, and the affairs of government under the reduced tariff are abundantly protected. Those who criticized the bill on the ground that it would show a deficit were wrong in their criticisms, and the Democratic arguments of a half century have been proven true by the operation of this new tariff law. The receipts were $733,000,000 and the ordinary disbursements were $703,000,000, leaving $30,000,000 balance to the credit of Democratic management, with the income tax working only a part of the year.

This does not include the Panama Canal expenditure, which is an extraordinary expense; this expense for the past year was $35,000,000. In other words, the new tariff pays the ordinary expenses of government and $30,000,000 of the Panama Canal expense, leaving a shortage in the grand total of these items of only $5,000,000. Much more than $5,000,000 is in the Treasury as surplus, and the Government will not have to borrow from any man to pay its debts. Thus endeth the first glorious chapter in the new freedom.

2. FEDERAL RESERVE BANKS.

The second step forward in the complex process of redemption of promises was taken by the Democratic Party in September, 1913, when Mr. UNDERWOOD called up the bill to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States. This bill was ably debated, and on September 18, 1913, passed the House by a vote of 287 ayes to 85 noes. Thirty-six Progressives and Republicans voted for the bill, while 85 Republicans and Progressives voted against it—the principal opposition coming from the "Old Republican Guard," the forlorn group of standpatters of the Sixty-third Congress.

The Senate passed the bill by a large vote, and it was signed by the President. It is now a law. The President demonstrated his eminent executive ability by the character of men he selected to put the law into operation. Universal confidence succeeded, and almost the entire body of national banks approved the law by voluntarily coming under its wings. In the language of the President the bill gives us a—

currency, not rigid as now, but readily, elastically responsive to sound credit, the expanding and contracting credits of every day transactions, the normal ebb and flow of personal and corporate dealings. Our banking laws must mobilize reserves; must not permit the concentration anywhere in a few hands of the monetary resources of the country or their use for speculative purposes in such volume as to hinder or impede or stand in the way of other more legitimate, more fruitful uses. And the control of our system of banking must be public, not private, must be vested in the Government itself, so that the banks may be the instruments not the masters of business and of individual enterprise and initiative.

Thus, while other great rulers of the earth have mobilized their reserves for destructive purposes, it remained for the President of the United States to mobilize our reserves for great constructive ends, for the well-being and lasting prosperity of the people of the United States.

Following this, came rapidly the enactment of the following important legislation:

3. Passage of a law for cooperative agricultural work between the agricultural colleges in the several States and the United States Department of Agriculture.

4. A law prohibiting the importation and entry of convict or pauper labor goods made in whole or in part or in any measure manipulated by convict or prison labor has passed the House and is now pending in the Senate.

5. Passage of a law by which free tolls to our coastwise shipping in the Panama Canal was repealed.

6. A law regulating the hours of employment and safeguarding the health of females in the District of Columbia.

7. A law appropriating funds for the investigation and eradication of hog cholera and dourine.

8. An excellent immigration bill has passed the House and is pending in the Senate.

9. A bill to increase the efficiency of the Naval Militia.

10. The passage of a better homestead law.

11. A law to provide for raising the Volunteer Forces of the United States in time of war.

12. A law providing for the relief and transportation of American citizens in Mexico.

13. A law providing for the relief and transportation of American citizens in Europe.

14. A law providing American registry for foreign-built but American-owned vessels.

15. An act appropriating $25,000,000 a year for post roads went through the House and will doubtless pass the Senate.

16. A law providing Government insurance of ships against war risks.

17. RAILROADS IN ALASKA.

Not the least of Democratic achievements is that piece of constructive legislation by which Alaska is to have not more than 1,000 miles of Government-owned and Government-constructed railroads connecting tidewater of the Alaska Gulf with the Yukon River at a cost of $40,000,000.

The President of the United States is to select the lines which will best promote the settlement of Alaska, develop its resources, and provide adequate and suitable transportation for coal for the Army, Navy, and other Government services, of troops, arms, and munitions of war, of the mails, and for other Government and public uses, together with such branch lines, feeders, sidings, switches, and spurs as he may deem necessary.

While other rulers are overwhelmed by a policy of destruction and war, the Democratic Party, guided by the greatest constructive leader of this age, commits itself irrevocably to a reversal of the Republican policy of "neglect for Alaska" and to the upbuilding and development of this far-off American peninsula. This long-slighted Northwest Territory is to become a tremendous "experiment station" for the most advanced of Government policies.

18. AMENDMENTS OF THE ALDRICH-VREELAND LAW.

Another achievement of the Democratic administration was the direct effect of the European war. This was an amendment to the Vreeland emergency currency law which enabled the banks to draw upon the $500,000,000 of additional currency authorized by that law. The war in Europe played havoc with European finances, but brought all our banking interests into instant harmony with the Treasury of the United States and led to this precautionary step. The collapse of international banking machinery united the financial intellects of the United States into common aims. Our national credit became impregnable, and the wheels of our industry will revolve and hum despite the catastrophe that has overtaken Europe. The breakdown of European civilization will injure our prosperity to some extent, but will not seriously retard it.

19. LEASING OF COAL LANDS IN ALASKA.

Woodrow Wilson stands behind this proposition, and in due course of time it will ripen into law. The withdrawal of the coal areas of Alaska from entry blazed the way to some sort of leasing plan by which development may ripen into fruitage without the concomitant of monopoly and plutocratic ownership of our great national resources.

20. THE MEXICAN SITUATION.

Walter Lippeman in his "Preface to Politics" calls attention to a class of persons who follow precedent and never create one,

and who go on winding the red tape of their business contentedly and continuously. He calls them "Routineers"—men of "immobility" caused by "too much gazing at bad statues of dead statesmen." Woodrow Wilson in his Mexican policy defied precedents and created a policy of "watchful waiting," which justifies Americans in trusting him as a great leader. The North American Review begged him to reverse his policy as to Mexico as he had reversed the Democratic policy as to "free tolls." The great editor of the Review was a most powerful suppliant and brought to his aid the editorials of a score of really great American editors. Woodrow Wilson adhered to his text and would not intervene nor recognize Huerta. Time has demonstrated that the President was right—that he is a virile thinker, an intellectual giant, and not a mere routineer. His vision was greater than that of any other leading American, and the outcome has not only silenced venal and other criticism but has also disclosed an American Moses leading the people of two countries out of the wilderness of uncertainty into the Canaan of certainty and hope.

His firm policy, pursued in the face of frenzied demand for aggressive action from many sources, has saved this Nation from a war with Mexico in which many lives would have been sacrificed and much property destroyed. Such a mistake would have completely demoralized business and left us a staggering war debt.

21. THE ANTITRUST LAWS.

To this mass of really constructive legislation achieved by the Wilson administration is to be added the three bills completing the antitrust program, two of which have passed the Congress of the United States, and the other is in process of completion. The two finished products are known as—

1. The trade commission bill, and
2. The Clayton bill, a measure to further regulate trusts.

The third piece of construction sure to be passed is known as—

3. The bill regulating railroad stock and bond issues.

The trade commission bill makes unlawful all and every form of "unfair methods of competition," and creates a commission with adequate powers to destroy monopoly in its genesis.

The antitrust bill makes unlawful—

a. Interlocking directorates.

b. Holding companies.

c. Trying companies which in the sale of one article require the purchaser to use only such complementary articles as are sold by the seller.

d. The bill fixes personal responsibility for unlawful corporate acts. Guilt is made personal. The antitrust law on the statute books, and known as the Sherman law, is supplemented by the present act and made capable of enforcement as a criminal statute.

The railroad securities bill is designed to lift railroads from the slough of speculation and dishonesty to the high plane of genuine worth and practical honesty. Fake fiscal agencies will no longer exploit railroad securities to the detriment of stockholders. Private banks will not become depositories for interstate corporations. Supplies and equipment will be purchased in open competitive fields and not from fake companies established to rob the stockholders of the railroads—minority stockholders will not be open to robbery. The stock exchange will lose its mechanical power over transportation and national banks no longer be permitted to act as exploiters disguised as promoters.

Woodrow Wilson, the President of the American people, has in his advocacy of these laws made himself the greatest living example of developed national ethics, and in the passage of these laws the American people are assured of the existence of a new code of business ethics, and the dawn of a new era of business practices. These laws clinch the "new freedom" by assuring all comers "equality of honest opportunity." They are substantial reforms; they have already awakened the national conscience, and back of their birth, spurring them forward into action, stands the form of Woodrow Wilson, not only our greatest of great Democratic leaders, but the great leader of us all.

THE PEOPLE'S DESIRE TO HEAR THE PRESIDENT.

The following letter from Congressman DOREMUS to the President shows that the people of the United States have not been unmindful of the work of their President and that there was a general desire to hear him during the present campaign.

The answer of the President follows, and will be read with pleasure by all our people. It is a strong, able, and patriotic document, and will win commendation from the people generally:

CHAIRMAN DOREMUS'S LETTER.

SEPTEMBER 1, 1914.

MY DEAR MR. PRESIDENT: For some time the national Democratic congressional committee has been receiving requests from every State in the Union urging us to enlist your active participation in the important election contest just before us. These requests come from scores of friends of your administration, who view with intense pride and satisfaction the splendid achievements that have resulted through, to use your own phrase, the cooperation of one "human being with other human beings in a common service."

I hazard nothing when I say that you are very near to the hearts of the American people and that your presence among them would be to them a source of much gratification.

I realize how occupied you are in these trying days and how steadfastly you have remained at your post of duty, safeguarding the best interests of all the people in this great crisis, and for that reason I almost hesitate to take up with you the matter of a speaking campaign. However, it is important that we who are responsible for putting before the American people in the coming election contest as best we can the splendid record of achievement of your administration should know as early as possible to what extent, if any, you can give us your valuable time.

Yours, very sincerely, FRANK E. DOREMUS.

THE PRESIDENT'S LETTER.

SEPTEMBER 4, 1914.

MY DEAR MR. DOREMUS: I have read your letter of September 1 with a keen appreciation of its importance. It appeals to me as the leader of the party now in power with peculiar force and persuasiveness. The close of a very extraordinary session of Congress is at hand, which has, I venture to say, been more fruitful in important legislation of permanent usefulness to the country than any session of Congress within the memory of the active public men of our generation. A great constructive program has been carried through, for which the country has long waited, and has been carried through with the approval and support of judicious men of all parties, and we have abundant reason to congratulate ourselves upon the record that has been made during the busy 17 months we have devoted to our great legislative task. Certainly in ordinary circumstances, if we were free to disengage ourselves for the purpose, we would be warranted in now directing our energies to a great campaign in support of an appeal to the country to give us the encouragement of its indorsement at the autumn elections.

We could go to the country with a very sincere appeal in which there need be no pretense or boast of any kind, but a plain statement of things actually accomplished which ought to be and I think would be entirely convincing. It is a record which shows us at peace with all the world; the questions which plagued business with doubt and uncertainty and irresponsible criticism out of the way, thoughtfully settled and disposed of; the apparent antagonism between Government and business cleared away and brought to an end with the plain reckoning accomplished; the path for sure-footed adjustment clear ahead of us, prosperity certain to come by means which all can approve and applaud.

MORE WORK TO BE DONE.

Moreover, there is a program of another kind ahead of us to which it is inspiriting to look forward—a program free from debate except as to the best means by which to accomplish what all desire. The great questions immediately ahead of us are the building up of our merchant marine with all that that means in the development and diversification of our foreign commerce and the systematic conservation and economic use of our national resources, subjects much talked about but little acted upon. There are other great pieces of constructive legislation waiting to be done to which we could turn without any controversy except, as I have said, as to the best ways of doing them.

I believe that ways can be found to do these things readily enough if the country will give us its generous support and trust us to do them; and it would have been a genuine pleasure to me to ask to be given again colleagues such as I have had in the two houses of Congress during the present memorable session. I trust that there will be many occasions upon which I may have the privilege of calling the attention of my fellow countrymen to the fine and unselfish service which has been rendered them by their present representatives, ready at all times to respond to any appeal which spoke convincingly of the public welfare.

But in view of the unlooked-for international situation our duty has taken on an unexpected aspect. Every patriotic man ought now to "stay on his job" until the crisis is passed, and ought to stay where his job can best be done. We must do whatever is necessary and forego whatever is necessary to keep us in close and active concert in order to relieve in every possible way the stress and strain put upon our people during the continuance of the present extraordinary conditions. My job, I now know, can be done best only if I devote my whole thought and attention to it, and think of nothing but the duties of the hour. I am not at liberty and shall not be, so far as I can now see, to turn away from those duties to undertake any kind of political canvass.

A TWOFOLD RESPONSIBILITY.

In the present emergency I am keenly aware of the twofold responsibility I am called upon to discharge; the responsibility which devolves upon me as President of the United States and the responsibility under which I am laid as leader of a great political party. Of course, the whole country will expect of me and my own conscience will exact of me that I think first of my duties as President, responsible for exercising so far as I have the ability a constant guidance in the affairs of the country, both domestic and foreign. The labors of Congress have a natural and customary limit; the work of the Houses can be and will be finished; Congress can adjourn. But the President can not, especially in times like these, turn away from his official work even for a little while. Too much depends upon his keeping all the threads of what is occurring in his hands.

I have, therefore, reached the conclusion that I can not in any ordinary sense take an active part in the approaching campaign; that I must remain here to attend to the serious work sure to fill the months immediately before us—months that will carry with them obligations, no doubt, of the most tremendous sort. I know that you will feel similarly about your own obligations; that Members of Congress, too, without distinction as to party affiliations, will feel that they must remain to do their work of necessary and pressing service and bring it to a successful conclusion.

TO BE JUDGED BY RECORD.

I shall no doubt take occasion as opportunity offers to state and perhaps restate to the country in the clearest and most convincing terms I can command the things which the Democratic Party has attempted to do in the settlement of great questions which have for many a long year pressed for solution, and I earnestly hope that they will generously open their minds to what I may have to say; but I shall not allow my eagerness to win their approval or my earnest desire to be granted by their

suffrages the support of another Congress to interfere with the daily performance of my official duties or distract my mind from them. The record men make speaks for itself. The country can not be deceived concerning it, and will assay it justly. What it chiefly expects and demands and what it will certainly be most surely won by is the performance of duty without fear or favor and without regard to personal consequences.

And certainly this is a time when America expects every man to do his duty without thought of profit or advantage to himself. America is greater than any party. America can not properly be served by any man who for a moment measures his interest against her advantage. The time has come for great things. These are days big with destiny for the United States, as for the other nations of the world. A little wisdom, a little courage, a little self-forgetful devotion may under God turn that destiny this way or that. Great hearts, great natures, will respond. Even little men will rejoice to be stimulated and guided and set an heroic example. Parties will fare well enough without nursing if the men who make them up and the men who lead them forget themselves to serve a cause and set a great people forward on the path of liberty and peace.

Cordially and sincerely, yours,

WOODROW WILSON.

SIGNIFICANCE OF THE MAINE ELECTION.

It must be gratifying to the President and to Members of Congress who have remained in Washington during the long term of the present session to find evidences of appreciation coming in from the people at home. The President and Congress have not been more diligent in trying to carry out the people's demands than the calamity howler has been in attempting to demoralize business, clog the wheels of commercial prosperity, and discredit the administration. The verdict has been rendered in Maine. The message announcing the election of a Democratic governor by an overwhelming majority over his Republican opponent and a Democratic legislature in this State where Democracy has, until recent years, been so greatly in the minority shows that the voters of Maine are appreciative of the faithful and honest efforts in their behalf, and that they approve the Democratic record. There is no reason to suppose that the voters of other States will be less appreciative. This is but the forerunner of a sweeping indorsement at the polls in other States. We have often heard it said in the past, "As Maine goes, so goes the Nation."

Development of Water Power.

SPEECH

OF

HON. SILAS R. BARTON,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 20, 1914,

On the bill (H. R. 16673) to provide for the development of water power and the use of public lands in relation thereto, and for other purposes.

Mr. BARTON. Mr. Speaker, the pending bill does not come before us with the stamp of partisanship indeliby written therein; neither is it, like most of the measures presented, to be forced through this House by the force of majority under the whip and spur of caucus rule. On the contrary, it has received the most careful consideration at the hands of the committee, all members being admitted to the councils. Extensive hearings were held, covering 724 pages of record, and such men as ex-Secretary Fisher, ex-Forester Gifford Pinchot, Dr. George Otis Smith, and Mr. O. C. Merrill, chief engineer of the Department of Agriculture, Forest Service, and some of the ablest financiers and water-power engineers of this country have contributed their information to assist in making a bill that would carefully preserve the rights of the States and of the United States—which means the people of this country—as against the locking up or monopolizing of this valuable asset by speculative corporations.

The bill grants preference in leasing to States, counties, and municipalities, when the application is made for municipal use, so that it is not necessary for municipalities to compete with corporate power to secure their natural rights. It also provides for the prosecution of the work so that when a lease is made it can not be laid away for speculative purposes, but must be prosecuted or the lease becomes valueless.

This bill also provides that a lease can not extend beyond a period of 50 years, and, as Mr. FERRIS, chairman of the committee, says:

It lays down the three specific things that the Federal Government can do at the expiration of any lease made under this act: First, the Federal Government may retake it and operate it itself; second, it may renew the lease to the original lessee upon such terms and conditions and for such term as may be authorized under the then existing applicable laws; third, the Secretary of the Interior, upon the expiration of the lease, may lease the property of the original lessee to a new lessee upon such new conditions, new terms, and for such new periods of time as the applicable laws of that date authorize, providing that the new lessee shall pay for the property according to the rule laid down in section 5 of this act. It is the thought that section 6 makes it sufficiently clear that at the expiration of the term the Federal Government will have a free hand to do what it desires to do with the property. It is thought that anything short of this would be giving away more than the public or Congress would intend to do.

In fact, this bill does not lock up our valuable resources, but unlocks them for use, keeping the key in the hands of our Uncle Sam, where it rightfully belongs.

Much power is vested in the Interior Department, but this power must of necessity be lodged somewhere, and I think that no better plan could be arranged than to put this responsibility square up to a department that represents and is responsible for so much of our natural-resource wealth; and as the people of our country are now wide awake to the value of these natural resources, I am confident that our rights will be most carefully safeguarded.

This department draws the contract, and I think they would be wise in following the suggestions offered by the chairman of the committee, which are:

First. No legislation, Executive order, or departmental ruling should permit the patenting or the title in fee to pass out of the Federal Government under any conditions. The fee title should be reserved in perpetuity to the United States.

Second. The dam sites should be leased for a period of time not longer than 50 years, without any entangling alliances or phrases difficult to understand, on which the courts might quibble or debate as to the relative rights of the Federal Government and the lessee after the term has expired.

Third. The recapture provision should provide that all nonperishable property, such as land, water rights, dam sites, good will, etc., should go back to the Federal Government at actual cost, and that all perishable property in connection with the plant should come back to the Federal Government at the end of the lease at its fair value. In both cases the interest of the public is conserved and made certain.

Fourth. Strong, clear, well-understood provisions should be inserted in the lease contract for the revocation of the permit for a violation of the conditions thereof.

Fifth. Provisions should be inserted in the lease requiring diligence and prompt construction of the plant, so that the property may not be held for speculative purposes.

Sixth. A royalty or rental for the use of dam sites and the property of the Federal Government should be required in all cases except for municipalities, at least sufficient to cover the cost of administration.

Seventh. The Federal Government should at all times maintain its paramountcy and full control.

Eighth. Annual reports should be exacted from the power companies, so that the public might at all times know of their acts and doings.

Ninth. The Federal Government should reserve to itself full power to fix rates for service, capitalization, bond issues, etc., in interstate projects, and, where there is no public-utilities commission for this purpose, in intrastate projects.

Tenth. Each lease, permit, or consent of Congress should contain a provision that upon proof that any such permittees, lessees, or grantees have conspired to prevent the development of water power or to limit the output of already constructed plants the lease should be revocable in a court of competent jurisdiction.

The estimates of potential developed and undeveloped horsepower of this country varies; it is surely conservative to place it at the low mark of 35,000,000 horsepower. Only 6,000,000 horsepower have been developed and are now in use. The chairman tells us in his speech that the value of the products is $17,000,000,000, or seven times the receipts of all the railroads in this country. While I think that the estimate of undeveloped power is much greater, yet on the basis as stated we can readily see that it is of extreme importance that this valuable asset be so safeguarded by law that the people's interest will be preserved.

On page 383 of the hearings is a map showing the present condition of the hydroelectric power that has been developed. This map shows that of the power developed practically all is controlled by companies having interconnecting directorates and holding companies within holding companies, most all, as has been the usual thing in the good old days, being controlled by the big fellow who lends aid and comfort to the little fellow until he gets him fat enough for consumption. Then he is used as an incident in the business, or off comes his head, and he is swallowed, entering into the great system.

Our coal, our forests, our water above and under the surface, are all God-given property of all the people, and their values should not be taken to fatten the fortunes of a favored few; on the contrary, all the safeguards of legislation should be thrown around the privileges when franchises or rights are ceded.

Neither do I think that we should like a miser keep these treasures just to look at; they were put here for our use, and the just use of them is, in my opinion, the highest form of conservation.

We should not let ripe timber go to waste on our forest reserves, as we are doing now. We should not forbid the use of our public lands for any legitimate enterprise, neither should we let this valuable asset, water power that will generate our hydroelectric energy so cheaply, go to waste. We should use it, and frame such laws in a businesslike way that would invite its use.

I think this bill does that very thing, and while it places a very great power in the hands of the Secretary of the Interior, I am confident that we will have honest, patriotic men filling that high place in our Government.

This bill has been considered on its merits, open to amendment, open to all reason, and not passed under the party lash by caucus rule, nor written and ordered passed without amendment, but brought in, as all legislation should be, for the fair consideration of this body, and I believe such action means the best kind of legislation.

Labor Legislation.

EXTENSION OF REMARKS
OF
HON. JOHN A. M. ADAIR,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 15, 1914.

Mr. ADAIR. Mr. Speaker, the Democratic Party, in its last two national platforms, made certain pledges of legislative action favorable to labor and in the interest of the plain people generally. Each and every one of these pledges have been fully and completely redeemed. In my own campaign for Congress I promised laboring men of my district that, if elected, I would use my voice and vote in securing such legislation as would do them full justice. I have sacredly and faithfully kept every promise I made to them. This Democratic House has passed more legislation in the interest of labor than was passed during the 16 years of uninterrupted Republican rule.

Mr. Speaker, for 16 years workingmen petitioned Congress for certain legislation favorable to labor, but their petitions were pigeonholed and their demands ignored. Finally they turned to the Democratic Party for relief and for justice, and our party heard their appeals and recognized their rights by enacting legislation which has, and will, greatly improve labor conditions and raise their standard of living.

The demands made upon Congress by labor have been fully met and the hearts of workingmen everywhere are filled with gratitude for those of us who contributed our voices and votes in the redemption of our platform pledge and in conformity with their petitions.

Mr. Speaker, since you have occupied that chair and have presided over a Democratic House the following bills, recognized as labor measures, have been passed and enacted into law:

First. The 8-hour bill, extending the operations of the eight-hour law to work done for the Government as well as work done by the Government.

Second. The Children's Bureau bill, to promote the welfare of children and to devise means whereby the necessities of the parents can not be used to retard the development of the children, who are the citizens of to-morrow.

Third. The anti-injunction bill, to protect workingmen during the period of trade disputes, and to give to them the same protection in the courts that other men enjoy. For more than 30 years there has been a tendency on the part of the equity courts to assume legislative power and to declare by injunction certain acts to be criminal during labor disputes that are not criminal at other times, and then try men for committing these crimes without the protection of a trial by jury. That is contrary to the spirit of Democracy, and this House has put its stamp of disapproval on such usurpation on the part of the courts by the passage of the anti-injunction bill.

Fourth. The contempt bill, to provide a trial by jury in the cases of indirect contempt when the acts alleged to have been committed in violation of the orders of the court are of a criminal character, which would otherwise be tried by a judge and jury in our law courts.

Fifth. The Department of Labor bill, creating a department with a Secretary who shall be a member of the President's Cabinet, and who shall have the power of mediation in trade disputes and the right to appoint conciliators in such cases when, in his judgment, it is wise to do so, and while his good offices may be used for the purpose of bringing the contending parties together, he shall have no power to enforce his own views upon either of them.

Sixth. The industrial-commission bill to investigate the entire subject of industrial relations between employer and employee, with a view of ascertaining the best methods of dealing with industrial disputes, so as to protect the rights of all persons directly or indirectly interested.

Seventh. The investigation of the Taylor and other systems of so-called scientific shop management in order that the workingman might be protected against speeding up beyond his normal power. It can not be said that the interests of capital and labor are identical, but they have a mutual interest in securing the largest possible production with the same expenditure of labor. It is only when it comes to a division of that which has been produced that their interests diverge. That is true scientific shop management which secures a larger production with the same expenditure of labor power. The manager who can not secure a proper amount of production without speeding up his workmen beyond a normal and safe rate is not even an efficient manager, let alone a scientific one, and can only be classed as a man driver.

Eighth. The seamen's bill to give freedom to the seamen, provide a standard of skill for seamanship, promote safety of travel at sea, and equalize the operating expenses of foreign vessels with American vessels, so as to build up an American merchant marine without resorting to subsidies.

Ninth. The convict-labor bill requiring the sale of convict-made goods to conform to the laws relative to convict-made goods in the States in which they are sold. There are many States which provide by their laws that all prison-made goods shall be branded as such, and yet when these goods have been made in one State and shipped into another for sale they have not been branded in accordance with the laws of the State into which they have been shipped; customers have been deceived, and an unfair competition maintained with the products of free labor. The bill will remedy that defect and remove a part of this illegitimate competition with free workmen and the manufacturers who employ them.

Tenth. The Bureau of Mines bill, to widen the scope of the Bureau of Mines so that it may be better able to develop methods of preventing accidents in mines and have greater efficiency in rescue work when accidents occur, not only in the coal-mining industry but in the mineral and miscellaneous mines as well.

Eleventh. The dredge workers' 8-hour bill, to remedy a decision of the Supreme Court that men engaged in dredging work in our rivers and harbors are not laborers and mechanics, but seamen, and therefore did not come within the provisions of the general 8-hour law.

Twelfth. An 8-hour provision included in the fortification bill to apply to civilians engaged in the manufacture of ordnance and powder for the Government.

Thirteenth. An 8-hour provision in the Post Office appropriation bill for post-office clerks and letter carriers.

Fourteenth. An 8-hour provision in the naval appropriation bill making the 8-hour workday apply to workmen employed under the current appropriations.

Fifteenth. A provision in the Post Office appropriation bill removing from post-office employees the gag rule which has been applied by Executive order, issued by President Roosevelt and broadened by President Taft. This provision would make it possible for postal employees to bring their grievances to Congress without fear of being discharged for doing so. It seems strange, but it is nevertheless true, that Theodore Roosevelt was the first President of the United States to issue an Executive order denying to the wageworkers employed by the Government the right of petitioning Congress for redress of their grievances unless their petitions had been passed upon and received the approval or consent of the heads of the departments, who may have been responsible for the grievances complained of.

Sixteenth. The phosphorus-match bill to protect the health of workers in the match industry.

Seventeenth. The bill to extend the provisions of the compensation-for-injury act to the employees of the Bureau of Mines.

Eighteenth. The bill to give to official papers of trades-unions and fraternal organizations second-class mail privileges.

Nineteenth. A provision in the naval appropriation bill requiring all coal purchased for the use of the Navy to be mined on an 8-hour workday.

Twentieth. The masters and mates' bill to reduce the hours of masters and mates, making it impossible to require them to continue on duty for indefinite periods, as has been the case in the past. It has been shown by the testimony before the Merchant Marine and Fisheries Committee that masters and mates have frequently been required to work 24 hours, and in some instances as high as 60 hours, continuously without a rest. This policy endangers the lives and property intrusted to their care. The bill passed by this House fixes the employment of masters and mates at 9 hours while in a safe harbor and to 12 hours

while at sea, a restriction which everyone must admit is in the interest of safety as well as of humane treatment to masters and mates.

Twenty-first. The trades disputes act embracing the relation of labor organizations to the antitrust laws of the country; the regulation of the issuance of injunctions and the guaranty of the right of trial by jury for alleged contempts committed out of the presence of the court.

In discussing this act the chairman of the Committee on Labor [Mr. LEWIS] said:

Mr. Chairman, it is no exaggeration to say that the above law is the greatest single piece of legislation ever passed at the instance of laboring people on the American Continent. At a single stroke it adjusts all the perversions of ex parte court procedure that have arisen by the confessed misuse of the injunction so frequently occurring, grants the constitutional right of trial before an open-minded jury, and corrects the juridical mistake as to the intent of Congress in passing the Sherman law. It is not too much to say, I repeat, that by this single stroke of the legislative hand more is being done in our country to rectify the judicial status of the great toiling masses than has ever been accomplished in our history before. Nor does this mean violent or radical treatment of the relations of labor and capital.

Thus section 7 of the Clayton bill, taken with its complementary sections, places the American workman where the British workman was placed by Parliament in 1906. Their experience shows that property will be as safe, the rights of employers will be as secure, with this measure enacted into a law, which I predict will become known as the Magna Charta of American workmen.

Everybody understands that section 7 would have been written into the Sherman Act in 1890 had there been any thought of the application since made of that great act. Everybody knows that Congress at that time had no thought of legislating with regard to the relations of employers and employees. I challenge contradiction for that statement. If Congress had ever intended to legislate upon these relations and saw fit to do what the States may well do and are doing, for it is their subject matter and not a Federal subject matter—prescribing penalties for individual wrongs when committed—I challenge gentlemen of this House to say that Congress would have ever said to the toiler, "If you overstep the line and commit a tort, you shall be subject to threefold damages." That was the natural sentence to have pronounced on the trust, an outlaw organization that sought to suck up all the commercial profit and power of the Republic. That is a sentence—the sentence of outlawry—that never can be pronounced, now or in the future, on a peaceful organization of workingmen.

I know there is some misapprehension. Some honest people are inclined to think that this section of the Clayton bill may mean a species of class legislation. They commit the error of considering labor as a commodity, a natural error inspired by the circumstances under which the price of labor, unfortunately, is sometimes determined by the iron laws of the market; but there is this distinction between labor and a barrel of oil—a commodity: Labor is never in truth a commodity; labor can never under our institutions be property, either before the court or before the legislature. Under our Constitution, property in human beings has forever ceased. While a barrel of oil is not only a commodity in the market it is a commodity before the courts; it is a commodity before the legislature. The legal attribute of a commodity is property, but the legal attribute of the workingmen is citizenship. A different principle of sociology and justice apply to these two subjects matter when they are before Congress or before the courts. The rules that are rationally applicable to the commodity can seldom be justly applied to the man.

Mr. Speaker, in addition to these laws recognized as purely labor measures, we have passed the following bills which affect either directly or indirectly every workingman in the country, and were petitioned for by millions of laboring men representing both organized and unorganized labor:

First. A bill providing for the election of United States Senators by a direct vote of the people.

Second. A bill revising the tariff downward from an average of 97 per cent to 26 per cent. This bill in conjunction with the antitrust bills just passed will result in bringing great relief to the consuming masses. While it will not lower the price of farm products because of the increased demand and limited supply of such products, it will give to the consumer cheaper clothing, cheaper dress goods, cheaper stockings, cheaper blankets, cheaper wearing apparel of all kinds, and cheaper manufactured products of every description.

Third. A bill providing for a system of parcel post which is already saving to those working for daily, weekly, and monthly wages, over $11,000,000 per year. Heretofore this vast sum of money was taken from the wage earners and turned over to the express companies, which enabled these corporations to pay annual dividends as high as 70 per cent.

Fourth. A bill providing a system of currency which takes the control of money and the fixing of interest rates out of the hands of Wall Street and places it with the people where it properly belongs. Labor has suffered more from the criminal manipulation of the money market than from any other source. This law puts a stop to such methods and will go a long way toward insuring steady employment for labor.

Fifth. An income-tax law which raises about $100,000,000 of taxes from the wealth of the country and relieves the average man of this great burden of taxation. Labor petitioned time and again for this legislation, but never got it until the Democratic Party came in control.

Sixth. Antitrust laws which will prevent combinations in restraint of trade and will protect the wage earner from the extortion heretofore practiced by giant monopolies and combinations.

Mr. Speaker, I took an active part in securing for labor all of this legislation. During the eight years I have occupied a seat in this House I have stood loyally and faithfuly by those who worked for daily, weekly, and monthly wages, no matter where employed. I have at all times claimed the right to speak for labor. I was born and reared in the atmosphere of poverty, worked three years in a factory, side by side with those who earn their living by the sweat of their faces. I am glad I did; I am proud of that experience; it taught me lessons I shall never forget; I learned then and I know now their wants and needs, and I shall always stand by them, whether in or out of Congress. I want to help bring about a condition where colossal fortunes accumulated through the sweat, privation, and worry of the men, women, and children of working people will be impossible; where poverty and want will be unknown and all those who are willing to work will receive such compensation as will enable them to secure comfortable homes, all the food and clothing they desire, and equal opportunities for themselves and for their children for recreation, rest, and mental development with every other citizen of this Republic.

Mr. Speaker, the workingmen of my district are intelligent, industrious, and appreciative. Not a drop of ingratitude will be found in the blood coursing through their veins. They are grateful for what we have done, and you may feel well assured that in the coming campaign they will cast their lot with the Democratic Party. They have stood by me in the past. They will stand by me in the future.

Summer Homesteads.

EXTENSION OF REMARKS
OF
HON. EDWARD T. TAYLOR,
OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 21, 1914.

Mr. TAYLOR of Colorado. Mr. Speaker, in my judgment there are several very serious and important objections to the bill H. R. 17780, presented by the gentleman from Oregon [Mr. HAWLEY]. In the first place I am, as nearly everyone on this floor knows, seriously opposed to the leasing of the public domain under any pretext. I feel that that is a false and erroneous policy, and that we can not build up the West, and that neither the Government nor the State are benefited, by temporary tenants. We want the people to own their homes and to have real estate and taxable and financial interest in the country in which they live.

The Colorado Democratic State platform two years ago contained a plank favoring the enactment of a law providing for the entry of lands suitable for summer homes to be sold in small tracts, and under proper restrictions for that purpose. And pursuant to that plank in our party platform, on the 8th of December, 1913, I introduced H. R. 10072, a bill authorizing summer homestead entries, which bill, with the amendments agreed upon, is as follows:

A bill authorizing summer homestead entries.

Be it enacted, etc., That any person entitled to enter land under the homestead laws may locate upon and enter as a summer residence homestead not to exceed 10 acres of any of the public lands either within or without the forest reserves, and upon either surveyed or unsurveyed land, by making improvements thereon to the value of $300, including a habitable residence and suitable outbuildings, and maintaining in good faith a summer residence of not less than two months during each of the three summers succeeding his entry: *Provided*, That lands chiefly valuable for coal, or for minerals or timber, shall not be subject to entry under the provisions of this act: *Provided further*, That the entryman shall not be required to be a resident of the State in which the entry is made; *Provided further*, That all such entries shall be subject to a public right of way on each side of all streams on the public domain, and that no entry shall have a frontage of more than 20 rods on any lake or running stream.

The Western Governors' Conference, composed of all the governors of all the Western States, met in Denver last April and adopted quite an elaborate set of resolutions, under the heading of "What the West wants." One of their main resolutions reads as follows:

SUMMER HOMESTEAD LAW.

We favor the passage of a summer homestead or preemption law, permitting land not valuable for timber, minerals, or agriculture, but suitable for summer homes, to be acquired in not to exceed 40-acre tracts for summer homes. The entryman should not be required to be a resident of the State in which the land is situated, and suitable improvements of the value of $300 and three years' summer residence should be necessary to secure patent.

The gentleman from California [Mr. RAKER] has also introduced a bill on this subject, H. R. 16021, which is, I think, very much preferable to the bill of the gentleman from Oregon.

There is no question but what there is a demand for a law authorizing entries of small tracts of land for summer homes in the mountains. The people should be induced to come to the mountains of our country and spend their summers rather than spending them abroad. This is a very important and far-reaching measure. It would have a wonderfully beneficial influence toward the upbuilding of the West, and I hope some legislation along this line will be passed. But I earnestly feel that the people should be offered a title to at least a small tract of land upon some reasonable conditions, so that they would feel that they owned something and hold it permanently, rather than by a temporary permit, subject to the whims of any forest ranger. That is too much like a tent camping expedition. We of the West want people to come out there and build substantial summer homes and return there every summer and become a part of our country, as many thousands of them would if a reasonable law could be enacted. Moreover, I feel that it is entirely wrong and contrary to good policy for the Agriculture Department to attempt to handle public-land matters in the way the bill of the gentleman from Oregon would allow. That bill would take the entire handling of these public-land matters out of the Interior Department and turn it over to the Forest Service. It would give the Forest Service absolute control, not only as to the occupancy but as to title, of 185,000,000 acres of the public domain. Neither Congress nor the public has ever contemplated extending the authority of the Forest Service to that extent. The disposition and title of all our public lands should be controlled by the Interior Department, and I therefore hope that whenever this measure is enacted into law, if it ever is, that it will be placed under the jurisdiction of the Interior Department and that there may be some reasonable proceeding whereby the occupants of the public land may acquire a title to at least a small tract of land, even if it is only 5 acres.

Labor.

EXTENSION OF REMARKS

OF

HON. WILLIAM A. CULLOP,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 29, 1914.

Mr. CULLOP. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address by my colleague, the Hon. H. ROBERT FOWLER, made at Bicknell, Ind., on the 7th day of September, 1914—Labor Day.

The address is as follows:

LABOR DAY.

The achievements of the world are the achievements of labor. The history of the world is a history of labor. It is the great fountain of supply for human wants. It is the source of all creative wealth and the firm basis upon which the civilization of the world stands. It is the ladder upon which all nations have climbed from the low depths of society to the intellectual heights of light and liberty.

It has always stood upon the firing line, skillfully conducting the progress of man and patiently bearing his burdens. As master mechanic it has industriously conducted the business of the world from the days of the clumsy hoe under tropical skies and the noisy ax in primeval forests to the management of the quiet lever which regulates the speed of flying trains across continents or guides the airship in its trackless course through the clouds.

Yea, more; labor found man in the jungles of barbarism and blood, conducted him safely through the winding and misty valley of superstition and ignorance, pointed out to him fruitful fields for his employment and profit, led him up the sober heights of judgment and reason, placed a crown upon his head, and converted him into an intellectual and moral god. [Applause.]

The dawn of civilization found labor in the foul and cruel clutches of human slavery, and for more than 5,000 long and weary years it was compelled to toil upon a plane with the beasts of burden, driven by the lash of cruel masters by day and chained in miserable quarters by night and closely guarded by sentinels to prevent its escape. But as liberty is the birthright of man, labor claimed it as its own and bravely organized itself against the doctrine of servitude of the many for the benefit of the few, and never ceased its manly efforts until it had placed itself upon a plane of equality before the law with the best citizenship of the world. For centuries it waded through many bloody servile wars of long duration, sometimes victorious but often defeated, yet only to organize and come again. During peace it had seen many of its members subjected to the most cruel and inhuman torture and often put to death for trivial causes. In time of wars it had seen its comrades captured and cruelly put to death by the thousands. It had seen them compelled to fight duels with wild beasts in the arena for the amusement of the king's loyal subjects. It had seen its armies surrender on terms of peace and promise of protection, but after being disarmed it had seen them butchered in cold blood by the thousands. The weapons it had been compelled to forge were used against it to shed its own blood; the fires it had been compelled to kindle were used to torture its own flesh.

Again, it had heard the historian boast of the democracy of Greece and Rome, but on investigation it found on actual count that in Athens, the boasted home of liberty, with a population of 515,000, only 9,000 had a voice in government, or about 1 in 40. In wealthy Corinth, with a population of 700,000, only 40,000 were free. In Attica, the home of learning and freedom, with a population of 550,000, more than 400,000 were slaves. In Rome, with a population of 90,000,000, more than 60,000,000 were slaves.

Again, it saw the nations of the world ruled by kings, supported by mighty armies, with the wealth of the world at their command. It saw wars waged for conquest and plunder and the inhabitants of nations taken captive and sold into slavery. It saw the dark clouds of sin and crime enveloping human society everywhere, and the heart of labor was chilled and beat slowly with fading hope, then stopped, as if to exchange hope for despair, but just then it heard a voice coming from the ranks of the lowly, saying, "On earth, peace; good will toward men," and it was amazed at such strange words. It listened again, and heard these words, "God created man in his own image," and labor recalled the teachings of its masters to the effect that laboring men were no better than animals, that they had no souls to save, and that when they died that would be the end; nothing for the future.

Labor also recalled that its masters denied it the privilege of worshiping a God and punished its members severely, often putting them to death, for engaging in divine worship, and it wondered what could be the meaning of this new doctrine; but just then it heard the voice for a third time, but in tones as if spoken by authority, saying, "Do unto others as you would have them do unto you." Then labor took on new hope, threw down its weapons of steel, and enlisted under the banner of the Prince of Peace to wage war against the sinful practices of masters and rulers by using weapons which conquer the souls of men without shedding blood. Guided by the light that streams from Calvary's cross, labor wisely organized itself into unions, where it could discuss economic and social questions affecting human rights and where it could agree upon plans for action. It hoisted above the bloody horizon of time its banner on which was inscribed in living letters the golden rule, "Do unto others as you would have them do unto you"—a motto of equal and exact justice to all and special privileges to none. Under the inspiration of this motto it has waged an unrelenting war against its enemies and has driven back the despoilers of human rights step by step, until it has risen from the lowest depths of human slavery, through varying degrees of local scanty rights, until it reached the plane of serfdom and villenage during the Middle Ages, where only the cactus of human rights grew. Encouraged by these meager rights, it anxiously and bravely pressed on, until it merged into the rosy morning of the seventeenth and eighteenth centuries, where, as a common servant, it was permitted to own and inherit property and enjoy the fruits of its own toil. Not satisfied with less than a full measure of civil and political liberty, it bravely struggled on through misfortunes, disease, and low wages, often suffering reverses on account of bloody wars, waged by ambitious princes, until the nineteenth century, when it emerged into the beautiful sunlight of the intelligent employee, enjoying all of the political and civil rights of a free government. What a victory! It is the marvel of the world. Nothing could equal it. But the task of labor has not yet been finished. Steady employment, improvement of sanitary conditions and a fair division of the profits are among the many problems which must be adjusted.

In America we have never been troubled with royal blood and the feudal system. All of our ancestors, with few exceptions, came from the laboring classes of other countries, and our Government was established upon the principle of liberty for all and special privileges for none; so we have the advantage of other countries. We began with liberty for all, with one exception, and before we had solved this question it cost us the lives of more than a half a million of our bravest men and the loss of more than $2,000,000,000 of our wealth.

COAL MINING.

Coal mining is one of the most useful occupations in the world, and under present conditions it would be impossible to carry on business and commerce without it. The use of coal for motive power and heat and lighting purposes is so common and the quantity consumed annually for these purposes is so large that we may reasonably conclude that coal mining in America will continue to be one of our greatest industries for centuries to come, and it is not too much to say that as time passes on coal mining will become more profitable, both to the operator and the miner, affording steady employment at good wages.

In 1910, the world produced a little over 1,000,000,000 tons of coal. Of this the United States mined more than 500,000,000 tons, which was more than one-half of the world's product. Great Britain produced nearly 300,000,000 tons, but she had employed more than a million miners, while we had only a little over 700,000. Germany produced a little less than 160,000,000 tons, but she had employed nearly 600,000 men. These figures reveal that the United States mined about 700 tons per man employed, while England mined about 300 tons per man employed and Germany about 270 tons per man employed.

During the same year a little more than 3,000,000 men were employed in the coal mines of the world. America mined more than one-half of the entire output, with less than one-fourth of the men employed, while England mined less than one-third of the entire output with more than one-third of the men employed. Germany mined about one-sixth of the product with one-fifth of the men employed.

DANGEROUS.

Coal mining is one of the most dangerous employments in the world. There is but one other business more dangerous, and that is metal mining. During 1910, 2,840 men were killed in coal mining in the United States, while in Great Britain only 1,754 and in Germany 1,140 were killed. We lost a much larger per cent in death per thousand men employed than either of the other two countries. Our loss was 3.92 for every thousand men employed, while Geramny lost 1.79 and Great Britain 1.70. Our loss per million tons of coal produced was less than either of them, ours being 5.66 to the million tons produced, Great Britain's 5.92, and Germany's 7.18.

This is a very important question for both the miner and operator. Both should be equally interested alike, and both should strive to make the conditions of the mines as safe as possible. While it is true that the operator has the responsibility of making his mines reasonably secure and he is held to answer in damages for a failure to exercise reasonable caution to do so, yet the miner can do much to aid in this much-needed work. On examination of statistics of deaths and injuries in coal mines, we are able to locate the most dangerous places in mines and the causes of injury and death.

During the years of 1910, 1911, and 1912 the average loss of life in our coal mines in America was a fraction over 2,639. All the underground accidents averaged 2,382, and the deaths from falls of coal and falls from roofs averaged a little over 1,261, which constitutes nearly one-half of all the deaths from all causes, which is 47.78 per cent. The next highest death rate comes from the use of mine cars and mine locomotives, and then follows deaths by gas and coal-dust explosions. The same is true in the coal mines of all other countries.

In Great Britain, for 1911, 1,232 men were killed in coal mining; 599, or 48.62 per cent, were killed from falls from roofs and coal. Germany for the same year lost a total of 1,176 men in coal mining; 442 were killed from falls of coal and from roof falls, or 37.59 per cent. For 1910, France lost 213 men in coal mining, and 81 of these, or a little over 38 per cent, resulted from falls from coal and roofs. During the same year Japan lost from all causes 307 men, and 198 of these, or 64.50 per cent, were killed from coal and roof falls. During the year of 1911 India lost 148 men from all causes, but she lost 84 from falls of coal and from roof falls, or 56.76 per cent.

It will be seen from these figures that the highest rate of death results from falls of coal and roof. It would seem that the greatest danger to miners is falls from roof and gas and dust explosion. The Bureau of Mines, both in the States and the Nation, is doing a great work in trying to lessen this high death rate, and many bulletins on these subjects have been published containing valuable information on new methods of handling these difficult problems.

LABOR UNIONS.

We often hear it said that all the troubles between labor and capital could be readily and easily settled if it were not for labor unions. Yes; but how would they be settled, and who would be present when the settlement is made? History tells us that all of the material advancement made by labor in the past has been accomplished through organized efforts. It was through a well-organized union that labor was able to defeat its cruel masters on the island of Scio, lying off the coast of Greece, about 400 years before Christ. Their brave leader, Drimakos, fled to the mountains with his followers and set up a separate government for labor and dictated terms on which his men should be protected and supplied with food and raiment.

It was through a combination of labor that the "shepherd hero of the mountains," Viriathus of Spain, in 149 B. C., defeated the well-trained armies of Rome and made himself King of Spain. It was through a well-organized system of labor that the corrupt Government of Sicily was overthrown in 143 B. C., and Unus, "the king of the slaves," was made ruler for 10 years. Spartacus, the gladiator, and the greatest labor leader of ancient times, organized, through labor unions, an army of 300,000 men and defeated 11 different armies of Rome in 11 successive battles, beginning in 74 B. C. But all of these great labor movements were unsuccessful in the end, for all of their efforts were based upon force. But here is an example where labor was successful. Moses not only organized the children of Israel into unions about 1,400 years before Christ, but they went out on a strike, 600,000 men, besides women and children. Pharaoh followed them with his army, but the Lord was with labor and saved it from the wrath of its cruel Egyptian taskmasters.

Our Savior organized a union of 12 and sent them out in the world to teach men how to conquer without shedding blood, and, as a rule, we have gained our best results by following His wise counsel.

But let us see what unions have done in coal mining, to lessen the rate of death. I have made a computation of the average rate of death per 1,000 men employed in all of the coal-producing States from 1896 to 1911, inclusive, a period of 16 years, and I find the highest rate to be in Colorado, 7.59, and I find the lowest rate to be in such States as Missouri, with 1.98; Indiana, 2.13; Iowa, 2.26; Kentucky, 2.28; Ohio, 2.50; and Illinois, 2.77, all heavily unionized.

Colorado coal miners have never been organized into unions, and it is pretty well conceded that the terrible suffering in that State for the last two years is the result of an effort to organize unions, which has been bitterly opposed by the operators. A very high death rate existed in other Western States until the organization of unions. Wherever labor has been well organized it has been the means of improving sanitary conditions and lessening the rate of death and injuries. Colorado is taken as a type of nonunion labor, because it has always been nonunion until the last two years, and it can not now be classed with union-labor States. Here we find the greatest death rate in the United States, except Utah, and her high rate is caused on account of an explosion in 1900, bringing her death rate up to 159.79 for that year. In the six great coal-mining States—Missouri, Indiana, Iowa, Kentucky, Ohio, and Illinois—the death rate is 2.32, as compared with 7.59 for Colorado. Pennsylvania produces four times as much coal as any other State in the Union, and yet her death rate per thousand men employed is only 3.32, notwithstanding it has been one of the greatest battle grounds between capital and labor in the country, but now its labor is fairly well unionized.

West Virginia produces next to the greatest amount of coal of any State in the Union, but of recent years labor has had much trouble with capital on account of its effort to systematize labor and improve its condition, yet its death rate for the last 16 years is about 5 per thousand men employed. It is quite evident from these figures that wherever labor has been brought under the magic influence of the union it has resulted in the improvement of conditions beneficial both to the miner and operator alike, and at the same time it has thrown about itself a greater security, thereby lessening the number of casualties.

WAGES.

In 1910 the Commissioner of Labor made an investigation as to the wages and hours of employment of the labor in the iron and steel industries of the country. It covered nearly all of the iron and steel plants in the United States, including 338 blast furnaces, steel works, and rolling mills. It covered the wages

and hours of work for 172,705 employees, which is more than 80 per cent of the men then employed in the plants examined. Fifty thousand of these employees were required to work seven days per week, and two-thirds of them were compelled to work more than 84 hours per week. Eighty-eight per cent of the men in the blast furnaces worked seven days a week. The seven-day work extended also to the Bessemer converters, the open-hearth furnaces, rails, and structural mills. It was also found that when the night shift was changed to the day shift, and vice versa, workingmen were required to remain on duty from 18 to 24 consecutive hours without rest or sleep. Seventy-two thousand five hundred and twenty-nine, a little more than 42 per cent of the whole, worked 72 hours per week, making a 12-hour day for six days in the week. Sixty per cent of these employees were required to work 60 hours per week, while only 22 per cent had a working week of 60 hours and only 14 per cent had a working week of less than 60 hours.

Thirteen thousand eight hundred and sixty-eight, or a little more than 8 per cent of the men employed, received less than 14 cents per hour; 20,527, or about 12 per cent, received 14 and less than 16 cents per hour; 51,417, or nearly 30 per cent, received 16 and less than 18 cents per hour. Thus it will be seen that nearly 50 per cent of the entire working force in these iron and steel works receive less than 18 cents per hour. In the New England district unskilled labor receives 16 cents; in the eastern district, 13 and 14 cents; the Pittsburgh district, 16 and 17 cents; the Great Lakes and Middle West district, 15 to 17 cents; and the southern district, from 10 to 13 cents.

Since this investigation and since the protest of union labor the hours have been shortened and the wages have been increased. It is quite evident that labor has received its greatest advancement in wages through the efforts of the union and through publicity by State and National Government.

One of the modern wonders in business is revealed from this investigation: The Steel Trust is the largest trust in the world and controls more than $30,000,000,000 worth of corporate stocks and other properties, yet it has been forcing labor to work more than 12 hours a day for seven days in the week. It is said that Rome had her thousands of slaves, but here is a modern Rome of the twentieth-century type huddling its thousands of employees in sweatshops, which challenges the boast of our institutions of liberty and learning. This is a problem not only for labor unions but for legislative bodies as well, and I am glad to say that Congress has been very active of recent years in the passage of remedial legislation for the benefit of labor. During the Sixty-second Congress more than 21 labor measures were passed, among which was the establishment of a Department of Labor in the Cabinet of the President. Heretofore labor was compelled to look after its own interest, but hereafter it will be dignified with a seat in the President's Cabinet. Hon. William B. Wilson, a union-labor man, has the distinction of being the first Secretary of Labor. A higher honor could not be conferred upon any man in America or elsewhere. The eight-hour law compels contractors for Government work to observe the eight-hour law. Before the passage of this law Government contractors refused to comply with the provisions of the 8-hour law, but now they will forfeit, out of their contract price, $5 a day for each violation of the 8-hour law.

A provision in the Post Office appropriation bill extends the provisions of the eight-hour law to clerks in post offices, letter carriers, and postal employees and repeals the gag law, thereby liberating labor in the Postal Service and giving it a right to present its grievances to its Member of Congress and to the committees of Congress without first being subjected to the danger of being thrown out of employment.

The present administration has made a record in which the rights of labor have not been neglected; the arbitration act, which prevented a general railroad strike by a peaceful adjustment of the differences between labor and the railroads; the Industrial Commission act, which gives a right to investigate industrial disputes and to settle such disputes peaceably upon terms of equity and justice; an act exempting labor organizations and farmers' unions from the provisions of the Sherman Antitrust Act and a provision in the same act regulating Federal injunctions and the issuance of the same, thereby granting labor the right of trial by jury in all cases where the injunction has been issued for alleged contempts not committed in the presence of the court. Had this law been in force at the time of the indictment of Samuel Gompers, John Mitchell, and Frank Morrison they would have been entitled to a trial by jury, and, in my opinion, they never could have been convicted. I regard the trial in this case as one of the most disgraceful in America.

We are now revising the law relating to Federal procedure, and two amendments were adopted a few days ago, one of which prevents Federal judges from taking a case from the jury when there is evidence to support the issues. The other provision prohibits the Federal judge from expressing an opinion to the jury as to the sufficiency of the evidence, as is the case now. Your own Congressman is the author of both of these amendments. They were prepared by his own hand and presented by him on the floor of the House. [Applause.] He not only secured the adoption of these two amendments, but he has to my personal knowledge supported every labor measure for the last three years which has been before Congress. You are to be congratulated on having such an able, fearless, and conscientious Congressman from your district. [Applause.] I have been told that I must not talk about politics here, but it is impossible to discuss living issues without wading into politics to some extent, and I must say that in my judgment the cause of labor can be best served in legislative bodies by selecting men of ability, honor, and integrity, who are not afraid to make public their views on this subject before the election, and who will have the manly courage to stand by them after the election. Men and measures is the watchword in the selection of representatives to legislative bodies, and no man should allow anything, political or otherwise, to stand between his vote and his conscience when he goes into the booth to mark his ballot. [Applause.]

TRADES-UNIONISM.

Herr Carl Legien gives the following interesting table denoting the strength and progress of the trades-unionism of the world, with the exception of Australasia:

Countries.	1910	1911
Great Britain	2,440,723	3,010,346
France	977,350	1,029,238
Belgium	138,928	92,735
Holland	143,850	153,689
Denmark	123,964	128,224
Sweden	121,180	116,500
Norway	47,463	53,830
Finland	24,928	19,649
Germany	2,698,144	3,061,002
Austria	451,232	486,263
Bosnia-Herzegovina	6,269	5,587
Croatia-Slavonia	6,805	8,504
Hungary	86,778	96,180
Servia	7,418	8,337
Roumania	8,515	6,000
Bulgaria	3,000	.....
Switzerland	93,797	78,119
Italy	783,538	709,943
Spain	40,984	80,000
United States	1,710,433	2,282,361
Total	9,905,198	11,435,498

Number killed per 1,000 employed in and about the coal mines of the principal coal-producing countries, 1901–1911, inclusive.

Years.	(1) India.	(2) Belgium.	(3) Austria.[1]	(4) Great Britain.
1901	0.68	1.17	1.19	1.36
1902	.66	1.07	1.08	1.24
1903	.84	1.14	.74	1.26
1904	.67	.93	.92	1.24
1905	.74	.91	1.45	1.35
1906	.89	.95	1.03	1.29
1907	.87	1.03	1.07	1.31
1908	1.37	1.07	.86	1.32
1909	1.09	.95	1.07	1.43
1910	1.52	.95	.93	1.70
Average, 1901–1910	.99	1.02	1.04	1.36
1911	1.39	1.15	1.26	1.17

Years.	(5) France.	(6) New South Wales.	(7) Germany.	(8) Japan.	(9) United States.
1901	1.21	1.39	2.34	2.39	3.25
1902	1.09	8.19	1.99	1.71	3.71
1903	1.02	.93	1.92	2.53	3.23
1904	1.07	.85	1.80	2.14	3.59
1905	1.04	1.71	1.86	3.22	3.63
1906	7.17	1.41	1.97	5.25	3.35

Labor Legislation.

The dignifying of labor by humanitarian laws which guard the health and safety of the employees and guarantee to them an honest wage for their service is the highest compliment to our Nation; but the peon and the serf are a reproach and a reflection on the countries in which they are found.

EXTENSION OF REMARKS

OF

HON. WILLIAM B. FRANCIS,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 14, 1914.

Mr. FRANCIS. Mr. Speaker, it is conceded that the greatest problem before the American people for solution to-day, is to regulate the legal relation between employer and employee so that a just balance may be maintained for a fair standard of living for our American workmen.

There enters into this great subject many material things, such as the hours which he shall work; the employment of women and children; immigration, contract, and convict labor; the sanitary conditions surrounding the employee; the provision for his safety in the performance of his work; the liability of the employer for injuries sustained; and the provision for compensaton provided by the State or otherwise for his relief.

In this respect the State of Ohio has taken an advanced step in the enactment of laws to provide relief for injured workmen which in its brief operation has already been the means of adding comfort and cheer to many homes which, without its enactment, would be disconsolate; and in this organized labor's efforts have in a great measure been rewarded.

The new eighteenth district, lying along the Ohio Valley a distance of more than 60 miles, seems to have been molded by the hand of nature for a great beehive of various industries, with its superior advantages of water transportation, supplemented by many railroads, with great coal fields, clay mines, limestone, oil and gas, all ready for the hand of man.

Its great pottery, brick, and tile works; tin works; being first in coal production; glass works, iron and steel works, furnaces and smelters, have attracted to this vicinity an army of skilled workmen and laborers which have made it one of the most important districts in the United States in point of diversified industries and in the vast army of laborers employed.

This district is therefore vitally interested in national labor legislation which will relieve and better the condition of workingmen.

I am pleased to have assisted in the great measures which have been enacted during the Sixty-second and Sixty-third Congresses in the interest of labor. They are not a panacea for all of labor's troubles by any means, yet we have made greater progress in the enactment of humanitarian laws and in the advancement of the interests of labor in the last two terms of Congress than was accomplished by Republican administrations in 25 years before.

We have just celebrated another national labor day—the first Monday in September. On this day in 1882 a great parade was held in New York City and another in 1884. In the year 1887 Colorado made the first Monday in September a legal holiday, and other States have rapidly fallen in line until to-day the cause of labor is recognized by a national holiday which is observed throughout the several States of the Union.

We have only to turn our eyes a short way back on the pages of the history of our country to see the unsanitary conditions under which workmen were compelled to perform their services and to observe the employment of women and children, with little or no legal regulations for their health or safety.

These conditions are immeasurably improved, but they are not yet ideal. The inhumanely long hours that were formerly exacted, even in the most dangerous employments, were scarcely less than brutal; but we are glad to see that organization, education, and legislation are resulting in better things.

As late as the year 1844 there seems to have been no limit as to time or the amount of service to be performed for a day's work, and President Van Buren found it necessary to issue an order that "All public working establishments will be hereafter regulated as to working hours by a 10-hour system."

But to-day nearly all the States of the Union have passed factory acts in some form or other. These laws relate to two different subjects, the one to the conditions of employment, and affect women, young persons, and children, and the safety and health of the employees generally. These laws are being enforced, usually by factory inspectors. As to the other, it has been the great aim of organized labor to have fixed by law the hours of service not only in the States but in the Nation. In many of the States there have been laws enacted which determine what shall constitute a day's work in the absence of contract—what shall constitute a day's work in public works and on public roads and to regulate a day's work in special occupations, and in limiting the day and week's work at which women and children may be employed. The dignifying of labor by humane laws which guard the health and safety of the employees and guarantee to them an honest wage for their service is the highest compliment to our Nation; but the peon and the serf are reproachful and a reflection on the countries in which they are found.

The Labor Committee of the House of Representatives deserves great credit for its untiring work during the short time the Democrats have been in power, an able review of which has been prepared by its chairman, Hon. DAVID J. LEWIS.

Mr. LEWIS's sympathies, by birth, early training, and occupation, are with labor, having been employed at mining when 9 years old, learned to read at Sunday school, continued at mining until 1892, when through his own studious efforts he was admitted to the bar, and has since practiced law until elected to Congress. His great ability is readily recognized in Congress as a labor leader. His review is as follows:

"It is something more than a coincidence that the following measures could not be passed through this House, or even considered, under the rule of Cannonism, and that they have been passed almost without opposition since the party of Woodrow Wilson and of CHAMP CLARK has been intrusted with legislative power.

"BILLS NOW LAWS.

"First. The 8-hour bill, extending the operations of the 8-hour law to work done for the Government as well as work done by the Government.

"Second. The bill providing an 8-hour day for all female employees in the District of Columbia, a jurisdiction over which Congress has complete power to act. This law is now in actual operation in the city of Washington, without any of those grave business disturbances which overfearful persons had been led to expect.

"Third. The dredge workers' 8-hour bill, to remedy a decision of the Supreme Court that men engaged in dredging work in our rivers and harbors are not laborers and mechanics, but seamen, and therefore did not come within the provisions of the general 8-hour law.

"An 8-hour provision included in the fortification bill to apply to civilians engaged in the manufacture of ordnance and powder for the Government.

"An 8-hour provision in the Post Office appropriation bill for post-office clerks and letter carriers.

"An 8-hour provision in the naval appropriation bill making the 8-hour workday apply to workmen employed under the current appropriations.

"Fourth. A provision in the naval appropriation bill requiring all coal purchased for the use of the Navy to be mined on an 8-hour workday.

"Of these 8-hour bills the present Secretary of Labor, Hon. William B. Wilson, who is a former coal miner, who entered the coal mines at 9 years of age, an experience identical with my own, observes:

"It has been said on the floor of this House that the labor measures we have passed would not give an additional sandwich to any wage-worker. This act alone will reduce the hours of labor of hundreds of thousands of workmen, directly or indirectly employed by or for the Government, giving greater opportunity for rest, recreation, and mental development to those who are affected by it. It will do more than that. While men working an 8-hour workday can naturally be more efficient per hour than when working 10 hours, it has never been contended that men can accomplish as much in 8 hours as they can in 10. The shortening of the workday, therefore, means the giving of employment to thousands of those who are now among the unemployed, giving them an opportunity of earning a livelihood which they do not now have, and that means not only a sandwich but a full meal.

"Fifth. The Children's Bureau bill to promote the welfare of children and to devise means whereby the necessities of the parents can not be used to retard the development of the children, who are the citizens of to-morrow.

"Sixth. The Industrial Commission bill to investigate the entire subject of industrial relations, with a view of ascertaining the best methods of dealing with industrial disputes so as to protect the rights of all persons directly or indirectly interested.

"Seventh. The phosphorus-match bill to protect the health of workers in the match industry.

"Eighth. The trades disputes act embracing the relation of labor organizations to the antitrust laws of the country; the regulation of the issuance of injunctions and the guaranty of the right of trial by jury for alleged contempts committed out of the presence of the court.

"Mr. Chairman, it is no exaggeration to say that the above law is the greatest single piece of legislation ever passed at the instance of laboring people on the American Continent. At a single stroke it adjusts all the perversions of ex parte court procedure that have arisen by the confessed misuse of the injunction so frequently occurring, grants the constitutional right of trial before an open-minded jury, and corrects the juridical mistake as to the intent of Congress in passing the Sherman law. It is not too much to say, I repeat, that by this single stroke of the legislative hand more is being done in our country to rectify the judicial status of the great toiling masses than has ever been accomplished in our history before. Nor does this mean violent or radical treatment of the relations of labor and capital.

"Thus section 7 of the Clayton bill, taken with its complementary sections, places the American workman where the British workman was placed by Parliament in 1906. Their experience shows that property will be as safe, the rights of employers will be as secure, with this measure enacted into a law, which I predict will become known as the Magna Charta of American workmen.

"Everybody understands that section 7 would have been written into the Sherman Act in 1890 had there been any thought of the application since made of that great act. Everybody knows that Congress at that time had no thought of legislating with regard to the relations of employers and employees. I challenge contradiction for that statement. If Congress had ever intended to legislate upon these relations and saw fit to do what the States may well do and are doing, for it is their subject matter and not a Federal subject matter—prescribing penalties for individual wrongs when committed—I challenge gentlemen of this House to say that Congress would have ever said to the toiler: 'If you overstep the line and commit a tort, you shall be subject to threefold damages.' That was the natural sentence to have pronounced on the trust, an outlaw organization that sought to suck up all the commercial profit and power of the Republic. That is a sentence—the sentence of outlawry—that never can be pronounced, now or in the future, on a peaceful organization of workingmen.

"I know there is some misapprehension. Some honest people are inclined to think that this section of the Clayton bill may mean a species of class legislation. They commit the error of considering labor as a commodity, a natural error inspired by the circumstances under which the price of labor, unfortunately, is sometimes determined by the iron laws of the market; but there is this distinction between labor and a barrel of oil—a commodity: Labor is never in truth a commodity; labor can never under our institutions be property, either before the court or before the legislature. Under our Constitution, property in human beings has forever ceased. While a barrel of oil is not only a commodity in the market, it is a commodity before the courts; it is a commodity before the legislature. The legal attribute of a commodity is property, but the legal attribute of the workingmen is citizenship. A different principle of sociology and justice apply to these two subjects matter when they are before Congress or before the courts. The rules that are rationally applicable to the commodity can seldom be justly applied to the man.

"Ninth. The Department of Labor bill, creating a department with a Secretary who shall be a member of the President's Cabinet, and who shall have the power of mediation in trade disputes and the right to appoint conciliators in such cases when, in his judgment, it is wise to do so, and while his good offices may be used for the purpose of bringing the contending parties together he shall have no power to enforce his own views upon either of them.

"Mr. Chairman, the Department of Labor is a real living and dynamic fact. And why? Its Secretary is a real son of labor.

* * * * * * *

"He is a credit to his race. He is a credit to the labor sentiment of the country, which has trusted and supported him, and a credit to the administration whose arduous responsibilities he so splendidly shares. Surely in William B. Wilson labor has a voice in the great councils of the Nation.

"BILLS WHICH HAVE PASSED THE HOUSE.

"First. The bureau of safety devices bill. This measure, the Mann-Bremner bill, after the death of Mr. Bremner ably supported by Mr. WALSH, of New Jersey, already favorably reported in the Senate, is designed to create in the Department of Labor a clearing house for devices preventive of industrial accidents. The ratio of accidents in the United States tends to run from two to four times as great as in other countries, and it is meant through this bureau to supply employers and employees with the best methods and devices in order to reduce as far as possible the frightful carnage in life and limb.

"Second. The Hensley and Booher convict-labor bills. One of these is designed to prevent the importation of convict-made goods from foreign countries and the other of convict-made goods from one State to another in competition with the products of free and self-supporting American labor.

"Third. The seamen's bill. This bill passed the Sixty-second Congress and was pocket vetoed by President Taft. It has since passed the Senate in the Sixty-third Congress and is now before the Committee on the Merchant Marine and Fisheries of the House, with most of its provisions agreed upon, and certain to become a law during the Sixty-third Congress. Its principal objects look to abolishing imprisonment as a penalty for desertion, and corporal punishment on board ship, Sunday work while in safe harbor reduced and regulated, establishes seaman's right to half wages upon arrival at any port, and 120 feet boat space for each seaman and apprentice; two years' service on lakes, bays, and sounds to entitle the sailor to rank of able seaman, and 12 months on the sea; regulating the number of lifeboats and saving equipment each vessel is to carry.

"Fourth. A provision in the judicial revision bill allowing appeals to the Supreme Court from decisions of the State courts nullifying State statutes on the ground of conflict with Federal law. A great many State labor laws have been invalidated by the State courts. This provision allows an appeal to the Supreme Court in such cases, and will doubtless save many State laws, as, for example, the semimonthly pay law of New York, recently sustained by the Supreme Court.

"BILLS REPORTED FROM COMMITTEE.

"First. The Deitrick bill regulating the use of the so-called Taylor system in Government shops.

"Second. The Maher bill amending the law under which the wages of employees in the Government navy yards and arsenals are to be determined and giving the Secretary of Labor a voice in such adjustments.

"Third. The Palmer child-labor bill.

"Mr. Chairman, this bill calls for the most thorough discussion, but for my present purpose I can only briefly describe its provisions. Urging the precedent of the convict-labor-made goods bills which have already passed this House, it provides—

"That it shall be unlawful for any producer, manufacturer, or dealer to ship or deliver for shipment in interstate commerce the products of any mine or quarry which have been produced in whole or in part by the labor of children under the age of 16 years or the products of any mill, cannery, workshop, or manufacturing establishment which have been produced in whole or in part by the labor of children under the age of 14 years, or by the labor of children between the age of 14 years and 16 years, who work more than eight hours in any one day or more than six days in any week or after the hour of 7 o'clock p. m. or before the hour of 7 o'clock a. m.

"I believe, sir, that the tender conscience of the people where childhood is involved and the national sense of the necessity of Federal action to protect those who can not protect themselves will justify us in passing this bill reported from the Committee on Labor.

"I say it is something more than a coincidence that these measures have passed a Democratic Congress and were not even considered by the Cannon rule. What is the cause? What is the difference? The difference, sir, I submit is this: The party of Joseph G. Cannon represented only a part of the people. The party of Wilson and CLARK represents them all. One is the tory, who thinks all law-made changes are dangerous and, as Wendell Phillips said, is afraid to brush down the cobwebs lest the ceiling may fall. The other is the liberal and progressive, who knows that as social and economic conditions change, so must change the rules of the State which regulate the relations of human beings.

"Mr. Chairman, it is not claimed for these measures that they will end the labor problem; that they will realize for labor all its rights or secure the employer from all occasional wrongs. We know that the rights of labor involve vastly more than its relations to the employer. Having secured fair wages and conditions of employment from his employer, the workman has then to meet that other problem common to all consumers, namely, how shall he be able to make his wages bring him an equitable share of the products of other men's labor? And it is here even more than with the employer that his task of rightful adjustment really lies.

"A brilliant orator a generation ago, taking his inspiration from the magnificent achievements of the inventors, declared that the inventor would soon emancipate the sons of toil from their physical drudgery and painful forms of labor by the substitution of machine for pick and spade. Well, sir, what do we find? Truly, the inventor is doing his part; but how about the correlative processes of exchange and distribution? Well, that problem remains unchanged, and has now become so aggravated as to be generally conceded as the cause of our high cost of living. How shall he make his wages bring him something like an equivalent of what he gave for such wages? I think all students now agree that the labor problem has become chiefly the consumers' problem. It is something to have stated the problem clearly. I shall do no more to-day. But, sir, we do not leave this problem, momentous as it is, entirely without hope. There ought to be some way by which the inordinate tax imposed by the processes of distribution—the tax that doubles, yes, trebles, the price of the product between producer and consumer—may be greatly lightened. In the last two generations the producer and transporter have done their part in cheapening the cost of the article. Productive and transportation costs have been pulled down and down in an almost never-ending scale of reduction. Meanwhile distribution agencies, unorganized and ever multiplying, show a piling up of expenditures, ever increasing the distribution tax, from which all must suffer, for we are all consumers. Can not this problem be adjusted? Must we confess our helplessness in its presence—this ever-widening maw that is swallowing nearly all of the fruits of mechanical advancement, and threatens to swallow more? Perhaps some one of the nations now at war and soon to be under extreme stress to feed its people will discover and apply the remedy. Necessity is the mother of invention—perhaps. If so, even this monstrous crime against humanity and organized repudiation of Christianity will prove some good.

"In this connection we can point to the industrial commission which has power to consider this subject and report its recommendations; and we may also point to the development of the parcel post by this administration as a promising means, when our people learn to use it, to purchase direct from the trucker and farmer as it becomes further perfected for that purpose.

"Mr. Chairman, such is the record of the Democratic Party in labor legislation in the Sixty-second and Sixty-third Congresses. Valuable as it is in itself, it is yet even more significant as an earnest of the fixed determination of our party to meet the problems of a growing and changing state of society and to adjust them—to adjust them calmly and justly, but to adjust them. It can not be said that our work has been partial and one-sided and that we have confined our work to a single class. We have met in the same spirit all the problems of our day. The direct election of Senators, the parcel or postal express, the prevention of corrupt practices at primaries and elections, the national banking law, the antitrust laws, the conservation bills, the income tax, and many other useful measures in the interest of society generally. Compare this record with the almost blank pages under Cannonism for 20 years—a record of unblushing toryism and inertia."

* * * * * * *

Mr. Speaker, it will be highly interesting to labor to know that the outlook for employment never was better than at present, although the enactment of these and other progressive laws by Congress has called forth the prophecies of the calamity howlers, founded in hope but not in truth, that disaster would come to our Nation.

The leading Republican paper in our district, the Martins Ferry Times, places our national prosperity above partisan politics, and carries in its columns, in its issue of September 12, a summary of 48 replies which were received by Taylor-Critchfield Co., of Chicago, from the leading manufacturers and business men in all sections of the United States on the subject of the great wave of national prosperity which is now upon us, which is as follows:

"HERE'S PROOF OF PROSPERITY—BUSINESS IN THE UNITED STATES IS SOUND—AMERICA FACES HER GREATEST COMMERCIAL OPPORTUNITY.

"This country is on the eve of an awakening—due to a wholesome state of affairs at home and to a condition abroad that will establish our trade supremacy beyond question.

"The above statements represent a summary of the replies received by the Taylor-Critchfield Co., of Chicago, to telegrams addressed to some of the leading business men of the United States.

"Their answers ring with optimism, hope, assurance, confidence.

"Business must be good. Proof of prosperity is found in the following messages:

"E. Mapes, secretary Cream of Wheat Co., Minneapolis, Minn.:

"I see no reason why, if business is not hampered for political reasons, the United States should not see great commercial prosperity during the continuance of the European war. This, however, is a time when the utmost latitude should be allowed by the Government to all legitimate business interests. Upon that, coupled with wise action toward the establishment of mercantile marine and adequate banking facilities, I think the question depends entirely. I think this is the greatest chance for the American manufacturer and business man that will probably come in several lifetimes, and think the business man of the United States can be safely trusted to take advantage of it if not hampered too much by unreasonable Government restrictions. Of course, there will come a reaction after the war, and how much the same will affect the United States depends entirely upon how firmly we have established our footing during the continuance of the war period.

"Windsor T. White, president the White Co., Cleveland, Ohio:

"Business with the White Co. has steadily improved since the scare following the first announcement of war abroad. I believe general business will continue fair in this country and will boom if our surplus farm products and manufactures can be shipped to other countries.

"United Cigar Manufacturers Co., New York City:

"In the main the present disturbances in American business are due to financial and merchandising readjustments made necessary by the European upset. This readjusting process is already well under way. In the meantime it would be a mistake to fear that the real fundamentals of American business are endangered. Even the cotton losses are already offset by grain increases. American business will emerge stronger from the present crisis than ever before, while other countries now at war will emerge hardly weakened. Speaking for ourselves, we are following our normal progressive policy.

"The Bartholomew Co., Peoria, Ill.:

"Our trade this year will exceed that of last year and previous years. The war has had no effect on the sale of our automobiles, and with the increased prices that farmers will receive for their products we look for still larger business in all rural communities in the Central West.

"A. J. Lavuer, general manager, Burroughs Adding Machine Co., Detroit, Mich.:

"General conditions in America do not warrant the slump in business which is being felt all over the country. The uneasiness created by the sudden changes made necessary on account of European disturbances is responsible for the lack of business activity. However, I believe that as soon as the business public decides as to the best way to proceed under existing conditions business will resume its normal attitude and should show a considerable increase.

"Woolson Spice Co., Toledo, Ohio:

"Our business is decidedly above normal. Outlook for fall and winter very favorable. We are taking advantage of present opportunity to extend our interests in many sections of the country.

"G. M. Skiles, president, Ohio Seamless Tube Co., Shelby, Ohio:

"My opinion is that this country was never on a more sound financial basis. If we will all comply with the President's message to the people; that is, to be calm, cool, level headed, and not 'rock the boat,' this country will continue to dominate the world.

"Studebaker Corporation, South Bend, Ind.:

"Our advertisement, 'Optimism and Opportunity,' expresses our views. We believe the opportunities for business heretofore supplied by Europe are now open to American manufacturers and merchants, and they should unite vigorously in taking advantage of the situation. Fundamental conditions of the United States are absolutely sound.

"E. Rosenbaum, president Southern Plow Co., Dallas, Tex.:

"The larger the army the greater the commissary needs. Texas, the world's commissary, stands ready to feed the hungry and clothe the naked with an unusually large feed crop made and a big cotton crop maturing. We should quickly recover from the temporary depression caused by the closing of European cotton markets and eventually supply the world with finished cloth instead of raw cotton, to our lasting benefit.

"Samuel Moody, passenger traffic manager Pennsylvania Lines, Pittsburgh, Pa.:

"Business conditions and prospects good. The European war will, in my judgment, bring out the Yankee genius to produce the wants of home manufacturers, so that this Nation will not be dependent upon the foreigner in the future as it has been in the past.

"C. W. Nash, general manager Buick Motor Co., Flint, Mich.:

"War or no war, there will be 40,000 Buick automobiles built in the 1915 season. We are going to manufacture 40,000 cars because we expect to dispose of that number, and we have every assurance that we will. The present demand for Buick cars in this country has never been equaled, and the cars we had planned to ship abroad will be sold in this country. The fact that no foreign-made cars are likely to be shipped into this country because of the war will have a balancing effect on the automobile situation and in a measure affect the foreign shipments heretofore made by American automobile concerns.

"Northwestern Knitting Co., Minneapolis, Minn.:

"Munsingwear sales this year are larger than last year. We expect a greatly increased demand this fall and winter. We deplore European conditions, but believe they indicate long-continued prosperity in the United States. We are enlarging our plant and employing additional help. Those merchants will be wise who anticipate as far as possible the increased business that is certain to come as a result of good prices for farm products and good wages in industry.

"Silas McClure, secretary Malleable Iron Range Co., Beaver Dam, Wis.:

"The volume of our orders and the recent improvements in collections, with only a limited movement of crops up to this time, confirm our opinion that trade conditions are sound throughout the agricultural districts of the whole United States.

"Detroit Engine Works, Detroit, Mich.:

"The best proof of our belief in trade conditions is that our advertising campaign is larger than ever before. We believe present conditions, while deplorable, will increase in a very short time the already prosperous conditions of the United States. The crops of this country alone and prosperous condition of the farmer make anything else impossible.

"B. A. Fuller, president Hercules Manufacturing Co., Centerville, Iowa:

"Our neutrality, our record-breaking crops, and the immense European demand for our surplus crops are absolute proof that we are on the verge of the greatest wave of prosperity in the history of our country. The Treasury Department decision to accept cotton and tobacco warehouse receipts as a basis for emergency currency means the South will get its share of this great prosperity at once, the same as every other section.

"James A. Craig, general manager Janesville Machine Co., Janesville, Wis.:

"With the abundant harvest we have this year and the positive assurance of high prices for all agricultural products, and being at peace with all nations of the world, we can't help but prosper.

"J. L. Hamilton, president Alabastine Co., Grand Rapids, Mich.:

"Europe's calamity is America's opportunity. We are due to witness, and can be instrumental in securing, the greatest era of prosperity known in this country's history. Wise legislation, liberal financiering, universal optimism, avoidance of strikes and lockouts, more fuel under the boiler, more pressure on the steam gauge, more money in advertising, and we will arrive.

"Detroit Steel Products Co., Detroit, Mich.:

"The fact that the business community has mobilized forces and is on guard, associated with strong fundamental conditions, should insure a safe future. The most serious handicap is the attitude of Congress toward successful business. That has been sufficient to retard prosperity. If continued during the strain caused by war we may face hard times.

"W. N. Brown, Collins Plow Co., Quincy, Ill.:

"American trade conditions are sound, but have been sluggish for a year. A strong revival which had set in has been temporarily checked by European war. We look for a heavily increased demand from foreign countries, to be followed by enormous demand for all other commodities from neutral countries and at home.

"Hugh Chalmers, president Chalmers Motor Car Co., Detroit, Mich.:

"I believe the basic conditions in this country are extremely good, and I believe that after the people become accustomed to the war headlines in the papers and settle down that business conditions in this country are going to be of great benefit to us and in my opinion it will not affect our business seriously after the next 30 days. A great catastrophe such as this war is, can not help but have a bad mental effect upon our people temporarily, but this will wear away and then we will realize how fortunate we are to be Americans at this time and what a great opportunity for the world's trade is open to us.

"J. Walter Earle, president Remington Typewriter Co., New York City:

"Our sales are a barometer of trade. Indications point to an increasing volume of business. America, as the one great industrial nation free from the ravages and horrors of war, should so shape her activities that she may in increasing proportion supply the needs of those beyond her shores as well as her own people.

"James Manufacturing Co., Fort Atkinson, Wis.:

"In our opinion the war not only opens great new fields for business abroad, but also large markets at home for goods heretofore imported. Our information shows enormous crops practically throughout the United States, with prices high and money conditions sound. Farmers and business based on agriculture must prosper. The gates of opportunity stand wide open to America's business. Our own sales were never better. July and August were both record breakers. Collections are normal. The war should increase our sales on dairy-barn equipment in the United States, because our customers, which include farmers and city business and professional men, will have more money to spend.

"Stark Bros. Nurseries & Orchards Co., Louisiana, Mo.:

"Business conditions with us are highly satisfactory. Our sales at this date show an increase of 38 per cent over this same date last year. Prospects for fall business are the best in years.

"M. W. Savage, president International Stock Food Co., Minneapolis, Minn.:

"Absolute and permanent commercial supremacy of the world is the present exceptional opportunity of the United States, and this requires only good judgment and cool-headedness and such a practical optimistic outlook as is fully justified by big crops and extraordinary markets and large increase in farm product prices and in the strength and energy of our people. Fair and square commercial war will finally subdue man's animal tendency to kill his fellowmen and can be made the means of bringing about universal peace. The United States has the brains and the money and the undaunted ambition to lead the world in vast business enterprises and will quickly dominate the markets of all Nations of the earth and help establish permanent peace. Farmers form the true basis of our prosperity and the present condition of the farmer, both as to home life and financial condition, is overwhelming and solidly optimistic. War among nations as well as war on business must necessarily cause tremendous unrest and loss. Mutual fairness between business and government, and a strong pull together, and the greatest commercial victory in all history will be ours.

"George A. Hormel, president George A. Hormel & Co., Austin, Minn.:

"In Minnesota and the Northwest crops are good, and we understand the banks are able to furnish money for the movement of grain, live stock, and legitimate business enterprise. Collections good. Labor is scarce and well employed at good wages. We see no immediate cause for alarm.

"James V. Rohan, president Belle City Incubator Co., Racine, Wis.:

"The effects of the war in my opinion should tend to improve rather than to retard the American trade conditions within the United States and Canada, though the export trade may be affected for a time.

"Bissel Carpet Sweeper Co., Grand Rapids, Mich.:

"We consider the outlook for fall and holiday business very good, and beyond this believe this country is approaching an era of prosperity greater than any in all its era.

"Hayes Pump & Planter Co., Galva, Ill.:

"Bigger crops than ever before, better prices, and the certainty for increased acreage of all cereal crops will give the greatest buying impulse this country has ever known. Surely the coming year looks like big business.

"Frank D. Blake, advertising manager Deere & Co., Moline, Ill.:

"Agriculture is the basis of our wealth. With the greatest number of bushels of foodstuffs in our history and the best prices in years our people will save money, materials, and wealth. There is a chance for greater expansion. Our factory products will be in demand, our people profitably employed. We are a great agricultural people at peace with the whole world.

"E. C. Simmons, Simmons Hardware Co., St. Louis, Mo.:

"General business is absolutely sound and healthy. There need be no fear or apprehension about it. Our August business will, I think, show the largest sales of any August for 50 years, with promise of better business later.

"John Clay, president Clay, Robinson & Co., Chicago:

"The live-stock business is not suffering from the effects of the war. It is likely to be benefited, as a continuance of the fighting will tend to increase the demand for our products. We are decidedly short of cattle and sheep, with a fair supply of hogs, the latter depending automatically on the corn crop. We are dealing in a product needed every day, and the country can not afford to have the streams of production and consumption seriously interfered with. In my judgment we are at the beginning of a long war, which will only end by exhaustion. The enormous resources of the conflicting parties point this way. The United States is certainly at the gate of opportunity, and by honest and upright dealing, payment of her just debts, even although other nations are tardy, she will gain immense benefits in credit and trade by a wise and liberal policy.

"C. A. Patterson, president Peoria Drill & Seeder Co., Peoria, Ill.:

"Close attention to business and the new necessity caused by the existing conditions abroad will keep farm and factory busy. Opportunity has been unexpectedly forced upon the inventive minds of American business men and the splendid results of their accomplishment will be a surprise to other nations and an appreciable financial benefit to the United States.

"L. Klima, general manager King Ventilator Co., Owatonna, Minn.:

"General outlook for business is very good. The increase in price on raw materials is more than offset by the value of farm products. Business generally will be what business men make it. We can keep the public from buying by talking war. We will make business by talking peace.

"A. L. Haecker, Woods Bros. Silo & Manufacturing Co., Lincoln, Nebr.:

"The business outlook for the United States was never better. Our crops are good, our people are at work, and we are mindful of our opportunity. There is a unity of sentiment for peace and thrift among us all. This will ripen into a golden period of prosperity.

"W. C. Davis, secretary Davis Milk Machinery Co., North Chicago, Ill.:

"We have been extremely busy and business has been very good with us. Our volume has run over 80 per cent in gain over last year's business for the same period, and indications are that business will be fairly good throughout the year.

"R. W. Neff, president the Remmers Soap Co., Cincinnati, Ohio:

"No condition exists that does not indicate that we Americans should have every confidence in the present and future. Bumper crops, banks sound with plenty of money, no overproduction. Although the war may affect a few, it will build up so many others that the few become negligible.

"The E. C. Brown Co., Rochester, N. Y.:

"Though our past fiscal year just closing has been the best in our history, many signs point to improvement in 1915. While collections have been tardy, the excellent crop and market conditions already show improvement and a boom seems started.

"Beechnut Packing Co., Canajoharie, N. Y.:

"We look confidently to the future, expecting supply and demand to regulate prices as they always have in the past. We are doing our best from day to day to promote our business. We feel that conditions are good; that the best times we have ever had are coming soon.

"John Wanamaker, Philadelphia, Pa.:

"Now is certainly a most excellent time for the American people to find out how much they can do for themselves of the things they have been depending upon foreign workmen to do. We not only can, but must, find out now whether or not this Nation can stand firm on its own 200,000,000 feet and make its own inventions to meet its own necessities and provide its own luxuries, and at the same time feed and clothe a great part of the rest of the world. We have the youth, energy, capital, will, the men and women to do these things. We can do everything that we are called upon to do, but deliver the goods, and we can't deliver the goods because we have no merchant marine. Let us get the ships, first of all. It will be no trouble to put the crews and cargoes aboard them. We must start plowing the seas for an early harvest.

"B. L. Hupp, secretary, Loose-Wiles Biscuit Co., Kansas City, Mo.:

"We look for favorable business conditions in this country during the war period, since European manufacturers are hampered in doing business here, especially in agricultural sections and in those manufacturing districts, a demand for whose products is directly created by the war. We anticipate a very satisfactory business this fall.

"Fred Warner, sales manager Oakland Motor Car Co., Pontiac, Mich.:

"Our connections throughout the entire United States report constantly improving business conditions. The only complaints are from the cotton States, and the feeling there is that their condition will be righted very soon. War should in most lines very materially increase our volume of business and prestige in world markets. We believe the next 12 months will show great prosperity.

"L. K. Wynn, president Black Silk Stove Polish Works, Sterling, Ill.:

"American business and the new banking system are concrete. There is no cause for alarm. The people are the architects of the situation. If there is any danger, it is in the minds of the people who might become panicky. Ignore discussion—keep everybody busy.

"H. C. Phelps, president Ohio Carriage Manufacturing Co., Columbus, Ohio:

"Our great crops, with good prices assured, backed by our safe and sound banks, make an irresistible force. What others destroy we can and will replace. There is nothing wrong with Ohio or the United States. We can't be stopped.

"O. E. Sovereign, president North American Construction Co., Bay City, Mich.:

"If we can keep our hat out of the ring, we will have the greatest period of prosperity in history. Our own immediate business future looks exceptionally bright. Our Aladdin mills have been running full force 20 hours a day for 5 months. Orders booked now necessitate doubling our capacity for 1915.

"Alfred Hanchett, advertising manager F. A. Patrick & Co., Duluth, Minn.:

"The European situation will bring American commercial independence and preeminence. It will be a strong stimulus to American manufacturers, a powerful promoter of foreign trade. Our administration, with keen business foresight, should make opportunities out of present conditions.

"W. R. Wooden, general manager Nichols & Shepard Co., Battle Creek, Mich.:

"The conservative lines followed by business generally for the last two or three years make present conditions sound. Sane advantage of present opportunities insures a period of commercial prosperity.

"A. O. Silver, treasurer W. K. Mullins Co., Salem, Ohio:

"Business is perfectly healthy, but taking a vacation pending further developments of the European war and exportation of crops. An American merchant marine now would open the doors of opportunity unused by American manufacturers.

"O. C. Hansen Manufacturing Co., Milwaukee, Wis.:

"American inventiveness, ingenuity, and push will cope successfully and rapidly with any detrimental conditions the war between European nations may have precipitated in this country, and the new opportunities now at hand will result in a new prosperity for this country never before realized."

The Philippine Islands.

EXTENSION OF REMARKS
OF
HON. WILLIAM GORDON,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 1, 1914,

On the bill (H. R. 18459) to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for those islands.

Mr. GORDON. Mr. Speaker, the Constitution of the United States provides that "For any speech or debate in either House, Members shall not be questioned in any other place." This imposes the gravest responsibility upon Members, and the duty of promptly calling attention to any erroneous statement of fact made by a Member, whether intentional or not, for the purpose of protecting the public interests and the reputation and dignity of this House. For this reason I have on several occasions called attention to misstatements of fact made by the gentleman from Ohio [Mr. FESS], and by so doing seem to have incurred his bitter enmity. This ought not to deter a Member from performing a public duty. On the last day this bill was under consideration, knowing the feeling which the gentleman from Ohio [Mr. FESS] entertained toward me, I was reluctant to interrupt him, and would not have done so except with his permission, and then only because I believe that to misrepresent the Philipino people on the floor of this House in reference to their illiteracy, concerning which all peoples are extremely sensitive, might involve grave consequence to the people of the United States by arousing resentment in the islands toward us and the men appointed by us to govern the people of the islands. For two members of the Committee on Insular Affairs to say, time after time, on the floor of this House that 85 per cent of these people are illiterate, without calling forth a rebuke from other members of the committee who knew of the falsity of the statement, seemed to me to impose upon other Members of the House advised of the facts the duty to call attention to them. In the majority report of the Committee on Insular Affairs is the following statement upon this subject, which is uncontradicted and undenied in the minority report signed by the gentleman from Ohio [Mr. FESS] and the gentleman from Minnesota [Mr. MILLER]:

The late James Le Roy, who for two years was connected with the Philippine Commission and who therefore possessed exceptional opportunities for securing information upon the subject, says in his admirable book on the Philippines, published in 1905, that "approximately one-half of the Christian population over 10 years of age is literate," and that this includes "the people of the most backward and outlying Christian settlements in the mountains of north and central Luzon, in unsettled islands like Mindoro and Palawan, and on the outskirts of Mindanao." In the Tagalog Provinces, where the percentage of literacy is highest, it is stated by this authority that the number able to read "is something over 70 per cent of the population above 10 years of age."

This was nine years ago and before the American system of education was fairly under way; before there were thousands of trained Filipino teachers conducting the schools in the English language. So much for the literacy of the Filipinos.

Our own census, taken by Army officers in 1903, after these people had been engaged in war almost continuously for seven years, shows but 55.5 per cent of illiteracy, and this was before the "educational campaign," so much talked about on the other side of the House, was commenced.

The gentleman from Ohio [Mr. FESS] opens his remarks with the statement that his course upon this bill will be governed by what he thinks is best for the Filipino, and not so much from the standpoint of our own citizenship; the gentleman mistakes his function as a Member of this House; he was elected to represent the American people and not the Filipinos; their accredited representatives have seats in this House and their voices and votes are in favor of this bill and they probably know more about what is good for their own people, and what their capacity is, than the gentleman from Ohio.

Further adverting to the issue of veracity tendered by the gentleman from Ohio [Mr. FESS] in answer to my inquiry the gentleman says that by the "ruling plank on this question in prior campaigns" the Democratic Party has demanded "immediate withdrawal." No platform of the Democratic Party adopted since we went into the Philippines has declared in favor of the immediate withdrawal from the islands. The gentleman has so frequently misrepresented the Democratic platform that it has come to be a habit with him, or he has

convinced himself that our platforms have declared for something that can not be found in them. The gentleman from Ohio further says that the "grandfather clause" in the constitution of some of the Southern States "denies to the colored people in those States the right to vote." This statement is not true in detail, substance, or effect. The so-called "grandfather clause" is not a limitation on the right of suffrage, it simply exempts from the operation of a literacy test imposed upon the right to vote certain persons who are lineal descendants of those who were qualified electors on January 1, 1868. I will not discuss the reasons which impel the gentleman from Ohio [Mr. FESS] to insist upon a much higher qualification upon the right of the Filipino people to vote in their own country upon local questions than the constitution of the State of Ohio itself imposes upon electors in that State. The gentleman probably insists that the Filipinos shall possess a property qualification and also be able to read and write the English language before they can exercise the right of franchise in their own country, out of his extreme solicitude for their welfare, as expressed in his opening remarks.

The constitution of Ohio by its terms grants the right to vote to male white citizens 21 years old and over, excluding convicts, idiots, and insane, if they are known to be such. Upon the question of the utility of this bill at this time, it enlarges the powers of the Filipino people over their own local affairs and transfers to them the authority to exercise the sovereign power of taxation. Twelve years ago Senator Hoar, of Massachusetts, declared that the cost of the Philippine enterprise to this Government in dollars and cents exceeded $600,000,000, and his figures have never been successfully challenged. The committee estimates that since that time the annual cost of retaining the islands has been fifty millions per year, so that, so far as the United States is concerned, the islands to-day represent an outlay by us in money of the stupendous sum of $1,200,000,000. The terrible war now raging in Europe will end when all men able to bear arms are killed or wounded, if not before. The President of the United States will probably be asked to occupy the seat at the head of the table when terms of peace are agreed upon. If these terms of peace included, as most civilized people in the world to-day hope and pray, provisions for international peace and disarmament by these nine leading nations of Europe and Asia, what will prevent the insertion of a clause in that treaty guaranteeing the autonomy and perpetual independence of the Philippine Islands? No policy of international peace and disarmament would be complete without including the neutralization of the Philippines.

The independence of Switzerland has been maintained for 100 years by virtue of such a treaty made at the close of the Napoleonic wars. Every nation north, east, and west of Switzerland is now at war, and yet by virtue of this treaty every soldier who has set foot on the soil of Switzerland since the war began has been immediately disarmed, and Switzerland to-day enjoys profound peace with all the nations. If President Wilson, foremost advocate of world peace to-day, could, as a part of the service which he is rendering mankind, secure an international agreement with the nations now at war, guaranteeing the perpetual independence and neutralization of the Philippine Islands, which would leave the people of those islands to work out their own destiny in their own way, free from foreign interference, he will be looked upon by that people for all time to come as their greatest benefactor, and make for himself a place in history second to no man living or dead, and, if enabled to lead to a successful conclusion the movement inaugurated by this administration for universal and perpetual peace, the coming generations of mankind will call him blessed throughout all the tide of time.

Emergency Revenue Legislation—Tax on Wine.

EXTENSION OF REMARKS
OF
HON. CHARLES F. CURRY,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. CURRY. Mr. Speaker, I hold in my hand hundreds of letters and telegrams from my constituents protesting against the almost confiscatory tax on wine imposed by this bill. The letters and telegrams are individual expressions of opinion and do not represent an organized effort to manufacture public sentiment. Some of the protests are from commercial organizations, business men, bankers, professional men, and wine makers, but the great majority of them are from farmers, vineyardists, who do not make wine, but who grow the grape.

Mr. Speaker, I do not propose to discuss the question as to whether or not the condition of the Treasury makes it necessary for the Congress to enact a law providing for the collection of additional internal-revenue taxes to meet the running expenses of the Government. In my opinion that claim was convincingly disproved by the very able speech of Mr. PAYNE. But assuming, for the sake of argument, and taking it for granted that the money is needed and the method of raising it by internal-revenue taxation is advisable, I wish to call attention to the manner in which this bill, if enacted, will affect the people of my State.

It is estimated that the United States has a population of about 100,000,000, and the State of California has a population of 2,250,000, or 2¼ per cent of the population of the country. This bill proposes to raise in internal-revenue taxes $105,000,000, of which amount California industry will be called upon to contribute, at a conservative estimate, between $10,000,000 and $12,000,000; that is, the 2¼ per cent of the population of the country residing in California will pay more than 10 per cent of the entire tax. I believe the combined tax on wine and gasoline in my State is expected to produce more than $10,000,000. Can any gentleman defend that as an equitable distribution of the burdens of this tax? I think not.

The vineyardists and wine manufacturers of the State are in particular subjected to an outrageously excessive and unjust tax of from 100 per cent to 150 per cent on wine. This tax will hurt the farmers, the growers of the grape, more than it will the wine makers. It is estimated that this tax alone will produce a revenue of $6,000,000.

In California 340,000 acres of land are planted in grapes as follows:

	Acres.
In wine grapes	168,500
In raisin grapes	110,500
In table grapes	61,000
Total	340,000

There are 15,000 vineyards in the State, some of them ranging in size from 200 acres to one of 3,200 acres, but most of them are in small holdings of from 10 to 25 acres each.

Seventy-five thousand people are supported by grape culture in California. They depend on raising and selling grapes for a living. This does not take into account the number of people and their families engaged in the wineries, making wine from the grape.

The amount of money invested in vineyards and wineries is over $200,000,000.

The cost of making a vineyard of bearing vines averages $300 per acre.

Grapevines yield from 4 to 8 tons per acre per annum, and are sold to the wineries at from $7.50 to $11 per ton. Some years extra choice dry wine grapes may be sold for as much as $25 a ton.

The net profit to the grape grower is small, as the cost of developing and cultivating a vineyard is great.

A ton of grapes makes from 150 to 160 gallons of dry wine or 80 gallons of sweet wine. The reason that a smaller quantity of sweet wine than dry wine is made from a ton of grapes is because a portion of the grapes in the manufacture of sweet wine is distilled into brandy, which is used to fortify the sweet wine.

It costs from 8 cents to 12 cents per gallon to make dry wine and 20 cents per gallon to make sweet wine.

Dry wine is sold at the wineries in bulk for from 16 cents to 19 cents per gallon, and sweet wine at an average of 29½ cents per gallon.

This bill will put a tax of from 100 per cent to 150 per cent on dry wine and of 100 per cent on sweet wine.

If the pure-food law is rigidly enforced, the sweet wine can stand the tax, excessive as it is, better than can the dry wine, as in this country most of the sweet wine is used in the manufacture of patent medicines, is prescribed by physicians, to a limited extent is used in cooking, and but a small amount is used by the people as a beverage.

Dry wine is an article of diet used as a drink with their meals by a large number of our citizens, particularly those of foreign birth and their children, and more particularly by those from France, southern Europe, and parts of Germany. Dry wine is also regularly used on the tables of many Californians

and Louisianians. They use it with their meals as most people use tea and coffee. This tax on dry wine will add to the cost of living of many frugal, hard-working people in moderate circumstances. The alcoholic content of much of the light California dry wine is very small; no more, in fact, than is contained in the so-called soft drink, ginger beer. Sweet wine has an alcoholic content of not less than 14 per cent and not more than 24 per cent.

The product of the California vintage of 1912 was:

	Gallons.
Dry wines	24,000,000
Sweet wines	17,718,000
Total	41,718,000

The vintage of 1913 of both dry and sweet wines was about 42,000,000 gallons, about 25,000,000 gallons of which was dry wine and about 17,000,000 gallons sweet wine.

Nearly one-half of our vineyard acreage is planted in wine-grape vines, and the grapes are of no commercial value except to make wine. One-third of the table and of the raisin grapes have no other commercial value than a winery value.

Only the choicest clusters of picked grapes can be sold for table use and used for drying into raisins. The balance of the table and raisin grapes are sold to be made into sweet wine and brandy.

The wineries can not stand this tax. Their capitalization represents actual investment. There is no watered stock in their corporations. During the past few years dividends have been few, small, and far between. If the tax is imposed they may slightly raise the price of wine and take part of the tax out of the consumer, but they will reduce the price of grapes, and the farmer, the vineyardist, will be compelled to accept very much less than prevailing prices heretofore paid.

The wineries have the greatest part of three vintages in their cellars, and this tax may result in their making only a limited quantity of wine for years to come. They will undoubtedly buy only enough grapes at a reduced price and make only enough wine to prevent the total destruction of the vineyards or the abandonment of the largest part of the grape-growing industry of the State.

The wine grapes are ripe and ready for gathering in California. This year's crop is the largest in the history of the State, but with the exception of those previously contracted for by the wineries they are not being picked, because the wineries will not buy them pending action on this measure. After this bill has been enacted into law the wineries may buy what is left of the crop, but they will pay for them much less than the vineyardists have been used to receiving for them.

It has been stated that domestic wine can stand the tax, as very little, if any, foreign wine will be imported during the continuation of the European war, but such is not the fact. Most of our wine importations come from Spain, Portugal, Italy, and southern France, where the wine industry is not affected by the war. No champagne and no German wine will be imported during the war, but so far as we know the manufacture of wine in the other wine-producing foreign countries and districts will not be affected by the war. It will continue to be imported as heretofore, and our excessively taxed domestic wine will be compelled to compete with it in our home market.

I hope this enormous tax will not be imposed by the Congress on our grape and wine industry.

No other country, not even one of those engaged in war, has imposed such a burden of taxation on its viticultural industry.

General Legislation by the Democratic Party.

EXTENSION OF REMARKS
OF
HON. JOHN A. M. ADAIR,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 28, 1914.

Mr. ADAIR. Mr. Speaker, no political party in the history of the country ever faced such responsibilities as were faced by our party when it recently came into power. The Republican Party had been in complete control of the Government for 16 years, during which time, by legislation, special privileges had been granted which enabled the few to take an undue advantage of the many, and these grants had continued until the beneficiaries of the system looked upon them as vested rights. The people had largely lost faith in the Republican Party, and still they were not quite willing to turn the Government over to the Democratic Party, as our party was misunderstood. The people had been led to believe that Democratic success meant destruction of business, soup houses, and panics. The Democratic Party was charged with being an enemy of business, and especially of wealth. No greater falsehood was ever uttered. The Democratic Party is not now nor never has been the enemy of wealth. Our party wants every man, regardless of his financial condition, to have the same rights, the same opportunities, and the same privileges under the law, but it is now and always has been opposed to legislating a few men rich at the expense of the balance of the people. The business interests of the country need have no fear that the Democratic Party will enact any legislation that will hinder, hamper, or destroy any legitimate business industry. The Republican Party had charged us with not being capable of constructive legislation, but the first year of Wilson's administration has proven that charge to be false, for never in the history of the country was there enacted so much constructive legislation as there was during the first year of Wilson's administration.

Mr. Speaker, I have already stated that our party faced great responsibilities when it came into power. Let me call your attention to conditions as we found them and the remedies we have applied. When we came into power we found the House completely under the control of Cannonism, and in the Senate Aldrichism was supreme. I had been in Congress but a short time when I saw what we needed was more men in both branches of Congress with more loyalty and less wealth, more patriotism and less plutocracy. Men who would not forget their constituency at home and who would rather have their names enshrined in the hearts of the plain people than to have their praises sung in the countinghouses of predatory wealth. I said the House was under the control of Cannonism, and you all know what that meant. It was simply a one-man power. Under the rules the Speaker appointed all of the committees, and he placed no Member on a committee until he was certain that Member would carry out his wishes on matters of legislation; and if after a Member was placed on a committee he refused to follow the dictation of the Speaker, he was immediately removed from the committee and humiliated before his constituency. No legislation could be considered in the House or voted upon unless the Speaker was willing. In fact, the Speaker of the House was practically in control of all legislation. When we came into power the first thing we did was to destroy Cannonism. We took the power of appointing committees of the House away from the Speaker and put it in the hands of the Ways and Mean Committee, where it properly belonged. We changed the rules of the House so that it is impossible for committees to smother legislation demanded by the people. Now every Member is free to vote his judgment and conscience on any bill before the House without fear of being punished by the Speaker. In other words, the House has been taken out of the hands of a vicious system known as Cannonism and restored to the people. Over in the Senate we found 38 millionaires and a large number of near millionaires occupying seats in that body. It was charged that seats for many of them had been purchased by some of the great corporations and trusts in order that no legislation might be had that would be detrimental to their interests. The Steel Trust had its representative on the floor of the Senate; the Powder Trust had its representative also in that body, and, as everybody knows, a certain Senator represented the Woolen Trust and Cotton Trust in the Senate for 30 years. With such conditions prevailing in the Senate it was impossible for the interests of the people to receive consideration. But it is altogether different now. The election of 1910 and 1912 has largely changed the membership of both the House and the Senate, and now the demands of the people can be heard and fairly and honestly considered.

Mr. Speaker, for many years the Democratic Party had insisted upon election of United States Senators by a direct vote of the people, but as the great financial interests of the country were in control of the Republican Party it was impossible to secure such legislation. Eight years ago, when I first entered Congress, I introduced a resolution providing for a change in the Constitution making it possible to elect Senators by a direct vote of the people. Theodore Roosevelt was then President, and during the seven years he occupied the White House he never sent a message to Congress recommending the election of Senators in this way, and never did favor such a method until he fell out with President Taft and was nominated for President on a Bull Moose platform, declaring for the election of Senators by a direct vote of the people. I went before Mr. Cannon's committee to which my bill was referred and made the best effort I could to secure a favorable report, but as the Speaker of the House and the administration, as well as the Republican

boss in the Senate, were against the legislation the committee refused to report my resolution.

During President Taft's administration I again made an effort to secure the legislation; but as the President was opposed to it, and as Cannon was still in control, my bill was pigeonholed. I said to the committee that if they did not report my resolution I would remain in Congress until the Democratic Party was in control, at which time I was sure such legislation as this, demanded as it was by the people, would receive favorable consideration. I did stay in Congress, representing a Republican district, until the Democratic Party came into power and immediately reported out a resolution providing for the election of United States Senators by direct vote of the people and passed it through the House by an overwhelming majority. It is now a law, and hereafter our Senators will be elected in that way. The people had demanded this legislation for years, but they never would have gotten it had they not turned to the Democratic Party.

Mr. Speaker, for many years our party had charged that the great financial interests were contributing large sums of money in each national campaign to perpetuate the Republican Party in power, in order that the special privileges they had secured through that party might be continued. You will remember in 1904 our candidate for the Presidency, Mr. Alton B. Parker, made the charge that the trusts and combinations were contributing thousands of dollars for the election of Theodore Roosevelt. You all remember how vigorously the charge was denied by Mr. Roosevelt; but recent investigations made by Congress disclosed the fact that more than twice the amount charged by Mr. Parker as having been contributed by the "interests" to the Roosevelt campaign fund had actually been paid in to the Republican campaign committee. Our Republican friends, pretending to be in favor of honest elections, passed a law providing that campaign committees should make a report within 10 days after the election showing the amount of contributions received, who from, and how expended. But what good did such legislation as this do? What good does it do to lock the stable door after your horse is stolen? We Democrats thought the people should know before they voted who was attempting to buy the election, as well as to know who had bought it after the election was over; so we passed a law providing that candidates and campaign committees should make a report of all contributions received and expended 10 days before the election as well as after the election; and this law has had much to do with purifying our State and National elections.

For many years our party had denounced the waste and extravagance in our Government expenditures that permeated every branch of our public service and promised, if given the power, that the affairs of government should be conducted in the largest degree of efficiency and economy. The first thing we did was to wipe out all extravagances in conducting the business of the House of Representatives.

When we took control of the House we found a large number of men on the pay roll drawing salaries from $1,200 to $3,600 per year who were leeches on the Federal Treasury, and who were rendering no service whatever for the Federal Government. They were simply ward politicians, placed on the pay roll of Uncle Sam by the Republican Party to compensate them for services rendered in a political way. We immediately appointed a committee to make an investigation and report the number of employees actually needed, and when this report was made and house cleaning was over we had saved the United States Government over $100,000 a year. This useless drain on the Treasury had been going on for 16 years, and nearly $2,000,000 of the people's money had been given away to ward politicians, who had rendered no service whatever to the Government. Next, we consolidated the pension agencies scattered throughout the country and effected a saving of over $400,000 a year; and then we changed the manner of paying pensions and effected another saving of over $200,000 a year. Following this came a readjustment in all the departments of government, whereby useless and unnecessary employees were weeded out and the strictest economy put into practice. While the Government expenditures will necessarily grow larger each year, due to the new fields of operation entered into by the Government, it can be truthfully stated that hereafter, under Democratic rule, but little, if any, of the people's money will be wasted. The people are not worrying about how much money is expended for governmental purposes, but they do want to know, and have a right to expect value received for every dollar expended.

Mr. Speaker, the Republican Party had fastened upon the people a system of taxation that was not only a burden, but an outrage from every standpoint. For years and years our party had denounced the protective system as unjust and unfair, but when we did so we were charged with trying to array labor against capital, with destroying the motive power behind the wheels of industry, and with removing the foundation stone of American progress. The system was allowed to continue year after year. The people were misled and deceived, and the outrage continued, and as a result of its continuance it distorted the functions of what God intended to be a free government into tools of greed and vehicles of oppression. We saw the Woolen Trust extorting from the American people over $100,000,000 each year in excess of what would have been a fair profit on woolen goods. We saw the Cotton Trust taking out of the pockets of the people over $90,000,000 a year more than they should have taken on cotton goods; and this vast sum of money was very largely coming out of the pockets of the men employed in the mills and factories and on the farm, and much of it from the 7,000,000 working girls in the factories and behind the counters. We saw the Steel Trust piling up colossal fortunes through enormous prices charged for steel products. One member of the Steel Trust has been giving away millions of dollars each year for a number of years, and has been unable up to this time to dispose of a very large part of the tremendous profits he received through a high protective tariff. Under this system we saw the wealth of the country drifting into the hands of a few men. It was enough to alarm us when we saw 50 men owning one thirty-fifth of all the wealth of the United States, and these 50 men largely dictating and controlling the legislation of the country.

It took the Democratic Party a number of years to educate the people on the tariff question, but finally they were awakened and in 1908 demanded of all parties a revision of the tariff downward. Every political party in existence promised, if given the power, to remove this burden of high protection. The people took the Republican Party at its word and commissioned it to revise the tariff downward, but the promise of that party was violated when the Payne-Aldrich bill was passed increasing the burdens of taxation instead of diminishing them. Then it was that Mr. Taft lost his opportunity. If he had vetoed the Payne bill and sent it back to Congress, accompanied by a statement to the effect that it was not a redemption of the party pledge, it would have made him the hero of the hour, and in all probability he would have been reelected to the Presidency. But Mr. Aldrich and Mr. Cannon and a few other standpat Republicans induced him to go over the country telling the people it was the best tariff law ever enacted in the history of the country. The people knew it was a vicious piece of legislation, the press had denounced it from one end of the country to the other, and at the ballot box they answered Mr. Taft by the election of an overwhelming Democratic majority in the House of Representatives. Then the eyes of the people were turned on the Democratic Party to see what it would do. Every Democrat has a right to feel proud of the record made by our party in the redemption of our platform pledge. We immediately revised the tariff downward from an average of 97 per cent to an average of 26 per cent, making the rates highest on the luxuries of life and lowest on the necessities of life. We passed a tariff law that is indorsed by practically all of the people, regardless of party. There is plenty of protection in it for every legitimate industry, and it has not up to this time and never will close a single factory or throw a single laboring man out of employment. Our manufacturers are selling billions of dollars' worth of goods abroad in competition with the world, and time will show an increase in our foreign trade. The Underwood bill is the first tariff bill ever passed that did justice to the farmer. Heretofore the farmer has sold his products on a free-trade market and was compelled to buy the things he had to have on a protected market. This was unfair. In writing the Underwood tariff bill we made it possible for the farmer to buy on a free-trade market as well as to sell on a free-trade market. I can take the Underwood bill and convince any farmer it is the first time he has ever had a square deal, so far as tariff legislation is concerned. While the Underwood bill will not lower the price of farm products, it will reduce the cost of living to the people in the great cities to a considerable extent. It will give them cheaper clothing, cheaper shoes, cheaper stockings, cheaper wearing apparel of all kinds, and will give them cheaper food products by preventing the trusts having control of the farm products from charging outrageous prices during the winter months, when products fresh from the farm are not obtainable. In other words, it will prevent the extortion practiced by the combinations having in their possession and in cold storage food products of the farm. Our Republican friends have been trying to prejudice the farmers against our tariff bill because a few eggs and some butter was shipped from Argentina into New York City last winter.

The fact is, the cold-storage men, having in their possession all the eggs and butter of the country, raised the price to the

point of extortion, and as a result a few eggs and some butter was imported; but this did not affect the price paid to the farmer. He had already sold his butter and eggs, and therefore was not affected by the price under such conditions in New York City. I am sure every farmer in the country will rejoice in the fact that the new tariff bill makes it impossible for the trusts and combinations to rob and plunder the poor people of the great cities. Every intelligent farmer knows that the price of his product is fixed by the law of supply and demand, and as the farmers are unable to form a trust or combination and hold their products the tariff has nothing to do with the price. So far as the Underwood bill is concerned, it can not lower the price of a single farm product, but will lower the price of the things the farmer must necessarily buy. It places all kinds of agricultural implements and farm machinery on the free list. It also places on the free list boots, shoes, harness, leather goods, wire fencing of all kinds, and many other necessities purchased annually by the farmer. The leading agriculturists of the country have already indorsed the legislation and are satisfied with it. It is a complete redemption of our platform pledge and proved conclusively that our party knows how to legislate for all the people.

Mr. Speaker, the Democratic Party had been advocating for many years the enactment of an income-tax law. Under our system of taxation it frequently happened that a poor man with a large family contributed more toward the running expenses of the Government than did the millionaire who was too proud to raise a family and had no one to feed and clothe except a wife and possibly a poodle dog. It was impossible to get such legislation through the Republican Party for the reason that the wealth of the country had found shelter under the wings of that party and was contributing the money to perpetuate it in power. For years the appeal of the people for such legislation was denied; but just as soon as our party was restored to power we passed an income-tax law that will raise about $100,000,000 off of the wealth of the country to be used in paying the running expenses of our Government. In other words, we lifted this burden from the shoulders of the poor people and placed it on the shoulders of the rich, where it rightly belongs.

Prior to the election of 1910 it was charged by our Republican friends that the Democratic Party was antagonistic to pension legislation, and that if our party came into power no soldier could expect an increase of pension. Ex-Senator Beveridge went over Indiana telling soldiers that I was not sincere in my effort to secure for them better pensions; that what I was doing was done purely for political purposes; but the action of our party when placed in power showed conclusively how untruthful his statements were.

The first week of the first regular session after the House became Democratic we reported out of the Pension Committee, of which I was a member, the most liberal pension bill ever passed by Congress in the history of the country. I was placed in charge of the bill on the floor of the House, and succeeded in passing it through that body in less than one week. For 16 years the Republicans had been in control of both branches of the Government and had persistently refused relief to the old soldier, but just as soon as we were given the power we forced through Congress the most liberal bill ever enacted into law. Following the enactment of this law, I had presented to me by the commander in chief of the Grand Army of the Republic a lithograph copy of a resolution passed by the Grand Army of the Republic thanking me for what I had in securing that legislation. Under the circumstances there is every reason in the world why Union soldiers should hereafter support the Democratic Party. Many of them have been doing so, and more of them will in the future.

Mr. Speaker, in my humble opinion, the greatest legislative achievement during the past 50 years was the enactment of the new currency law, which demonstrated conclusively that our party is capable of constructive legislation. For 30 years our currency system had been looked upon as a mere patchwork, and in fact was the laughingstock of the world. The necessity for the change was admitted by all. Investigations had been made and discussions had, but nothing in the way of action resulted. The old system was satisfactory to the moneyed interests of the country who were in complete control. These interests had been putting up the money to finance the Republican campaigns, and that party had paid them back by depositing millions of money in the great banks of Wall Street without charging the banks any interest. When I first came to Congress, several years ago, I introduced a bill requiring national banks to pay 2 per cent interest on Government funds. It was being paid on township, county, and State funds, and I could see no reason why it should not be paid on Government funds. I tried to get an indorsement of my bill from the Secretary of the Treasury under the Roosevelt administration, and again from the Secretary of the Treasury under the Taft administration, but was unable to do so, as neither of the Secretaries were willing to charge the banks of Wall Street any interest upon such deposits. I made an investigation of the matter, and I found if national banks had paid 2 per cent interest on Government funds during the past 25 years, that it would have amounted to $36,000,000, and this vast sum of money was actually given away by the Republican Party for the campaign contributions received from these big banks. When the Wilson administration came in I was going to reintroduce my bill, but was informed by the Treasury Department that the Secretary of the Treasury had the right to fix the conditions on which these deposits might be received, and soon thereafter the Secretary of the Treasury issued an order that national banks having on deposit Government funds should pay interest, and they are now paying it; and it is amounting to something like a million dollars a year. Who would have thought that any party, in order that it might receive large campaign contributions, would have given away millions of dollars of the people's money? President Wilson insisted that currency legislation should follow the enactment of the new tariff law, not alone because it was a pledge of our party, but because there was real need for it. Under the old system we had witnessed the power used and held by the great banks of the East in manipulating the money market, fixing interest rates, largely controlling the prices of farm and factory products, and bringing on panics when it suited the Wall Street crowd to do so. No such condition will ever again arise under the new law. The control of money and the fixing of interest rates have been taken out of the hands of the big banks and placed in the hands of the people, where it properly belongs. The enactment of this law sounds the death knell of the Money Trust, and means no more financial panics. It makes it impossible for the frenzied financiers of Wall Street to ever again concentrate the money of the country in that city. It extends a helping hand to the farmer while protecting fully the interests of the business man and the banker. It makes it possible for your local banks to secure money to loan to legitimate business in order that the wheels of industry may not be stopped, and that business may be carried on for the benefit of those engaged in it, as well as for the benefit of the general public. It is legislation that will bring great good to all the people, and wipes out for all time to come every form of special privilege, so far as our banking and currency system is concerned.

Mr. Speaker, if I had the time I should like to take up other achievements of the Wilson administration. I should like to speak of the system of parcel post we have established, which has been a remarkable success. It has made the Post Office Department self-supporting and has saved the people millions of dollars by reason of cheaper transportation. I should like to present to you in detail the 21 bills passed in the interest of labor, which have given to workingmen the protection they deserve and have filled their hearts with gratitude for the Democratic Party. I should like to present to you the splendid results to be obtained through the Lever bill for farm-extension work and review in a general way the separate legislative acts we have passed directly in the interest of agriculture. I should like to discuss the antitrust laws we have just passed, which will protect the people from the extortion practiced by giant monopolies and combinations. I should like to remind you of the President's policy of "watchful waiting," which has resulted in peace between the United States and Mexico and saved to the American people millions of money and the lives of thousands of our American boys. I should like to speak of the successful fight President Wilson made against the Wall Street Money Trust, which resulted in preventing a disastrous panic. I should like to go into detail and show how the lobby was eliminated from the Halls of Congress and seat of government through the exposures made by President Wilson. I should like to speak of the peace program of Secretary of State Bryan, who has negotiated treaties embodying the principle of "postponement" as an integral feature of international law, which treaties have been accepted by more than 30 Governments, more than two-thirds of the whole number in existence. I should like to speak of the work of this administration resulting in the voluntary breaking up of interlocking directorates, which all admit have been the backbone of the trust system. I should like to speak of the Alaskan railway bill, which was an administration measure, and will result in making Alaska one of the most productive and prosperous northern countries of the world. There are many other achievements of this administration I would like to speak of, but I shall not take the time.

Mr. Speaker, the splendid work our party has done should inspire us with new zeal to press forward in our fight for the

rights of the people. Let us as Democrats continue to stand for equal and exact justice to all men and oppose special privilege in every form. Let us see that every man has a square deal and an equal opportunity under the law. Not many years ago we frequently heard members of our party speak of themselves as Jackson Democrats, Cleveland Democrats, Bryan Democrats, gold Democrats, and silver Democrats, but now, thank God, we are all just plain Democrats, united as we never have been before, standing together shoulder to shoulder with Woodrow Wilson, fighting the battles of the people. Let us hope this happy condition will continue for the good of humanity, for the good of the country, and for the cause of constitutional liberty throughout the world, until the nations of the earth, hearkening to the American drumbeat, under one language, one liberty, and one God, shall march down the pathway of time into the dawn of the millennial day.

War Tax.

EXTENSION OF REMARKS
OF
HON. JAMES A. FREAR,
OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. FREAR. Mr. Speaker, the question before the House is, briefly, Shall a war tax of $100,000,000 be passed largely to pay for a scandalous $53,000,000 pork-barrel bill? Why pass a vicious bill that has been riddled here and in the Senate? Why tax Wisconsin $5,000,000 annually in order to pour floods of money into southern creeks and rivers, where navigation is a joke? Why give the enormous sum of $53,000,000 in cash, $33,000,000 in new projects, and $7,000,000 through the sundry civil bill, amounting in all to $93,000,000, principally to States south of the Ohio River, that furnish less than 10 per cent of the total water traffic?

Why tax Wisconsin, Illinois, Indiana, Ohio, and Pennsylvania approximately one-quarter of the total amount in order to turn an unprecedented pork barrel into 50 creeks and insignificant harbors of North Carolina and Florida and into many other wasteful projects elsewhere?

If the pork-barrel bill of $53,000,000 is defeated or reduced, why collect $100,000,000 war tax to cover an expenditure that is not to be made? Why tax the people to pay for a pork barrel, anyway? Why waste public money? The river and harbor bill follows the war-tax bill in the House. Both bills are wrong in principle.

In his message of September 4 recommending a war tax the President said that the people of the country are intelligent and profoundly patriotic. Irrespective of partisanship, Representatives upon this floor have supported the President whenever it has been possible to do so. We have witnessed patriotism before partisanship on many occasions during the present session. By our support of the currency bill, from which Republican committee members were excluded during the preparation; by our support of a Mexican policy, which bristled with dangerous possibilities; by our support of antitrust measures and other important legislation Members on this side of the aisle have patriotically supported the President whenever it was believed for the best interest of the country to do so.

We opposed to a man the unscientific, sectional Underwood tariff bill that discriminated against the vast agricultural interests of the North; that closed up sugar factories all over the country and will cut off over $50,000,000 annually in sugar tariff revenues alone. That tariff bill has not reduced the price of sugar or the high cost of living, but, on the contrary, it provides insufficient revenues and disappoints its supporters, as was inevitable.

We have opposed caucus rule that governs the entire legislative program of the Democratic majority, and I hope we will patriotically oppose the ill-advised proposition advanced for the first time in the history of the country to levy a war tax in times of peace in order to cover wasteful and extravagant expenditures.

The President asks for a war tax to raise $100,000,000 annually. For what? Administration leaders say it is to cover past and future appropriations that have been made or are to be made. It is profitless to denounce responsibility for a deficit that will be caused by $50,000,000 lost in revenue receipts from sugar alone; and yet the country should know just why this tax is to be levied.

A tremendous increase in Government expenditures under the present Democratic administration has been caused by wasteful appropriations. Statements submitted by the Appropriations Committee to the House show that increase during the last three years to be as follows:

1913	$988,353,340
1914	1,057,605,694
1915	1,089,408,777

Within two years the party that came into power through denunciation of Republican extravagance now admits its own wasteful extravagance to the extent of $101,055,437 annually beyond appropriations made for the last Republican administration.

I listened to the able Democratic leader, Mr. FITZGERALD, chairman of the Appropriations Committee, when he said on this floor:

> Whenever I think of the horrible mess I shall be called upon to present to the country on behalf of the Democratic Party I am tempted to quit my place. * * * Our Democratic colleagues have not given support to us thus far during this session of Congress. They have voted against recommendations they should not have voted against; they have unnecessarily piled up public expenditures until the Democratic Party is becoming a laughingstock of the country.

These words of condemnation from a qualified judge—and a Democrat—explain why over $100,000,000 in extra burdens will be saddled onto the country.

It is now proposed to levy a war tax of $100,000,000, to include a pending pork-barrel bill, largely built for southern projects; projects so scandalous that the bill has been condemned all over the country, both North and South.

Upon September 9 in the Senate the Senator from Utah, a recognized tariff authority, estimated a future shortage in the Treasury arising from tariff losses due to the European war of fifty or sixty millions of dollars a year. If the $53,000,000 pork barrel is passed, that will cover this shortage, which is included in estimates at its full amount. How can we save that money and avoid a tax? The rivers and harbors bill passed the Senate for $20,000,000. Why not reduce the war tax $33,000,000 or for the full sum of $53,000,000?

On the 30th of June, 1914, the unexpended appropriation for rivers and harbors amounted to $45,338,653. In addition to this amount, $6,990,000 was appropriated in 1914 through the sundry civil bill, so that over $52,000,000 in available appropriations is waiting to be spent on good, bad, or indifferent river and harbor projects all over the country.

By spending $52,000,000 now available for river improvements and defeating the pending bill of $53,000,000 a deficit of $50,000,000 in tariff receipts will be avoided and a war tax in time of peace will be unnecessary. That is a plain business proposition. Drop the 1914 pork barrel.

Let us economize and, if need be, pass a small emergency fund in addition to the $52,000,000, which is twelve times the amount spent in former years, when river traffic was at its height. Let us provide for meritorious river and harbor projects of the country, but let us save millions of dollars from the twenty-odd crooked creeks of North Carolina found in the bill and scores of other crooked creeks in Florida, Georgia, Texas, and other States. Let us save part of the $9,000,000 that is to go into a questionable $60,000,000 lower Mississippi River land reclamation project; also $2,000,000 that is a part of a $20,000,000 Missouri River project, although it has been demonstrated Missouri River commerce will cost the Government over $150 per ton. Let us save $2,250,000 in the 1914 bill which provides that amount as a payment on a $20,000,000 bankrupt Delaware & Chesapeake Canal scheme. Let us save on the Tennessee, the Cumberland, the Coosa, and scores of other wasteful projects that reach into many millions.

Let us economize in earnest by stopping this shameful waste of money, money which must be raised, if at all, by compelling the people of my State and of every other State to pay a heavy war tax for a river and harbor pork barrel.

If the pork barrel must go through, if we have lost all sense of economy and legislative responsibility, then let us postpone for a brief time the building of an Alaskan railway or the inaugration of big highway expenditures. Let us economize and avoid the war tax.

Facing all the mistakes of an unscientific tariff reduction, we may yet prevent a direct war tax of $100,000,000 by practicing economy.

For five days in the House I exposed wasteful items in the pork-barrel bill. The people now are aroused to the wickedness

of the bill. It would never stand for a moment if it did not mix good projects with bad ones, but the people have a right to demand that bad projects be struck out, that the unexpended appropriations be used, and that a war tax be avoided.

Where are the professions of the Democratic platform promising economy? How do they square with $60,000,000 for rivers and harbors and $32,000,000 for new projects, which, added to the $52,000,000 now available, makes $137,000,000 proposed in cash or new obligations in 1914 for rivers and harbors? Is not it wasteful beyond parallel? Compare it with the old days when actual river traffic existed, when river and harbor bills rarely exceeded $10,000,000 annually. Every legitimate waterway interest would be amply covered by $52,000,000 now available. Why rock the boat?

I desire to be patriotic. I desire to support the President's wish whenever it is based on sound reasoning, but a Congress that has placed $101,055,437 extra burden upon the people within the past two years will perform a patriotic service to the country by defeating such wasteful expenditures. Let us throw the barrel overboard and save the ship.

The people are patriotic and intelligent, as the President well says, and they are patient and indulgent when they believe they are being well governed, but the responsibility for wastefulness lies primarily with Congress, and extravagance will not be forgiven if it is to be covered by a war tax which places an average burden of $1 on the shoulders of every man, woman, and child in the country.

Does any Member or any citizen doubt the sentiment of the country as to the 1914 river and harbor bill? Extracts from some of the leading papers, taken from hundreds which have come to my hands, are significant.

The Philadelphia Inquirer said editorially on September 16:

> Daily the debate over the thieves' bill, politely known as the rivers and harbors appropriations, goes on in the Senate. Having cut out appropriations of genuine merit to serve the interests of southern statesmen, it is interesting to watch the antics of our southern friends in their efforts to defend the great steal. * * * The South is in the saddle sure enough.

The Chicago Tribune of September 10 says:

> If the rivers and harbors appropriations were 50 per cent pure they would be opposed by uncompromising Congressmen determined that filching should not have recognized place in the process of Government. Until the question of internal improvement can be taken up honestly by Congress these bills ought to be opposed.

To the same effect are scores of papers at hand, including the Detroit News, the Christian Science Monitor, the Milwaukee Free Press, the Milwaukee Sentinel, and the Washington Herald, which says "There's that $53,000,000 river and harbor bill, most of which is admitted to be sheer 'pork.'" That waste should be stopped where it is. If the Democratic majority in Congress lacks the nerve to stop it, the President should veto it. The whole country would applaud.

I could quote from the Washington Times, New York Sun, the Press, the Times, the Philadelphia Press, Cleveland Plain Dealer, and innumerable papers that ask Congress to swat the barrel.

Collier's National Magazine, La Follette's, Pierson's, Chappel's, World's Work, Saturday Evening Post, Harper's, and other periodicals have had strong editorial utterances on the subject. Many of these journals have had commendatory words regarding my own efforts in helping to start the fight, for which I am grateful, because it has been an unpleasant duty to perform. Yet it is a just fight, and when we consider the scandalous character of the pork barrel and understand that $52,000,000 is now available for waterways improvement, and that a Democratic Congress is demanding a war tax to cover an additional $53,000,000 pork barrel, it is time for hypocritical cant about Democratic economy to take to the woods and avoid the wrath to come. The people are patient and long-suffering, they respect the President, but no Democrat can look with favor upon a Democratic Congress which robs the people through a war tax in order to distribute political pork over the country, three-fourths of which goes to the South, to be paid largely by the North. Sectionalism is a matter of regret, but we only stultify ourselves when we wink at fraud, and the 1914 pork barrel is the worst fraud that has ever tried to roll through Congress.

Let us use the $52,000,000 now available, defeat the pork barrel, and avoid a burdensome war tax. If the tax measure is passed by Congress in the face of these facts let full responsibility fall upon the shoulders of the party that has rolled up unprecedented and extravagant burdens during its brief period of public service.

The Democratic Party and Its Labor Legislation Record.

EXTENSION OF REMARKS

OF

HON. CYRUS CLINE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 23, 1914,

Mr. CLINE. Mr. Speaker, it has been said that labor-union men do not enter into politics. Theoretically, that may be true; practically, it is not true and should not be. It is the duty of every man to associate himself with that party that stands for the principles in which he believes and desires to see enacted into law. The Democratic Party in its last two platforms has taken a firm and decided stand upon questions affecting labor. It stated what it would do if intrusted with power and it has redeemed its promises. The last two Congresses have been democratic. They have given to labor, both organized and unorganized, all the recognition and legislation labor has had. In the 16 years the Republican Party was in power it not only failed to legislate on important labor subjects but it organized its committees of the House, notably the Judiciary and Labor Committees, so that no legislation could be reported out of those committees.

I desire to recite a few things that the Democratic Congress has done to ameliorate and better the condition of the laboring man:

First. It constituted an 8-hour day a lawful day's labor for all work done for the Government as well as all work done by the Government.

Second. Congress passed a bill making the eight-hour law apply to a great number of men employed in dredging rivers and harbors and doing fortification work. The Supreme Court has declared that men performing this labor were not laborers and mechanics but seamen.

Third. The fortification appropriation bill contained a provision applying the eight-hour law to those engaged in the manufacture of powder and ordnance.

Fourth. The eight-hour bill applies to post-office clerks and city mail carriers.

Fifth. In the military and naval appropriation bills we applied the eight-hour law to all work on naval construction.

Sixth. The Children's Bureau is a Democratic creation designed to promote the health and intelligence of those persons who will come to-morrow to administer the Government. One feature of the bureau is to put an end to child labor and liberate the child from those conditions that dwarf both the mind and the body.

Seventh. The Democratic Party created the Department of Labor, with a Secretary to be a member of the President's Cabinet, to help shape these policies that shall best protect and promote the interests of the laboring classes. The Secretary of Labor has the power of mediation in disputes between labor and capital and the lawful authority to appoint conciliators in cases where, in his judgment, it is wise to do so.

Eighth. The industrial commission bill, providing for the investigation of all disputes between the employer and the employee.

Ninth. The seamen's bill, to give freedom to the seamen, provides skilled seamanship, and equalizes operating expenses of foreign with American vessels.

Tenth. Denying interstate commerce to convict-made goods unless the goods are branded according to the law of the State into which the goods are shipped, that the purchaser may be advised as to the character and make of the goods. This is done that unfair competition with free labor may be broken up.

Eleventh. The abolition of the gag rule that, through the Executive order of Presidents Roosevelt and Taft, prohibited the employees of the Post Office Department from presenting their grievances to Congress under penalty of being subjected to discharge. Under the Executive order the absurd condition imposed was that an employee could not take his or her grievance to a Member of Congress unless it had the "O. K." of the superior officer. In all probability the superior officer may have been responsible for the grievance.

Twelfth. The Democratic Party passed the phosphorus-match bill to protect the worker in the match industry from the injury known as phossy-jaw.

Thirteenth. We provided a compensation-for-injury act to apply to employees in the Bureau of Mines when in demonstration and other dangerous work.

Fourteenth. The naval appropriation bill contains a provision that all coal mined for use in the Navy shall be made under the eight-hour law.

Fifteenth. The anti-injunction bill to protect workingmen when a dispute arises between employer and employee in a square deal with the employer before the courts. Federal judges have assumed an autocratic power not in harmony with our institutions in issuing injunctions and restraining orders. We denounce the usurpation of such power and its application to labor bodies and farmers' organizations when the Sherman antitrust law never contemplated that its provisions should apply to those classes.

Sixteenth. We also passed a bill to provide for trial by jury where the defendant was charged with indirect contempt. This is the American doctrine. No man charged with an offense criminal in its nature ought to be denied a trial by jury.

Seventeenth. We passed recently the Clayton bill amending the Sherman antitrust law wherein we distinctly provide that the law shall not apply to labor unions and farmers' organizations not organized for profit on a stock basis. It is the object of the Democratic Party to protect the rights of property and the liberty of the citizen. Undoubtedly this act is the most significant piece of labor legislation enacted in this or any country.

The discussion of the Sherman law with relation to labor usually proceeds from a false premise. Originally, the Sherman law dealt with commercial property—not men. It sought to prohibit men who entered into a corporate capacity in commercial transaction from destroying lawful competition in trade, controlling prices, and operating in restraint of trade. So well was the object and purpose of this legislation understood by its promoters in its inception that evidence is abundant to show that it was not presumed to include labor unions and farmers' organizations. The historical fact is the great corporate bodies, fortressed by unlimited capital, covering wide stretches of territory and employing many thousands of men, were then in the infancy of their development, but sufficiently dangerous to demand restrictive legislation. Labor unions and farmers' organizations were likewise in their infancy.

The purpose of the Sherman Act was to liberate commerce and commercial transactions from the grip of greedy men. The Sherman law was confined to articles of trade and exchange, and rightfully so. No man understands now or understood then that labor is a commercial product that you could go into the market and buy and sell. We only sell the product of labor, not labor itself. So no man or set of men can "corner" it, restrict it, or control it so as to operate it as a limitation on production or as a restraint upon trade. I voted to exempt labor organizations and farmers' organizations from the operation of the Sherman law. I believed it was the correct and proper thing to do. Let me give you a reason for doing so. Labor is the most important and necessary element of our social and economic life. It invests the finished product of the factory, the mine, and the wide diversity of our commercial industries with 50 to 80 per cent of their value. The potential power of labor is the greatest asset in our national development. Our unlimited field of natural wealth is waiting for the genius of labor. The basis of all national happiness and the enjoyment of property lies in extending to the laborer the largest liberty. Civilization moves upward as you enlighten and thereby strengthen labor and share with it its proper proportion of the wealth it creates. This age of progress will be preserved so long as you keep in mind the equitable division of the profits that the worker produces. Capital enters into combination for its mutual protection and profit. It has a right to do so under certain well-defined limitations. Against such combinations the worker enters into organization to protect his capital, his labor, increase his wages, and shorten his hours. Why should not the same rights be accorded labor that are accorded to capital? The Clayton bill simply makes definite the original purpose of the act. No man would deny the right of the laboring man to organize to benefit his condition. If he may organize, he may exercise certain rights and powers that make effectual the organization, else the mere act of organizing would be an absurdity. I would not indorse any legislation eliminating the laboring man or any other citizen from the operation of the criminal statute in the destruction of life or injury to property. This is a Government of law, not of license. Equality before the law is the genesis of free and enduring government.

In addition to the direct labor legislation that I have invited your attention to somewhat in detail, we have passed many other important measures of great benefit to the laboring classes, among which are the following:

First. A bill providing for direct election of United States Senators.

Second. A bill revising the tariff downward that carries an average rate of duties of 100 per cent to an average rate of 25 per cent duties. This legislation is a companion to the antitrust legislation that will result, when business conditions have been properly adjusted, to lowering the cost of the necessaries of life.

Third. A bill providing for a parcel-post system that has saved the people over that paid formerly to express companies within one year nearly nine millions of dollars.

Fourth. We have enacted a new banking law that takes the control of our money affairs out of Wall Street banks and distributes the money throughout the country, keeps it in channels of trade where it belongs. Nothing so militates against the steady employment of labor as the evil manipulation of our currency.

Fifth. We have enacted an income-tax law that, following the Democratic doctrine, takes $100,000,000 of taxation from necessities that the common people must have and places the taxation where it belongs, to wit, on those best able to bear it.

This legislation is Democratic legislation; reported from Democratic committees and enacted into law by the Democratic Congress. I challenge any Republican to show where his party is entitled to credit for originating and passing a single act of importance to relieve the laboring man. The laboring man ought to stay with his friends. Not an act enumerated but what has received my support and vote. The laboring man who wants to reenact the Payne-Aldrich tariff bill ought to vote the Republican ticket. I am opposed to it. The laboring man who wants to submit himself and his fellow-workers to midnight injunctions again ought to vote the Republican ticket. I am opposed to them. The laboring man who wants to repeal the income tax on wealth that pays a hundred million of taxes and pay his share of it himself ought to vote the Republican ticket. I will not support such legislation. The laboring man who is opposed to the parcel-post law ought to vote the Republican ticket. I am in favor of the law. The laboring man who wants an unlimited foreign immigration to come to our shores and compete for the job he has ought to vote the Republican ticket. I want to restrict immigration. On the contrary, the laboring man who wants to correct the evils of Republican legislation, who wants to maintain equality of opportunity for himself and his children in the race of life, ought to vote the Democratic ticket. That is the cardinal doctrine of the Democratic Party.

Emergency Revenue Legislation.

EXTENSION OF REMARKS

OF

HON. ANDERSON H. WALTERS,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. WALTERS. Mr. Speaker, in opposing the passage of the so-called war-tax bill I desire to direct attention to a phase of the processes of legislation, not confined to this measure alone, but which characterizes every bill of importance considered in the House. Members of the House have been in receipt of protests from various trade and business organizations, corporations, and individuals against levying taxes on the products of their business, on their resources, or on their incomes. No fault can properly be found with the great majority of these communications, but it is of interest to note the methods in vogue by business men and others to secure an influence with and in the Congress. In a late primary campaign in Pennsylvania the following was issued:

[Independent Brewing Co. of Pittsburgh; capacity, 1,200,000 barrels; general offices, twenty-third floor, First National Bank Building, Pittsburgh, Pa.; Walter P. Hansell, president; C. H. Friend, vice president; James P. Mulvihill, vice president and sales manager; H. C. Baxmeier, secretary; Charles E. Succop, treasurer. Breweries: Duquesne, American, D. Lutz & Son, Chartiers Valley, First National, Homestead, Hill Top, Home, Globe, Charleroi, Monessen, New Kensington, Loyalhanna, Anderton, Butler.]

To our stockholders:

In view of the strenuous campaign being carried on by the Anti-Saloon League, kindred organizations and their followers, aiming to enact sumptuary legislation in our State, and the effect such legislation would have on the value of brewing investments, it is absolutely

necessary, in order to properly protect your interests, that you become active in the campaign.

We therefore solicit your cooperation and influence in behalf of the candidacies of the Hon. BOIES PENROSE for United States Senator and Messrs. Thomas S. Crago, M. M. Garland, A. J. Logan, and John R. K. Scott for Congressmen at large, as well as for the local congressional, State senatorial, and State legislative district candidates, as shown on the folders inclosed herewith.

We have no hesitancy in indorsing all of these candidates for the respective offices named, and believe that your holdings will not suffer in any manner in the event of their election, as they are broad-gauged, liberal-minded men, who can be depended upon to treat your interests fairly in all legislative matters.

Respectfully, yours,

INDEPENDENT BREWING CO.,
WALTER P. HANSELL.

River and Harbor Bill.

EXTENSION OF REMARKS
OF
HON. STEPHEN M. SPARKMAN,
OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 21, 1914.

Mr. SPARKMAN. Mr. Speaker, in view of the full and lengthy discussion of the rivers and harbors bill now in the Senate, when that measure was before the House I had supposed that it would be unnecessary for me or anyone else favoring it when here to again speak in its defense, nor do I know that such a course is necessary now; indeed, I am inclined to believe it is not. But in view of criticisms since made here and elsewhere I shall ask the indulgence of the House while I refer to some of them, together with the policy we have been pursuing for many years and are yet pursuing toward the improvement of our navigable waterways.

These critics of rivers and harbors bills are not the first who have arisen, nor will they be the last. Others have occupied the same field before them, have gone over the same ground, and others will follow them. Then, too, with an occasional exception, they are of one class here—new Members—the origin of their criticism in most cases being likewise the same—lack of information as to the importance and nature of the work to be done. The new Member, coming fresh from other fields of endeavor, in which he has not had the opportunity or time to study and familiarize himself with the great transportation problems of the country and the important bearing our navigable waterways have upon the just and proper solution of these problems, is inclined to fall into the error of supposing that this class of governmental work is unnecessary and a wasteful use of the public revenues. Service here, however, for a few terms, followed by the study of those questions, eventually works a change in the views of such critics and they come to understand the importance of the appropriations Congress has been making for the improvement of our rivers and harbors. They come to know what a large majority of the people already know—that every dollar of their money judiciously expended in that way comes back multiplied many times in cheaper freight rates, in increased transportation facilities, and in the stimulus given to productive energy resulting in the more rapid development of the great and varied resources of our country. They learn, too, what the people already know—that while mistakes may and do occur both in engineering and in the selection of projects for approval by Congress, these are few and unavoidable in an undertaking so great as the improvement of hundreds of harbors on ocean, gulf, and lake and of more than 25,000 miles of navigable rivers and canals. They also learn that the rivers and harbors bills are not "pork-barrel" affairs nor the result of logrolling practices; that the Members of Congress, sent here by honest constituencies, are honest and honorable men who would not and do not stoop to the reprehensible practice of bartering the public money for votes in the legislative halls, whether House or Senate. All these things are soon learned, and the one-time critic gives way to some newer Member or Members, who in turn learn the same lessons as the days go by.

Now, I do not wish to be understood as objecting to honest and fair criticism, for no harm can be done, while good may be accomplished thereby. If a measure like a river and harbor bill is defective, it ought to be criticized and the defects pointed out in order that they may be corrected. If it is a proper measure, analysis and fair criticism will not hurt it.

Those of the national legislators who have found fault with the pending river and harbor bill are not numerous—only two or three in the House and as many perhaps in a coordinate body. Of these last, however, I will not speak, nor will I take note of their criticisms.

While objection has been raised here to the size of the bill the weight of the criticisms have fallen on individual items. The gentleman from Wisconsin [Mr. FREAR], for instance, after pointing out what he thought were many vicious items in the measure when it was before the House, some days after its passage through that body printed in the RECORD of April 10 last an extended and what I presume was designed to be a complete and exhaustive statement of all his objections to the bill. In this statement, containing some 22 pages of the CONGRESSIONAL RECORD, he specifies, in his charge of logrolling and waste, a little more than 2 dozen items—26 items to be exact—out of 301 projects in the bill as it left the House. These items are, however, too many by 26 if his denunciation of them is well founded, for, that being true, they should not be in that or any other measure. To be sure, he denounces as a fraud and a criminal waste of public money 90 per cent of the bill, yet only specifies the projects I have mentioned. Of these, 18 call for expenditures aggregating the relatively small sum of $1,179,669, and yet the waterways to be improved by this expenditure have a commerce of more than 3,000,000 tons. Of course some of these waterways carry a greater tonnage than others, but each is an important artery of trade judged by the chief test of merit, that of commerce to be benefited, present and prospective. These 26 streams are all on the Atlantic and are located in the States of New Jersey, Delaware, Maryland, Virginia, North Carolina, and Florida. True, there are others referred to by him, but they are all large projects, or relatively so, and none, I believe, except the upper Mississippi north of the Ohio River.

Time will not admit of a specific reference to all these waterways, nor of a detailed answer to the criticisms he makes of their treatment in the pending bill. Two of them, however, the Oklawaha and Kissimmee Rivers, being in the State which I have the honor of representing here, I shall take the liberty of noticing and of dealing at some length with his criticisms of the projects submitted for their improvement.

When the gentleman strikes these two waterways he is particularly caustic and severe, characterizing the adoption of the Oklawaha River project as a crooked game, filching money from the Treasury for the benefit not of commerce but to develop water power for the benefit of one J. D. Young.

Now, first, I want to deny with all the emphasis at my command that the improvement is to develop water power for J. D. Young or anyone else, for it has absolutely no foundation in fact, as a study of the report will show. The gentleman was kind enough to refer to a certain portion of the engineer's report as proof of his assertion, and yet a reference to this particular paragraph contradicts the charge he makes, for it is there shown that it is not proposed by this improvement to develop any water power whatever. That portion of the paragraph which is found in the district officer's report, page 19, is as follows:

> A small amount of water power could be developed at the proposed dams at the lower end of the Kyle & Young Canal and at Moss Bluff. The fall at these dams would be 7 feet 6 inches and 11 feet, respectively. The amount of water available is 124 cubic feet per second. I do not believe that any plan for the development of this power could be coordinated with a plan for the improvement of the river in the interest of navigation, in view of the very small amount of power that could be developed.

True, in another part of the report a suggestion is made that by certain changes in the plan outlined large bodies of land could be drained. The chief, however, advises against this for the present, but recommends that the Secretary of War be given authority in the future to make such modifications of the project submitted as may be approved by the Chief of Engineers and as may be necessary to provide for land drainage and reclamation as well as for navigation, the work, however, not to be undertaken until local interests shall have deposited with the Secretary of War an amount equal to the estimated cost of such improvements, meaning improvements exclusively in the interest of drainage and reclamation.

So it will be seen that the improvement recommended and to be made by the Government is solely for the purpose of navigation, and that if any drainage plan is undertaken later the parties benefited are to pay for the same to the last cent. Hence I say it is purely a navigation project and one, too, of great merit. As to that let us see.

The river rises and for a part of its course runs through the lake region of the middle peninsula of Florida, one of the citrus fruit growing sections of the State; thence for a greater part of the remaining distance, through thousands of acres of the finest truck and farming land in the world. Tributary to this river and entirely dependent upon it for water transportation are not only large areas of heavily timbered land, together

with a farming section second to none in the State, but also the flourishing towns of Ocala, Leesburg, Eustis, Umatilla, Tavares, and numerous others, containing or surrounded by more than 50,000 inhabitants, the most of them following the various industrial pursuits incident to a progressive people engaged in the development of a State with perhaps a greater variety of resources than any other in the Union. There are also large kaolin and infusorial earth deposits along this waterway, with an output of upward of 40 carloads of the former product per day or, say, 60,000 tons now being shipped by rail at figures making the margin of profit small and greatly crippling the industry, all of which, together with a hundred thousand tons of the latter per annum, could and no doubt would use the river if it were improved as contemplated.

The improvement would not only furnish a navigable channel of more than 90 miles, but would connect several large lakes with a perimeter of 125 miles, thus making the entire shore line of the waterway at least 215 miles. As bearing to some extent upon conditions there and the resources of the country adjacent to the river, I quote from Capt. (now Maj.) Slattery's report on the project the following:

> Most of the land on the banks of the lakes is susceptible to cultivation, and the adjacent land is high and rolling and favorably situated for orange groves, truck farms, and picturesque building sites. The citizens are enterprising and enthusiastic in regard to the development of the locality. Many miles of hard-surfaced road have been constructed, and the citizens of Leesburg authorized the bonding of the town for the construction of a canal through the town to connect Lakes Harris and Griffin, between which the town lies, and the limits of which extend from lake to lake. A length of 2,350 feet of this canal has been excavated from Lake Griffin and 2,140 feet from Lake Harris, leaving 3,400 feet still to be excavated, which includes a new alignment of the portion of the canal from Lake Harris. The right of way for this canal and wharfage space at the basin, I am informed, has been acquired by the municipality.

And I may add that this canal is to be turned over to the Government free of cost, and will become a part of the waterway. There was formerly a large commerce on this river, which finally diminished in volume owing to the fact that the channel was not kept in repair and with such depth of water as would warrant its free and constant use, but there is, even now, under all the difficulties attending the navigation of the stream, a respectable traffic of upward of a hundred thousand tons per annum, as shown by the latest reports. This tonnage, when the navigation of the upper river is improved as contemplated through that magnificent region, with its numerous and valuable products of forest and mine, of orchard and grove, of farm and garden, will largely increase. What is especially significent in that connection is the estimate, a conservative one, too, it would appear, made by the engineers that a saving in the transportation of freight, mostly by water, will be made of at least $600,000 per year; but if half that is saved, the people of this country will in two and one-half years get back more than the entire cost of the improvement, for not only would the shippers be benefited by such saving, but the consumers as well.

Moreover, this improvement is intended to form a part of the waterway across Florida from the Atlantic to the Gulf whenever that waterway is constructed in its entirety. Such a proposition has recently been under consideration by the engineers, but while reporting against the immediate construction of a canal across the State, they find that the route embracing the present Oklawaha River with the proposed improvement would be the best whenever the canal is constructed, which it is thought will be desirable in the not distant future. This proposed use of the waterway would abundantly justify the improvement if the other great advantages mentioned were eliminated.

Certainly a work promising so much by way of benefit to general as well as local commerce is abundantly justified, and its adoption should not be characterized as a steal or the filching of money from the United States Treasury.

The gentleman from Wisconsin is equally unfair and equally wide of the mark when he comes to deal with the Kissimmee River, which he characterizes as a creek, dry eight months in the year, the improvement of which, according to his more or less solemn asseveration, is a real estate scheme worked in the interest of an ex-Member of Congress. He winds up his tirade—I can not characterize it otherwise—against this unfortunate and unoffending object of his wrath with an illustration which he no doubt thinks apt and by which he would liken his colleagues on this floor to cracksmen and horse thieves.

Now, Mr. Speaker, there is nothing in this project to justify this characterization, for it is a highly meritorious proposition, one for the benefit of commerce, and for the especial benefit of no individual or scheme. That river, which he prefers to call a creek, like the Oklawaha, rises in and runs partly through one of Florida's many lake regions and partly through a fertile prairie country from 10 to 30 miles wide. It has its source in Lake Tohopekaliga, on which the thriving city of Kissimmee is located, and flows for a distance of 137 miles into Lake Okechobee, which has a natural outlet through the Caloosahatchee River to the Gulf and through two or three drainage canals constructed by the State into the Atlantic. The purpose of the improvement is not only to furnish increased transportation facilities for the people and products near the stream to and from its source at Kissimmee, but also to open up a navigable waterway from its mouth in Lake Okechobee, 150 miles from the Gulf and almost the same distance to the Atlantic, the whole when completed to give a continuous navigation from Kissimmee 250 miles to the Gulf and about 220 miles to the Atlantic. This, too, at a first cost of only $47,000.

There being no railroads through that section, the river furnishes the only means of transportation the people there have. At ordinary low water the stream has only 2 feet of available depth, but even in its lowest stages it is not dry eight months in the year, as the gentleman asserts, nor is it dry during any period, short or long, but is navigable and is navigated by boats carrying freight and passengers the year round.

True, Mr. Speaker, navigation is difficult there when the water is low; but in face of these difficulties few, if any, streams in the country can show a more healthy or a more satisfactory commercial growth. From 1909 to 1912 its freight tonnage grew from 10,000 tons to 71,000 tons, an increase in three years of more than 700 per cent, the commerce consisting of such items as bricks, lumber, building material, fertilizers, fish, grain, oranges and other fruits, vegetables, groceries, and general merchandise. One of the engineers, calling attention to this remarkable increase, in a recent report states that it is due to general prosperity, and particularly to an increase in the fruit and vegetable output, which are staple products of that section, and products, too, in which the entire country is interested. Just here a pertinent question would be, If the increase of traffic has been so rapid under the adverse conditions mentioned, what may we expect when we give the people in that fertile valley a 3-foot navigation the year round, as is contemplated in the project adopted?

Now, Mr. Speaker, a word as to the charge that the project is a real estate scheme. I suppose the only foundation for this charge is a copy of a letter contained in the document recommending the project written by a Mr. Kribbs to one of the engineers, who was evidently seeking information as to the possibilities of the section from a commercial standpoint. In this letter the writer refers to a large tract of land near the river which the owners were proposing to divide into lots and sell to prospective purchasers, who, no doubt, would need and would use water transportation, as there is none other to be had. But how this can justify the charge made is beyond my comprehension. I can understand how it may furnish an argument in favor of the improvement, as it would offer a promise of an increase in the products of the section and added freight for the river traffic, but can not understand how it could constitute an argument against the work.

Let me only add that if this is not a worthy project there are few, if any, in the bill, and the same, even if in slightly varying degrees, may properly be said of all the remainder of the 17 smaller projects criticized by the gentleman.

As I said, time will not permit me to go over the remaining smaller items, but I may add that they are, in my opinion, all worthy and in line with the liberal but conservative policy we have been pursuing for the past 20 years toward our rivers and harbors.

The gentleman from Wisconsin also mentions some 8 or 10 larger projects scattered about, mostly in the Southern States, which he designates in his easy and choice rhetoric as "larger and more important grafts." These include the Mississippi, the Missouri, the Trinity, the Brazos and Coosa Rivers, the Chesapeake & Delaware Canal, and last but not least, the Ohio River.

Mr. Speaker, I have not the time to notice in detail his attack on these projects, and it is not necessary that I should, as all of them, except the Chesapeake & Delaware Canal, were started prior to 1910, while the projects for the remaining streams, except the Missouri, were adopted prior to that year, and have hence been under improvement for a long while, even during most of the time covered by the incumbency of the Hon. T. E. BURTON, chairman of the House Committee on Rivers and Harbors, who justly enjoyed the reputation of being the best informed man in either branch of Congress on river and harbor matters, as well as that of an able and honest legislator. If they had been unworthy, either he or some other Member of this House would doubtless have then discovered the fact. Moreover, these items have all been discussed on the floor of this House, the most of them several times during the last decade, so that the Members here are familiar with them or have had abundant opportunities of becoming so.

Mr. Speaker, I have said that I have no objection to honest and fair criticism, but I submit that the wild and intemperate language of the gentleman from Wisconsin, to which I have referred, is not of that nature and I regret to see it indulged in here or elsewhere.

After all, Mr. Speaker, what is the nature of the measure that seems to provoke such harsh language on the part of the gentleman from Wisconsin and a few others? Why, sir, it is a bill for the improvement of the navigable waters throughout the country in order that their efficiency may be increased so that they may aid the people, exporters and importers, shippers, farmers, manufacturers, and producers everywhere in reaching the consumers with the greatest ease and at the lowest possible cost, to the end that all, producers and consumers alike, may be benefited. It is a bill proposed in response to an economic, commercial, and popular demand, nationwide in its sweep, for liberal treatment of our rivers and harbors—a bill framed on the same lines and of like character, both in detail and substance, in purpose and effect, with its predecessors for the past 20 years and more.

Since 1894 there have been nine general rivers and harbors bills enacted into law, one for each of the years 1896, 1899, 1902, 1905, 1907, 1910, 1911, 1912, and 1913. That of 1896 carried cash and authorizations amounting to $76,195,570.37, being the largest in amount of any that had up to that time passed. In addition, it was the largest in the number of projects treated of any that has ever passed Congress, and may be said to have marked the beginning of the present liberal policy toward our navigable waterways.

True, the bill of 1899 was relatively a small one, only aggregating $36,730,166.07; the next bill, however, that of 1902, was much more liberal, carrying $65,107,602. Again, the bill of 1905 was not large as compared with the preceding one, only appropriating and authorizing $35,355,533.04; but this was followed in 1907 by a bill carrying in all $86,872,432, the largest by far that was ever enacted. Indeed, it was twice as large as the pending measure when it left the House. Nor were those the only efforts made during that time to enact river and harbor legislation, for in 1901 a bill framed by the Rivers and Harbors Committee of the House, during the chairmanship of the Hon. T. E. BURTON, had passed the House and was sent to the Senate carrying $59,935,415. There, however, it was talked to death by a Senator who, having determined to kill the measure, procured and held the floor in a so-called discussion of its provisions until the session came to a close on the 4th of March of that year.

This was a very meritorious bill and ought to have passed, but the language used by that Senator and one or two others in its denunciation was almost if not quite as harsh as any used in criticism of this bill. For instance, in opening his remarks on the conference report, this Senator said:

> Mr. President, I have no hesitation in saying in the presence of the Senate that the basis upon which this bill and all river and harbor bills for a dozen years, within the scope of my knowledge, have been constructed is vicious and entirely contrary to just and equitable principles of legislation. Any Senator who will carefully read this bill and in conjunction with it the report upon which it is based will inevitably be driven to the conclusion, unhappy though that conclusion may be and humiliating as it is, that the bill is framed, constructed, and completed upon the despicable principle of division and silence.

Later on in the debate another Senator characterized it as "one of those iniquitous measures that is attempted to be passed upon each and every occasion by interesting this, that, and the other Senator in this, that and the other State." He further expressed the belief that it was "an iniquitous measure, to use," as he said, "the vulgar term, a steal."

I only make these quotations, Mr. Speaker, to show not only that like criticisms of river and harbor bills have been going on for many years, but that one of the best measures ever introduced into Congress did not escape the severest condemnation. The bill was not only a highly meritorious measure, but was framed upon lines identical with others before and since, including the present, some of which passed without serious criticism.

The defeat of this measure, however, was not approved by the country. On the contrary, it was condemned by the people, who were becoming restive at the slow progress being made in river and harbor improvement under biennial and triennial bills, and noting the ease with which even one of those measures could be killed on its way to the statute books, they began to demand the enactment of annual bills.

The growth of this sentiment in favor of the liberal treatment of our rivers and harbors was voiced in the Democratic platform of 1904, which declared in favor of "liberal appropriations for the care and improvement of the waterways of the country," and condemned the "policy of starving home development in order to feed the greed for conquest and the appetite for national 'prestige' and display of strength." This declaration was followed by a still stronger one in the Democratic platform of 1908, which, after stating the well-recognized fact that "water furnishes the cheaper means of transportation," declared that "the National Government, having the control of navigable waters, should improve them to their fullest capacity." Then followed a further declaration earnestly favoring "the immediate adoption of a liberal and comprehensive plan for improving every water course in the Union * * * justified by the needs of commerce." This declaration, strong and comprehensive, was approved in the Democratic platform of 1912.

The platform utterances of the Republican Party on that subject were of a like effect. Following the liberal bills of 1902, 1905, and 1907, the last named, as has been said, being the largest ever passed by Congress, the Republican platform of 1908 pointed to the forward step in the improvement of the inland waterways of the country as one of its greatest achievements, while after the adoption by Congress in 1910 of the annual bill feature, followed by that of 1911, when every branch of the law-making body was under the control of that party, its platform of 1912 declared in favor of "a liberal and systematic policy for the improvement of our rivers and harbors, such improvements to be made upon expert information and after a careful comparison of cost and prospective benefits." So it will be seen that the two old parties, the Democratic and the Republican, are both irrevocably committed to a policy of liberal treatment of our rivers and harbors.

In the meantime sentiment in favor of annual bills became so strong that Congress after an emergency measure was enacted in 1909 adopted that feature in the bill of 1910, followed as it has been by those of 1911, 1912, and 1913, with that of 1914 now pending before the Senate.

Now, Mr. Speaker, let me ask wherein does this measure differ from its predecessors that it should be condemned even by a few, while those that have gone before are praised or quietly accepted as meritorious? Why, sir, there is practically no difference between this and the bills heretofore mentioned, except that five of the nine mentioned appropriated larger and only four smaller sums, with the further exception that there is not so much carried by way of authorization in this as in the most of those that have preceded it. But the necessity for authorizations in the case of annual bills is not so great as when such measures are passed at longer intervals, it being much easier for the engineers to estimate at the end of one fiscal year for the next than it is to make an estimate for work covering two or three years at a time. Besides, it is better to cover only one year at a time, because if mistakes are made in engineering or unlooked-for difficulties arise they can easily be rectified or the plans changed to suit altered conditions, thus often effecting economies not possible when an estimate has to cover a longer period of time. Furthermore, when annual bills have become a fixed fact, so that a contractor may reasonably expect an appropriation for a project each year, he will plan with reference to this certainty of legislation and will give the Government the benefit of figures quite as low as if he were bidding under an authorization for a continuing contract. Indeed, contracts under the annual-bill feature, though only from year to year, are in a majority of instances equivalent to continuing contracts.

And therein lies one of the troubles resulting from a break in the continuity of such legislation. If Congress should once fail to pass an annual bill, or withhold the annual appropriations on projects once started, where work should continue, and there is a reasonable expectation of its continuing, contractors would become timid, and in future bidding would take into consideration a possible failure of an annual appropriation and endeavor, by increased charges for work, to guard against losses in the future for such failure.

Some objection has been raised to the measure on the ground as charged that it pursues what is called a dribbling policy—that is, that too many projects are undertaken without provision having been made in the bill for their completion—but if that is a just charge, which I deny, it is equally true of its predecessors since and including that of 1896. Indeed it is much more applicable to some of them than this. The bill of 1896, for instance, contained 438 items, only providing for the completion of 54, or 12.3 per cent, while the pending measure has only 301 items and provides for the completion of 71, or 23.6 per cent. That of 1899 contained 391 items, the completion of 86, or 22 per cent, of which was provided for. That of 1902, containing 353 items, provided for the completion of 57, or 16 per cent. The bill of 1905, with 334 improvements, made provision for the completion of 52, or 15.6 per cent. That of 1907, containing 361 improvements, provided for the completion of 99, or 27.3 per cent. The bill of 1910, with 426 improvements, provided for the completion of 75, or 17.6 per cent. That of 1911 contained 231 items of improvement and provided for the

completion of 38, or 16.4 per cent. That of 1912 embraced 276 improvements, with provision for the completion of 43, or 16 per cent. That of 1913 appropriated and authorized the money for 302 items, making provision for the completion of 52, or 17.7 per cent. So it will be seen that in the matter of completing projects the 1914 bill as it left the House followed the lines laid down in those that have gone before, since and including 1896, except that it made provision for the completion of a larger percentage of projects than was made for a like purpose in any of the others, saving that of 1907, which only exceeded it in that particular by less than 4 per cent.

But it is not necessary to make provision for the completion of as large a percentage of projects in the case of annual as in biennial or triennial bills, because the work may be carried on quite as expeditiously with smaller appropriations in the former as with larger sums in the latter. Besides, in either case, we follow the advice of the engineers, only giving what they say they can judiciously expend during the fiscal year. We certainly should give no more, and are not likely to give less, if convinced that their estimates are correct.

Mr. Speaker, it is remarkable, in view of the strong and vigorous language used in the criticism of this bill, how the grounds of the objections thereto disappear when they and the bill are subjected to analysis and comparison is made between that measure and those held to be above criticism.

There are three things to be considered in determining the merits of a project for improving a navigable waterway—first, the engineering features; second, the cost; third, benefits to accrue. Into the latter item three elements may also enter—commerce, present and prospective; influence of the improvement upon freight rates; and the development of the country. The first, of course, is the most important. Now, apply any one or all of these tests and the work we have been doing and are proposing to do is abundantly justified. Few mistakes of engineering have been made, a fact which speaks loudly of the excellence of our Engineering Corps; at least, it speaks with a loud and convincing voice to anyone who wants to hear, and it is only to that class I am speaking. If anyone doubts, let him point out the mistakes. He will find them few and relatively of little consequence.

Nor has the cost been great when compared with similar work in other lands. Take Prussia, for instance, which in that particular is perhaps typical of the other European countries. The average cost per mile of the improvement of her navigable rivers down to 1906, the last figures available so far as I know, was $30,300, while the average in the United States up to and including 1913 was only $17,355 per mile.

Furthermore, while the cost has been moderate the benefits have been gratifyingly large. Freight rates, as a result of these improvements, have been greatly reduced, production largely increased, and the development of the country materially aided, while the tonnage of our water-borne commerce has grown beyond all expectations. All this may be ascertained by anyone who will study the reports with a view to finding out the facts.

We know, for instance, that these improvements have had a great effect upon freight rates, both directly and indirectly. The engineer reports show this and our own observation confirms it. It has been estimated that these reductions are as much as a dollar a ton for every ton carried by water. We know, too, that wherever these improvements have been made business and industrial conditions are stimulated and the country developed, especially in the sections tributary to the waterway.

But the most remarkable development has been in the growth of water-borne commerce during the more active period of river and harbor improvement—that covering the past 20 years. In 1896 the tonnage of that class of commerce was less than 300,000,000 tons. By 1907 it had grown to 625,901,653 tons, and by 1913 to 1,002,759,355 tons. This, Mr. Speaker, is a most remarkable showing and should satisfy the most captious critics of the economy and wisdom of the policy under which we are improving our rivers and harbors. Certainly it amply justifies the expenditures we are making and have made, even if mistakes now and then occur in the submission by the engineers or the adoption of projects here.

The truth of the matter, Mr. Speaker, is that this wholesale criticism is based upon an erroneous conception of the nature of this measure. But, unfortunately, the views of its critics expressed in Congress have been accepted as correct by a few of the leading newspapers and magazines throughout the country, papers justly high in public esteem and of wide circulation. Little blame, if any, can be attached to these papers, for they had the solemn assertion of a few Members of Congress that the bill contained many vicious items.

And therein, Mr. Speaker, lies one of the grounds of complaint against such characterizations of the motives of Members who feel and take a deep interest in that class of legislation. Is it any wonder that newspaper writers and others out of Congress reading in the CONGRESSIONAL RECORD charges made by a Member here that other Members are grafters, that even as important a measure as the annual river and harbor bill is a "pork-barrel" affair and the result of logrolling, graft, crookedness, and even thieving; I say is it any wonder in the face of all this that newspapers with little time to investigate should take such charges and characterizations as true and send them out to their readers as worthy of belief? They might perhaps, having no time in this busy age to investigate, be justified in saying of the Member who makes such charges, "He is on the ground and should know the facts, therefore his statements must be true." Mr. Speaker, all this but illustrates the care one should exercise in his remarks here regarding presumably honest men representing honest and patriotic constituencies. I trust I may not remain here sufficiently long, or even live long enough, to develop such an opinion of the honesty and integrity of the great American Congress.

Now, Mr. Speaker, I have shown, I trust, that this bill throughout and in all its details, like its predecessors for the past two decades, is in keeping with that liberal policy we have, in obedience to public sentiment, been pursuing toward our rivers and harbors. That policy, outlined in the platforms of the two old parties and condemned by none, but voiced by the people all over the country, demands that our navigable waters be improved to their fullest navigable capacity, so as to meet the demands of a rapidly growing commerce, present and prospective, ever keeping in mind, of course, the proper relation between cost and benefits; and not an item in the pending bill, at least as it left the House, but comes well within the scope of that policy.

If there is any wrong, it is not to be found in the bill but in the policy upon which it was framed, and for that the people of the country are responsible, for we have only responded to their wishes as we have understood them.

Now, this policy can be altered; but before doing it you had better hear from the people, who have not yet condemned it or asked for a change. Suppose, however, you conclude to make a change and to materially curtail the list of favored projects, where will you draw the line between the desirable and the undesirable? What will be your standard of excellence? What your test of merit if we depart from the policy we have been pursuing for the past two decades? This is a pertinent question, which must be answered whenever a change is to be made in that, the only policy yet demanded and upheld by the people? For political or other reasons we may depart from it, but let me warn those who may be responsible for the change that their acts will likely return to plague them; indeed, I risk nothing in saying that the change, if any, will only be temporary, because the people are determined to have ample water-transportation facilities.

Mr. Speaker, I regret to note what appears to be an effort to inject politics into this measure. During a service here of nearly 20 years I have never seen that done before if it is being done now. During all that time our rivers and harbors bills have been kept out of politics, the only consideration in and out of the Committee on Rivers and Harbors being as to the merits of each proposition, and if politics is injected into this measure it will not only be the first, but it will be a regrettable occurrence. This class of legislation is of too much importance to the country and to the whole commercial world for our deliberations upon it here to be influenced by party considerations. Any political advantage gained in that way would be dearly bought, and would be short lived. As I said, a large majority of the people are, in my opinion, behind the present bill, at least as it passed this body.

And a large majority of this House is, as it has been for the past 20 years, in favor of this liberal policy, as is evidenced not only by the votes of the Members here and at the other end of the Capitol, but by utterances on this floor from time to time of men of great influence and of national repute. From among many of such utterances I wish to refer briefly to the remarks of one who has perhaps borne a more conspicuous part in river and harbor legislation during the last quarter of a century than any other one man. It is needless to say that I refer to the Hon. T. E. BURTON who, during the time he was a Member of this body and when the bill of 1896 carrying the largest amount of any such measure ever enacted into law, except that of 1907, was before the House in advocacy of the same, used the following language, which I commend to those who think the pending bill an extravagant or unwise measure:

The argument—

Said he—

is also made that the bill is extravagant. This argument comes with very poor grace when we consider that this House a few days ago, al-

most without a dissenting voice, appropriated in one bill over $30,000,000 for our Naval Establishment. This is the one appropriation made by the General Government the immediate result of which is to increase the wealth and commercial development of our country. Indeed, it not only provides better channels and harbors for commerce, but even in case of war provides for waterways quite as essential for our safety as battleships and cruisers. The sums expended are not extravagant, but, on the contrary, very small, when we take into account the enormous extent of our seacoast along the Gulf and the two great oceans, and the unequaled mileage of our rivers, to which we must add the marvelous traffic on the great inland lakes, the most surprising of all.

In order to maintain our place among nations we must increase our exports. The sharp competition which has been brought to bear in supplying our home markets has not yet been exerted in securing foreign trade. This is largely due to the fact that we have a home market, the greatest in the world, and by the further fact that until within the last 20 years we, with little effort, had a practical monopoly in supplying foreign markets with staple products. Until recent years we largely supplied the markets of the world with cotton, the fabric most used for clothing; with the wheat which furnishes bread; also tobacco, the luxury used by the greatest number. But in recent years active competitors have arisen in the furnishing of each of these staples in either hemisphere and on both sides of the equator. In order to regain and maintain the great advantage which we formerly possessed nothing can be of so great an assistance as the improvement of our great harbors and the development of a better system of inland transportation by improving navigable rivers.

Neither is the objection that appropriations for rivers and harbors have sometimes been wasted a valid one. Beyond the inevitable loss or waste belonging to every system of expenditure maintained on a large scale, and in an era when inventions are yearly revolutionizing methods of construction, there have not been injudicious expenditures in the river and harbor bills. The waste has not been as great as in other branches of the public service. Many of the most expensive ships built for our Navy, constructed according to the best models of the time, are now rusting away at wharves, utterly useless to-day, though costing millions. The navy of Great Britain, designed in accordance with the most perfect development of the art of shipbuilding, numbers in the Admiralty list useless hulks which cost millions of pounds.

The accusation of extravagance in these expenditures for rivers and harbors is effectually disproved by a comparison with the methods of other nations of more developed resources. England and France illustrate two widely different lines of policy in the provision made for aids to commerce and transportation. In Great Britain these improvements are for the most part undertaken by private corporations or agencies other than the Imperial Government. These enterprises have been undertaken upon an enormous scale. Undoubtedly more capital is invested there in harbors, docks, and inland waterways than in any other country. In recent years the Tyne, at and below Newcastle, has been deepened and other improvements made at a cost of $20,000,000. On the Mersey and the Clyde much larger sums have been expended. The Manchester Canal, 35½ miles in length, has recently been completed at a cost of $75,000,000. In other private canal companies $150,000,000 is invested. This method of improvement by private corporations or local authorities is not suited to our methods or, especially in the case of inland waterways, to the greater extent of territory involved in each improvement.

The same arguments are as pertinent now as they were in 1896, and as appropriate to the present measure as to the one of that year. The pending bill, it is true, is not as large as the one then under consideration, but, like that or like the most of the bill of 1896, it is all for the improvement of our navigable waterways, and although much has been done since then, much remains to be done; not, however, as much by half as remained then, for since that time we have appropriated for that class of work nearly $400,000,000, the most of which has been expended. True, three-fourths of the work of original improvement solely in the interest of navigation has perhaps been completed or is in process of completion, but as a whole the work remaining to be done is as greatly needed as the work for which the bill of 1896 provided or as that provided for in any enactment since then. During that period the country has neither stood still nor gone backward, but has continued to progress rapidly along every line of material development. Production has grown to enormous proportions, water-borne commerce trebled in tonnage, while the wealth of the country has increased 60 per cent. This growth and development has made necessary increased expenditures along almost every line of governmental activity. The speaker to whom I last referred, while defending a $76,000,000 river and harbor bill, called attention to a $30,000,000 naval appropriation bill passed by that Congress, while now we have alongside of a $43,000,000 bill as it left the House a $144,000,000 naval appropriation bill enacted into law, an increase of nearly 500 per cent. But there has been, of course, no such growth in river and harbor appropriations, nor should there be, as we in making appropriations are working as we have been for two decades, to a definite end, which we will soon reach.

Now, Mr. Speaker, is it not the part of wisdom to push to early completion this important work so greatly needed and so urgently demanded, promising as it does so much for the prosperity of the country and the happiness of the people? There can be but one sensible answer, and that answer is that we should take no backward step, but, without waste or unnecessary delay, pursue this wise policy of river and harbor development until the demands of our commerce are fully met.

Emergency Revenue Legislation.

"I supported this legislation and am willing to take the consequences."

EXTENSION OF REMARKS
OF
HON. ELLSWORTH R. BATHRICK,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. BATHRICK. Mr. Speaker, this emergency, temporary tax, forced upon the American people by trouble in Europe, is very little trouble to complain about compared with the cause of complaint over there. We should be very thankful and contented with our small troubles.

I want the people to know part of what there is to be thankful for, and I insert the following synopsis of Democratic legislation for them to think about.

I supported this legislation and do not fear the consequences.

DIRECT ELECTION OF SENATORS.

We believed the people should rule in fact, and not a star-chamber clique of politicians who, under the old plan, often steered special-privilege Senators through a subsidized legislature.

THE INITIATIVE AND REFERENDUM

was read into the charters of the States of Arizona and New Mexico when they were admitted to the Union. We believed the citizens should have the veto power over bad laws.

CHANGE OF HOUSE RULES,

was made that legislation may not be smothered in committee and to abolish the tyranny of Cannonism.

A LOWER TARIFF.

It was too high. There was general demand to make it lower, and this was equivalent to a mandate from those whom I represent.

THE INCOME TAX,

putting $100,000,000 annual tax on those more able to bear it than the poor.

FREE SUGAR,

that the people might not pay about $120,000,000 tax each year in order that a very few should profit.

THE FEDERAL RESERVE BANK ACT,

that money and credit may not be controlled by big banks in New York, and money panics may be hereafter avoided.

ANTITRUST LEGISLATION,

that fair competition, honest business, and better opportunities may prevail for all who strive in commerce and that monopoly be abolished.

AGRICULTURAL IMPROVEMENT IN MANY WAYS,

that farm-science instruction can be carried to the farm practically; that large sums used for this purpose might be for the good of all, in town and country alike.

FARM CREDIT,

that the banks may loan on mortgages, and a better credit, better adapted to agricultural needs, be secured. This will be extended and improved next session.

GOOD ROADS,

that the highway from the farm to the market may be a saving on the farmer's and consumer's cost; that time, vehicles, and patience might be saved without putting the burden of construction wholly on the farmer, who uses the country roads mainly for the necessities of the city.

THE CORRUPT PRACTICES ACTS,

requiring report of campaign expenses, that unscrupulous politics may not corrupt the electorate and pack our legislative bodies with a favored class.

TO REPEAL FREE TOLLS,

believing that it would be a tax upon, not a benefit to, the people and that a diplomatic situation made the repeal wholly right as well as expedient.

PENSION BILLS,

that those who preserved our integrity as a Nation and whose sacrifices in our wars made our greatness possible may not be forgotten in their days of infirmity.

REDUCTION OF MILEAGE BELOW 20 CENTS PER MILE,

believing actual expenses would be fair. This was passed in the House.

DEDUCTING PAY OF ABSENTEES,

that public officials should not draw pay while unnecessarily absent from post of duty.

WAR EMERGENCY ACTS,

that the European war burden should fall as lightly as possible upon the American people. A world war could not leave us unscathed, and a temporary war tax and commercial adjustments became a necessity.

PEACE RESOLUTIONS,

calling on all nations for a suspension of armament, that the great burden of war be lightened.

THE ALASKA RAILROAD BILL,

that the great natural resources of that country may be developed for the people and not given over to the Guggenheim monopoly.

INVESTIGATIONS OF THE STEEL TRUST, THE MONEY TRUST,

lobbyists, etc., that better information might secure better legislation and your representatives should not be influenced by the paid lobbyists.

INDUSTRIAL EMPLOYEES' ARBITRATION,

that an impartial official might advise and adjust differences between employer and employees without disaster to either. Two dangerous railroad strikes have been averted by this law.

LABOR LEGISLATION,

that our courts might not be instruments of oppression; that shorter hours of labor might more equitably divide the fruits of production; that our girls and boys might not be stunted in their extreme youth in factories; that the great body of American high-class labor might have representation in the Presidents' Cabinet; that our seamen might be safer, as well as the traveling public; that workmen might have sure compensation for industrial accidents.

THE DEVELOPMENT OF COMMERCE IN NUMEROUS WAYS,

that foreign and domestic trade might succeed and the division of the benefits of prosperity be more general.

WOODROW WILSON.

With the masterful hand of statecraft he kept back impending national sorrow, even when his own bereavement tore at his breast. He kept guard at the gate of the Nation and denied entrance to the demon of war. He watched and waited there, that the wives and children and sweethearts at the gates of a million homes need not watch and wait for fathers, sons, and lovers who would return no more.

Some say, without just reason, we have not saved the public purse from extravagance.

What might have been but for the President's economy of passion, but for this saving of peace?

Woodrow Wilson saved a year's toll of 10,000,000 men when he saved us from war. He saved our Nation from tears, our commerce from disaster, our homes from desolation; and whatever might lie behind the black curtain of this foreign hurricane of human passion, he will save us from that, too, if we will but uphold his great purpose and cease quibbling and dragging upon his sincere endeavor.

Speech Delivered by Hon. Henry T. Rainey at the Democratic State Convention in Illinois.

EXTENSION OF REMARKS

OF

HON. MARTIN D. FOSTER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914.

Mr. FOSTER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a speech delivered by Hon. HENRY T. RAINEY at the Democratic State convention in Illinois.

The speech is as follows:

Address of Hon. HENRY T. RAINEY, M. C., twentieth district of Illinois, temporary chairman Democratic State convention, Springfield, Ill., Friday, September 18, 1914.

GENTLEMEN OF THE CONVENTION: I thank you sincerely for the great honor you have conferred upon me by selecting me to preside over the temporary organization of this great Democratic convention.

We are here to-day to ratify a ticket adopted not in convention but by Democratic voters in a Democratic primary, conducted fairly and honestly, in which each man had the opportunity to express his individual preference at the ballot box. Our ticket has been selected by decisive majorities. The campaign has been unusually free from personal abuse. The fight between Democrats has been spirited, but it is over. [Applause.] The time has come for all Democrats to bow to the will of the majority in this great State; to forget factional disputes and antagonisms, and to assemble under Democratic banners in order to present a united front in the approaching elections to a common enemy. We may disagree as to who Democratic standard bearers ought to be before a primary election, but after the primary fight is over there is only one thing for Democrats to do—fall in line behind the successful candidates in the primary. We are here to-day representing the entire Democratic Party of the State, to promise on behalf of the great mass of that party to support vigorously, enthusiastically, and fearlessly the entire Democratic ticket.

THE ILLINOIS DEMOCRATIC CONGRESSIONAL DELEGATION.

Just before starting from Washington for this city I had the honor of presiding over another enthusiastic meeting, a meeting composed of the 20 Democratic Members of Congress from Illinois. There was a time when I was the only Democratic Member from this State. The great Democratic Senator who represents this State in the Senate of the United States participated in our deliberations. I was unanimously instructed, on behalf of the Democratic delegation from Illinois in the Congress of the United States, the second largest Democratic State delegation in Congress, to explain to this convention the condition of the public business which makes it inadvisable for Members of Congress to leave Washington at the present time, and which makes impossible their presence here to-day.

I expect to return to Washington as soon as this convention adjourns. I bring you greetings from the Illinois Democratic delegation in Congress, and I am authorized by them to say that they recognize the importance of harmony in Democratic ranks in Illinois at the present time. They indorse enthusiastically and vigorously the entire Democratic ticket in Illinois, from Roger Sullivan down to the bottom of the ticket. I am authorized by Senator LEWIS to say that he concurs most heartily in the action of the Democratic delegation from this State in Congress. [Applause.] A great Illinois Democrat, prominent in the national counsels of his party, by a decisive majority, complimentary to him and conclusive upon all, has been selected to head the ticket. In the approaching campaign the Democratic Party, forgetting all differences, represented here in this convention, pledges, first of all, unswerving loyalty and vigorous, active support in this campaign to the candidate who has been selected to head this ticket, the Hon. Roger Sullivan, of Chicago. [Long and continued applause.] We pledge equal loyalty and vigorous active support to all the other names appearing under his name upon the ticket adopted by the Democrats of this State in the primaries of September 9. [Applause.]

DEMOCRATIC VICTORIES.

We have assembled here under most favorable auspices. Since our last convention the Democratic Party has been victorious in the State of Illinois and in the Nation. The armies of a united, triumphant Democracy have won and are winning, and will continue to win victories on every field. The broken, discouraged forces of the enemy have tried in vain to reconcile their differences and to reunite the warring, discordant factions which have made impossible effective opposition to the splendid Democratic advance throughout the country.

REPUBLICAN DISSENSION.

To-day while a united Democracy convenes under one banner here in this hall in widely separated cities two factions of the Republican Party convene, not for the purpose of adopting plans and methods to offer vigorous opposition to a united Democratic Party, but for the purpose of developing methods of fighting each other. [Applause.] The ties that have bound together the Republican Party are being severed, and to-day throughout the State, in every community, Republicans can be found who are supporting, and who expect in the future to support, the Democratic ticket. The administration of President Wilson is being treated fairly by great Republican newspapers in this State.

We commence here to-day, not a partisan fight against Republicans, but a fight for the maintenance of the great principles we have already incorporated into the law of the land and for the policies which have brought peace and happiness and prosperity to this country while the nations of Europe are engaged in destructive war [applause], and in this fight we expect to have the support in this State of thousands of patriotic

citizens who have heretofore voted the tickets of the Republican Party. [Applause.]

We control both branches of the National Congress by decisive majorities. We control the National Executive. In this State and throughout the North Democratic State administrations strive to overcome the effects of years of Republican misrule.

WE HAVE KEPT THE FAITH.

The Democratic Party has kept the faith. We have been true to the theories upon which the party was founded and to the great unwritten constitution which has regulated and controlled Democratic policies in all the decades which have passed since the days of Jefferson.

A Democratic Congress has met without fear the great problems which have been confronting the country through all the years of Republican rule—problems which have been continually pushed forward into the future by the Republican Party through all its years of supremacy. Under the wise, patriotic guidance of the greatest President the country has had in a half century of time [long-continued applause] the present Congress has remained in session longer than any Congress since the Civil War. The term of the present Executive is not yet half over. There still remains another session of the Congress now in session, but we have already enacted into law nearly all the great remedial measures we promised the country during the last campaign for the Presidency. We proudly call attention to a marvelous record of performance not equalled by any party in the same length of time during all our history as a Republic.

DEMOCRATIC ACHIEVEMENT.

We have kept our promises literally and have revised the tariff downward. We have written into the laws tariff provisions which have wiped out every vestige of the old war tariffs. We have enacted the lowest tariff law we have had since the Walker tariff of antebellum days. Business goes on as usual. Our factories are running, many of them day and night. The predicted business disasters and panics have not come.

Already in the wholesale prices of goods the effect of our revision is being felt. Long before the next presidential election retail price reductions and cheapening of methods of distribution will make impossible the return to power of any party, in any section of the country, which promises or advocates a restoration of the old oppressive Republican tariff schedules.

We have enacted into law efficient income-tax regulations—the kind of a tax which compels the rich to bear their fair share of the burdens of running this Government. We have already accomplished the currency reform demanded by present-day conditions. The new Federal banking act is not yet in operation, but will be before the elections in November. Already the fact that the law will soon be in operation has had its reassuring effect upon the banking and business interests of the country. Bank panics and extensive business depressions are now a thing of the past. We have abolished forever the "dollar diplomacy" of the Republican Party—the diplomacy which meant that investments of Wall Street capitalists and speculators in the weaker Republics of the western world would be protected by the armies and navies of the Uniteds States and compelled to yield the return the investors demanded. We have substituted for that policy the doctrine of human rights. Already a feeling of confidence toward us is being established in the weaker Republics south of us. Bonds of friendship are beginning to hold together the Republics of the western world, and it will not be long before we may expect profitable trade relations with the prosperous, productive countries of South and Central America which up to the present time have rejected our overtures and our commercial advances.

We have driven forever out of Congress the insidious lobby and no longer are the corridors of our National Capitol filled with the men who represent great interests and who demand legislation at the expense of the great producing masses of our population.

We can call attention to the fact that we have already by wise legislation reestablished the American merchant marine, and we have accomplished it without subsidies. Under Democratic laws, enacted by Democratic majorities in both Houses of the National Congress, approved by a Democratic President, scores of ships are applying for registry under the American flag, and it will not be long until the American flag flying over American merchant vessels is as familiar upon the seas of the world as the flag of any other nation.

We have taken the necessary steps toward opening up the vast Territory of Alaska, with all its possibilities. The policy of the Republican Party was either to give away to the interests the resources of this great section of the continent or to tie them up forever. The people rebelled against the former course, and a Republican administration, weak and inefficient, merely tied up these great resources and left the problem for us to solve. We have met it unflinchingly; and to-day groups of American surveyors are penetrating the interior of Alaska preparing for the great railway made possible by a Democratic administration.

We have made effective the popular vote for United States Senators.

We have averted great railway strikes by arbitration.

We have destroyed the Telegraph and Telephone Trusts.

We have made possible an efficient parcel-post law and have extended it and cheapened it.

We have wiped out the deficit in the Postal Service and have made the Post Office Department self-sustaining.

We have made effectual and possible trust dissolutions.

We have destroyed Cannonism in the House of Representatives and have made that body responsive, not to the will of a few political bosses representing the interests, but we have made it responsive to the demands of the people of the United States. [Applause.]

Before the end of the present session we will have written into the law all the great trust bills advocated by the present administration. All of them have already passed the lower House of Congress. One of the most important of them has already become a law. The trust laws we have enacted are along Democratic lines; they are based on the Golden Rule. Under them business will flourish and trade wars will cease, legitimate, honest competition will prevail, and there will be a restoration of the honest, honorable business methods of the past. Under them the trusts must obey the decrees of courts. They must abandon unfair, cutthroat competition. Discriminations between purchasers of their goods must cease. They must abandon the control of competitors acquired by them under the "holding-company" systems. The tremendous power wielded by their interlocking directorates must cease. [Applause.] In other words, the trust laws we have enacted give to the struggling, ambitious men of moderate means a better chance in life. [Applause.]

We have enacted much-needed legislation providing for cooperative agricultural extension work throughout the land and for the fostering and development of our commerce at home and abroad.

I have called attention only to a part of the wonderful record of achievement of one Democratic Congress whose life has but half expired. We found confronting us when we took charge of the National Government and the State government contract authorizations made by previous national and State administrations, which we were compelled to meet and which have apparently prevented economies in the administration of the State and the National Government. The national administration at this present session of Congress has only authorized, in addition to the necessary appropriation bills, the building of the Alaska railroad and the establishment of the War Risk Insurance Bureau and the appropriation of $1,000,000 incident to the hostilities in Europe. The party which would promise to abandon any one of these contract liabilities could not hope to succeed in a national election. There is an increase in our Army and Navy appropriations of over $6,000,000, all of which can be traced to disturbed conditions on our southern border and to the situation at Vera Cruz. It has therefore cost us $6,000,000 to maintain peace in Mexico, and the war in Europe has cost us $1,000,000. This expenditure of a little over $7,000,000 represents what it will cost us to remain at peace with all the world for the period of one year of time. The warring nations of Europe carry on their present operations at an expense to them of $50,000,000 for each day of time. We undertake to say that the firm, uncompromising, unyielding, inexpensive foreign policy of the United States is entitled to the cordial support of the American people. [Applause.]

WHAT HAPPENED ON THE 13TH OF AUGUST.

On the 13th day of August the Senate of the United States approved 19 arbitration treaties with 19 nations of the world, submitting to arbitration all questions, making impossible for all time wars between the United States and 19 of the 59 nations of the world. On that same day the armies of France and Germany met in awful battle in the old border Provinces separating those two nations, which have been the theater of wars since the dissolution of Charlemagne's Empire, and that night the cold light of stars shone in the faces of 20,000 dead men on that awful field of carnage.

Who won that victory? Certainly not the widows of the young men who died there and who are compelled now to pursue their weary way alone through the years to come to the grave. Certainly not the thousands of children rendered fatherless on that awful day. Whoever won that battle, which

was the greater victory, the victory on that field covered with horribly mangled bodies of men, or the victory for peace won in the United States Senate—peace with 19 nations of the world? A few days later the *Ancon*, a transport of the United States Government drawing 30 feet of water, steamed through the Panama Canal in less than six hours of time, emphasizing the victory, after 400 years of effort, for peace and commerce won under a Democratic administration; the victory over the barrier which for all time had separated at that point the great oceans of the world. On that same day, in front of an old fortress in Belgium, the Germans and Belgians were engaged in awful conflict, and at the close of the battle the ground was strewn with the bodies of 25,000 men who fell. Who won that victory? No matter who won it, can it be compared to the victory for peace we won when we united the oceans of the world—the victory we won not only for the commerce of our own country, but for the commerce of all the world? [Applause.]

ARBITRATION.

We have brought peace in the great Republic to the south of us and have resisted the clamors of a considerable portion of our own population for war. Can anyone now be found in this country who will question or criticize the firm policy of watchful waiting pursued by this administration, which has saved to the country millions of treasure and thousands of lives? The Wilson doctrine—the doctrine that in the Republics of the western world presidents must be elected by the people; not selected as a result of the work of assassins and murderers—is recognized now as established among all the 22 Republics of this continent. There are pending now other arbitration treaties in the Senate of the United States, and when they have been approved, as they will be by that body, we will have accomplished treaties of peace and arbitration with over half the nations of the world. We will have established lasting peace with three-fourths of the population of the world. Is not this better than war? [Applause.] Are not the policies of the present administration entitled to the cordial support and enthusiastic approval of the voters of this country?

WHAT PART OF THE WORK OF THIS ADMINISTRATION WILL THE REPUBLICANS REPEAL?

What do those who clamor for the restoration of the Republican Party to power expect that party to do? Do they expect the Republican Party to abandon the firm foreign policy of the present administration, which insures peace for us while all the other great nations of the world are engaged in destructive war? Under Republican rule Wall Street controlled the credit of the Nation. We have destroyed that control. Does anyone think that we ought to restore it? We have driven Cannonism from the halls of Congress. Can anyone insist that it ought to be restored? The Republican Party taxed the American people $120,000,000 a year on sugar. We took it off. Do the voters of this country want to give the Republican Party a chance to put it on again? We have extended the parcel post and compelled express companies to reduce their charges. Does anyone think the express companies ought to be permitted to restore the charges they formerly made? Does the country want the paid lobbyists of special privilege to again make their appearance in the House of Representatives? We have levied a tax upon the incomes of the rich. Do the voters of this country think it ought to be taken off and the tariff restored on sugar and the other necessities of life?

I am unwilling to believe that the people of this State or of the Nation desire to undo the work of the present administration and to restore to power the party under which flourishes corporate greed and trust oppression.

ENTERING NOW UPON A PERIOD OF PEACE AND PROSPERITY.

Under Democratic rule we are entering upon a new era. An era of peace and prosperity at home—industrial peace, business harmony. Peace which gives to young men starting out in life the opportunities they ought to have. Under Democratic rule we have established peace between this country and half the nations of the world. Peace which means victories for commerce, a lessening of the burdens of war, and the restoration of our carrying trade—a peace which makes for happiness and prosperity and the material progress and comfort of the 100,000,000 people who live within the boundaries of continental United States. The starry banner of the Republic throughout this administration has stood, not for war and human misery, but for the progress, happiness, comfort, and prosperity of all the people. [Applause.]

With faces turned not toward the past, but toward the future, a united Democracy represented here by over a thousand delegates, coming from all parts of this great State, commences to-day the great Democratic advance which will result in victory in November. [Loud and continued applause.]

Eighteen Months of Democratic Rule and the Effect of the Tariff on Farm Products.

SPEECH
OF
HON. GUY T. HELVERING,
OF KANSAS,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, August 27, 1914.

Mr. HELVERING. Mr. Speaker, in summing up the achievements of any administration the vital questions are: What promises were made? Have they been kept? Have the results accruing been of benefit to the masses, and does the future give promise of greater benefits yet to result from the policies of the administration under discussion?

It is to these questions that I propose to confine myself, and in doing so I shall strive to keep clear, as far as possible, from the domain of speculation and confine myself, as far as possible, to the facts as proven by reliable statistics, taken largely from Government sources.

Before entering into the debatable points of the subject let us first devote a little time to a reference to legislation enacted, in regard to which there is but little, if any, controversy.

We have legislated to the end that this Government shall construct a railroad in Alaska. By doing so we have placed in the hands of the Government the key needed to unlock the resources of this great national possession, to the end that they may be of benefit to all of our people and not to a few grasping monopolies.

We have legislated along lines directed to extend the activities of the Department of Agriculture so that it will be of greater benefit to the farmer. We have done constructive work in this direction by the appropriation given to the department for the stamping out of hog cholera, and we went a long way in the direction of constructive educational legislation when we paved the way for cooperation between the Government and the States for work designed to carry to the farmers the information of practical value. We have developed the parcel post until it has been of the greatest utility in bringing about fairer express rates, and we are making use of it as an instrument by which we can bring producer and consumer closer together. While doing this, we have placed the Post Office Department on a paying basis and made of it a revenue producer for the Government.

We have brought about a larger measure of self-government in the Philippine Islands, and thereby have come nearer to the day when the people of these islands will be bound to us by ties of respect and admiration instead of looking upon us as natural enemies who aim at the destruction of freedom.

Under the leadership of our President we have purged Washington of a most iniquitous lobby, and while questions arising are fully and frankly considered, according to the best light given to us by the country, we are no longer buttonholed by the representatives of selfish interests who have no vital interest in good legislation, but who profit by special favors.

Along the line of pension legislation, it is to Gen. SHERWOOD and a Democratic Congress that the old soldier owes the enactment of a law which redeemed the promises made. The Republicans had 14 years of opportunity and failed, but no sooner had the Democrats come into power than they recognized the justice of the claims of the veterans.

We have also passed a bill granting a pension of $12 a month to the widows of Spanish-American and Philippine War soldiers, and we have taken care that their minor children shall be provided for.

THE INCOME TAX.

By amending the Constitution and passing the income-tax law we have taken a burden amounting to at least $75,000,000 per year from off of the shoulders of the masses and put it upon the wealth of the country. In doing so we have recognized that the tremendous cost of government was inequitably adjusted, if it was to be paid out of the producing and consuming ability of the Nation, and that it was but fair that the wealth of the Nation, concentrated in the hands of the few and earned by the sweat of the many, should carry a larger part of the burden. No more equitable tax was ever levied, and few are those who complain because we have enacted this legislation which was so long prayed for but which had been delayed by causes indefensible.

THE TARIFF.

Coming to the controversial subjects, the tariff stands in the front rank, and as it was first in the list of the great reforms

promised by our party I propose to give to it corresponding attention.

The attempt has been made here, and doubtless will be made again, to arraign the farmers of the United States against the Democratic Party because some farm products have been placed upon the free list. That attempt will stand or fall, according as to whether farm products sell for lower or higher prices than they did under high protective tariffs. In saying this I want to keep out of consideration all reference to enhanced prices brought about by conditions arising from the present European war. I will not insult your intelligence by claiming credit for any advance in farm products due to such a cause, although it is to be regretted that too often in the past our opponents have claimed credit for results which have come through the operation of natural laws, and have not hesitated to lay on Democratic doorsteps the children born to their own incompetency or extravagance.

I herewith submit a table giving the market price of seven staple farm products as paid on April 1, 1913, and April 1, 1914:

Prices paid to producers of agricultural products, April 1, 1913, and April, 1914.

[Price of hay is per ton; other products, per bushel.]

State.	Corn.		Wheat.		Oats.	
	1914	1913	1914	1913	1914	1913
Ohio	$0.64	$0.51	$0.93	$0.99	$0.39	$0.33
Indiana	.61	.48	.91	.97	.39	.32
Illinois	.64	.47	.88	.90	.38	.31
Michigan	.64	.51	.92	.99	.40	.32
Wisconsin	.59	.49	.82	.82	.37	.32
Minnesota	.52	.41	.83	.76	.32	.26
Iowa	.59	.41	.79	.79	.34	.29
Missouri	.74	.50	.86	.93	.46	.37
North Dakota	.51	.47	.81	.72	.32	.33
South Dakota	.57	.39	.79	.73	.33	.26
Nebraska	.63	.44	.75	.74	.37	.31
Kansas	.73	.45	.90	.78	.46	.40
Oklahoma	.74	.50	.81	.77	.48	.39

State.	Barley.		Rye.		Potatoes.		Hay.	
	1914	1913	1914	1913	1914	1913	1914	1913
Ohio	$0.57	$0.50	$0.68	$0.72	$0.80	$0.56	$12.20	$10.30
Indiana	.50	.65	.63	.67	.83	.53	12.70	10.80
Illinois	.55	.54	.62	.71	.91	.58	13.90	12.00
Michigan	.64	.63	.60	.57	.50	.36	12.00	10.70
Wisconsin	.52	.50	.55	.56	.53	.31	10.30	10.60
Minnesota	.45	.43	.51	.49	.53	.28	6.40	6.50
Iowa	.52	.51	.62	.60	.93	.51	9.80	9.60
Missouri		.60	.74	.78	.99	.74	14.20	9.40
North Dakota	.39	.34	.48	.47	.57	.31	5.80	5.20
South Dakota	.44	.41	.51	.57	.75	.39	7.00	5.60
Nebraska	.52	.40	.57	.56	.94	.53	8.50	7.20
Kansas	.57	.42	.65	.67	.98	.77	12.10	7.60
Oklahoma	.68	.50	.93	.87	1.00	.91	11.50	7.40

It will be noticed that there has been an increase all along the line, and if you take the two leaders—corn and wheat—and analyze the conditions surrounding them you can plainly see that while the prices on these commodities are not affected in normal times by the tariff, nevertheless when the years of general calamity resulting from drought overtakes us and we have hungry mouths to feed and stock to care for, the free listing of these products will under such conditions ameliorate distress, and do so without injury to the American farmer.

That is so because we are an export nation of cereals, and the world price is the price at which our cereal products must be marketed.

In the fiscal year 1912-13 we produced of the 15 great staple products of the farm to the value of $11,165,000,000. Our importation of these products amounted to $36,855,000, and we sent abroad nineteen times more than we brought in. The world price is what we received for these products in foreign markets, and the home price was automatically regulated by the price at which they were sold abroad. That is well understood and no amount of sophistry will lead the farmer astray.

WHEAT.

During the major portion of the past year wheat sold in Winnipeg, Manitoba, at a higher price than it commanded in Minneapolis. Canadian wheat did not come into the United States to compete with us, for a duty of 10 cents per bushel would have prevented, even if Canadian wheat was selling at a lower price than ours. Likewise, we have a duty of 25 per cent operating against Canadian flour, so that the price of wheat or its products in the United States could not be adversely affected by Canadian competition. Is that not a fairer deal for our farmers than was given to them under the Payne-Aldrich law, when the great Minnesota milling companies were permitted to import Canadian wheat by paying a duty of 25 cents per bushel, ground it into flour, and on the exportation of that product were refunded the amount of duty paid? Democratic tariff laws have protected the United States farmer against unfair competition, while Republican laws, ostensibly designed to protect the farmer, gave an excess of protection to the manufacturer and permitted the farmer to retain only the shell of bogus protection.

"Oh," our opponents say, "we admit that there is no competition to be feared from Canadian wheat, but Argentina will take away from us our home market." That statement will not bear analysis. The statistical department of the Argentine ministry of agriculture is authority for the statement that it costs 66 cents per bushel to raise wheat in that country, and the yield averages 15 bushels to the acre. That is the basis upon which we must meet Argentine wheat in the markets of England and of the Continent. The world yield and the world demand will ever be the price factors, and as long as we are exporters the world price will prevail in our home market.

CORN.

In 1913 we did have a tremendous shortage of corn in this country—it amounted to 677,748,000 bushels—but even with that shortage this country produced in that year 68 per cent of all of the corn raised in the world. In this country there are 130,000,000 acres planted to corn, 13,000,000 in Mexico, and 10,000,000 in Argentina. When the time comes that our opponents can prove that the tail will wag the dog, then we are ready to be convinced that our corn has cause to fear competition from any section.

The shortage in our crop in 1913 did encourage importations, because it resulted in an increased price in this country. Each year we are increasing the percentage of the corn which we manufacture into cattle and hogs, and on the farms the American people are becoming more and more manufacturers as well as producers of raw material. In the English markets our corn sells for a better price than the Argentine article, because it lends itself easier to feeding in the raw state. In average years bringing Argentine corn into the United States would be equivalent to "carrying coals to Newcastle." In years of drought we need that corn if we are to feed the "teeming millions" who require meat from the cattle and hogs. Last year we had to face just such an unusual condition, but any study of the statistics, honestly made, will convince that no injury has accrued to the American farmer because of competition in our home corn markets.

THE FARMER AND CATTLE PRICES.

Our enemies would lead you to believe that the Democrats struck a blow at the farmer by placing meats upon the free list. Let us see about that. You will find your answer in the statistics gathered by our great Department of Agriculture, and they effectually dispose of the charge.

The cutting up of the great cattle ranches into small farms had brought about new conditions in this country. We were facing a condition which showed that we would soon become buyers in the meat markets of the world, where hitherto we always had been sellers. The American raiser had always obtained for his product a price based upon the world's supply as compared with the world's demand. The American consumer of that meat paid an enhanced price based upon the ability of the packer to sell at a higher price as a result of the destruction of competition—in that enhanced price the American farmer did not share.

Now let us see how this condition operated, as disclosed by the departmental statistics: From 1910 to 1914 the total number of meat animals in the United States—cattle, sheep, and hogs—decreased from 151,812,000 to 144,507,000. But in 1910 the greater number was worth on the farm $1,534,600,000, while in 1914 the lesser number was valued at $1,930,087,000. The total number of animals had decreased 7,305,000, but their value had increased $395,427,000. If that is the sort of calamity which Democratic legislation brings to the cattle raisers, then the farmers would gladly welcome more of it.

OTHER PRODUCTS OF THE FARM.

You will find similar results when you go into an analysis of the other products of the farm. Butter, cheese, eggs, and poultry command good prices, and will command better ones in the near future as the result of causes which I will discuss later on. It is true that a few months ago the Chinese hen was held up as the factor which would bring woe to the farmers' wives in this country, but we no longer hear much about that. Statistics prove that the egg supply of Missouri alone has increased more in the last 10 years than the entire amount of Chinese exportations. There is a market for the American product which will insure good prices as long as natural causes

govern. Eliminate the cold-storage houses, or, better still, regulate them, and you will do more good for the farmer's wife than you will by putting a duty of $1 a dozen on eggs, for we are exporters of double the amount that we import, and a tariff under such circumstances is a delusion and a snare.

In order that I may give to the membership of this House an exact statement as to the relative prices of eggs paid to farmers I herewith submit a table furnished me by a farmer living near Manchester, Dickinson County, Kans.

These figures are taken from a daily diary which has been kept since 1908.

	1908	1909	1910	1911	1912	1913	1914
January			$0.30½	$0.24	$0.28	$0.19	$0.26
February	$0.18	$0.18	.22½	.15	.22½	.17½	.20½
March	.12½	.16	.17½	.12½	.16	.14½	.17½
April	.12	.17½	.17½	.12½	.16½	.14½	.15½
May	.12	.18	.16	.12½	.14½	.15	.16
June	.11½	.17	.15	.09½	.13	.13½	.14½
July	.13½	.16½	.11½	.10	.14	.09½	.14½
August	.14½	.16½	.17	.12½	.15½	.12½	.16

This table shows conclusively that the farmer has received during the first eight months of 1914 an average price of more than 3 cents per dozen above the price received in 1913.

TELLS ITS OWN STORY.

Where has calamity struck the industries of the United States as the result of Democratic legislation? The answer is always most indefinite. Ever we are told of some section remote, and when we make an investigation we find that its habitation is removed and is beyond the reach of railway train, mail, or telegraph.

Surely, if any industry in the United States would have been adversely affected by tariff legislation it would have been that of the manufacture of cotton goods. Every change in the tariff, as relating to that industry, means readjustment of selling prices, and that means uncertainty until such times as selling price has been scientifically balanced in accordance with conditions prevailing.

Now, let us see how the cotton manufacturing business has fared in the past year, and the figures which I will quote are vouched for by Secretary Redfield, of the Department of Commerce.

In the 10 months ending June 30, 1914, there were consumed in this country 4,745,390 bales of cotton, and in the 10 months ending June 30, 1913, the consumption was 4,588,729 bales. Here is an increase of 156,661 bales, approximately 78,330,500 pounds, of cotton which was manufactured into goods by American labor and was sent out and entered into fair competition with foreign products.

And to trace back from effect to cause we find that in June, 1914, the number of spindles in operation in this country was 30,938,752, as compared with 30,046,121 in June, 1913, an increase of 892,631.

More spindles in operation; more cotton used; more operatives employed, all of which means more money in the pockets of cotton-mill employees and a greater opportunity to buy more American products. If this be the result of Democratic tariff revision, surely we have no reason to be dissatisfied.

EVERYWHERE OUR PEOPLE ARE PROSPEROUS.

Take any and all of the lines which denote activity here in America and what do we find? A general increase in production in the past year which can not mean otherwise than that we are making remarkable progress and are utilizing our resources as never before.

There was a healthy increase in the coal production in the fiscal year ending June 30, 1914, which would not have been the case if we were not prosperous. Twenty-four States showed an increase in coal production and only six showed a decrease. The production of coke also showed a material increase, and in petroleum we had an increase of 25,000,000 barrels and a value showing an increase of $72,000,000 over the preceding year.

In cement production we had the banner year, with a gain of more than 11 per cent over its predecessor, and yet the cement manufacturers made dire prophecies when we placed their products on the free list one year ago.

In the past year we had record products in lime, building sand and gravel, sand lime, brick, and glass sand. And among the other mineral products for which the past was a record-breaking year we find bauxite and aluminum, sulphuric acid, feldspar, mica, pottery, talc, and soapstone, and we find substantial increases in gypsum, phosphate rock, abrasives, barytes, slate, and salt.

The record is there and it is easily found and analyzed. It shows that mine and mill and smelter and furnace are prosperous, and that the calamity predictions have failed to materialize.

CURRENCY LEGISLATION.

It is my belief that when the history of this administration is fairly written the currency legislation will stand out prominently among its accomplishments. It will do so for it stands out as one of the finest achievements in constructive legislation. The world in general has given to it praise in unstinted measure and here in this country we have had several object lessons which prove to us that even before it was put into operation it had inspired the confidence necessary to insure stability.

The Claflin failure was monumental, but business at once adjusted itself and localized the damage done. The European war caused a restriction of credits in the world and was the cause for the dumping on our markets of millions of dollars' worth of American securities. We have met each and every contingency, with but little ill resulting, because it is recognized that we are, for the first time in our history, on a stable basis and are in position to make use of our wonderful resources. It has been said that the dollar is the most cowardly of possessions, because it will desert the channels of business and go into hiding at the appearance of the first threatening cloud. We have put an end to that by Democratic currency legislation, and to-day we have confidence, whereas in 1907 we had no such grave situation to face, and yet Republican currency legislation forced us—at least it was not able to prevent our being forced—into a disastrous money panic, which shattered the foundations of all business, destroyed credit, and brought about misery at the very time that our natural products of the farm were to be had in plenty, but could not be sold because money was not obtainable.

Furthermore, as a result of our currency legislation we are in position to take advantage of European conditions and give a wonderful impetus to our foreign trade, and we are able to do this because we have now on the statute books legislation which gives stability to legitimate financial transactions at home and abroad and which will provide the machinery through which Americans will be enabled to conduct trade in foreign countries without carrying a handicap.

TRUST LEGISLATION.

Coming to trust legislation, we find that this House has passed three bills aimed to bring about competition and curtail the evils which have crept into our business life as the result of the unchecked license of the big combinations. One of these bills has passed the other body, and before this session is over I look to see all of them made into law. Tariff, currency, and trust legislation formed the main part of the program promised by our party. We recognized that the three questions were interlocked and that there would be no relief from manifest evils until all were dealt with. This we have done, and that our propositions must have appealed to even many of our opponents is made manifest by a study of the votes cast on the various measures.

HOW THEY VOTED.

For the tariff bill seven Republicans and Progressives voted with the Democrats.

Thirty-eight Republicans voted with the Democrats for the currency bill.

Forty-seven Republicans voted with the Democrats for the Clayton antitrust bill.

No Republicans had the courage to vote against the trade commission bill.

And only 12 Republicans voted against the bill regulating the issue of railroad stocks and bonds.

THE PRESIDENT'S FOREIGN POLICY.

There is but one more question to which I propose to give very much attention, and that is the foreign policy of this administration.

But a short time since there was a disposition on the other side to sneer at the policy of "watchful waiting," but that is no longer in evidence. Developments in Mexico have demonstrated the wisdom of our President. We have won through the patience, courage, and far-sighted policy of a President who had a belief in high ideals and who believed that he understood his countrymen. He has gained a moral victory and has advanced American interests, and he has done so without leaving behind him a road strewn with the dead and wounded. The American homes made desolate are few, but the victory is no less important, and the great beauty of it is that the wounds made will quickly heal and leave behind them only admiration for a people great in power, but who, under wise leadership, refuse to use that power for aught but the benefit of humanity.

It is too early for us to estimate what are the advantages gained. We are facing a general war in Europe, and we find

ourselves with no entanglements and with hands free to utilize them in the doing of constructive work for the greater good of our own people and that of all of the people of the world. Ours is the only great Nation in the world in position to act as mediator, and our treatment of China, of Mexico, of Cuba, as well as our broad-minded handling of Panama Canal complications, point to us as the one Nation which will have the respect and trust of the world, so that it can act to the best advantage in bringing about the final adjustment.

Already we have entered into some 20 treaties which aim to prevent war, and these treaties are with practically every nation on this continent. We do not covet our neighbor's goods, and we are demonstrating it every day, so that the nations of this earth have but to know us to realize that we are not seeking conquered territory or aggrandizement.

Without entering into the realms of speculation, we can well imagine that the present war can not but result in a most wonderful development of American trade, carried in American vessels. Primarily this trade will come from our South American neighbors, who should be our natural customers, but ultimately it will mean that we will reap as the result of the paralysis of foreign manufacturers, who can not hope to recuperate in years to come.

It requires no great amount of foresight to realize that all this will mean such an impetus to American labor as we have never dreamed of. Our factories will have to increase and multiply if we are to meet the world's needs, and this means steady employment, good wages, and even a higher standard of living for American laborers, resulting, of course, in a market for the products of the American farms and a better one than if we had to send these products abroad in order to dispose of a surplus.

If these were all of the advantages to be gained it would be selfish on our part to rejoice, for it would mean that our success was to be purchased at the price of the misery of others. That I do not desire to see, and it is my sincere belief that our country will be the means of bringing about results from this war which will mean inestimable good to all of the civilized people of the earth.

WHAT IT MEANS.

Some months ago Members of all political parties in this Chamber united in passing a resolution designed to bring about a cessation in the world expenditures for war purposes. We were not in position to advance our views then, but we are to-day. The time was not ripe for us to get a hearing then, but it is to-day, or will be as soon as the foes across the ocean are counting the toll of human lives and of treasure offered up as a foolish sacrifice to unnecessary war.

For one moment, my friends, give consideration to the known facts. Out of every $100 spent by the Government of Great Britain, $37.85 is paid as the cost of war or in preparations for war. In France the amount is $35.07; Germany, $55.86; Japan, $45, and in our own country, where the universal prayer is for peace, out of every $100 expended, $68.07 due to war, or preparations for it.

Think of what all of that means. Consider the burden entailed upon the labor—upon the productive capacity—of this nation and of the others when such an amount of tax is annually wasted. The cry of the Nation is for economy in governmental expenditures, and when we can secure a lessening in the tremendous amounts referred to above we will have taken the first progressive step and the first constructive step to answer that cry.

Our time to act will come when called upon to mediate. The treaties already secured by our well-beloved Secretary of State, W. J. Bryan, point to the road, and the policies of Woodrow Wilson show to the world that we have the one man who has ever acted to the end that the peace of the world may be preserved without the sacrifice of human lives. That is the meaning of the situation now confronting us, as I see it, and all of us will have reason to take a new and a greater pride in our American citizenship if the results turn out as expected.

IN CONCLUSION.

That in part is the 18-months' record of this Democratic administration, as I understand it. Upon that record we welcome judgment. Under the wise leadership of Woodrow Wilson we have striven to remove the demand for a "square deal" from the mere clamor of the demagogue and write it into the law of the land. Our party has not and never will make an attack upon legitimate industry of any kind, but when we insist that business, big and little, shall obey the spirit as well as the letter of the law we simply demand that all business shall be so conducted that equality shall mean something more than a mere generality and that the fruits of competition shall be something more than "Dead Sea fruit."

Let Us Have Peace in Colorado.

EXTENSION OF REMARKS

OF

HON. EDWARD KEATING,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 8, 1914.

Mr. KEATING. Mr. Speaker, I ask unanimous consent to extend my remarks in order that I may place in the CONGRESSIONAL RECORD a letter addressed by the President of the United States to the coal miners and the coal-mine owners of Colorado.

The Members of this House have some knowledge of the unfortunate industrial conflict which has disturbed the State which I represent in part on this floor.

One year ago a strike was called in the coal fields of Colorado. Approximately 12,000 men were affected. Efforts at arbitration by the State authorities failed, and the representatives of the national Department of Labor tendered their good offices without success.

Secretary of Labor Wilson visited the strike zone and endeavored to mediate. He succeeded in securing a conference between the employers and their employees, but it was abortive.

As early as last October President Wilson interested himself in the situation.

With marvelous patience he has repeatedly sought to bring about an understanding, and if his suggestions had been accepted I am confident my State could have avoided a staggering loss of life and property.

Last April, in response to urgent requests from State officials, led by Gov. Ammons, mine owners, labor leaders, and citizens generally, President Wilson sent a large detachment of Federal troops to the various coal fields. They restored order at once and have remained in control of the situation.

These soldiers have established a remarkable record. They have been in Colorado for almost five months and they have not had the slightest difficulty with either party to the strike. This record has never been equaled in the history of labor troubles, and I believe both officers and men are entitled to the thanks of the country.

The presence of the soldiers has not, however, brought about a settlement of the strike. The men and their former employers seem as far apart as ever.

President Wilson feels that this situation can not be permitted to continue. The Federal troops can not be kept in Colorado indefinitely. Something must be done.

What that something should be the President indicates in the following letter which he addressed to the president of the Colorado Fuel & Iron Co., the chairman of the Victor-American Fuel Co., the president of the Rocky Mountain Fuel Co., and the officers of the United Mine Workers of America:

THE WHITE HOUSE, *September 5, 1914.*

MY DEAR SIR: I feel justified in addressing you with regard to the present strike situation in Colorado because it has lasted so long, has gone through so many serious stages, and is fraught with so many possibilities that it has become of national importance.

As you know, Federal troops have been in the State for the purpose of maintaining order now for a long time. I have been hoping every day during that time that some light would come out of the perplexities of the situation, some indication that the mine operators and the miners who are now on strike were willing to consider proposals of accommodation and settlement, but no such indication has reached me, and I am now obliged to determine whether I am justified in using the Army of the United States indefinitely for police purposes.

Many things may come out of this situation if it is not handled with public spirit and with a sincere desire to safeguard the public, as well as all others concerned. Perhaps the most serious of them all is the feeling which is being generated and the impression of the public that no one is willing to act, no one willing to yield anything, no one willing even to consider terms of accommodation.

As you know, two representatives of the Government of the United States have been actively engaged in investigating the whole situation and in trying to reach a dispassionate conclusion as to what it is possible to do in justice to both sides not only but also in the interest of the public. The result of their investigations and of their very thoughtful consideration in the matter has been the drafting of the inclosed "tentative basis for the adjustment" of the strike. I recommend it to you for your most serious consideration. I hope that you will consider it as if you were acting for the whole country, and I beg that you will regard it as urged upon your acceptance by myself with very deep earnestness. This is a time, I am sure you will feel, when everything should be done that it is possible for men to do to see that all untoward and threatening circumstances of every sort are taken out of the life of the people of the United States.

Sincerely, yours,

WOODROW WILSON.

The "tentative basis for the adjustment of the strike," referred to by President Wilson, was prepared by two men who were selected for the work because of their peculiar qualifica-

tions. One of these men, Hywel Davies, is the president of the Kentucky Coal Operators' Association—an organization of mine owners—and the other, W. R. Fairley, is a practical miner of long experience and a member of the miners' union.

It will be seen, therefore, that the President's peace plan is not a one-sided arrangement but has been prepared by men who were desirous of protecting the interests of both miner and mine owner.

The suggested "basis of settlement" is as follows:

DRAFT OF A TENTATIVE BASIS FOR THE ADJUSTMENT OF THE COLORADO STRIKE.

Whereas the industrial conflict in the coal mining fields of Colorado has disrupted the peace of those sections of the State to the extent that a state of war has practically existed for some time; and

Whereas a temporary peace is maintained by the presence of the Federal troops: Therefore there should be established a three-year truce, subject to—

1. The enforcement of mining and labor laws of the State.

2. That all striking miners who have not been found guilty of violation of the law shall be given employment by the employer they formerly worked for, and where the place of the employee has been filled he shall be given employment as a miner at the same or other mines of the company.

3. Intimidation of union or nonunion men strictly prohibited.

4. Current scale of wages, rules, and regulations for each mine to be printed and posted.

5. Each mine to have a grievance committee to be selected by majority ballot at a meeting called for the purpose in which all employees (except officials of the company) have the right to participate.

Members of said committee must be employed at least six months at the individual mine before being eligible.

Married men to be in the majority on each committee.

Grievances to be first taken up individually with the proper officer of the company. Failing adjustment they can refer to their local grievance committee for further consideration with the mine officials. Still failing adjustment, the matter shall be submitted to a commission composed of three men to be appointed by the President of the United States and which shall be representative of each side, with the third member to act as umpire whenever necessary. This commission shall during the three years of truce serve as adjusters or referees in all disputes, whether individual or collective, affecting wages, working and social conditions.

Said commission shall devote primarily all the necessary time to the consideration and adjustment of such disputes.

6. It is understood as a condition of the creation of said commission that during the life of the truce—

(a) The claim for contractual relations is to be waived, but this shall not prevent the voluntary agreement between any employer and their employees during the life of this truce.

(b) No mine guards to be employed, but this does not preclude the employment of necessary watchmen.

(c) In the establishment of the truce the presence of the Federal or State troops should become unnecessary.

(d) There shall be no picketing, parading, colonizing, or mass campaigning by representatives of any labor organization of miners that are parties to this truce which will interfere with the working operations of any mine during the said period of three years.

(e) During said truce the decisions of the commission in cases submitted shall be final and binding on employers and employees.

(f) There shall be no suspension of work pending the investigation and reaching a decision on any dispute.

(g) The suspension of a mine over six consecutive days by the company may be authorized for cause satisfactory to the commission, but not pending any dispute.

(h) Willful violations of any of these conditions will be subject to such penalties as may be imposed by the commission.

On account of the mutual benefits derived from the truce, the employers and employees should each pay one-half of the expenses of the commission.

Respectfully submitted.

HYWEL DAVIES,
W. R. FAIRLEY,
Commissioners of Conciliation.

From the inception of the strike the coal-mine owners have insisted that they would never consent to "recognize the union." All those who have essayed the rôle of peacemaker have agreed that that was the crux of the controversy.

The President has avoided that issue without sacrificing the interests of the toilers.

The "tentative basis of agreement" recognizes the workmen's right to meet and organize for the purpose of demanding the correction of grievances.

And it provides an impartial tribunal for the determination of those grievances.

In other words, it creates a "court of industrial relations," a court for which there is urgent need in every State of the Union.

Why should capital and labor adjust their differences with clubs?

If an employer and his workman become involved in a controversy over a coat and are unable to reach an agreement, they appeal to the court. Now, the court may be unfair, it may be corrupt, or it may be grossly incompetent to pass on the matter at issue, but, notwithstanding, its verdict is binding. The experience of centuries has taught us that this is a good way to adjust disputes over property.

But if the employer and his workman quarrel about wages, hours of labor, and working conditions, and either or both are too stubborn to yield a little here and there, we find that instead of appealing to some impartial tribunal they proceed to "fight it out." Sometimes this is a mere figure of speech, but sometimes it means bombs and Gatling guns, bloodshed, and property loss.

Of course, all this is very silly and very barbaric and should not be tolerated by organized society.

President Wilson has offered a humane, twentieth-century solution of the problem.

I trust the miners and mine owners of Colorado will have the good sense to accept.

That this is the sentiment of the right-thinking people of this country is amply demonstrated by the editorial comment of the great national papers on the President's proposal.

The following from the Washington Post is typical:

[Editorial from Washington Post, September 9, 1914.]

THE COLORADO STRIKE.

It will be a commentary upon their own lack of patriotism if the mine operators and employees in the coal fields of Colorado refuse to accept the President's suggestion for a three years' truce. Other interests have made many sacrifices in the general effort for national harmony at a time when the people of the country must stand together to meet the shock of the European war. The situation in Colorado, bordering on civil war, has become a national, as well as a State menace, and if the interests involved have any regard for the welfare of the country they will bring their strife to a quick end.

When it is realized that the chief obstacle, and almost the sole obstacle, to peace is the refusal of the mine operators to make a contract with the labor unions, as such, and the refusal of the employees to go to work without such a contract, the cause of the dissension appears to be almost trivial. Especially does it seem to be insignificant, and utterly unworthy of sane men, when compared to the bloodshed, poverty, and starvation that have blighted the families of the coal region.

The owners of the mines have not shown a broad spirit in dealing with the problem, and are to be blamed for refusing to arbitrate. It is all very well to say that there is nothing to arbitrate. Perhaps not. But in a crisis of this kind, even the fetich called principle might be moved back a bit to make room for the cause of humanity.

Neither side, however, need sacrifice principle under the plan submitted by the Department of Labor. They can meet upon this common ground, and thus permit the withdrawal of Federal troops and the resumption of business. The wives and children of the district, the wives and children of the union men as well as nonunion men, will breathe a sigh of relief if an end comes to their terrible travail. A blot will be removed from the integrity of the State.

War Revenue Bill.

EXTENSION OF REMARKS
OF
HON. GEORGE W. EDMONDS,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914.

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. EDMONDS. Mr. Speaker, I do not care to take up the time of the House to indulge in any lengthy discussion of the present measure, H. R. 18891, for the reason that the following figures which I shall quote tell too plainly and forcibly who is to blame and what economic policy is responsible for the enormous decrease in the revenues of our country—nothing else but the Underwood-Simmons tariff law.

During January, 1914, a few months after the Underwood-Simmons tariff law went into effect, but seven months before war among the European nations was declared, the duties collected from customs were $23,528,079.83, as compared with duties collected under the Payne law a year previous which amounted to $29,334,124.09, the decrease being $5,806,044.26.

The decrease for February amounted to $9,995,512.13.

The decrease for March amounted to $1,530,276.30.

The decrease for April amounted to $1,461,200.19.

For May, 1914, there was only a slight increase of $365,824.04.

The decrease for June, 1914, amounted to $115,151.05.

The decrease for July, 1914, amounted to $4,818,180.50.

The decrease for August, 1914, amounted to the enormous sum of $11,503,589.92.

Customs receipts continue to fall behind, with a daily average of decrease under collections of last year from $300,000 to $500,000.

Therefore, even if the war abroad had not occurred, the present administration sooner or later would have had to adopt some other means to replenish the Treasury besides taxing the items contained in this so-called war-tax bill, which title the framers are not justified in using, as such a measure should only be adopted when our own country is at war with some other nation or nations and not in time of peace.

But I can not sit by without voicing my protest against a rule, already popularly called a "gag" rule, which will prevent

a thorough discussion of this measure or the possibility of amending it in any way. Surely the chairman of the Ways and Means Committee and the majority members of that committee do not possess all the knowledge and wisdom in the framing of a bill which is to raise over $100,000,000, without the assistance of even the members of their own party, for the rule, when adopted, is as binding on the majority side of this House as on the minority.

I am thankful, however, Mr. Speaker, that there is another branch of our legislature—the Senate—where the cloture system does not exist, as has been demonstrated on more than one occasion. When this bill reaches that body let us hope that in the freedom of debate among the Senators there will be pointed out to the members of the Democratic Party the error of their ways in the framing of a tax bill the real purpose of which is to make up the enormous loss in our customs receipts brought about through the operation of the Underwood-Simmons law.

Postal and Civil-Service Laws.

EXTENSION OF REMARKS
OF
HON. WILLIAM E. COX,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, August 8, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 17042) to amend the postal and civil-service laws, and for other purposes.

Mr. COX. Mr. Chairman, I opposed this amendment while the bill was pending in our committee. I opposed it on the floor of the House, and I oppose it now. I believe for the first time in the history of the rural-route service of this country the Post Office Department has worked it out on a scientific basis. I opposed it then because I believed they were getting all the money they were entitled to. Second, I opposed it because the Postmaster General said before our committee that it was not needed. He did not come before the committee and ask for the increase of a single salary of one of his employees. The persistent, insistent demand on the part of these rural-route carriers for increase in salary has been based at different times on different things. Five or six years ago it was based on the proposition alone of the increased high cost of living, and they got it. Two years ago it was based upon the theory that they ought to have as much as the city letter carrier, and they got it. They now come before Congress and they ask for an increase in salary upon a totally different proposition, namely, because of the increased weight of their mail brought on as a result of the parcel post. Let us see what that has done for them. In 1912 the mails were weighed upon each rural route in the United States for two months before parcel post was enacted. The average weight of mails per day carried over each route before the parcel post was 28.26 pounds. One year after the parcel post was enacted and put into operation for two months again every piece and package of mail that went over the rural route was weighed, and the average weight of mail was 34.38 pounds per day per route, an increase of 6.12 pounds per day per route, and yet for that increase the demand is made here for an increase of $100 per annum on each standard route.

Why, if you gentlemen had had the opportunity of reading Postmaster General Burleson's letter, you would readily agree that he is clearly right upon this proposition. Let me call your attention to a few of these routes. For instance, there is a route out of Boston, S. C. I do not know whose district that is in, but the average weight of mail carried each month over the rural route out of Boston, S. C., is 150 pounds, while on a route going out of a town in Oregon there are carried 7,800 pounds a month. I appeal to you, is it right to pay the man in South Carolina, with 150 pounds in 30 days, the same amount as the Oregon man, who has to carry 7,800 pounds in 30 days?

I call your attention to a place in Alabama where the average weight of mail each month is only 178 pounds. Is it right to pay that man $1,200 a year, when up here in the State of Connecticut a rural-route carrier carries from 5,500 to 6,000 pounds per month?

Take my home town, Jasper, Ind., carrying upon an average of 365 pounds of mail per month, a little over 12 pounds per day. Is it right to pay that carrier $1,200 per year when a carrier on a certain rural route in New Jersey carries 4,500 pounds of mail per month?

Take the rural-route carrier out of Huron, Ind.—this is in my district—carrying on an average 395 pounds of mail per month, a little over 13 pounds per day, and a rural-route carrier in Wisconsin, carrying upward of 2,000 pounds per month. Is it fair to pay the rural-route carrier out of Huron $1,200 per year and the rural-route carrier in Wisconsin the same amount, while the carrier in Wisconsin carries eight or ten times as much mail?

Take the rural-route carrier out of Shoals, Ind., carrying upon an average of 345 pounds of mail a month—a little over 13 pounds per day—and another rural-route carrier who carries from 1,000 to 7,500 pounds of mail per month; are the carriers carrying this extra amount of mail to be classed with the carriers carrying such a small amount?

Heretofore mileage was the only basis of pay for rural-route carriers. No other element entered into its consideration whatever but the rearrangement of pay for rural-route carriers, as fixed by order No. 8246, dated July 14, 1914, and which is as follows, to wit:

POST OFFICE DEPARTMENT,
Washington, July 14, 1914.

(Order No. 8246.)

On and after July 1, 1914, the compensation of rural carriers shall be based upon the length of routes and the number of pieces and the weight of mail carried, as shown by the records of the department; and their rates of pay shall be computed on and fixed according to the following schedule:

Schedule.

Length of route.	Salary base.	Pieces of mail per month.	Pounds of mail per month.
4 miles and less than 6 miles	$480	3,000	400
6 miles and less than 8 miles	528	3,700	490
8 miles and less than 10 miles	576	4,400	580
10 miles and less than 12 miles	624	5,100	670
12 miles and less than 14 miles	672	5,800	760
14 miles and less than 16 miles	720	6,500	850
16 miles and less than 18 miles	840	7,200	940
18 miles and less than 20 miles	960	7,900	1,030
20 miles and less than 22 miles	1,080	8,600	1,120
22 miles and less than 24 miles	1,152	9,300	1,210
24 miles and over	1,200	10,000	1,300

An increase or decrease of $12 per annum shall be made for each 1,000 pieces and for each 100 pounds, respectively, greater or less than the schedule; and an allowance of $12 per annum shall be made for each closed pouch or closed sack of mail carried per day and also for each full mile of route served in excess of 25 miles in length: *Provided*, That no carrier shall be reduced in present compensation because of this order, and that $1,200 per annum shall be the maximum salary.

A carrier serving one triweekly route shall be paid on the basis and subject to the above conditions for a route one-half the length of the route served by him, and a carrier serving two triweekly routes shall be paid on the basis and subject to the above conditions for a route one-half the combined length of the two routes.

The compensation of carriers on newly established routes shall be at the rates in effect June 30, 1914.

A. S. BURLESON,
Postmaster General.

Incorporate two other elements into it:

First. Number of pieces.

Second. Weight of mail carried as shown by the records of the department.

It is perfectly idle and absurd to say that the rural-route carrier out of Boston, S. C., and Jasper, Ind., is compelled to have the same kind of equipment, where their average weight of mail per day is from 5 to 13 pounds, as the rural-route carrier must have who carries 7,500 pounds of mail per month. The rural-route carrier out of Jasper or Boston, S. C., can easily get along with one horse or a motorcycle, if the roads are good, while the other carriers, where the mail is so heavy, must have not only two horses, but a heavy two-horse wagon.

The truth about the whole matter is that very few Members of this House believe that these rural-route carriers are entitled to a flat increase of $100 per year, but the vast majority of the membership of this House are thoroughly in accord with the Postmaster General in the rearrangement of their pay. We must remember that the rural-route carriers are a powerful and potential political organization—43,000 of them—reaching about one-half of the population of the United States six days in every week. They are in a position to make themselves felt not only back home in our respective districts but here on the floor of the House.

I am in favor of giving the rural population competent, effective, and efficient mail delivery, but we could pay these rural carriers $2,000 per year and the people would not get any better service than they are getting to-day. These rural-route positions could be let out by competitive bidding and practically every one of them would be carried for less than $800 per year. Everywhere an examination is held to fill a vacancy or where a new route is established there are from 25

to 100 men who stand the examination and who are willing and anxious to get the job at the present salary. I was recently told by a Member of this House that in an examination recently held in his district to fill a vacancy, upward of 70 men stood the examination and 58 of them went on the eligible list. In a county in my own district, where a rural-route examination was held recently, 32 men stood the examination and 28 of them went on the eligible list and all after one job I undertake to say that there is not one of the defeated candidates for this job who would not have readily jumped at the opportunity to carry the mail on that route for $800 per year. The people are not crying out to spend $53,000,000 a year for this service. This is false and erroneous. It is absurd to believe that the people are crying for this. What the people want is service. They want their mail delivered to them, and they are entitled to have their mail delivered to them the same as the people in the city have their mail delivered to them. And they are entitled to have it delivered to them as cheaply as possible; and as the people have to pay for it in the last analysis, they are just as much interested in the matter of economy as we are. It costs $53,000,000 a year to pay these rural carriers, and the receipts taken in as a result of this does not exceed $10,000,000 per year, but I am not complaining about this. The country people are entitled to have their mail carried to their doors just the same as the city people, and if we are to practice economy in giving them this service, I am sure they are in favor of it. I feel sure that the amendment of the gentleman from South Carolina is going to carry, but I hope it will never become a law. The rural-route carriers are getting all they are earning, all they are entitled to, and if they feel that their present salary is too low, an easy way out of it is for them to quit and let some other fellow take his job.

Emergency Revenue Legislation.

EXTENSION OF REMARKS

OF

HON. FREDERICK H. GILLETT,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. GILLETT. Mr. Speaker, there is a concerted effort by the Democratic Party to make the European war a scapegoat for their own shortcomings and an argument for their own reelection. This bill to lay new taxes on the people is one of the evidences of that effort. Your tariff law had proved a failure. You asserted in the campaign two years ago that the Republican tariff was the mother of trusts and the cause of the high cost of living, and that the remedy for those unpopular conditions was a Democratic tariff. The country, because of a division in the Republican Party, took you at your word and you have applied the remedy. Have the diseases been cured? Have the troublesome symptoms been dissipated? Have the trusts vanished and the cost of living fallen? On the contrary, the trusts have developed a strong affection for their new stepmother, the Democratic tariff, while the cost of living shows no appreciation of the fact that it was expected to come down.

One result has happened, however, exactly as we predicted. While the blessings which you promised have failed to keep their appointments, the evils which we prophesied have presented themselves on schedule time. Employment has been scarce, millions of men have been out of work, the buying power of the people has diminished, and business depression has resulted. And all this came before the outbreak of the war. How could it be otherwise? You avowed that the purpose of your tariff law was to increase importations of foreign merchandise, which you said would give our purchasers cheaper goods. The importations have increased, but have purchases been any cheaper the past year? The result of cheapness which you promised has failed. But the increased importation of these foreign goods means necessarily that they take the place of just so many American goods and that just so much work is taken away from American workmen and transferred to foreign factories, and just so many American workmen are unemployed. That result which we predicted has followed. The importations during the last fiscal year after the passage of your tariff bill were $102,000,000 larger than for the corresponding time of the previous year. But recognizing that such an increase of importations would take so much work away from us, you were going to make up for it by selling more American goods abroad, increasing our exports, and so keep us busy. Have you done it? Instead of increasing, our exports diminished by over a hundred million dollars. So our business suffered not only because we brought into the country a hundred million dollars' worth of products more than the year before and took so much work away from our people, but, in addition, because we also sold a hundred million dollars' worth less goods abroad and so lost the work which that production would require. We lost both ways, from the increased imports and from the diminished exports.

It would have required a very material decrease in the cost of living to compensate the American people for the loss of that vast production of $200,000,000 worth of goods and all the employment and wages it represents, but there has been no decrease at all in the cost of living, and we have endured all the loss which we predicted and have enjoyed none of the compensation which you promised. Is not that of itself sufficient proof of the failure of your tariff law?

But the revenue from it is insufficient to meet current expenses, and so you have introduced this bill for extra taxes. You pretend that it is on account of the war, but under the operation of your tariff law our expenses exceeded our receipts, and for the coming year this Democratic Congress has made appropriations on a scale which would cost $30,000,000 more than last year, so that without the war in Europe there was sure to be a deficiency, and some extra provision must be made. Now, you are seizing on the pretext of the war to make good the deficiencies for which you and not the war are responsible, and to provide sufficient income for not only the war loss but for your extravagant scale of expenses. Everywhere else in this world a lessening income is reason for a reduced outlay. From the untutored savage to the most cultured economist everyone except the Democratic Party recognizes the relation between income and outgo, and that when one falls off the other should be contracted; that a time of business depression is not a time for free expenditure. The appropriations for this coming year are the largest ever made, and nearly $100,000,000 larger than for the corresponding year of the last Republican administration, which the Democrats denounced as shamefully extravagant, and it would seem to be the part of ordinary prudence and common sense to now revise and prune these enormous appropriations rather than to raise new taxes to pay for such unprecedented indulgencies. At a time when credits all over the world are rocked to their foundation it would seem natural that this Government should set an example of economy instead of levying extraordinary taxes to pay for expenditures which have been planned on an unprecedented scale but which ought to be at once curtailed. The war will still further reduce our revenues and is an additional reason for reducing expenses rather than laying new taxes.

In his message recommending this tax the President admitted that we have on deposit in the banks $75,000,000, or enough to make good any deficit for many months, and probably for the duration of the war, but he said it would cause inconvenience and distress and confusion to rapidly withdraw these deposits. That is a novel argument. The people must be taxed in order that Government money may not be withdrawn from favored banks. The banks pay the Government 2 per cent for the money and loan it out at from 6 per cent upward. So the people are taxed that the banks may make this profit. Does not taking money by taxes cause just as much confusion and distress as taking gradually the money deposited in the banks? Why should the money be drawn from the pockets of the people who have a right to it until it is needed by the Government, rather than drawn from the favored banks, who have no right to it at all? The deposit of money with banks has often been criticized as leading to favoritism and dependence on the money power and undesirable intimacy between the banks and the administration, but I never before knew of an instance where such tenderness was shown toward the banks as to tax the people rather than to demand of the banks that they should pay their debts. It has always been thought dangerous and suspicious that an administration and the banking interests should have close relations; it has always been recognized that the banks, under the influence which the United States Treasury can exert, might easily be used for partisan purposes. Indications of such influence are already apparent. When the Reserve Board was created, which should control the whole banking system of the country, all the men whom the President first nominated for those $12,000 positions were Democrats, so that the board should consist of seven Democrats and not a single Republican. I do not know of a more indefensible act of rank partisanship, and it at once excited the unpleasant suspicion

that the administration was planning to use the banking interests for partisan purposes.

The Secretary of the Treasury has recently threatened to withdraw Government deposits from banks which kept their reserve fund larger than he thought necessary. A bank never wants to keep its reserve fund unnecessarily large. The money in the reserve lies idle and earns nothing for the bank. It only keeps it as a matter of prudence and caution, to be ready to meet an emergency. The real danger and tendency is always to loan too much and keep its reserve too small. It is because a bank is always tempted by self-interest to keep its reserve unsafely low and extend its credits too far that it has been necessary to provide by law that every bank must maintain a certain reserve. And if a bank in the exercise of its discretion, with its selfish interest the other way, thinks it prudent to enlarge its reserve, should the Secretary of the Treasury, in the exercise of his assumed omniscience, or for the benefit of his party policy, set up his judgment as conclusive and threaten it with withdrawal of Government deposits? Presumably the directors of a bank are the best judges of local conditions and of the safety of local loans. Is the Secretary of the Treasury to act as the dictator of our whole financial system through membership on the reserve board and through his power of lending Government money to the banks that earn his favor and denying it to those who for any reason he dislikes? Former Secretaries of the Treasury have been very scrupulous in the exercise of this discretion. Democrats would have denounced violently any Republican administration which interfered so actively, but here constant intervention and favoritism seems to be the rule. A Democratic Senator from a southern State, whose record for paying its obligations was not stainless, complained to the Secretary of the Treasury that his State was not able to borrow $1,000,000 in New York on satisfactory terms. A borrower often finds terms unsatisfactory, especially in periods of financial disturbance. But the Secretary of the Treasury issues a public statement that it is preposterous that the State should not be able to borrow such a small amount, and that if the Senator can not raise it on satisfactory terms "I will myself see if banks can not be found to take up this loan." I have no doubt that with this threat and with his power to injure a bank the New York banks will deem it wise to loan the money, even if they do not like the investment, but I do not think that is part of the legitimate functions of administration Senators or Secretaries of the Treasury.

An enormous inflation has been inaugurated, and one product—cotton—has been selected as deserving special privileges from the banks. It is a most dangerous and sectional precedent. The present Secretary of the Treasury is notoriously the political organ of the administration. He, more than anyone else, is the dispenser of patronage and the manipulator of the political machine. And it is disquieting to see the occupant of that position also dispensing financial favors, issuing financial threats, and enforcing a policy of active personal intervention over the financial system of the country. The banks have tremendous power and ought to be kept absolutely free from partisan interference, and ought not to be subjected to the threats or the bribes of the active head of any political machine. It would not be safe for a bank to criticize or disobey his orders, but the country ought to watch with suspicion his interference.

While this war temporarily lessens our revenues and disturbs business, I think its permanent result may be advantageous to the United States. Unless it is short, our industries will adapt themselves to the new conditions, credits will gradually settle, and the war, acting not only as a protective but as a prohibitive tariff, will compel us to make for ourselves what Europe has made for us, and thus will increase both our commercial independence and our annual production. I observed recently that one of the ablest members of the Cabinet issued a statement that this war might prove a benefit to the United States by compelling us to develop certain of our own resources instead of depending on importations from abroad. I quite agree with the Secretary. But it is a singular statement, coming from a Democratic statesman. That is exactly the purpose of a protective tariff, which Democrats have persistently fought and which has been a cornerstone of the Republican Party. To make difficult the importation of competing products, so that we could supply our own needs and do our own work and develop our own resources, has been the aim of protection, and if that policy had not been in force for half a century, who can tell how prostrate and helpless this sudden cessation of European industry and imports might leave us now?

This war acts like a prohibitive tariff; it suddenly shuts down all imports from parts of Europe. It is bound to stimulate every branch of American industry which has grown to be self-independent just as soon as the first shock has passed and readjustment is made. Our opponents used to compare our tariff to a Chinese wall. This war is a protective wall reaching to the sky, for it shuts out everything from some nations, and when the Secretary says it will be an ultimate gain to us and will compel us to develop our own resources he is preaching pure Republican doctrine, and I hope he will remember it after the war is over. That was the ground on which Alexander Hamilton based the first protective tariff, and that has been its main defense ever since. We do not need such prohibitive protection, such a high wall, any longer. We can accomplish the result surely and easily by a moderate tariff.

The Secretary's sudden discovery of the virtue of cutting off foreign imports and encouraging our own development reminds me of Charles Lamb's famous essay on roast pig. You remember he detailed how, thousands of years ago, when the world was young, after the burning of a Chinese house, the owner, delving in the ruins, put his hand on the hot body of his young pig, and, licking his burned fingers, tasted for the first time roast pig. He greedily devoured the novel dainty and pined for more. He kept the delicious discovery secret and kept building new shanties and burning them down as often as he had a fresh litter of pigs to taste again the delectable result. His secret was discovered, others were carried away by the same passion for the new delicacy, huts began burning down all over China, and it looked as if human habitations would be lost, till the genius of a great philosopher discovered that the same end could be achieved by any other fire without burning down the house, and China was saved.

So I would suggest to the Secretary that while we acknowledge the merit of his somewhat belated discovery, and while we sympathize with his enthusiasm for developing our own resources and not relying on foreign supplies, yet it is not necessary to burn down the house. The conflagration of a great war is not indispensable, but the same result can be achieved safely, easily, and surely by a moderate protective tariff, such as the Republican Party advocates. In that way we can reap all the advantage and be spared all the shock and suffering.

Instead of this proposed bill, which, under the pretext of a war, seeks to provide funds sufficient for the enormous appropriations to which this Democratic Congress has treated itself, and for which the ordinary revenues would be insufficient, instead of such a bill we need a policy of retrenchment and economy appropriate to the existing conditions, and we need a protective tariff law which will again turn the balance of trade in our favor, as it was before, give employment to workmen in the United States instead of to those in foreign countries, and revive again throughout the land confidence and industry and employment.

Governmental References in Connection With Oregon Discussion.

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 15, 1914,

On the bill (H. R. 16136) to authorize exploration for and disposition of coal, phosphate, oil, gas, potassium, or sodium.

Mr. JOHNSON of Washington. Mr. Speaker, in connection with my discussion with the gentleman from Illinois [Mr. THOMSON] I desire to quote briefly from the 14-page pamphlet issued by the Department of the Interior in 1912, and prepared by Frank Bond, Chief Clerk of the General Land Office, in which seven maps are printed showing the development of the territory of the United States. Each step is noted by map and in text—La Salle's discovery of Louisiana for France, its transfer to Spain, and its sale to the United States. The French rights were to the territory drained by the Mississippi and its tributaries. Spain had no further claims, and our contest for the Northwest was with the British. This official document says:

> The common boundary along the forty-second parallel, between the Mexican cession and the Oregon Territory, is the line also fixed by the treaty with Spain of 1819. The eastern boundary of the Oregon Territory conforms to the western boundary of the Louisiana of La Salle and the Louisiana Purchase of 1803, the same being the watershed between the Mississippi River drainage and the drainage toward the Pacific Ocean. * * *
>
> Map No. 6 shows, in addition to the Louisiana Purchase boundaries the boundaries of the Texas annexation of 1845, the Oregon Territory,

title to which was settled in 1840, the Mexican cession of 1848, and the Gadsden Purchase of 1853.

The Department of the Interior and the Department of Commerce and Labor, by letters of February 2, 1912, and February 10, 1912, respectively, formally accepted these boundaries and the areas thereby determined for use in all publications of the several bureaus of each department.

The Government publications which have been referred to in the discussion as to the acquisition of the "Oregon Territory" are as follows:

Historical Sketch of Louisiana and the Louisiana Purchase, with a statement of other acquisitions, by Frank Bond. 1912. Ten cents.

Areas of Acquisitions to the Territory of the United States, Areas of the States, Territories, and Possessions. Diagram showing the historical development of the States. Department of the Interior, Office of the Secretary. 1914. Five cents.

Both are interesting documents, and should be in all school libraries.

The Tariff and Labor.

EXTENSION OF REMARKS
OF
HON. JAMES W. GOOD,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 29, 1914.

Mr. GOOD. Mr. Speaker, Republicanism means high wages, good prices, and good times.

Democracy means low wages, lack of employment for American workmen, and hard times.

The Republican Party has always stood for high wages for American workmen. The Democratic Party has always advocated a policy which, when put in operation, has brought low wages and lack of employment to our workmen. Republicans insist that the protective tariff as an American policy is an unfailing guaranty to American workmen of high wages and constant employment. It is a noteworthy fact that a Democratic low tariff has always resulted in low wages, idle factories, and uncertain employment to American workmen. Protection has always brought good times and good wages and constant employment.

Years ago James G. Blaine declared that "the tariff question is essentially a question of wages." The periodical removal of protection by the Democratic Party has always been followed by a loss of employment and eventually a reduction in wages to American labor. Labor is high in this country when the product of labor is high. Reduce materially the price of that which labor produces, by importations from cheap-labor markets, and with the same stroke you strike down the wage which our labor receives.

Few people realize that wages are so much higher in this country than in Europe. The following table, prepared by Brig. Gen. Crozier, Chief of Ordnance, United States Army, gives a fair idea of the superior wage scale paid American workmen:

Comparison of wages paid in Belgium and United States in the manufacture of firearms.

Designation.	Belgium.	United States.[1]
	Per hour.	*Per hour.*
Drop forger	$0.08 to $0.13	$0.37½ to $0.50
Barrel rolling	.08 to .13	.34½
Forging	.08 to .13	[2]
Power milling (miller)	.08 to .13	.25 and .28½
Hand milling	.07 to .13	.25 and .28½
Profiling	.07 to .13	.31½ to .37½
Drilling	.05 to .06	.31½
Tapping	.05 to .06	.31½ to .37½
Shaving	.07 to .13	.31½ to .34½
Polishing	.05 to .10	.32½ to .37½
Filing	.09 to .13	.31½ to .37½
Woodworker (machinery):		
Stock turning and drilling	.07 to .09	.31½ to .40½
Stock sanding and polishing	.10 to .14	.31½ to .40½
Assembling, etc	.09 to .14	.31½ to .37½
Toolmakers	.10 to .16	.40½ to .46½
Machinists	.10 to .16	.37½ to .43½
Packers	.06 to .10	.28½ to .28½
Common laborers	.05 to .10	.25
Draftsmen	[3] 25.00 to 80.00	[4] 83.33 to 100.00

[1] Rates taken from Springfield Armory. All male employees in United States. A large majority of these employees work on piecework and make from 10 to 20 per cent more than day wages.
[2] See drop forger.
[3] Per month.
[4] Per month. Some of the arsenals employ a larger number of draftsmen than others, and the rate of pay extends to $183.33 per month.

Comparison of wages paid in Belgium and United States in the manufacture of ammunition.

Designation.	Belgium.	United States.[1]
	Per hour.	*Per hour.*
Machine operators (women)	$0.05 to $0.07	$0.14½ to $0.19
Automachine tenders	.12 to .16	.40½
Machinists	.12 to .16	.31½ to .50
Toolmakers	.12 to .16	.34½ to .47
Helpers	.05 to .09	.25
Carpenters	.07 to .10	.37½ to .40
Electricians	.07 to .10	.31½ to .53
Steam fitters	.07 to .10	.31½ to .34½
Draftsmen	[2] 25.00 to 80.00	[2] 75.00 to [illegible]

[1] Rates taken from Frankford Arsenal. [2] Per month.

Proportion of males and females employed: 400 men to 100 women in United States. A large majority of these employees work on piecework and make from 10 to 20 per cent more than day wages.

But some one may say that the cost of living is greater in this country. This is what Samuel Gompers, president of the American Federation of Labor, says about it. He went to Europe to study this question, and in his report says:

Mentally contemplating the many cities I visited, and having in mind the conversations I had with workingmen who had lived both in Europe and America, I believe I may assert that whether the cost of living in Europe or America is greater to the workingman depends entirely on the standard of living he adopts while in America. If he voluntarily lives the life of self-denial in this country that he compulsorily lived in his native land, his outlay of money will remain about the same. Even then he will hardly be able to escape gaining something for the superior supply of the good things of life in America.

Living is cheap to the wageworker in Europe only because he does without what in America soon becomes a necessity to him.

The actual condition of the laboring class of a country is the best test as to the standard of wages and the cost of living in that country. Here is what a few noted Englishmen say of the condition of the laboring classes in Great Britain:

SOME ENGLISH OPINIONS ON LABOR CONDITIONS ABROAD.

John Ruskin: Though England is deafened with spinning wheels, her people have not clothes; though she is black with the digging of fuel, they die in cold; and though she has sold her soul for gain, they die of hunger.

John Bright: Nearly one-third of the whole people dwell in homes of only one room, and more than two-thirds of the people of Scotland dwell in homes of not more than two rooms. We find poverty and misery. What does it mean. It means more than I can describe and more than I will attempt to describe; and as need begets need, so poverty and misery beget poverty and misery. In fact, in looking at the past—to me it is a melancholy thing to look at—there is much of it which excites in me not astonishment, but horror. The fact is, there passes before my eyes a vision of millions of families—not individuals, but families, fathers, mothers, and children—passing ghastly, sorrow-stricken, in never-ending procession from their cradles to their graves.

Joseph Chamberlain: The class of agricultural laborers of this country (Great Britain) are never able to do more than make both ends meet, and have to look forward in times of illness or on the approach of old age to the workhouse as the one inevitable refuge against starvation. The ordinary conditions of life among the large proportion of the population are such that common decency is absolutely impossible; and all this goes on in sight of the mansions of the rich.

Leslie's Weekly for April, 1914, contains an article depicting the deplorable conditions of the laboring classes in England at present, from which we quote:

Recently, in London, a large conference of influential people, representing society, the church, and every political party, was called by the Duchess of Marlborough to unite with the women workers in a protest against the "sweating" system. Factories and workshops in Great Britain give employment to 2,000,000 women and girls and at least 100,000 more work in their homes. After mentioning $3.75 a week as the amount estimated for the minimum requirements for a single woman, the Duchess of Marlborough said that in organized industries there were probably 300,000 who earn less than $3 a week, while there are many who earn only $1.50 a week. A shirt maker in the meeting produced a shirt for the making of which she was paid 18 cents a dozen. By working from 5.30 a. m. to 11 p. m. this woman and her husband made in a week $2.62; out of this they had to pay 37 cents for the machine and 45 cents for cotton, leaving the net wages of the two for one week's work $1.80. We have nothing like this in the United States.

Everybody knows how well American labor was employed and the high wages it received under Republican administrations. Their splendid condition has not escaped the envy of Europeans. E. Levasseur, a noted French author, speaking of the American workman, says:

Taking everything into consideration except rents, the ordinary objects consumed by the laborer's family, quantities and qualities the same, cost rather more in France than in America, and this is particularly true of Paris as compared with New York. In consequence the average American workman enjoys a real as well as a nominal income which is probably more than twice as great as that of the French workman.

Real wages being higher in the United States, the American workman lives more comfortably than the European, certain grades of English labor excepted. He has acquired settled habits of consumption and enjoyment; his food is more substantial than that of the workman of continental Europe; he dresses better; he is more comfortably lodged, and often owns the house in which he lives; he insures his life; and, if provident in his own way, he spends more for amusement and upon the societies with which he is affiliated; in other words, he has a higher standard of life than the European workman. Such a condition is one of the most desired results of civilization, and the American people are justly proud of it. (The American Workman.)

The testimony of these notable witnesses, whose experience covers a span of more than half a century, is an inspiration, and is certainly conclusive of the fact that Samuel Gompers was right when he said—

That whether the cost of living in Europe or America is greater to the workingman depends entirely on the standard of living he adopts while in America. If he voluntarily lives the life of self-denial in this country that he compulsorily lived in his native land, his outlay in money will remain about the same.

HIGH WAGE SCALE IMPOSSIBLE WITHOUT PROTECTION.

The difference between workingmen here and abroad is the difference in the wages they receive. Our workingmen receive from two to six times more wages than the European workmen receive. Why? Why is the European workman, year in and year out, confronted with the problem of poverty, cold, hunger, and starvation? Every year witnesses an increasing number of immigrants flocking to our shores. They have learned in the hard school of adversity that Europe offers only starvation wages to her workmen and that America offers vastly more. European workmen understand that not only nominal but actual wages are higher in this country than in any other country in the world.

HIGHER WAGES AND SUPERIOR ADVANTAGES.

Wages are higher here because the policy of protection to American workmen recognizes and guarantees a higher wage scale and a higher standard of living. The policy of the Republican Party has always been, and still is, to maintain tariff duties that will measure the difference in the cost of production at home and abroad. This difference consists almost entirely of the difference in the labor cost. With an increased wage the American laborer demanded a higher standard of living than the world had ever known. As that standard of living advanced the demand for shorter hours, and for improved conditions surrounding the workmen came from the trades-union.

ACCOMPLISHMENT OF TRADES-UNIONS.

The organizing of laboring men in this country into trades-unions has done much to improve the conditions of labor, but let us always remember that it was the American policy of protection that made the accomplishment of the trades-unions possible. Without protection our manufacturers could not have paid the high wages which our laboring men now enjoy. Their product would then have come in free and open competition with the unfair and underpaid labor of Europe. Without trades-unions the workingmen would not have received this high wage scale which protection made possible. If unionism alone is responsible for the superior wages paid our workmen, why is it that in England, where labor is highly organized, laboring men are compelled to live in the most deplorable conditions? But in England the hours that constitute a day's labor are longer, and the pay the union men receive is much less than in this country. If protection is not the cause, what is the reason that our workmen are so much better paid and better fed?

UNDERWOOD TARIFF LAW UNFAIR TO LABOR.

For the past nine months we have been operating under a law enacted by a Democratic Congress which greatly reduced the tariff duties on foreign-made goods imported into this country. This law was enacted in response to a direct promise of the Democratic Party to reduce the cost of living. After a fair trial of more than nine months no one will seriously contend that this law has reduced the cost of living to the consumer. But who will not admit the Underwood law has seriously reduced the power of the American laborer to earn a livelihood? Its real effect has been to injure the American laboring man, and to improve the conditions of labor abroad. During the month of April, 1914, our purchases of foreign-made goods exceeded our purchase of such goods in April, 1913, by more than $36,000,000. During the same month our exportation of American-made goods was $37,000,000 less than in April, 1913, a loss in a single month under the Underwood Tariff Act of $73,000,000, most of which would have been paid in wages to the American workingmen.

In view of this large increase in importation of foreign-made goods that are taking the place of domestic-made goods, it might be well to inquire whether the foreign-made goods imported into this country under greatly reduced tariff duties are manufactured by laborers who are members of trades-unions; whether they were manufactured in unfair shops; whether they were manufactured by children under 14 years of age; and whether they were manufactured in the sweatshops and prisons of Europe. In Italy over 50,000 children work in textile factories 10 hours a day at an average wage of less than 10 cents; in Japan 60,000 children work 12 hours a day in textile industries at an average daily wage of less than 7 cents; while in India more than 60,000 children are employed making carpets at a daily wage of less than 5 cents. These children are all under the age of 14 years, and if their product is to come into open competition with the product of the American trade-unionist, what is to become of organized labor's demands? Can we long protect labor if we leave the product of labor unprotected?

PROTECTION AND UNIONISM HANDMAIDS OF LABOR.

It is a most encouraging sign that the rank and file of organized labor in this country is realizing that unions are useless if the product of union labor is to be brought into open competition with underpaid nonunion labor, child labor, and even convict labor of Europe. The inconsistency of a program which protects our laborers only against their American competitors is un-American and is unworthy of the rank and file of any organization. Trade-unionists should stoutly object to the product of their labor being brought into open competition with the product of nonunion and unfair labor, and for this reason, mindful of their own interests and of the high object of their organization, they will not vote to bring the product of the unfair and underpaid labor of Europe into open competition with the product of their own labor.

The man who votes to reduce the cost of living in this country to the same low level of living costs in Europe can not object to living under the same conditions and working for the same wage that confronts the European wage earner. We can not have steady employment for labor here if our people buy their supplies made in sweatshops abroad. When one buys an imported article, what assurance has he that it was not made by unfair labor? If it is right to boycott goods made in this country by nonunion men, is it not equally right, aye, is it not a duty to boycott goods made in the sweatshops of Europe by children, by unfair and underpaid labor, and even by convict labor? The American workman ought to be protected to the extent that the goods which he produces should not be displaced by goods made by unfair, underpaid, nonunion workmen of Europe. This being true, what more effective method can be devised to protect American labor from this unfair competition than the Republican policy of protection? It made unionism possible. It made possible the wage scale enjoyed by our workmen, which is the highest scale of wages paid to workmen the world over. If the many advantages that trades-unions have gained are to be preserved to the laboring men of this country, this can only be done by maintaining the policy of protection to American labor and American industry.

Record of Achievements of this Congress.

EXTENSION OF REMARKS

OF

HON. DAN V. STEPHENS,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

September 9, 1914.

Mr. STEPHENS of Nebraska. Mr. Speaker, in view of the constant criticism of a partisan minority in this House upon the record of this Congress, I feel that it is right and proper to call the attention of the country to what the real record of this Congress is when stripped of the verbiage of unreasoning partisanship. To that end I propose to briefly review the principal acts of this Congress in as fair a manner as possible.

I have no patience with partisanship when it comes to the transaction of the people's business, and I would not refer to the record of the Democratic Party as such since it has been in control of the Government were it not for the fact that it must now answer to the people in the coming general election for its conduct.

In transacting public business the party in power sometimes finds it necessary to be partisan; that is, to act as a party unit in order that business may be dispatched. If it were not for this fact, one could refer to the work of Congress without making any reference whatever to the acts of political parties, but the people have intrusted the control of the Government to the Democratic Party, and the party had to act as a party to dispatch public business, it therefore must answer to the people for the record it has made. The people will want to know how well the work outlined in the party platform has been carried out, and upon the record made the people will base their decision at the November elections.

UNPARALLELED LEGISLATIVE RECORD.

To begin with, let me state that the promises made to the people by the Democratic Party have been redeemed by this Democratic Congress now drawing to a successful close. It

has been the longest continuous session in the history of the Government, and has to its credit the enactment of more constructive, beneficial, and far-reaching legislation in the interest of the whole people than has been passed by all the Congresses put together since the Civil War. That is a remarkable and sweeping claim, but the facts prove the statement conservative. Great reforms that the most optimistic believed would not be realized in a decade have come with ease through the action of this Congress, fresh from the people, without entangling alliances of any kind. This great step forward is proof to the people that they can really control their own Government. The control came two years ago when partisanship gave way and the rank and file of the Republican Party concluded to clean house. Blind partisanship had been rife in this country so long that it seemed almost impossible to get voters to examine into the acts of the leaders of their party. Intrenched behind such a wall of prejudice, it was impossible to prevent selfish men from using the powers of government to further their own personal and private interests. The leaders under the old convention system could nominate whom they pleased, and the blind partisanship of the voters could be relied upon to elect them to office. I speak of voters in all parties, my own party included; but it so happened that the Republican Party was in control of the Government, and for years partisanship kept it in control regardless of its public acts. And these same leaders bargained out legislative privileges to special interests for campaign funds to perpetuate themselves in office.

That was the condition existing when the political revolution came that swept Woodrow Wilson, the greatest independent Democrat in the United States, into the President's chair. It was as much a Republican victory as a Democratic victory, for the Republican Party was mad clear through—mad at itself—and its members deliberately made up their minds individually that it was time to clean house, and to do a good job of it, by rebuking the leaders of the Republican Party, who had deliberately betrayed them by repudiating the promises of the party conventions made to the people.

That rebuke, delivered by patriotic Republicans to their betrayers, has had a wholesome effect on this Democratic Congress. It has served as an awful warning to the timid and the procrastinator that the wrath of the people is sure to be visited upon them if they fail to carry out their party pledges.

I have the greatest respect for those Republicans who had the courage to break away from their party to administer that rebuke, and for their sakes, as well as our own and the country's good, I am glad the Democratic Party has justified the confidence they placed in it by intrusting this great work to its hands.

No matter what the promises are that a party makes to the people, every voter wants to see them honestly kept. Therefore we are going to appeal to the country for an indorsement at this coming election upon the ground that we have kept faith with the people; that we have made good our promises to them. The obstacles have been great, because of the partisan opposition we have encountered at every turn of the road.

Mr. Speaker, since the foundation of the Government partisanship has been rife in this House. The custom is for the party out of power to harass and annoy the party in power and offer every obstacle possible to its program. I am informed the Democrats did it when the Republicans were in power, and the Republicans are now doing it. I have no patience with such methods. The party in control of the Government should be left free to enact the program which the people have ordered, and the party in power should answer to the people for its conduct.

So, as I discuss the record of this Democratic Congress I do so not in a narrow partisan way, snarling at Republicans, but rather with a sense of gratitude that the Democratic Party has had the courage and ability to carry out its program regardless of every obstacle. Every patriotic citizen should rejoice at such an example of party virtue instead of regretting that it has not been seduced by the tempters who desire to use the people's Government to further their own personal interests.

DESTRUCTION OF THE LOBBY.

President Wilson has stood firm as a rock in his determination that the Democratic Party should keep faith with the people. When the tariff bill was before Congress the Sugar Trust lobby was powerful, doing its best to defeat the passage of the bill. President Wilson called the attention of the country to its presence at the Capitol and defied it. The result was surprising and showed the moral effect of the attitude of the President on the conduct of public business. His calling attention to the Sugar Trust not only had the effect of driving the sugar lobby out of the Capitol, but every other organized lobby designed to secure special privileges was driven out. Lobbying became so unpopular that Congress was left free to do its business without intimidation from powerful interests that often raise large sums of money to prevent the reelection of Members of Congress who refuse to support their measures.

In many ways not marked out by law the President can use the great moral force of his office for or against the interests of the people. President Wilson has not hesitated to use this great force in backing up this Congress in carrying out its pledges, and he has been so successful in using this great force always on the side of the people that I do not doubt that history will record him as the greatest President of the United States since the immortal Lincoln.

If Woodrow Wilson never did another thing of importance, this one act of his has justified his election to the Presidency. But his two years of service to the people are crowded full of the most brilliant acts of statesmenship.

MEXICO.

His position as a big brother to poor, distracted, poverty-stricken, blood-stained Mexico marks him out as a man of great vision and with courage to carry out his convictions. The war lords of our Army and Navy—if they may be so dignified—used every effort possible to drag this country into a war of extermination with poor Mexico; but the President and his great Secretary of State stood like a wall of adamant for the right of Mexico to settle her own troubles, and it is most gratifying to note that she is making progress. It shows how the good sense and determination of two men rightly placed makes the difference between war and peace, and this country certainly owes to President Wilson and Secretary Bryan a debt of gratitude for keeping it out of a war with Mexico. Confidence in President Wilson and Secretary Bryan gives the people of the country additional comfort and security at the present moment, in view of the turbulent times in Europe.

APPEAL TO COUNTRY TO SUPPORT PRESIDENT.

Mr. Speaker, the Democratic Party will also appeal to the country for its indorsement of the acts of this Congress at the coming election upon the ground that it is against good public policy to divide the powers of government between two political parties by electing a Republican Congress to tie the hands of a Democratic President. Regardless of how a Republican may feel about the legislative acts of this Congress, he has one sound business doctrine in common with Democrats, and that is the doctrine that the majority must control, and since a majority has placed a Democratic President in the White House he wants that President left free to carry out his program and thereby prove to the country that his policies are either good or bad. If they prove good, a Republican can rejoice as well as a Democrat, because he is benefited with the Democrat; if they prove evil, a Republican can still be happy because his theory of government has been vindicated. One might as sensibly hitch a horse to each end of a cart and have them pull in opposite directions as to put a Democratic President in the White House and a Republican Congress in the Capitol. One is as idiotic as the other.

Let the Democratic Party try out their doctrines and see what comes of them. If these doctrines prove ineffective, the results will successfully dispose of the Democratic President and the Democratic Congress in 1916 without the aid of persons that are now trying to embarrass the administration in every way possible. If they prove to be helpful to the satisfaction of the Republicans, we can all rejoice together.

Mr. Speaker, there is nothing that the special interests who have been using the Government to further their own business would desire more than to have a divided Government, a Democratic President and a Republican Congress, because with such a condition they could feel secure against prosecution for infringement of the laws and against any new legislation that proposed taking away any of their privileges. Nothing would please these highbinders more than to have the Government deadlocked. They are now and have been making every effort to check the action of Congress in carrying out the program of reform legislation. Their intention is to defeat the Democrats who have made this legislation possible and return in their places men who would antagonize President Wilson and make the last half of his administration a failure. My judgment is that an appeal made to the people to uphold the policies of this administration will meet with a ready response, with the result that a Democratic Congress will be returned to hold up the hands of President Wilson during the closing two years of his administration. Any other course would be shortsighted and reactionary, and would so discourage reformers everywhere as to set back the progressive movement 10 years.

PARCEL-POST LAW.

Mr. Speaker, since the political revolution in 1910, when the Republican Party first concluded to clean house, some most

remarkable acts of legislation have been passed. One of the first and most far-reaching acts of the new régime was the passage of a parcel-post measure in 1911. This act has saved to the American people in express charges untold millions of dollars, and its development is yet in its infancy. Ultimately a complete parcel express will be established connecting every nook and corner of the United States. This is bound to have a far-reaching effect upon the development of the country, and is being rapidly perfected by our Postmaster General. There was never any legitimate reason why we should not have a parcel post, but it took a Congress fresh from the people to pass the law in defiance of the express companies.

THE UNDERWOOD TARIFF BILL.

The second great act of importance was the passage of the Underwood tariff bill, which scientifically revised the tariff downward, thus fulfilling the pledge made to the people by both the Republican and Democratic Parties, but carried out by the Democratic Party. This tariff bill took away excessive privileges that certain great manufacturers had obtained by assisting Congress to write tariff schedules in their own interest. It has so distributed the tax over a large number of articles that it will bear the least heavily upon the necessaries of life.

Under the Payne-Aldrich tariff the taxes were heaviest upon the necessaries and lightest upon the luxuries. Behind the excessive Payne-Aldrich tariff schedules the trusts flourished. Under the Underwood tariff schedules the trusts have found that the Government no longer gives them excessive advantages by keeping out their competitors and securing to them the right to rob consumers in the home market while they go abroad and compete with their competitors in foreign markets, furnishing the foreigner goods at a cheaper price than they furnish the consumers in the home market. The reduction of the tariff was in harmony with the demands made by all classes of people in all political parties, and has almost ceased to be a party measure, although Republican partisans have undertaken to misrepresent the effects of the Underwood tariff so as to mislead the people of the country as to its operation.

CORN.

For example, the calamity howlers immediately set up a cry that we were about to destroy the farmers of this country by permitting the importation of agricultural products from foreign countries. Especially did they harp upon the importation of corn from Argentina. The truth is that corn flourishes in America as it does nowhere else in the world, and we produce 72 per cent of all the corn produced in the world of which there is any record. In other words, we produce, in round numbers, 7 out of every 10 bushels of corn raised on the earth. When this cold-blooded fact is known to the farmer of this country he will understand the fraudulent claims made that corn importations are going to affect the price of his crop. If the foreigners, who produce about one-fourth of the corn in the world, want to sell a portion of that corn, it is not at all probable that they will ship it to the United States, which raises the other three-fourths, unless they are sure we can use it to advantage. It is more likely that a man in Argentina with good judgment who has corn to sell would export that corn to Europe, where there is a great demand for it and where very little is grown. There he would meet our corn with an equal freight charge. That is the logical way to look at it, and that is the way the business is actually transacted. Some corn has been imported into the United States—a few million bushels a month. Most of it has been used by the Corn Products Co., of New York, and manufactured into cereal foods and exported. While we were importing these few million bushels from Argentina, paying a few cents a bushel less for it than the price of our own corn, we were exporting 45,000,000 bushels to Europe and selling it, in competition with Argentine corn, at a few cents higher price.

The transaction resulted as follows: We bought cheap Argentine corn and furnished American labor employment to manufacture it into food cereals; then we shipped the cereals abroad and got back European gold for it. We also shipped abroad the American corn which might have been used by this cereal-products concern, which we sold on the European market at a few cents a bushel advance over Argentine corn. We actually made money in the transaction. Instead of the tariff act destroying the price of American corn, it enabled us to use Argentine corn for a cheap purpose to our advantage and to sell our better corn to Europe at a higher price.

My colleague from Iowa, Mr. VOLLMER, in a speech made before this House recently, very aptly stated that the importations of corn from Argentina during the entire six months that the Underwood tariff has been in effect would not furnish a respectable breakfast for the hogs of Iowa. The whole Argentine crop does not equal the crop grown in the State of Iowa in a poor-crop year, and, of course, they must eat some of it down there.

It is upon such silly claims as these that a few of these partisan opponents of the administration expect to win a victory at the coming election.

WHEAT.

The facts are, we have been in competition with foreign corn ever since we have been exporting any corn at all. The same is true of wheat. Every bushel of corn and wheat we sell abroad we sell in competition with the corn and wheat products of the world, and that price fixed our home price. We have for many years exported these two cereals, and the price of wheat in this country is invariably the price of wheat in the foreign market less the transportation charges. Every man who studies market reports knows that the price of wheat goes up and down according to the condition of the growing crops in other parts of the world. The present war in Europe is a splendid example of the proof of this statement. Wheat is going up constantly as a result of the European war, and it is impossible to trace any connection whatever between the price of wheat and the amount of tariff that is levied by this country. No wheat can be imported into this country from any country that has a tax on wheat without paying 10 cents a bushel tariff. The result is that no wheat is imported except for seed or experimental purposes. Under the Payne-Aldrich bill there was a tax of 25 cents a bushel on wheat and 15 cents a bushel on corn, and this tax was levied for the purpose of flimflamming the farmers of this country and making them believe that they were receiving a great benefit from a protective tariff, thus enabling eastern manufacturers to secure the farmers' votes for an exorbitant tariff upon their products, which the farmers are compelled to buy. Under the excessive tariff of 25 cents a bushel on wheat, the farmers of this country have sold their wheat crop as low as 40 cents a bushel, and under a tariff of 15 cents a bushel on corn they have sold their corn crop for as low as 10 cents a bushel, thus proving absolutely the uselessness of a tariff on an item of commerce which is produced in such large quantities that we must export our surplus to foreign countries.

CATTLE.

Another basis of attack is furnished the partisan opponents of this measure in the fact that under the new tariff act cattle are reduced from 27½ per cent to 10 per cent, thus permitting the country, they say, to be overrun with cattle from Canada and Mexico. We are now having an example of the effect of this tariff. There is a great scarcity of cattle in this country at the present time. There are hundreds of thousands of acres of pasture land going to waste for the want of cattle to feed upon it. Cattle are not being raised in sufficient numbers to supply the enormous demand for meat. A great herd of cattle in Chihuahua, Mexico, is now being marketed and sold in this country on account of the revolution in that country. These cattle are brought to the boundary line of the United States, and the importer then pays 10 per cent tax to the United States Government for bringing them into the United States. These cattle are then carried over the railroads—furnishing employment to our people—to the big stock centers, such as Omaha, Kansas City, Denver, and St. Louis. There they are purchased by farmers and ranch owners, and again transported over railroads, furnishing employment to our people, to the ranches and feed yards of the West. Here they consume the pasture, the forage, and the corn that is grown by our people. When these cattle are ready for the butcher they are again transported over the railroad to the packing centers, where they are prepared for food, giving employment to tens of thousands of other workers. This meat then is again transported over the railroads to the various centers of population, where it is needed for consumption, furnishing employment to other countless thousands of people.

It will thus be seen that the mere fact that the tariff was reduced from 27½ per cent to 10 per cent has enabled the importation into this country this season of several hundred thousand head of cattle that we have handled with great advantage and profit to ourselves and have not in the least disturbed the price that the farmers received for their own stock. The truth is the farmers are the buyers of this class of stuff and profit, along with others, in its importation. But the facts are there are not enough cattle in Mexico or Canada to in any way affect the price of our live stock in this country. If all the stock they possess was shipped into this country, it would not supply our markets for a week.

BEEF.

The same argument may be made concerning the importation of beef from Argentina. Since the Underwood tariff bill went

into effect we have imported from Argentina about 9,000,000 pounds of beef a month, beef being on the free list. At this rate of importation we will import annually about 108,000,000 pounds. This sounds like a tremendous amount of beef until you stop to consider the population of this country. We have approximately 100,000,000 people in the United States. We therefore import in the course of a year about 1 pound of meat for each man, woman, and child. We consume in the course of a year of all kinds of meats 172 pounds per person. So, if in the course of a year we happen to get an additional pound from Argentina it is very apparent to anyone that the price of beef is not going to be affected thereby. The claim that we are going to be injured by the importation of beef becomes absolutely ridiculous in the face of these facts. In the last four years our beef production has been decreasing rapidly and our population has been increasing very greatly. The beef packers have been so rapacious in their management of the business, and the farmers so disorganized in the marketing of their beef, that the beef-producing industry of this country has been on the wane. There is no business more hazardous than beef production to the farmer who buys his feeders, due to the beef packers' monopoly. The Chicago beef packers now control five of the nine packing houses in Argentina, and it must be apparent to anyone that they are not going to buy beef in Argentina to ship into this country to compete with the beef they buy here. It is to be hoped that the Clayton antitrust bill, now pending in Congress, will cure this evil when it becomes law.

BUTTER.

These high-tariff exponents thought they saw an opportunity to enlist the sympathy of the farmers' wives of this country to their program by trying to frighten them with the bugaboo of foreign importations of butter under the new tariff, but their efforts have signally failed, for the reason that the price of butter is now very satisfactory to the farmers, and at no time has it been affected by the importations of butter from foreign countries. Under the old tariff butter bore a tax of 6 cents a pound. Under the new tariff it bears a tax of 2½ cents a pound. This price absolutely prevents the importation of first-class butter into this country, for the simple reason that when you add 1 cent a pound for transportation charges to the tariff of 2½ cents a pound you have a total tax of 3½ cents a pound, that must be added to the foreigner's price before it can come into competition with American butter. There is only one country in the world that can compete with us in the production of first-class butter, and that is Denmark. Denmark has always had a splendid market in England for all the butter it could produce. The English are great butter eaters, and they demand the very best that can be bought in the markets of the world.

The price of Danish butter in England for the last four years has never been as low as 3½ cents under the New York price of Beatrice or Elgin butter, thus precluding the possibility of the profitable importation of Danish butter. Some cheap butters were imported into this country last spring, but in practically every instance the importer lost money in the transaction. Last March the butter price broke, which gave the calamity howlers an opportunity to criticize the tariff law; but when it was shown that the four big butter markets of the country had in cold storage on the 1st day of March 18,000,000 pounds of butter as against 9,000,000 pounds for the year before the argument failed, because the reduced price of 3 or 4 cents a pound was due wholly to the excessive quantity in storage, and was justified.

INCOME TAX.

In connection and associated with the tariff legislation is the revolutionary legislation known as the income-tax law. It is revolutionary because it is an entirely new method of raising revenue for the Government, and is one that is meeting with the unanimous approval of the masses of the people of this country. The Democratic doctrine has been to transfer as much of the tax as possible from the backs of the poor by taking it off of their food and clothing and placing it on the incomes of the rich and comparatively rich who are well able to pay it. The doctrine is that the great fortunes of this country have by a system of taxation devised by themselves been able to collect from the American people vast sums of money, and that it is no more than just that they should make a return to the National Government that gives them protection by paying a reasonable tax upon their incomes. Their incomes are gathered from the people, and they are simply required now to take a portion of those incomes and transfer it to the National Treasury, thereby relieving the burden that has heretofore been borne by the people in the form of taxes on necessaries of life. Through this income tax we will ultimately be able to raise approximately $100,000,000 a year, which is almost one-third of the revenue which has heretofore been raised by the National Government through a tariff tax.

The time will ultimately come, no doubt, when the National Government will be wholly maintained by a tax levied upon the surplus wealth of the Nation rather than upon the necessities of the people. It is not an unjust tax nor should it be complained of by those who have to pay it. They ought to be thankful for the advantages they have in possessing incomes large enough to be taxed under this law. We have many citizens in the United States whose incomes approach that of the National Government every year, and it goes without saying that such enormous incomes are paid by the great masses of our people, and it is perfectly legitimate and perfectly fair that such incomes should pay a very heavy tax to the Government. For 20 years this doctrine has been a part of every Democratic platform, and it is a matter of great pride to us to at last write it into law.

I have no doubt the time will come when an inheritance tax also will be added to this income tax, which will make it impossible for swollen fortunes to be transferred from father to son, going on increasing in enormous proportions and thereby becoming a menace to the peace and welfare of the Nation. The time will come when the greater portion of these great fortunes will be taken over by the National Government in the form of an inheritance tax at the death of their owners. I am ready to vote for such a law now.

FREE SUGAR.

This Congress took the tax of about $100,000,000 off the sugar of the people and put it on the incomes of the rich. It was in accord with the Democratic doctrine of placing the bulk of tax upon the surplus wealth of the people rather than upon their necessities. It is hardly possible that the high-tariff men will tell the people this fall that we made a mistake in taxing the incomes of the rich and comparatively rich, and that if they get into power they will repeal the income tax and raise the hundred million on the necessaries of life, mainly sugar.

NATIONAL BANK RESERVE ACT.

Mr. Speaker, for more than 50 years we have been building up in this country a national banking system which has been so illy devised that money panics have been common. Several times in the last 50 years the country has been plunged into tremendous money panics that have wiped out the savings of hundreds of thousands of our citizens. These savings, as a result of the panic, have been transferred to the pockets of those who happened to have the ready capital at the time the panics occurred. The reasons for these panics are easy to find. They were due largely to our banking system. Each national bank was an independent unit standing absolutely alone, and whenever a depression came or any sort of trouble occurred in the financial world, the independent banks in the vicinity of the disturbance immediately were called upon to bear the brunt of the burden of the community, and the people not having as much confidence in the banks as they should, made the burden greater by demanding their deposit money. Each bank being an independent institution was left helpless to fight the battle alone, with the result that there were always many bank failures following these panics, the larger banks absorbing the resources of the smaller ones in the final settlement.

For years business men have been demanding a better and safer banking system for this country, but not until the political revolution that swung a Democratic Congress and a Democratic President into power was such legislation undertaken. One of the first things that this administration undertook was the preparation and passage of a national-bank act that would mobilize the resources of the 7,500 national banks so as to make them available at any point of financial disturbance upon the shortest notice. In a nutshell, that is the national reserve act which a Democratic Congress has put on the statute books. This act organizes the national banks of the United States and State banks that join the system into a mutual protective association, so that when a bank in any nook or corner of this great Republic gets into trouble it becomes physically impossible for panic-stricken people to ruin it by demanding their deposits, for the simple reason that they can get their deposits when they want them. This will be the first time in the history of this country, when this law goes into effect, that one can put money into a national bank or a State bank that is a member of this association and be absolutely certain that he is going to get his money back again when he wants it regardless of panics. The reason for this lies in the fact that the bank's assets are composed principally of the promissory notes of those who borrow the money of depositors, and these promissory notes can be deposited with the national reserve bank and national currency secured thereon for the purpose of paying to the depositors their money at any time they may require it. It not only makes absolutely certain that depositors will get their money back whenever they demand it but, in addition to this

great advantage, farmers, business men, and manufacturers can secure money in adequate quantities to enable them to carry on their work.

Under this new law, when a bank finds itself in need of a large sum of money for the purpose of furnishing farmers with capital to buy live stock and other necessary equipment for the extension of agriculture, or for a business man to have a little additional capital to extend his line of merchandise, or for a manufacturer to buy raw material for his plant, a member bank can take the notes given by these different lines of industry and secure national-bank currency thereon for the purposes above indicated. The result of the operation of this law will be that no needy and worthy industry of any kind or character will be destroyed for the want of necessary money to keep it going. Any legitimate business entitled to credit will be able to secure it. It has been claimed that this is the best banking system yet devised in any civilized country in the world, and it certainly is one of the most important pieces of legislation enacted by this or any other Congress since the Civil War.

GOOD ROADS.

For the last 8 or 10 years there has been great agitation all over the United States for the improvement of the wagon roads of the country. The problem is a great deal larger than any one believes when he first approaches it, but the people of the States have approached it with a fair degree of success in its solution. It is not only a difficult problem to solve, but it is a stupendous problem to finance, and since the welfare of all of the people depends so completely upon the perfection of their methods of transportation and communication it has become a problem of national importance and one in which the National Government should take a particular interest. In line with this thought and in line with the action of this Congress in passing a parcel-post law, a bill has been passed through this House providing for national aid to the States in the construction of wagon roads. This bill carries an appropriation from the National Treasury of $25,000,000. This appropriation is not contemplated for the benefit of automobile routes, but it is so devised that this sum of money is to be expended in conjunction with similar appropriations by the States for the purpose of stimulating the construction of wagon roads over which the crops of this country must be moved to the markets.

The appropriation itself will not go very far toward building roads, but it will certainly stimulate enormously the action of the States, counties, and municipalities in the construction of wagon roads leading out of their centers. These local subdivisions are now spending large sums of money for the improvement of wagon roads, and this sum appropriated from the National Treasury will encourage them in this great work. It is the first time in the history of this country that the farmers, who pay nearly one-half of the taxes of the Nation, will have returned to them and expended in their midst a portion of the money they pay in the form of taxes. Heretofore practically all the money of the Government has been used for the improvement of our rivers and harbors and the construction of public buildings. Even the building of post offices does not directly benefit the agricultural community, so it is a conservative statement to say that this is the first time that the agricultural communities have had passed a piece of constructive legislation benefiting them directly since the establishment of the rural-delivery system.

We pay out in a year in the United States approximately a billion dollars for wagon freight, and if we could make our wagon roads so good that we could double our loads we would save half a billion dollars a year in wasted energy, besides increasing the comforts and pleasures of life enormously. Good wagon roads make the country a desirable place in which to live, and as the country becomes more desirable more people will seek the country and lands will become more highly improved and productive. This bill is now pending in the Senate with every prospect of becoming a law in some form or other before this Congress closes.

FARM DEMONSTRATION WORK.

The Agricultural Department of this Government is the great pride of the American farmer. It has assembled the greatest amount of scientific information ever gathered together in the history of the world on agriculture. The National Congress has been reasonably liberal in the past in its appropriations for this department, but every year the importance of the stimulation of agriculture has become more apparent to legislators. There has been a great demand from the farmers of this country for the past several years for more practical work in the development of this great basic industry of our people.

The States have tried to apply as much as possible the agricultural information they have at hand through their State schools. Through this work of the State agricultural colleges we have demonstrated absolutely the value of sending out practical men to disseminate the accumulated information for the benefit of farmers direct to the farmers themselves. It is too long to wait for the few boys we turn out of agricultural schools each year to carry on this work of scientific agriculture. It has been found necessary to educate the men in the fields on the importance of modern methods in cultivation. To that end the farmers have demanded and have secured the passage through Congress of what is known as the Lever bill, which will ultimately carry an appropriation of something like $8,000,000 a year for farm-demonstration work. This bill provides that a scientific farmer will be made available to every farmer who wishes to experiment on his own land. In other words, these expert farmers will take the experience that the National Government has accumulated and go straight to the farm with it and demonstrate in cooperation with the farmer the value of these great discoveries. This will all be done through State agricultural schools. Instead of State agricultural schools being simply theoretical institutions where farmers' boys go to talk about farming, these great institutions will reach out to every farm in the States with practical men working with the farmers demonstrating their theories; so that not only the farmer boys will get the benefit of this education, but farmers themselves and farm hands will all become students in the field of our great farmers' colleges.

This is a most ambitious undertaking, and one that will commend itself to every intelligent man. No one has given this subject any consideration whatever who does not realize that the whole prosperity of the Nation is dependable absolutely upon this great industry of agriculture. When it languishes, everything else languishes; when it prospers, every other industry prospers. It is therefore most essential that this industry receive the care and attention it deserves from this Government.

For years the National Government has coddled and protected manufactures, which in our early history was a most beneficial and wise course to pursue; but it must not be forgotten that that course was always at the expense of agriculture; and it is only in recent years that the attention of the people has been called to the importance of the industry that feeds all the others and the appalling fact that it has been languishing and falling far behind in the matter of producing sufficient foodstuffs to supply the demands of the Nation.

We are producing less foodstuffs per capita now than ever before. For example, we produce 21 per cent less corn, 15 per cent less wheat, 12 per cent less oats, 9 per cent less cotton, and 5 per cent less rye per capita than we did 10 years ago. We are also producing less meat of every kind per capita than we did 10 years ago, thus accounting for all of the increase in the price of farm products.

In connection also with this farm-demonstration work reference is made to an act appropriating $600,000 for the extinguishment of hog cholera, which has been destroying the wealth of the Nation every year to the amount of hundreds of millions of dollars; and an act protecting migratory birds, which are of such great importance to agriculture in destroying insects injurious to crops. In fact, taking it as a whole, agriculture never in our history received so much consideration from Congress as it has this session.

GOVERNMENT RAILROAD IN ALASKA.

In 1867 the United States Government purchased from the Russian Government the Territory of Alaska for the sum of about $7,000,000. It was considered at that time a very poor purchase, and for many years no particular attention was paid to it; but recently figures have been compiled showing that we have drawn from Alaska some $500,000,000, principally in gold, furs, and fish products (fisheries) since its purchase. We have also discovered that Alaska is underlaid with thousands of square miles of coal and copper. In addition to this there are immense forests of valuable timber. The question has been whether to permit private interests to go into Alaska and take possession of these vast resources or whether the National Government should retain possession and provide some reasonable method of leasing, so that private interests may make available these vast resources and render to all the people their just share of the profits. To this end this Congress has passed what is known as the Alaskan railway bill, authorizing the building by the National Government of 1,000 miles of railroad into that Territory. This step has been greatly encouraged and supported by that class of people who have been demanding that the resources of the Nation shall be conserved for all of the people and by that other class of people who have believed in Government ownership of transportation lines.

The National Government owns and is successfully operating now the Panama Railroad, which extends across the Isthmus of Panama, and a line of Government-owned steamships plying

between the ports of New York and Panama. These Government-owned corporations have proved most successful, thus encouraging this further step in Government ownership by authorizing the construction of this railroad into the wilds of Alaska. It is hoped that splendid results will follow from this great project by opening up to settlement that great region, which is one-fifth the size of the United States. In addition to this important record we are about to revive our merchant marine by suspending obnoxious shipping laws and buying a fleet of merchant ships to transport the produce of our farms and factories to foreign countries, while all Europe has abandoned its commerce and gone to war. It is truly a day of great events, and our Government has risen to the needs of the times.

PANAMA CANAL TOLLS.

When the Panama Canal act was prepared and presented to this House, in 1911, it did not allow free tolls for the American Shipping Trust, but when the bill was presented to the House a union of ship-subsidy Democrats with the Republican minority forced an amendment to the bill providing for the free use of the Panama Canal by the domestic shipping trust.

This was a great humiliation to the Democratic Party that had fought ship subsidies throughout its history, but it was outvoted and the act passed Congress providing that this great waterway costing the American people $400,000,000 was to be used by the Shipping Trust free of tolls, and the American people would pay the cost of operating the canal for their benefit, but when President Wilson came into office and found that this act of a previous Congress was in direct violation of our treaties with England, Colombia, and Panama, he immediately requested Congress to repeal the act, which it did very promptly. The United States had stalked about all over the face of the earth, demanding equal rights for its shipping in every canal in the world with the domestic commerce of the countries that owned the canals, and had secured equal rights in every instance, but at the first opportunity, when we, ourselves, became the owners of a canal, we immediately passed an act charging everybody else toll, but sending our own shipping through free, thus demanding for ourselves in our own canal an advantage that we have refused to give to any other country in the world. Our position was absolutely indefensible and could have brought us nothing but the contempt of other nations had we adhered to it. But aside from all of this, no fair-minded man can understand what right the Shipping Trust has to demand free use of a waterway that has cost the American people $400,000,000. It would be an exact parallel if, when we finish the construction of our Alaskan railroad, we permit the Standard Oil Co. to use it free of freight, while charging everybody else. As the canal act now stands, every ship passing through the canal, excepting our own warships, will pay to the National Government $1.20 toll per ton for its use.

ANTITRUST LEGISLATION.

Three bills of great importance have been prepared and are now pending in Congress for the regulation of trusts. Two of these bills will become law in a few days. The first measure provides for the formation of a trade commission which is to control big business in the exact manner that the railroads are now controlled by the Interstate Commerce Commission. The success of the Interstate Commerce Commission in handling the great railroads of this country in a manner that is satisfactory to both the railroads and the people led to the passage of this trade commission bill. This commission established here in Washington will be able to investigate the actions of large corporations doing an interstate business, and compel them to comply with the law whenever it is found that they are violating it. It is intended that a corporation doing interstate business will be able to ascertain through this commission what it can do and can not do under the law, and will do away with the long-drawn-out litigations in the courts and the tying up of great business interests that has heretofore been very common in the prosecution of trust cases.

The facts are, the prosecution of trusts in this country has cost the American people untold millions of dollars, with very little profit to them, due to the fact that the courts are not fitted to handle great business industries. Their methods are too unwieldy and too long drawn out to accomplish any good whatever. In fact, there is scarcely a trust prosecution, although it is pronounced successful, that has brought the people any relief whatever. Court procedure in this country has become so burdensome that instead of being a guaranty of justice to the people it has become a guaranty of ruin to any man who has entered its portals with the deluded idea of seeking justice through extended litigation.

With these conditions in mind Congress has attempted to equip this trade commission with powers that will enable it to compel corporations to obey the law and to prevent unfair discrimination in trade, and to a large extent this can and will be done without calling to the aid of the commission the court machinery of the country. Of course, whenever a corporation refuses to comply with the orders of the commission they necessarily will have to be haled into the courts and take the consequences, which will mainly result in giving up the plunder they have accumulated, in the form of court costs and attorneys' fees.

The second of the antitrust bills is what is known as the stock-and-bond bill, which empowers the Interstate Commerce Commission to regulate the issuance of stocks and bonds of railroad companies doing an interstate business. When this bill becomes a law no railroad can issue stocks or bonds without first submitting a report to the Interstate Commerce Commission, giving the reasons for the issue and stating what the money is to be expended for, and receiving the approval of the issue by the Interstate Commerce Commission. This will prevent the squandering of the resources of railroads by the gang of Wall Street highbinders who have made a business of wrecking railroads, the most recent example being the New York, New Haven & Hartford. The railroad industry of this country has been done irreparable harm by these men, who have been speculating in their stocks and manipulating them for the purpose of swindling stockholders out of their rightful interests in the property. It is believed that with this power the Interstate Commerce Commission will be able to put the railroads of this country upon a substantial basis, so that their stocks and bonds will be reliable investments and that in the course of time the people will have confidence in them and will not hesitate to invest in their securities. This measure is undoubtedly of far-reaching importance.

The third antitrust measure is what is known as the Clayton bill, and strengthens the provisions of the Sherman Antitrust Act in many particulars.

When these three measures become laws it is believed that the trust question will be practically solved.

This record of the Sixty-third Congress shows conclusively by its legislative acts that the people have taken possession of their own Government. Members of Congress are responsive to the will of the people. The grip of monopoly upon the reins of Government has been broken and the lobby has been driven from the National Capital. It is a day for thanksgiving and rejoicing everywhere over our progress in civic virtue.

National American Woman Suffrage Association.

EXTENSION OF REMARKS

OF

HON. DUDLEY DOOLITTLE,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 28, 1914.

Mr. DOOLITTLE. Mr. Speaker, the following article has been handed me by the National American Woman Suffrage Association as showing the correct political attitude of that great organization, with the request that I give the same additional publicity, which I am pleased to do:

NOT IN CONGRESS FIGHT—DR. SHAW MAKES CLEAR POSITION OF NATIONAL SUFFRAGISTS—OPPOSED TO POLICY OF CONGRESSIONAL UNION IN ITS WARFARE UPON DEMOCRATIC MEMBERS.

On September 13 the Congressional Union announced its policy of sending speakers and organizers to the equal suffrage States to oppose Democratic candidates for reelection because of the opposition of that party to congressional action on woman suffrage.

The confusion caused by the conflicting policies of the National American Woman Suffrage Association and the Congressional Union has caused the national association to make public the following telegram received by Dr. Anna Howard Shaw from Mrs. Cora G. Lewis, member of the Kansas board of administration, to emphasize the fact that the Congressional Union has no connection with the National American Woman Suffrage Association. Kansas has been an equal-suffrage State since 1912.

TOPEKA, KANS., *September 22, 1914.*

Dr. ANNA HOWARD SHAW,
National Suffrage Headquarters:

Do you indorse Woman's Congressional Union sending women to Kansas to work against Democratic Party? Every Democratic candidate for Congress and Senate pledged to national suffrage. State platform demands it. Present Democratic governor loyal. Has appointed 25 women officials superintendents institutions and State boards. Women here creating bitter feeling are Miss Trax and Mrs. Latimer,

who made partisan speeches with Roosevelt. Said they represented national suffrage organization. Answer immediately, my expense.

CORA G. LEWIS,
Member Kansas Board Administration.

Dr. Shaw sent the following reply:

SEPTEMBER 23, 1914.

CORA G. LEWIS, *Topeka, Kans.:*

National association does not indorse the Congressional Union's plan of working against Democratic Party. The Congressional Union is not a member of the national association and has no connection with it. The national association is strictly nonpartisan and opposed to working against Democrats or members of any other party as such. You can not state too strongly that I, as well as other national officers, oppose policy of Congressional Union. Mrs. Latimer and Miss Trax do not represent National Suffrage Association.

ANNA HOWARD SHAW.

Emergency Revenue Legislation.

EXTENSION OF REMARKS
OF
HON. CHARLES H. BURKE,
OF SOUTH DAKOTA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. BURKE of South Dakota. Mr. Speaker, that there is no necessity for raising additional revenue now is clearly admitted by the President in his message of September 4 by the following statement:

The Treasury itself could get along for a considerable period, no doubt, without immediate resort to new sources of taxation. But at what cost to the business of the community? Approximately $75,000,000, a large part of the present Treasury balance, is now on deposit with national banks distributed throughout the country. It is deposited, of course, on call.

From this statement, and it is verified by the Treasury statement, the Government has now on deposit in the national banks $75,000,000, loaned to the banks at 2 per cent interest, with the express understanding that it is subject to call, as the President states. In addition to the money deposited in the banks there was in the Treasury, as shown by the statement of September 23, about $44,000,000, so on that day we had on hand and available nearly $120,000,000. Until this amount is greatly reduced why should we levy a tax upon the people of $105,000,000 annually, as proposed by this bill, when we are at peace with all the world and when there is not even a likelihood of our getting into war?

The President in his message says that it would not be desirable at this time to begin drawing from our deposits in the banks, and I will quote exactly what he did say on this point:

I need not point out to you what the probable consequences of inconvenience and distress and confusion would be if the diminishing income of the Treasury should make it necessary to rapidly withdraw these deposits.

This means that rather than take money belonging to the United States deposited with the banks, upon which they are only paying 2 per cent interest, we should tax the people. When an individual deposits money in a bank, it is for the purpose of having it when needed, and who would be so magnanimous or generous as to borrow or tax himself in order to favor his bank by leaving his money on deposit, to be loaned by the bank at perhaps a large rate of interest, when he might need what he had in the bank, or a portion of it, to meet the expenses of his business and his living; and yet that is exactly what is proposed by the President in recommending the legislation contained in this bill.

It has been suggested in this debate that the money that will be taken from the pockets of the people, or a portion of it, if this measure becomes a law, will probably be deposited with the same banks that now have the $75,000,000. This suggests that it would be appropriate to amend the title of the bill, which reads, "A bill to increase the internal revenue, and for other purposes," so as to read, "A bill taxing the people to further aid certain favored national banks." According to the most ardent advocate of this bill, including the President, the very largest amount that would be required to supply the deficiency monthly would be $8,000,000, not a large sum to take out of the banks each month, and it might not be more than $2,000,000 or $3,000,000. How taking from $2,000,000, or perhaps $8,000,000, from the banks each month would cause distress by reducing the circulation more than taking it out of the pockets of the people is logic that I can not understand. The gentleman from Illinois [Mr. MANN] says that the only reason he can see for it is that we may deal more kindly with the banks which owe the Government the deposits.

I think it has been proven beyond a question of doubt that it is not necessary to raise more money at this time, and before I conclude I will endeavor to show that it is not necessary. If, however, more money is required, or should be required, there is ample means provided by existing law to meet the emergency, which may only be temporary.

The law raising war revenue enacted in 1898 provided for issuing certificates of indebtedness. Section 32 of the act, which was not repealed, is as follows:

SEC. 32. That the Secretary of the Treasury is authorized to borrow from time to time, at a rate of interest not exceeding 3 per cent per annum, such sum or sums as, in his judgment, may be necessary to meet public expenditures, and to issue therefor certificates of indebtedness in such form as he may prescribe and in denominations of $50 or some multiple of that sum; and each certificate so issued shall be payable, with the interest accrued thereon, at such time, not exceeding one year from the date of its issue, as the Secretary of the Treasury may prescribe: *Provided*, That the amount of such certificates shall at no time exceed $100,000,000. * * *

This section was designed to provide for any deficiency which might occur up to $100,000,000, and it was not repealed, but purposely left as permanent law in order that the President might issue short-time certificates to meet any emergency; and the President seems to think an emergency does exist now.

There is also a law authorizing the issuance of $375,200,980 bonds to be sold to pay the expenses of constructing the Panama Canal. Under a Republican administration and a Republican tariff law it was only necessary to dispose of these bonds, amounting, with the premium, to $138,600,869.92, paying out of the surplus in the general fund $207,008,347.37, so there is available now bonds to the amount of $240,569,000 which, under the law, can be disposed of for the purpose of repaying the general fund the $207,008,347.37 that was taken from that fund and expended in the canal construction.

A prudent individual, when disaster of any kind overtakes him and his resources are not equal to his expenses, first resorts to curtailing his expenses and begins practicing rigid economy; and then if he can not make ends meet, he borrows money, either at the bank upon his note or by mortgaging his real estate. The President, however, is not willing that the Government shall meet this emergency by issuing certificates or selling bonds, and in his message says:

And we ought not to borrow. * * * To sell bonds would be to make a most untimely and unjustifiable demand on the money market; untimely, because this is manifestly not the time to withdraw working capital from other uses to pay the Government's bills; unjustifiable, because unnecessary. * * * These are not the circumstances, this is at this particular moment and in this particular exigency not the market to borrow large sums of money.

This is more logic that I can not comprehend—that it withdraws working capital to borrow money, but to take it from the people by taxing them will not. It might only be necessary to raise comparatively a small sum, and possibly not any; but if this bill becomes a law, it will take from the people to a certainty not less than $105,000,000 before it is repealed. Of course that will enable the Secretary of the Treasury to further favor a few banks, and it will offer an inducement to our Democratic friends to continue their extravagant appropriations and possibly buy a few million bales of cotton, as is being proposed by some of our southern friends. The president of the National Farm Union, Charles S. Barrett, in addressing the joint conference of the Texas district union at Fort Worth, on August 31 last, said:

There is only one thing to do, and it is this:
That the United States must buy three or four million bales of cotton at not less than 10 cents a pound from the farmers of the South. Three or four hundred million dollars is all that will be required.
The South is in the saddle at Washington and the South can do whatever it wants. The boys at Washington will do whatever you tell them to do if you give them to understand you mean business.

The South certainly is in the saddle, and this Congress has been making the best of its opportunity, as I might show, if I had the time, by pointing out numerous instances of discriminations in favor of that section of the country.

I stated in the outset that this proposed tax is not necessary, and I will try to demonstrate that it is not by quoting from the Treasury statement of September 23, which is the latest statement available, and the statement used by those favoring the passage of the bill. This statement shows our receipts from all sources for this fiscal year, viz, from July 1 to September 23, $166,616,800.38, while for the corresponding period last year the amount was $165,881,896, or $934,904.38 less. In other words, this year we have taken in about $1,000,000 more than we did for the same time last year. This same Treasury statement shows that for the fiscal year July 1 to September 23 we have disbursed $184,708,150.11, while for the very same period last year we only disbursed $176,856,929.77; that is, we have paid out this year almost $8,000,000 more than we paid out for the same time last year. It is easy to see how this can be remedied simply by curtailing and practicing economy. The President can order each of the several departments of the Government to stop extravagances, just as a railroad president, or the head

of any great corporation, does when business is dull and expenses exceed receipts. Why not refuse to pass the river and harbor bill now pending in the Senate? The Republicans in 1898, when it was necessary to raise revenue by taxation in time of real war, did not pass any river and harbor act. If the river and harbor bill is not passed in this session it will mean the saving of many millions of dollars without injury to the interests of the Government. I presume, though, it will be passed, in order that some of the Members of Congress can secure some of the "pork" that the bill contains, and the people will be called upon to pay the bill by the passage of this iniquitous measure. I tremble for some of you who will vote for this bill, and also for a rivers and harbors bill, when you return to your districts and face your constituency. How are you going to explain your action, especially you who represent districts that do not get any of the "pork"?

In order to verify the figures that I have given, I will insert the Treasury statement for September 23, that gives the receipts and disbursements from July 1 for this year and for the same period last year.

Daily statement of the United States Treasury at the close of business Sept. 23, 1914.

RECEIPTS AND DISBURSEMENTS AFFECTING THE GENERAL-FUND BALANCE, SEPT. 23, 1914.

	This month to date, fiscal year 1915.	Corresponding month and date, fiscal year 1914.	Fiscal year 1915 to this date.	Fiscal year 1914 to corresponding date.
RECEIPTS.				
1. Revenues:				
Customs	$13,352,492.06	$21,478,252.26	$55,772,319.62	$80,219,859.24
Internal revenue—				
Ordinary	26,341,504.18	19,843,047.63	78,628,702.46	71,756,344.18
Corporation and income tax	318,394.87	53,009.62	7,927,290.95	2,195,035.65
Miscellaneous	2,307,337.42	2,675,865.21	24,288,487.35	11,710,656.93
Total	42,319,728.53	44,050,174.72	166,616,800.38	165,881,896.00
2. Public debt:				
Proceeds of sales of bonds—				
Panama Canal				
Postal savings				1,116,880.00
Total				1,116,880.00
Grand total of receipts	42,319,728.53	44,050,174.72	166,616,800.38	166,998,776.00
DISBURSEMENTS.				
1. Ordinary:				
Pay warrants issued	45,936,881.71	44,800,324.47	181,743,825.39	172,731,465.02
Interest on the public debt	403,607.54	393,574.20	5,729,990.87	5,939,112.79
Total	46,340,489.25	45,193,898.67	187,473,816.26	178,670,577.81
Less unexpended balances repaid	1,383,107.33	709,427.97	2,765,666.15	1,813,648.04
Net ordinary disbursements	44,957,381.92	44,484,470.70	184,708,150.11	176,856,929.77

There has been a gradual falling off in customs duties under the Underwood law ever since it went into effect, just as we predicted there would be, and to prove that this is true, and in order to show exactly what has happened, I will give the customs receipts for seven months this year and seven months last year. I do not bring this statement down to the present time or to the end of August, but only to July 31, as that was before there was any war in Europe:

Customs receipts, by months (first seven months calendar years 1913 and 1914), Payne law and Underwood law.

[Daily Treasury statement.]

	1914	1913	Decrease in 1914 from 1913.
January	$23,528,079.83	$29,334,124.09	$5,806,044.26
February	17,609,605.70	27,605,115.83	9,995,512.13
March	25,927,212.90	27,457,489.20	1,530,276.30
April	22,232,766.57	23,693,966.76	1,461,200.19
May	20,800,573.25	20,434,749.21	[1] 365,824.04
June	23,553,447.58	23,668,598.63	115,151.05
July	22,988,465.04	27,806,654.54	4,818,189.50
Total	156,640,148.87	180,000,698.26	23,360,549.39

[1] Increase.

It will be noted by this statement that the customs receipts have been less each month during the present calendar year, except the month of May, over the corresponding receipts for last year for the same period, and that the shortage is not confined to the month of August; yet the President in his message of September 4, in which he asks that additional revenues be provided for the Government, called attention to the loss of customs duties for the month of August, 1914, comparing the receipts with the amount received in August, 1913, stating that they were $10,629,538 less, and said, "It is due in part to the reduction made in the customs duties," and that it was due to the European war. As a matter of fact, the customs receipts for August this year were $11,503,590 less than for August last year, instead of $10,629,538, as stated by the President. If that was a sufficient cause for becoming alarmed and demanding revenue legislation, why was it the President did not demand the legislation last March, when the customs receipts for the month of February were about $10,000,000 less than for February, 1913, the exact difference being $9,995,512? In the month of May it will be noted that the receipts, while a little more than in May, 1913, were only $1,369,212 greater than for the month of August of this year. It would seem as if the war in Europe was seized upon by the President as an excuse for demanding this legislation, which had to come sooner or later, unless there should be a material reduction in our expenses and appropriations.

Under the Underwood law our imports have materially increased, while our exports have steadily decreased, as shown by the following figures:

For July, 1914:	
Imports increased	$20,615,521
Exports fell off	6,851,831
Change against us	27,467,352
For seven months ending July 31, 1914:	
Imports increased	$121,944,698
Exports fell off	126,290,975
Change against us	248,235,673
Balance of trade in our favor first seven months, 1913	308,624,462
Same, 1914	60,388,789
Loss to United States by falling off of balance of trade	248,235,673
In July, 1914, the balance of trade against us was	5,538,344
In July, 1913, the balance of trade in our favor was	21,929,608

This statement shows a balance of trade against the United States of about $250,000,000 in a period of only seven months, necessitating the shipping abroad of that much gold or its equivalent. Is it any wonder that our banks are uneasy and are refusing to make new loans, and that they are building up their reserves? The Secretary of the Treasury would blacklist banks that are seemingly doing only what prudence would suggest under the circumstances, but I do not imagine that he will get very far in forcing them to materially increase their loans, and at rates that he may fix. Banks have been commended in the past for practicing conservative methods during periods of depression and protecting their deposits, but this is the first instance in our history when a great official, the head of the Treasury Department, has seen fit to censure the banks of the country for exercising caution and declining to materially increase their loans when there is an industrial depression—which I believe is due to a mistaken tariff policy—and because of the uncertainty of threatened legislation affecting business that may be enacted, so long as Congress remains in session. The best thing that could happen to restore confidence and help the country at this time, in my opinion, would be for this Congress to adjourn and give business an opportunity to revive and move along with the certainty that for a time at least it will not be menaced by the possibility of destructive legislation.

Our opponents seek to attribute present conditions to the existing war in Europe, and yet they look upon the war as the thing that may save them in the approaching election. While it may afford them a hope, there is little chance for them to realize it. The war abroad undoubtedly does affect business in this country to some extent and has something to do with our present financial condition, but it is not by any means entirely responsible for existing conditions, which would have been as embarrassing in a few months as they are at present, even if there had been no European war.

Our Democratic friends accuse the Republicans and Progressives of being unpatriotic in opposing this measure, which most of them admit is unnecessary at this time, but they forget what happened in 1898, when we were actually at war and at a time just following an industrial depression from 1893 to 1897 that is without parallel in our history. It was not necessary then to levy taxes because the revenues were not sufficient

to meet the ordinary expenses, because the previous year a Republican Congress had repealed the iniquitous Wilson tariff law and had enacted in its place the Dingley law, but it was necessary to provide money to pay our soldiers and maintain our Army and Navy, who were engaged in defending the country against a foreign enemy. What was the attitude of the Democrats in the House at that time? They not only denounced the bill that was presented by the Republicans, but, with the exception of two or three, every Democratic Member voted against it and against the conference report, and among those who so voted were a few distinguished gentlemen on that side of the House who are still here, and among them is our beloved Speaker, who made a speech denouncing the bill and voted against it, as did the distinguished gentleman from Alabama [Mr. UNDERWOOD], who said:

This tax will fall almost entirely on the hard-working and industrious artisans, merchants, mechanics, farmers, and professional men of the country, but not on idle wealth that is protected but never made to pay for the benefits received.

I know its features are partisan and unjust; they will oppress the masses of the people; they are unnecessary, and the same amount of revenue could be raised from sources that would equalize the burdens of taxation and not be felt by the people.

He is now the sponsor for this bill, which is substantially the same as the law enacted in 1898. Following the President's message of September 4 urging this legislation, it was given out by the gentleman from Alabama that the Ways and Means Committee would prepare and report a bill proposing, among other things, to tax freight rates 3 per cent, and it was understood that such a bill had the approval of the President. What happened? A few Members on that side who do their own thinking protested and started the machinery for a caucus, secured enough signatures to a call, and a caucus was held. The slogan of that caucus was to abandon the proposition of taxing freight rates and adopt the revenue bill of 1898. The caucus in short order so decided and instructed the Democratic members of the Ways and Means Committee to prepare a bill accordingly, and now, when we are at peace with all the world, and when no war is even threatened, it is to be jammed through under a drastic rule, without even an opportunity to offer an amendment, and with only a few hours of general debate, and apparently every Democrat ready to vote for it.

The bill, if enacted into law, will not only be oppressive, but an outrage upon the people. That it is necessary to meet a deficit resulting from the war in Europe is only a pretext and is without foundation in fact, as I have clearly shown. I shall vote against it, as I did against the vicious and drastic rule that was adopted making it possible to pass it without so much as giving anyone an opportunity to even offer a single amendment. In this we have another example of Democratic inconsistency.

The gentleman from Alabama [Mr. UNDERWOOD], who is in charge of the bill, and who probably directed the Committee on Rules to report the rule for its consideration, only five years ago, in 1909, when the Payne bill was being considered in the House, in a speech said:

The rules of this House for a hundred years have recognized that when you come to consider a great appropriation bill or a great revenue bill the only way the House can express the sentiments of the country and the Members can express the sentiments of their constituencies is to consider the items contained in the bill item by item. It is impossible to get a consensus of this House or an expression of the opinion of the country by voting en bloc for a tariff bill, as much so as if it was a general appropriation bill.

Consistency is certainly not a virtue with our Democratic friends when they are in the majority and have the power to do what they wish.

Mr. Speaker, for the purpose of emphasizing that the deficiency which the President says exists is not due to the cause that he assigns, the war in Europe, but to the extravagant appropriations passed by this Congress, I propose to discuss the record the Democrats have made in this session of Congress, which is the first regular session since they obtained control of both branches of Congress. I shall also expose their hypocrisy in showing the difference between their platform promises and their performances, and will try to demonstrate that they are incompetent to successfully conduct the affairs of the Nation, as always has been the case when the Democratic Party is in power.

In 1908 the Democratic national platform contained the following declaration:

The Republican Congress in the session just ended made appropriations amounting to $1,008,000,000, exceeding the total expenditures of the past fiscal year by $90,000,000, and leaving a deficit of more than $60,000,000 for the fiscal year just ended. We denounce the needless waste of the people's money, which has resulted in the appalling increase, as a shameful violation of all prudent considerations of government and as no less than a crime against the millions of working men and women, from whose earnings the great proportion of these colossal sums must be extorted through excessive tariff exactions and other indirect methods. It is not surprising that, in the face of this shocking record, the Republican platform contains no reference to economical administration or promise thereof in the future. We demand that stop be put to this frightful extravagance, and insist upon the strictest economy in every department compatible with frugal and efficient administration.

The platform of 1912 said:

We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of the recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a democratic government and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

In view of these two declarations the country had a right to reasonably expect a reduction in the appropriations made by Congress. It will be noted that the platform of 1898 refers specifically to the appropriations made by the Republican Congress in the session which had just ended, naming the amount $1,008,000,000. Now, let us see how faithfully the Democratic Party has carried out its promise with relation to appropriations.

The distinguished gentleman from New York [Mr. FITZGERALD], Democratic chairman of the Committee on Appropriations, in a speech in the House on the 12th of the present month, gave the total appropriations for the session, and no one will question their accuracy. The amount appropriated up to August 31 in the present Congress is $1,089,408,777.26. This does not include the river and harbor bill, which passed the House appropriating $39,408,004, and authorizing $4,061,500 additional contracts, a total of $43,469,504.

It appears from the statement of the chairman of the Appropriations Committee that in the appropriations made for this year the pension bill was reduced $11,150,000, which he says was not brought about by economizing at the expense of those who have borne arms in the service of the Republic, but by diminution of the numbers through natural causes of those carried upon the pension rolls. He also shows that the appropriation for the Panama Canal is only $20,718,000, which is about one-half or less than what it has been in other years, owing to the work of construction being nearly completed. By the reduction in these two appropriations there was $30,000,000 or more which had to be appropriated heretofore that was not required this year, so, naturally, in view of the platform declarations of the Democratic Party in 1908 and 1912 it might be expected that the total appropriations would at least be reduced to that extent, but what are the facts?

The total appropriations for the fiscal year ended June 30, 1913, the last year of the Taft administration, excluding the river and harbor acts, were $988,353,340.41, a difference in favor of the Republican administration of over $100,000,000.

It will be interesting to compare the appropriations for the present and preceding four years, which are as follows:

Total appropriations, excluding river and harbor acts.

1911	$978, 521, 087. 68
1912	995, 799, 462. 72
1913	988, 353, 340. 41
1914	1, 057, 605, 694. 40
1915	1, 089, 408, 777. 26

The Democratic Members in the House can not say that they did not have their attention called to what would happen if they did not follow the recommendations of the Committee on Appropriations in holding down amounts, because on more than one occasion the distinguished chairman, Mr. FITZGERALD, warned them, as did other members of that committee. On April 10 last, when an effort was being made to increase an appropriation over the recommendation of the committee, Mr. FITZGERALD said:

Mr. Chairman, it may seem somewhat strange, but I hope it is not out of place, to remind Members on this side of the House that the Democratic platform pledged us in favor of economy and to the abolishment of useless offices; but it did not declare, Mr. Chairman, that the party favored economy at the expense of the Republicans and the abolition of useless offices in territory represented in this House by Republicans while favoring a different doctrine wherever a Democratic Representative would be affected. In a few months I shall be called upon in the discharge of my official duties to review the record that this Democratic House shall have made in its authorization of the expenditure of the public money. Whenever I think of the horrible mess I shall be called upon to present to the country on behalf of the Democratic Party I am tempted to quit my place. I am looking now at Democrats who seem to take amusement in soliciting votes on the floor of this House to overturn the Committee on Appropriations in its efforts to carry out the pledges of the Democratic platform. They seem to take it to be a huge joke not to obey their platform and to make ridiculous the efforts of the members of our party who do try to live up to the promises they made to the people. * * * My colleagues upon this floor seem either to be so indifferent to a very perilous situation for our party, or else, which I do not wish to believe, have so far forsaken Democratic practices and Democratic principles as not to deserve to continue in control of this Government.

We charged the Republicans for 12 years of my service in the House under Republican administration with being grossly extravagant and reckless in the expenditure of the public money. I believed that charge to be true. I believed that my party, when placed in power, would demonstrate that the charges we had made in good faith were true. We are entitled to the help and to the support of the Members on this

side of the House in honest efforts to carry out the pledges of the Democratic Party, and in our attempts to show that what we charged in order to get into power was true. We have not had that support. Our Democratic colleagues have not given that support to us thus far during this session of Congress. They have voted against recommendations they should not have voted against. They have unnecessarily piled up the public expenditures until the Democratic Party is becoming the laughingstock of the country.

I appeal to them now before it is too late; I appeal to them now before we have gone beyond recall to stop the conduct of which they have been guilty. Do not continue to vote for these improper and improvident appropriations. Those who propose to continue to do so should at least have the courage openly to assert upon the floor of this House that they believe the professions of the Democratic Party have not been made in good faith, that they can not be carried out, and that we are not entitled to power because of those professions.

The distinguished gentleman from Mississippi, a Democratic member of the Committee on Appropriations, during the month of April said:

This is the most outrageously and criminally extravagant Congress that ever sat on the American Continent. I want to apologize to the Republicans for having called them extravagant when they were in control of the House. They were modest in comparison with the appropriations that we are now making.

That no attention was paid to these and other admonitions and remonstrances is apparent by the recklessness that prevailed in the piling up of the appropriations beyond anything ever before conceived of, as shown by the figures that I have given.

The increases in the appropriations made in this Congress are not confined to any one branch of the Government, but to every department; and every appropriation bill, with the exception of the pension bill and the Military Academy bill, which is a bill only carrying about $1,000,000, shows a substantial increase over the appropriations heretofore made. While the Congress is directly responsible for the increases, it is not entirely upon the Congress alone, because the estimates of the administration were greatly in excess of estimates submitted during the Taft administration, and it is to the credit of Congress that the appropriations are less than the estimates. In other words, could the administration have had its way, we would have had still a larger sum appropriated. While the increases in appropriations are due to a large extent to the increasing of the amounts appropriated for general purposes, some of it is due to increases in salaries of officials and the creation of new offices, many of which are useless. We are indebted to the distinguished gentleman from Massachusetts [Mr. GILLETT], ranking member of the Republican minority on the Committee on Appropriations, for enlightening the House by giving in detail the different new offices, with the salaries in each case, that have been created in the present Congress, together with increases which have been made in the salaries of offices heretofore in existence. The list presented by Mr. GILLETT is as follows:

The new banking law creates five new offices with salaries of $12,000 each and increases the salary of the Comptroller of the Currency from $5,000, at which sum it had remained for 50 years, to $12,000 per annum.

The new Trade Commission act creates five commissioners at $10,000 each and a secretary at $5,000.

A new board of appeals, consisting of three members at $4,000 each, is created in the office of the Secretary of the Interior.

For commercial attachés, to be appointed by and compensated at such salaries as the Secretary of Commerce may fix, and a clerk each, at $1,500; and for traveling expenses the sum of $100,000 is appropriated for a year.

The salary of the private secretary to the Secretary of the Treasury is increased from $2,500 to $3,000, which means that the private secretaries to the other nine Cabinet officers must also be increased from $2,500 to $3,000.

A chief of division, created less than a year ago under the income-tax law, is increased from $2,500 to $3,500.

Six Assistant Attorneys General in the Department of Justice have their salaries increased from $5,000 to $7,500.

The salary of the assistant to the Attorney General was increased during the extra session on an urgent deficiency bill from $7,000 to $9,000.

The salaries of our diplomatic representatives to Argentina, Chile, and Spain are raised from $12,000 to $17,500 each per annum, and the three secretaries of the legations to these countries are increased from $2,625 to $3,000 each.

The mission to Paraguay and Uruguay is divided and a new minister authorized, with a new salary of $10,000.

Six Indian inspectors, at a salary of $2,500 each, with a like amount for expenses, for which $30,000 is appropriated. By Executive order these positions are to be filled without requiring compliance with the civil-service law and regulations.

The Democratic House of the last Congress insisted upon abolishing three internal-revenue collectors of the Republican administration at $4,500 each. At this session one of them is re-created, the place to be filled by a Democratic administration. If the office was not necessary to collect revenues then, how can it be needed now, except to meet some political exigency.

In the Pension Office 40 special examiners, at $1,300 each, heretofore employed to facilitate settlement of claims for pensions of old soldiers, and whose appointments were controlled by civil-service law, are abolished. In their places 5 special examiners, at $1,300 each, who are not under the civil service but are political appointments, are provided for.

An effort was made to provide the Secretary of the Treasury with an additional assistant, at $4,500, notwithstanding there are already three Assistant Secretaries of the Treasury, receiving a salary of $5,000 each, and a similar effort was made to provide two additional clerks in the office of the Secretary of State, with an additional assistant to the Secretary, at $4,500. These were provided by the Senate, but, to the credit of the House conferees, were all eliminated in conference.

The gentleman from Massachusetts also called attention to the way economy has been practiced at the other end of the Capitol since the Democrats came into control of the Senate by showing that there have been added to the rolls 35 additional clerks, increasing the pay roll $49,380.

Mr. GILLETT also called attention to the Democratic declaration for "reduction in the number of useless offices," and commenting thereon said:

I can think of no office that was more useless than was the special resident commissioner of the Lincoln Memorial Commission. It was created as a sinecure for a venerable Republican when he retired from the Senate, broken with age, supposed to be penniless, having given his best years to the public service, and obviously with but a short lease of life. The law was so phrased that the office terminated upon his death. Within less than a year he died. Was the office allowed to lapse? Was the promise to reduce the number of useless offices kept? No; this party of economy revived the law and perpetuated the sinecure, only substituting the name of a popular Democrat who had once been a Senator, had since held a very lucrative office, and who I hope may live long, as he apparently will, to draw his comfortable salary.

He said further, commenting upon what was done to provide for the first friend of the distinguished Secretary of State and the editor of his newspaper, the Commoner:

A celebration of the opening of the Panama Canal was to be provided. There were plenty of officials already in the service to perform all the duties involved, both practical and ornamental, but an ex-editor of the Commoner, who had been drawing a salary of $14,000 per year under this administration, was about to lose his office because by law it terminated on April 1. An appropriation was so arranged as to give him a superfluous place on the commission at the compensation of $10,000 per year. This commission was not created until May 20, but as his other office terminated April 1, President Wilson considerately made an official order that his salary should date back and begin on April 1, although it was not until May 20 that the office was created. Thus he was saved the misfortune of a hiatus in his Government salary. I believe he resigned the office to run for governor of his State, but the incident illustrates the eagerness of the President and Congress to carry out their platform and reduce useless offices.

He cited another instance of the insincerity of the Democrats in their professions of economy by saying:

The last Republican Congress increased the salary of the Secretary to the President to $7,500. That increase was fought by the Democratic Party here with a vehemence and fury quite disproportionate to the expense involved, and a casual observer would have thought that there could be no question of their intense hostility to the measure and that they really considered it an inexcusable extravagance. In the next Congress the House was Democratic and the Senate Republican, and a compromise was reached that the salary should continue at $7,500 while that administration continued, but that on the 4th of March it should again revert to its former amount of $6,000. At that time no one knew whether there would be a Republican or a Democratic President on the 4th of March, but the Democrats were loud in their professions that if they won the salary should remain at $6,000. They won; and when faced with the actual fact that they were providing for one of their own, the same Democratic House ate their words, belied their previous action, and gave their own party official the $7,500 which they had bitterly antagonized for ours.

I have already stated that whenever the Democratic Party has been in control of the affairs of the country it has demonstrated its incompetency and inability to rise to the occasion, and this is shown in the present administration by the record that has been made for extravagance and by the failure of the majority in Congress to enact the appropriation bills within the fiscal year. During the 14 years that the Republican Party controlled both branches of Congress the annual appropriation bills were enacted into law before the beginning of each fiscal year, thereby affording each department of the Government to know definitely the amount that it would be authorized to expend for the year, which is necessary in order to have a business administration. During the first year that the Democrats were in control of this body nine of the great appropriation bills were not passed until the second month of the fiscal year had nearly expired. During the last session of the Sixty-second Congress, which terminated on March 4, 1913, two of the appropriation bills, namely, the Indian bill and the one providing for sundry civil expenses, failed to become a law

within the life of the Congress. This would have necessitated an extra session of the Sixty-third Congress had a special session not been called to consider tariff legislation. This Congress has been continuously in session since April 7, 1914, and still four of the large appropriation bills failed to get through until several weeks after the fiscal year had commenced. This certainly demonstrates the inefficiency of the Democrats and the unbusinesslike manner in which they transact public business. It is, however, in accord with the record of the party, as it appears that during the first year of the last Democratic administration 20 years ago 12 of the appropriation bills failed to be passed until some time after the beginning of the fiscal year.

History seems to repeat itself. In 1893, when the Democrats were in control, Congress had to be in session the entire year in order to do its work. Now, 20 years afterwards, we are again obliged to be in session the whole year round. The gentleman from Massachusetts [Mr. GILLETT] called attention to the significance of this incident; and in speaking of it, said that in the Fifty-third Congress, 20 years ago, the Democrats had a majority of 80 in the House, and that they were unable to keep a quorum without docking the Members' pay for absences; and that now, when they have a majority of 141, they are again obliged to dock the Members in order to keep them here. He stated, and no one has disputed his statement, that from June 5 until the resolution was adopted directing the Sergeant at Arms to deduct from the salaries of the absentees, that the Democrats at no time had a quorum present, notwithstanding their majority of 141.

Mr. Speaker, in conclusion I want to again protest against the enactment of this unnecessary and burdensome measure that proposes to take from the pockets of the people $105,000,000 annually when there is no necessity for it. It would seem, in view of the facts with relation to our finances as they appear from the Treasury statement, and because there is ample opportunity by the practice of rigid economy on the part of the administration to supply any deficiency that may exist for the present, that this bill ought to be defeated. I know that it is hopeless to expect that it will fail of passage in the House, but when it goes to the other end of the Capitol, where there is opportunity for consideration and debate, and when the country will have a chance to be heard, I hope that it will be defeated; but if not, that it may at least be amended materially in some of its provisions so that the tax will be more equitably distributed.

The War Has Unified Americans.

EXTENSION OF REMARKS

OF

HON. CORDELL HULL,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 30, 1914.

Mr. HULL. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following editorial from the Washington Herald of September 30, 1914.

The editorial is as follows:

[From the Washington Herald, Wednesday, September 30, 1914.]

"THE WAR HAS UNIFIED AMERICANS.

"At such a time as the present the sterling qualities of the American people come to the front. It is a time of crisis in our business affairs of peculiar nature that has never been seen before in the country's history; and this statement is none the less true because it is a crisis that was entirely unforeseen and is even now not entirely appreciated by the mass of people. The appalling war that is being fought in Europe affects the United States in a degree only second to that with which it affects the interests of the European nations. Whoever wins or loses as a result of the war, an incalculable destruction of the world's accumulated wealth will take place; and of this loss the United States must expect to bear a very considerable share. This is an unpleasant fact, but it is a fact. There is no use of anybody's trying to avoid it. To look at the matter in its nearest and most obtrusive aspect, Europe holds perhaps $5,000,000,000 worth of the demand notes of this country in the shape of stocks, bonds, and other evidences of indebtedness, and whenever the stock exchange opens in New York a great portion of these notes will be presented to us for payment. These will be presented not because the holders of the notes think that American business affairs are bad, but because they desire to raise money for their own needs; or, in other words, to replace the wealth that has been destroyed on the battle fields of France and Belgium. They will ask for this money, and they will ask us to ship it to them in gold.

"It may be that when the stock exchange opens—and nobody knows whether or not it will open before the war is ended—these demands will not be as great as is now threatened. We can not tell about that exactly, but we must be prepared for the demands, whatever they are. Therefore, it is something from which everyone should derive hope and courage rather than dismay, that the people are bracing themselves to stand the shock in the best possible manner. Political differences are being forgotten; radical propositions which were so common a few months ago, looking forward to a destruction of wealth on our own account, are no longer agitated; extravagant schemes of national expenditure are being abandoned; raids upon the rich are no longer advocated as a means of bringing the millennium; and business men and stockholders in home industries, who have been buffeted and batted for so many years, are temporarily left in peace.

"One of the most gratifying signs of this tendency has been the general rallying of hands in support of our present national administration. Every intelligent and self-respecting man feels that now is the time to stand by the Government, whether he thinks the Government is worthy of just criticism in many respects or not. He feels, and feels rightly, that minor differences of opinion should be abandoned and that he should give his ungrudging support to those who stand on his own country's battle line and are charged with the responsibility of taking care of the great interests common to all. Nevertheless, while we think that the underlying motive which has inspired the general praise of President Wilson's attitude and conduct in recent months has proceeded from the source described, we are bound to say that, in our judgment, most of this praise has been deserved for intrinsic reasons. The President has been calm, patient, and farseeing when other people were nervous, excited, and perturbed. He curbed the thoughtless purposes of those who would make the Government's necessity for more revenue an excuse for an additional and unjustified increase of the income tax. He promptly recognized the unwisdom and unfairness of imposing a tax on railway freight revenues. He was quick to recognize that there should not be a moment's delay in having recourse to the provisions of the Aldrich-Vreeland emergency currency act, and he unhesitatingly asked the advice of men prominent in the business and financial world as to the wisest course to pursue.

"But we trust we shall not be considered as at all hedging our position of unflinching support of the President when we refer to the very obvious fact that, from one point of view, the war has been a lucky development for his administration. The tariff policy of the Democratic Party, to which Mr. Wilson committed himself, has turned out disastrously, and the war has served to obscure the fact. This tariff policy has resulted in a stupendous increase of importations of foreign merchandise—merchandise which was previously purchased from domestic producers—and all without any compensating advantage to us. In the fiscal year from June 30, 1913, to June 30, 1914—that is to say, long before the European war was ever thought of—our importations of foreign merchandise increased nearly $114,000,000; and the fact is, summing up the mass of figures on this subject, that in the foreign-trade operations of the country since January 1 alone, the balance in our favor has been $318,000,000 less than in the year preceding. Despite the largely increased value of our imports of merchandise, the decrease in the rate of duties collected under the new tariff was such that the gross amount of duties collected by the Government fell off over $26,000,000; and as the expenses of the Government increased in the same period nearly $18,000,000, there was a shortage of nearly $44,000,000 in Government revenues before July 1, or nearly a month before the European war broke out.

"No one will deny that the upsetting of our foreign trade, caused by the war, would have necessitated the raising of additional money for Government purposes, even had the Aldrich tariff law been in existence instead of the Underwood law which followed it; but, in all reason and justice, we desire to point out that, even if there had been no war, the Underwood tariff law would have produced and was producing a large Government deficit."

Mr. HULL. Mr. Speaker, the foregoing article from a leading Republican paper presents, in striking contrast with the attitude and utterances of Republicans in Congress, the serious and far-reaching effects of European war conditions upon the financial, commercial, and governmental affairs of the United States, save in one aspect to which I wish to call attention and correct. The editorial at one point falls into the patent error

so generally propagated by Republicans in Congress—that the Underwood revenue law had broken down before the war commenced. This wholly erroneous view is based upon a comparison of customs receipts alone derived from the Underwood law during the first nine months of its existence and from the Payne law during a corresponding period of the previous year. To make this comparison with any semblance of fairness it is necessary to include with the Underwood tariff receipts the amount of income tax levied for the express purpose of displacing a corresponding amount of the Payne tariff law. The excess of income tax receipts after deducting the amount that would otherwise have been derived from the Payne corporation excise tax law is $42,000,000 for the fiscal year 1913. This amount added to the yield of the Underwood law for the fiscal year 1913 offsets by more than $16,000,000 the revenue loss of the customs provision of the Underwood law, as it was intended to do. The fact must be borne in mind that imports would have been much less had the Payne law continued in operation and customs receipts correspondingly reduced. The Payne rates can not with any fairness be applied to the imports under the Underwood law.

The conclusion from all the facts that the Underwood law is a better revenue producer than the Payne law can not be escaped by the best juggler of figures. The most extreme view that the opponents of the Underwood law can present is that if this law broke down as a revenue producer before the war, still greater would have been the breakdown of the Payne law had it continued in operation. The Underwood law paid all current expenditures and $34,000,000 for the Panama Canal, whereas the Payne law had the help of two canal bond issues, and without which it would have produced a deficit for three of the four years of its existence.

Emergency Revenue Legislation.

REMARKS

OF

HON. WILLIAM L. LA FOLLETTE,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. LA FOLLETTE. Mr. Speaker, Gen. William T. Sherman has been accredited with the saying, "War is hell." I am inclined to think that the American people will have a like opinion of this revenue measure should it become a law.

Some of my colleagues who are opposing this bill have intimated on the floor that it is almost incredible to think it necessary to enact a law of this character at a time when we are at peace with all the world. We are at peace, and I sincerely hope we will remain so; nevertheless I do not consider the calling of this bill a "war measure" a misnomer. It is a war bill the enactment of which has been made necessary by the ruthless onslaughts made on our commercial activities by the poorly balanced, noneconomic, trade-paralyzing law known as the Underwood-Simmons Tariff Act.

Our industries put up a brave fight against this act, but have been compelled to give ground slowly and steadily from the day it was enacted into law, many of them being sorely wounded and large numbers of them placed totally hors de combat by its merciless assaults.

President Wilson's "new freedom," whereby our manufacturers were to be enabled to capture the markets of the world, has resulted in our industries being captured to such an extent that our foreign trade declined since its enactment more than $210,000,000, while our imports increased more than $102,000,000; and despite this increase under this poorly balanced tariff enactment our revenues have fallen off at the customhouse more than $23,000,000 since this law was enacted.

The month of February, 1914, showed nearly as much decrease in revenue—$9,995,512—as did the month of August—$10,629,538—which month's decrease was pointed out by President Wilson as having been caused by the European war, and on which he predicated his request for an additional revenue-raising enactment. The fact is the extravagant way his "party-controlled Congress" has appropriated the people's money—already millions of dollars above that of any other Congress in our history, with more than five months yet to pile up additional appropriations—makes it apparent that it would only have been a matter of a few months anyhow before additional revenues would have had to be provided to take care of the running expenses of the Government.

The general supposition was that the first act would be the selling by the Treasury as needs developed of the available Panama Canal bonds, $240,569,000 worth of which are still authorized for sale under the law.

But no; the President, who is one of the prominent historical students and writers of the day, well knew that there had never been a Democratic administration that did not have to sell bonds during its life to help defray the expenses of the Government, and he saw in this European war an opportunity to cover up Democratic revenue failure under a claim of war necessity, levying additional internal-revenue taxes on the people to supplement Treasury needs and avert during his administration the selling of bonds.

Mr. Speaker, I think the President of the United States made a mistake when, appealing to their patriotism, he asked the people of the United States to assume this added burden of taxation at a time when over this broad land there is general commercial depression brought on by unwise tariff enactment put on the people under the mask of a blessing—and I will give to the President and to you gentlemen the credit of the "hope" that it would so prove; a forlorn hope, indeed.

The railroads of the country, on account of falling off in revenues caused by decreased traffic brought on by closed factories and curtailed freight receipts from every section of the United States, all sections being hurt to some degree and some more than others by the Underwood tariff bill—as I said, the railroads are asking that they be allowed to raise freight rates to keep from going into bankruptcy, and the general rumor is that this raise is to be sanctioned by the President. The railroads have been compelled to curtail their expenses, discharge thousands of both common and skilled laborers, allow their roads to run down in upkeep, and have been unable to replace worn-out equipment—cars of all kinds, as well as locomotives. The locomotive works of the country have decreased the number of their employees by more than 50 per cent since January, 1913, and thousands of other industries more than that.

The trust barons, whose products have been placed on the free-trade list under the Democratic platform enunciated at Baltimore—that is, the only trust barons they succeeded in finding, the American farmers—lost thousands of dollars on account of the importations of corn, oats, and barley into this country, also butter, eggs, potatoes, and many other commodities from abroad, and yet the reduced cost of living which you promised to the people has not materialized.

Your "new freedom" has given countless thousands of our citizens freedom from work and holidays in perpetuity and left our people but ill prepared to assume additional burdens of taxation.

Mr. Speaker, I think it would have been much better to have sold the bonds and relieved a distressed people from this added burden; then in good time—when the party of progress and advancement has been restored to power by a people chastened by Democratic mismanagement—the Republican Party will, by a well-balanced and sane tariff enactment, take care of the bonds you would issue and our people again be prosperous and happy.

There was a total of $375,200,980 worth of canal bonds authorized to be applied on the building of the Panama Canal, which was estimated to cost $400,000,000. The canal has been completed for a little less than the estimate. It has been nearly paid for, most all of it while the Republican Party was in power. They paid more than $200,000,000 on it out of the general revenues of the Government, only issuing $134,631,980 worth of the bonds authorized. You are proposing to put this direct tax on the people to pay the $20,718,000 authorized by this Congress to be expended on the Panama Canal instead of paying either by surplus revenues or by bonds, as provided by law.

I think the American people, and especially those who live in the Pacific Northwest, will appreciate this. You are not only going to ask them to help pay these millions you have appropriated for the Panama Canal by direct taxation, but the President demanded and you passed an act repealing the "free-tolls" feature of the Panama Canal act, thus taking away from the people of the Pacific Northwest the only hope they had of regulating the freight charges of the transcontinental railroads. They will surely appreciate this direct tax to help pay for this canal, whose benefit to them you have made abortive.

Mr. Speaker, when the President delivered his message he stated that—

> The Treasury itself could get along for a considerable period, no doubt, without immediate resort to new sources of taxation. But at

what cost to the business of the community? Approximately $75,000,000, a large part of the Treasury balance, is now on deposit with national banks distributed throughout the country. It is deposited, of course, on call. I need not point out to you what the probable consequences of inconvenience and distress and confusion would be if the diminishing income of the Treasury should make it necessary to rapidly withdraw these deposits; and yet without additional revenue that plainly might become necessary—and we ought not to borrow; we ought to resort to taxation. To sell bonds would make a most untimely and unjustifiable demand on the money market—untimely because this is manifestly not the time to withdraw working capital from other uses to pay the Government's bills.

Mr. Speaker, we will stop here and endeavor to analyze this remarkable argument. The Government should not withdraw its $75,000,000 loaned to national banks subject to call because, forsooth, it might work a hardship on the privileged banks which hold these Government deposits at 2 per cent, which they are in turn reloaning to their customers, who are asked to pay these direct taxes, at from 6 to 8 per cent, and in some cases, probably, 10 per cent, for the privilege of doing business with it and thus be enabled to pay this war tax. Yes; war is what Gen. Sherman said it was.

Yet on June 30, 1914, there was on deposit in the national banks throughout the United States $6,268,000,000, and the Government deposits in national banks on that date amounted to $66,000,000, or about 1 per cent of the total. How preposterous to even hint that the withdrawal of the Government's call deposits could cause "distress and confusion" even though all called at once, which would not be at all necessary. The banks holding this money well know it is subject to call, and if they have not kept themselves in shape to pay when called are unworthy the deposits and unsafe custodians of the people's money.

The President has said:

To sell bonds would be to make a most untimely and unjustifiable demand on the money market—untimely because this is manifestly not the time to withdraw working capital from other uses to pay the Government's bills.

Mr. Speaker, I have not been a college professor, hence that may be the reason why I can not differentiate between the taking of working capital from the bankers and investment brokers of the country and the taking of working capital from the pockets of the people. It is the business of the bankers and investment institutions of the country to loan money, buy bonds, and so forth, and they well know that money invested by them in Government bonds is speedily disbursed by the Government and is as speedily returned to their strong boxes as deposits and profits on transactions, but that money taken from the pockets of the people is gone from them never to return. How solicitous you are for the welfare of the banker and the broker and how callous to the welfare of the people. How different from that Democratic President, James Buchanan, who found his administration similarly embarrassed by unwise tariff legislation. President Buchanan had this to say of the condition of the country and the distress of the people:

We have possessed all the elements of material wealth in rich abundance, and yet notwithstanding all these advantages our country, in its monetary interests, is at the present moment in a deplorable condition. In the midst of unsurpassed plenty in all the productions of agriculture and in all the elements of national wealth we find our manufactures suspended, our public works retarded, our private enterprises of different kinds abandoned, and thousands of useful laborers thrown out of employment and reduced to want. The revenue of the Government, which is chiefly derived from duties on imports abroad, has been greatly reduced, whilst the appropriations made by Congress at its last session for the current fiscal year are very large in amount.

Under the circumstances a loan may be required before the close of your present session; but this, although deeply to be regretted, would prove to be only a slight misfortune when compared with the suffering and distress prevailing among the people. With this the Government can not fail deeply to sympathize, though it may be without the power to extend relief.

You will see that President Buchanan did not hint at levying any direct taxes against the American people, whose factories and industries had been similarly affected by Democratic tariff legislation. He said that the making of a loan, while to be regretted, would be "only a slight misfortune when compared with the suffering and distress prevailing among the people. With this the Government can not fail to deeply sympathize."

Mr. Speaker, President Buchanan evidently had not realized that the vision of people without work, idle factories, and hunger and want was only a creation of his imagination, a "psychological condition"; that the hunger and want, distress and suffering among the people in the industrial centers of our country were only hypothetical and not real. President Buchanan evidently was not a philosopher, as is his successor who now occupies the White House, and was really distressed about the condition of the people. His successor is distressed for the especially favored banks, which might be discommoded by the withdrawing of $75,000,000 of the people's own money that these banks are now using at 2 per cent interest, which money could be applied to defray the expenses of the people's Government and thus relieve them from this additional burden of taxation.

Mr. Speaker, the President of the United States said that approximately $75,000,000 is now on deposit with the national banks distributed throughout the country. He gave the Congress no information as to how widely it was distributed, nor in what amounts in the various States. Several gentlemen on the Republican side of the Chamber have endeavored to ascertain the scope of this distribution from the Treasury Department, but have signally failed in their efforts. Under the circumstances, are they not justified in the supposition that while the money may be widely distributed it may only be in comparatively small amounts throughout the country in general, and that the larger part of it is in the great money centers, in the hands of investment banks—and some of our national banks could be so classed—and has been used largely to buy stocks and bonds dumped into this country from troubled Europe, bought at their own price, and with the Government aiding them, to hold them until times become settled again, when they will be enabled to add large profits to their business at the expense of the people called on to pay this tax? Congress has not been given this information. Why not?

Mr. Speaker, I am against the levying of this revenue measure against the people at this time. I think it unwise and unnecessary. What we want is economy in Government, curtailment of expenses, and wise and sane legislation that will lighten the burdens of the people instead of adding to them. I very much fear, though, that the country can not expect that from you gentlemen constituting the majority in this Congress. Your party has always been "long" on promises and "short" on performances, and it is easier for a leopard to change his spots than for you to change your false economic policies.

Out-Heroding Herod.

"Then Herod sent forth and slew all the children that were in Bethlehem, and in all the coasts thereof. Then was fulfilled that which was spoken by Jeremy, the prophet, saying, 'In Rama was there a voice heard, lamentation, and weeping, and great mourning, Rachel weeping for her children, and would not be comforted, because they are not.'"

Certain States of the South to-day tolerate conditions which out-Herod Herod. He killed swiftly and without pain; the child-snatchers of the southern mills torture before they kill. He killed the children of a tiny province; their victims are torn from a great section of a great country. He killed the body only; they too often kill mind and soul as well.

EXTENSION OF REMARKS

OF

HON. JOHN JACOB ROGERS,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 29, 1914.

Mr. ROGERS. Mr. Speaker, on July 8 last I introduced in the House of Representatives a joint resolution proposing an amendment to the Constitution of the United States to the following effect: "The Congress shall have power to regulate throughout the United States the employment of women and of persons under the age of 21 years." This resolution was referred to the Committee on the Judiciary, and is still pending in that committee.

It may not be inappropriate to set forth some of the considerations which have led me to believe that nothing short of an amendment to the Constitution of the United States will adequately remedy the conditions attending the employment of women and children now prevailing throughout the United States.

At the present time—and indeed throughout our history as a Nation—it rests with the several States to determine what restraint, if any, shall be imposed either on the employer or the employee, or both, in entering into and continuing in operation the contract of employment. This power is vested in the States, because a part of the general police power and because never withdrawn from them by the Federal Constitution.

With 48 Commonwealths, each in this particular respect entirely independent of every other Commonwealth as well as of the Nation, it is not surprising that a vast divergence of labor-protecting legislation exists. Different States, like different individuals, vary widely in their point of view as to what constitutes necessary and proper protection of the laboring classes. Massachusetts has of late years deservedly achieved the reputation of being among the two or three most enlightened and

progressive States in respect to labor legislation. Other States are equally conspicuous for their retardation in this respect.

It is perhaps not material to discuss the causes which result in this variance; the problem is before us, and demands a solution. In pointing out in some detail the precise differences between the group of States of which Massachusetts is typical and the group of States at the other extreme in labor legislation, I am especially anxious to avoid even the semblance of sectional feeling. This is solely a question of fact; and in developing my arguments I shall strive throughout to rest every assertion I make, not upon the belief or opinion of any individual, but upon statistics derived at first hand from authentic and official publications readily available to any who may care to examine them.

Before setting forth the specific respects in which a small group of States—of which North Carolina, South Carolina, Georgia, and Alabama are typical—lags far behind the advanced group, it may be profitable to consider the increased importance of the former in the manufacturing world.

These four States have during the last decade or two been forging ahead very rapidly indeed in this respect. Like Massachusetts, they are primarily manufacturers of cotton goods. The last census shows that Massachusetts is the first State in the Union in value of its cotton-manufacturing products, with an output of $180,462,000, representing 29.7 per cent of the total output of the United States. North Carolina, the second State in the Union in value of cotton-manufacturing products, had an output of $72,680,000, or 11.6 per cent. South Carolina, the third State in the Union in this respect, had an output of $65,929,000, or 10.5 per cent. Georgia, the fifth in rank, had an output of $48,036,000, or 7.6 per cent. Alabama, the ninth in rank, had an output of $22,211,000, or 3.5 per cent.

Stating these figures in another way, the three States of North Carolina, South Carolina, and Georgia had a combined output of cotton manufactures somewhat larger than that of the Commonwealth of Massachusetts, and consequently contributed a somewhat greater percentage than did Massachusetts to the total of cotton manufactures produced throughout the United States. If we include Alabama, the preponderance is, of course, much more marked. It is plain, then, that a State like Massachusetts can no longer fail to take account of the volume of the cotton manufacturing turned out by the textile mills of the Southeastern States.

A more illuminating standard of comparison is deducible from the fact that in the decade from 1900 to 1910, while the value of Massachusetts cotton manufactures was increasing 67.8 per cent, that of North Carolina was increasing 156.2 per cent; of South Carolina, 121.8 per cent; of Georgia, 160.3 per cent; and of Alabama, 172.4 per cent. In other words, these four States of the Southeast are growing, so far as the cotton-manufacturing industry is concerned, from two to three times as fast as is Massachusetts.

What is true of cotton manufacturing is true also of manufacturing in general. In the decade ending in 1910 Massachusetts showed an increase in value of all manufactured products of 64.2 per cent, while the corresponding figures for North Carolina are 154.1 per cent; South Carolina, 112.3 per cent; Georgia, 114.6 per cent; and Alabama, 102.4 per cent. The percentage of increase in several of the other Southern States is still larger, one in particular showing an increase of 560 per cent.

Perhaps a still more accurate basis for comparison of the cotton-manufacturing development of the several States is afforded by an examination of the number of spindles therein. This is graphically portrayed by the following table:

Spindles.

	1890	1900	1910
Massachusetts	5,872,852	7,931,671	9,637,601
North Carolina	344,606	1,137,328	2,958,235
South Carolina	332,784	1,436,969	3,760,891
Georgia	445,452	882,321	1,774,967
Alabama	79,362	419,968	913,503
	1,202,204	3,826,586	9,407,596

In other words, while Massachusetts in the 20 years from 1890 to 1910 did not quite double its number of spindles and in the last decade increased only 21.5 per cent, North Carolina increased nine times in the 20 years and 160.1 per cent in the 10 years; South Carolina, twelve times in the 20 years and 161.7 per cent in the 10 years; Georgia, four times in the 20 years and 113.3 per cent in the 10 years; and Alabama, eleven times in the 20 years and 117.5 per cent in the 10 years. All four States taken together have a number of spindles about the same as those of Massachusetts, although they had only one-fifth as many in 1890; their total for 1910 is eight times that of 1890.

As indicative of the fact that Massachusetts was not unduly backward in percentage of increase as compared with its neighboring States, it is interesting to notice that the percentage of increase in Maine for the decade ending 1910 was 21.3; for New Hampshire, 6.1; for Rhode Island and Connecticut, 20.3 each; thus Massachusetts had the largest percentage of increase in New England.

Taking the increase of spindles in the United States as a whole, there were in 1890, 14,384,000, and in 1910, 28,178,000—less than double the figure of 20 years previous.

The South Atlantic and South Central States had 1,779,000 spindles in 1890 and six times as many—10,553,000—in 1910. All the rest of the United States had 12,604,000 in 1890 and less than one-half again as many—17,625,000—in 1910. Thus while the Southern States had only about one-eighth of the spindles in the United States in 1890, they had about two-fifths of them in 1910.

At the risk of being wearisome I have set forth at some length these figures, which show beyond question that from year to year the South is procuring a larger and larger proportion of the manufacturing business of the United States, especially of cotton manufacturing. On the other hand, Massachusetts, which may be taken as typical of the States of the North, has gotten a smaller and smaller share at every census since 1850. Its share of the total of 1850 was 15.5 per cent and of 1910, 7.2 per cent. Strangely enough its proportion of the wage earners of the United States is also smaller to-day than in earlier years.

A State can not complain if it is fairly and squarely outdistanced in keen competition for the business of the Nation and of the world. Competition is necessarily keen, and no one can complain provided it is also fair. Massachusetts and New England as a whole are manifestly being outstripped to-day by the Southern States in the race for industrial supremacy. The only question which under these circumstances Massachusetts has the right to ask of its rivals is "Are you competing fairly?"

It is human nature on the part of every community and State and Nation to strive to win the prize. There is no doubt that the States of the Southeast are keenly alive to the possibilities of the hour and are straining every nerve to reap the fullest harvest. They are not to be criticized in this, provided only, as I say, they live up to the ideals of a civilized nation in the methods which they pursue. I have hitherto alluded to a remark made on this floor by the gentleman who is generally expected to be the majority leader in the next House. He is from North Carolina, and in discussing the textile situation he spoke as follows:

> We in the South intend to make the New England mills come down and put their mills there or else go out of business.

That was a straightforward utterance, and the gentleman who made it can not be accused of seeking to fight in the dark or of failing to have the personal interest of his constituents at heart. But at the same time it is hardly to be expected that the great States of the North, dependent as they are, in large measure, upon the prosperity of the textile industries there, should cooperate with the gentleman from North Carolina as he seeks to achieve his purpose. Rather should we, while ourselves living up to the rules of the game, insist that our rapidly growing rivals on the South Atlantic coast shall also conform to those rules which the enlightened minds of the Nation, whether resident in the North or in the South, have come to accept as representative of the standard of decency and right living.

We have now reached a point where it is perhaps desirable to consider what are the rules of the game as to-day interpreted by the different participants in it. These rules, of course, are the laws passed by the different States—which, as I said at the outset, vary widely from one another—regulating the terms and conditions of employment.

It will be observed that my resolution gives Congress power to legislate only for women and children. It says nothing about adult males. The reasons for this distinction are perhaps obvious, but may be stated substantially in the words of Secretary William B. Wilson, of the Department of Labor, with whom I discussed this very resolution before introducing it. After making it plain that he was speaking for himself, and not for the administration, he said, in substance, that legislation of this sort, while in his opinion manifestly desirable, was desirable only in so far as it covered the "wards of the State,"

It would for many reasons, he thought, be unwise to make it applicable to adult males, for so to do would curtail the value of individual effort and would tend to prevent the worthy and able man from mounting to that position in the world to which his merits entitle him. There may be some question whether, assuming the contention of Secretary Wilson is correct, the constitutional amendment goes too far in including women, on the ground that in a large and rapidly increasing portion of the United States they have already ceased legally to be "wards of the State." I have deemed it proper, however, to include them in this legislation. Whatever the law may say, it can surely never come to pass that women will cease to constitute the physically weaker sex, and hence the sex more deserving of especial protection.

In my analysis of the existing laws of the States with which I am especially concerned, I shall limit myself to the briefest possible synopsis of the statutory provisions affecting the employment of women and children.

MASSACHUSETTS LAWS.

Employment forbidden in any occupation during school hours or between 6 p. m. and 6.30 a. m. until the age of 14 years is reached.

No employment under 14 in any factory; workshop; manufacturing, mechanical, or mercantile establishment; barber shop; bootblack stand; public stable; garage; brick or lumber yard; telegraph, telephone, or messenger office; construction or repair of buildings; or in tenement or other houses. No employment in any of the foregoing occupations under 16 more than 6 days in any one week, nor more than 48 hours in any one week, nor more than 8 hours in any one day, nor between 6 p. m. and 6.30 a. m.

No employment under 16 in any factory, workshop, manuracturing, mechanical, or mercantile establishment unless applicant has age and schooling certificate authorizing employment.

No employment under 16 upon 21 specified dangerous machines, nor in any hazardous occupation, nor in other occupations dangerous to health or morals.

No employment under 18 in 14 specified occupations regarded as extrahazardous physically or morally.

No employment under 21 in connection with the sale of alcoholic liquors.

No employment of boys under 18 nor of girls under 21 in occupations first listed more than 6 days a week, nor more than 54 hours a week, nor more than 10 hours a day, nor between 10 p. m. (6 p. m. for textiles) and 5 a. m.

No employment under 21 in any factory, workshop, manufacturing, mechanical, or mercantile establishment unless certificate as to age and ability to read and write is on file.

No employment of any child under 18 nor of any woman in any factory or workshop or in any manufacturing, mechanical, mercantile, telegraph, telephone, express, or transportation establishment more than 10 hours a day or 54 hours a week, nor of any woman nor of any child under 21 between 10 p. m. (6 p. m. for textiles) and 6 a. m.

Compulsory schooling for all between 7 and 14, and until 16 unless able to read, write, and spell in the English language. Free schoolbooks for everyone.

Various statutes looking to the protection of health, life and limb, and morals of women and children having employment; especially noteworthy is an elaborate workmen's compensation act, compensating injured employees irrespective of negligence.

NORTH CAROLINA LAWS.

No child under 12 to work in any mine, factory, or manufacturing establishment, nor under 13 in factories except as apprentices.

No child under 16 to work in any mill, factory, or manufacturing establishment between 9 p. m. and 6 a. m.

Children between 8 and 12 required to attend school four months a year, except that if a child lives 2½ miles from school, if extreme poverty makes his services "necessary for his own support or the support of his parents," or if "unable to provide the necessary books and clothes," the child need not attend school. In other words, the child is excused in the very cases where there is the greatest need of schooling.

"Not exceeding 60 hours shall constitute a week's work in all factories and manufacturing establishments. No person under 13 years of age shall be required to work in such factories or establishments a longer period than 60 hours in one week: *Provided*, That this section shall not apply to engineers, firemen, machinists, superintendents, overseers, section and yard hands, office men, watchmen, or repairers of breakdowns."

A school term consists of six months "or as nearly as said funds will provide." Schoolbooks are free only in 1 county out of 100 in the State, and then only for very poor children who comply with certain elaborate requirements.

No workmen's compensation act.

SOUTH CAROLINA LAWS.

No employment under 12 in any factory, mine, or textile establishment.

Women in mercantile establishments not to work more than 60 hours a week, nor more than 12 hours in one day, nor later than 10 p. m.

No employment in any cotton or woolen mill more than 60 hours a week or 11 hours a day, except to make up lost time and except in the case of mechanics, engineers, firemen, watchmen, teamsters, yard employees, or clerical force. No employment between 8 p. m. and 6 a. m. under the age of 16 in any factory, mine, or textile establishment, except to make up lost time.

No workmen's compensation act.

GEORGIA LAWS.

Employees not required to work in cotton or woolen manufacturing establishments more than 60 hours a week, except to make up lost time, and except in the case of engineers, firemen, watchmen, mechanics, teamsters, yard employees, clerical force, and all help that may be needed to clean up or repair machines.

No child under 10 years of age shall be employed or allowed to labor in or about any factory or manufacturing establishment within this State under any circumstances.

The minimum is 12 unless the child is an orphan and has no other means of support, or unless an aged or disabled father or widowed mother is dependent upon him. This provision obviously lends itself readily to evasion. The minimum is 14 unless the child can write and has attended school.

No employment under 21 in manufacturing establishments or machine shops, except between sunrise and sunset. In the case of children under 14, a prohibition to work between 7 p. m. and 6 a. m. in factories or manufacturing establishments.

No workmen's compensation act.

ALABAMA LAWS.

No employment under 12 in any mill, factory, mine, or manufacturing establishment.

Sixty-hour week in mills, factories, and manufacturing establishments for children under 14.

Prohibition to work under 16 in mills, factories, or manufacturing establishments between 7 p. m. and 6 a. m.

No workmen's compensation act.

IN GENERAL.

Summing up the statutory situation throughout the United States, it may be broadly stated that the following points deserve especial emphasis:

First. Although 40 out of 48 States prohibit child labor under 14 in mills and factories, including all 6 New England States, not one of the 4 Southern States just considered is included in the number.

Second. Although 19 States, including Massachusetts, limit the hours of labor of children under 16 to eight hours a day in mills and factories, not one of the 4 Southern States just enumerated has such a law.

Third. Although night work is forbidden under 16 in mills and factories in 33 States, including Massachusetts, Georgia does not appear in the list.

Fourth. Although there are workmen's compensation acts in 24 States, including Massachusetts, not one of the 4 Southern States enumerated has such a law; and, generally speaking, it is probably not too much to say that not 5 per cent of the safeguarding legislation characteristic of the more advanced of the United States is to be found in the 4 Southern States now under discussion.

ENFORCEMENT OF LAWS.

The labor laws upon the statute books of the 4 South Atlantic States considered are sufficiently medieval in all conscience, but this statement by no means tells the whole story. The further question arises as to the extent of the enforcement of such laws as there are. Obviously the mere existence of a law is wholly valueless unless honest and continued diligence is exercised to make it effective.

LAW ENFORCEMENT IN NORTH CAROLINA.

A bulletin issued by the National Child Labor Committee in May of this year says:

Although the age limit in that State—North Carolina—is nominally 13 years, an exemption in the law for children working in an apprenticeship capacity, forced on the legislature through legal cunning hired by selfish greed, has been universally interpreted to mean that any child over 12 years might be employed in any capacity by the simple expedient of calling them apprentices. The proof is overwhelming and incontestable that, in spite of the law, children 8 and 10 years of age were employed in North Carolina until last year for a 12-hour day and are now employed for an 11-hour day. Until January 1 of this year there has been no effort to enforce the child-labor law in North Caro-

lina. On the 1st of January of this year a law which recommended itself to the law-making body because of its economy, to say nothing of its futility, became operative. Under it the county superintendents of schools were charged with the duty of inspection. Some of them have already given notice that they do not expect to attempt the fulfillment of this task; so the children go unprotected in spite of the law which was designed to protect them, because its violation is absolutely safe.

An elaborate 19-volume Report on Condition of Woman and Child Wage Earners in the United States, prepared in 1910 under the direction of Charles P. Neill, Commissioner of Labor, but only this year made fully available, says, in this connection:

In North Carolina the law was only slightly less flagrantly violated (than in South Carolina). Of the 59 establishments canvassed 44, in the 44 establishments illegally employing children a total of 1,751 of 74.6 per cent, were found to employ children under the legal age. children were employed, 202 of whom, or 11.5 per cent, were under the legal age.

LAW ENFORCEMENT IN SOUTH CAROLINA.

The May, 1914, Child Labor Bulletin, above quoted, says:

In South Carolina there are two inspectors under the Commissioner of Agriculture, Commerce, and Industries who are faithful and energetic in their work. Through a good system of records they are able to keep up, as well as can be expected, with the children who are illegally employed—that is, the children under 12 years of age.

The annual appropriation for the salaries and expenses of these officers is $3,500.

The Neill report, above quoted, says:

The most extensive violation of the age-limit law was found in South Carolina. In addition to 42 children under 12 years of age who were orphans, children of widows, etc., and who were therefore legally employed, 405 other children under 12 were found working in the establishments investigated in that State.

LAW ENFORCEMENT IN GEORGIA.

The May, 1914, Child Labor Bulletin says:

Georgia has a commissioner of the Department of Labor with one assistant. He has been unable to attempt anything by way of enforcement of the child-labor law because of the amount of office work necessary for preparing the statistics of industry. At the session of the legislature last summer the appeals he made for additional appropriations and equipment were as pitiful as they were futile.

The Neill report says:

In Georgia 20 out of 31 establishments investigated, or 64.5 per cent, employed children under the legal age.

LAW ENFORCEMENT IN ALABAMA.

In Alabama the same official charged with the duty of inspecting jails and almshouses is expected also to inspect factories where women and children are employed. The May, 1914, Child Labor Bulletin says:

His two assistants have been able to do some work in factory inspection, yet agents' reports and the photographic records recently made have demonstrated the fact beyond peradventure that the law is habitually violated.

The Neill report says:

In Alabama 8 of the 13 establishments investigated employed children under the legal age. This is a smaller proportion of establishments than were found thus violating the law in Georgia, but a much higher proportion of children were illegally employed, although this proportion was lower than in either North Carolina or South Carolina.

IN GENERAL.

The Neill report, under the caption "Employment of children under legal age in the Southern States," says:

The age-limit laws in effect at the time of the investigation were openly and freely violated in every State visited.

An appended table shows that, exclusive of children under 12 employed under legal exemption, 8.3 per cent of all children employed were illegally employed.

No children are entered in this table as under 12 years of age unless this age was admitted by the family or was proved by absolutely reliable evidence.

Some children so employed were as young as 7 years of age.

The point of view of society has, except in a few Southern States of this country, changed astonishingly in modern times. Less than two centuries ago the best minds regarded it as the crowning glory of an industrial community that employment could be obtained by tiny children. For example, Daniel Defoe, in his "Plan of English Commerce," which appeared in 1728, says:

How many millions of people are kept in constant motion, men, women, and children employed, infants (so they may properly be called) of 5, 6, and 7 years of age, made capable of getting their own bread and subsisting by the labor of their own hands. * * * In the manufacturing counties you see the wheel going at almost every door, the wool and yarn hanging up at every window; the looms, the winders, the combers, the carders, the dyers, the dressers, all busy; and the very children, as well as women, constantly employed. * * * The manufacturer sends the poor woman combed wool or carded wool every week to spin, and she gets 8 pence or 9 pence a day at home; the weaver sends for her two little children, and they work by the loom, winding, filling quills, etc., and the two bigger girls spin at home with their mother, and these earn 3 pence or 4 pence a day each. * * * I once went through a large, populous manufacturing town in England * * * there is not a poor child in the town of above 4 years old but can earn his own bread.

So far as the group of States we are considering is concerned, the march of two centuries has wrought astonishingly little improvement.

THE HELPER SYSTEM.

The "helper system" is a subterfuge very commonly found in the South whereby a law prohibiting the employment of children under a certain age is evaded. If the name is omitted from the pay roll, the employer argues that he is not employing the child. The facts that the child has an assigned task, that the work is done by the manufacturer's direction and for his benefit, and that the employer pays for it in a relative's pay envelope fail to alter his conclusion. Of course where the law provides that a child under a certain age shall not be "permitted to work," it can not be evaded in this way; thus far, however, such a provision has been kept out of the laws in the States where the child-labor evil is most prevalent.

In certain southern mills the Neill investigators found that children under the legal age of employment formed as large a proportion as 7 per cent of all the employees, this circumstance being possible in part through the present use of the "helper system."

LAW ENFORCEMENT IN MASSACHUSETTS.

The Massachusetts laws for the protection of women and children, as I have shown, are numerous and elaborate. An appropriation of from $100,000 to $200,000 a year is made by our legislature for their strict enforcement. The Neill investigators examined 22 factories in Massachusetts and found but 1 child out of over 18,000 employees who was employed under the legal age. It can not be said that Massachusetts seeks to force others to practise that which it is not willing itself to do.

EFFECT OF CHILD-LABOR LAW ON COST OF PRODUCTION.

Whatever the indirect economic and community advantage resultant from rigorous laws regulating the employment of women and children—as to which I shall have more to say later—there can be no doubt that their immediate and direct effect is to increase the cost of production. The numerous salutary provisions of the Massachusetts laws, such as those requiring seats for women, clean, well ventilated, and light places to work, guards and safety devices of all kinds, pure drinking water, wash rooms, and toilet facilities, etc.—all very rarely, if ever, found in the southern manufacturing States—mean a very considerable addition to the expense of manufacturing.

The workmen's compensation act is said to have trebled or even quadrupled the cost of insurance, yet no citizen of a State which has had this law would for a moment think of a return to the former conditions.

What is the effect upon the cost of production of the absence or nonenforcement of laws limiting and regulating the employment of women and children? Obviously and necessarily to keep down the cost of manufacturing, for the reason that the wages paid women and children are less than those paid to adult males. To employ women and children forces down the wages of adult males for two reasons: First, because the natural tendency of a wage scale is to sink to the lowest level paid for a given piece of work; and, second, because the free influx of women and children largely increases the labor supply and hence naturally tends, through the familiar economic law of supply and demand, to reduce the wage unit.

These statements are not merely theoretical, but are substantiated by the elaborate report of the Neill investigators. For example, they say:

Of the mill operatives employed in the southern mills investigated the greatest number in any wage group were earning between $3 and $3.99.

The average earnings per hour in Massachusetts for all occupations were 14.9 cents in the case of males and 13.6 cents in the case of females. The corresponding figures for North Carolina were 9.7 cents and 8.7 cents. In other words, the earnings per hour in North Carolina are about two-thirds of those in Massachusetts.

As the labor cost forms a large proportion of the total cost of the commodities produced by the respective States, there is readily seen the tremendous handicap under which Massachusetts labors in competing with North Carolina. To cite a specific instance, male weavers in Massachusetts over 16 earn 17 cents per hour. In the Carolinas, Georgia, and Alabama they earn 12 or 13 cents per hour. The prices paid in Massachusetts are not so munificent that we are willing to contemplate the possibility of anything but an upward trend.

Turning now to the caption in the Neill report "Average hourly earnings of children under 12 years of age in southern mills," we find at least a part of the explanation for the low wage scale in the Southern States. An elaborate table has been prepared to show the average wage per hour of these tots

under 12 with whom grown men supporting a family have to compete. This table shows that 4 or 5 cents an hour is apparently regarded as high pay. "The lowest earnings throughout the six Southern States investigated for spinners were those of an 8-year-old boy in Mississippi, 1.9 cents per hour, and the highest were those of a 10-year-old boy in Mississippi, 6 cents per hour."

The Neill report shows that in the case of hosiery and knit goods 13.7 per cent of the Massachusetts women employed earned under $5 a week, while 33.3 per cent of the Georgia women earned under $5 a week. Earnings under $6 per week in Massachusetts were 25.6 per cent and in Georgia 55.8 per cent. Earnings under $8 a week in Massachusetts were 56 per cent and in Georgia 80.4 per cent. Only 18 per cent in Massachusetts and 9.4 per cent in Georgia earned $10 and over per week.

In the case of woolens and worsteds the figures were: Under $5—Massachusetts, 10.9 per cent; North Carolina, 50 per cent; and Georgia, 43.9 per cent. Under $6—Massachusetts, 23.7 per cent; North Carolina, 59.7 per cent; and Georgia, 66.3 per cent. Under $8—Massachusetts, 55 per cent; North Carolina, 80.6 per cent; and Georgia, 90.8 per cent. Over $10—Massachusetts, 21.8 per cent; North Carolina, 9.7 per cent; and Georgia, 1 per cent.

I speak of these figures not because Massachusetts has any reason for pride in them, but to show how infinitely worse its southern competitors are in this respect. Lewis W. Parker, of Greenville, S. C., cotton manufacturer, who made a recent statement before the Committee on Labor of the House, in which he fully recognized the deplorable situation now prevailing, said:

I do not think it is egotism for me to say that I probably, through the corporations with which I am connected, am the largest taxpayer in the State of South Carolina. * * * I deplore our conditions. * * * I myself as a manufacturer and as a citizen regret exceedingly the scale of wages which exist in the South. I would like to see this higher as a man and as a manufacturer. * * * I believe a high wage scale is perfectly compatible with low cost of production.

City Warden Thomas Evans, of Atlanta, Ga., where a determined strike has recently been in progress to support the demands of the strikers that child labor in the cotton mills should be abolished, says:

There is hardly a factory in the city employing this class of labor that pays the employees enough for their self-sustenance. Society, through the city government and private charities, has to make up the deficit; that is, the immediate deficit. I do not know who pays the deficit in the lives of little children who work in the mills.

If I had the space I could quote the words of hundreds of prominent and reliable and responsible men of the South who deplore as deeply as anyone can the wretched condition prevailing there. The "Men and Religion Forward Movement" made the solution of the questions thus presented one of its activities in many southern cities, notably Atlanta.

HOURS OF LABOR.

Comparison between Massachusetts and the southern manufacturing States, based upon the number of hours employed, is somewhat inaccurate, because the latest authentic figures available are those of the census of 1910, since the compilation of which some changes in the labor laws, both in Massachusetts and in the South, have been made. It is safe to say, however, that the relative differences between Massachusetts and its southern competitors have been maintained, if not increased, as a result of the passage of new Massachusetts labor laws in 1913, which have been briefly analyzed above.

Perhaps the most helpful comparison is that of hours of labor in the manufacture of cotton and cotton small wares. In Massachusetts all but 150 out of 108,914 employed in this industry worked less than 60 hours a week in 1910. In North Carolina all but 52 out of 47,231 worked 60 hours or more per week. In South Carolina all but 450 out of 45,454 worked 60 hours or more a week. In Georgia all but 929 out of 27,803 worked 60 hours or more a week. These figures include boys and girls as well as adults, and show that while 60 hours or more is the practically universal schedule in the South, less than 60 hours a week is the equally universal schedule in Massachusetts.

The United States census says:

It is evident from the figures that for most of the wage earners employed in the manufacturing industries in North Carolina the hours were 60 or more a week, or 10 or more a day. The reports indicate that the cotton-goods industry is mainly on a basis of 11 hours a day, or from 63 to 66 hours a week.

Some improvement has been made recently in certain Southern States in the direction of shortening the hours of labor. On the other hand, the statement of Alexander Long, the owner of two cotton mills in South Carolina, made last May before the Committee on Labor, is illuminating as reflecting the attitude of the "progressive" manufacturer.

The CHAIRMAN (Hon. DAVID J. LEWIS). What is the hope among progressive manufacturers like yourself down there with reference to reducing the hours of labor?

Mr. LONG. We do not see why they should be reduced. If they were reduced, the child would have to earn less.

Probably the 8-year-old child above referred to as earning less than 2 cents per hour would be among those to suffer if obliged to work less than 11 hours a day. This remark of Mr. Long's is, I think, interesting as indicative of the present attitude of certain manufacturers in the South toward the adoption of legislation designed to ameliorate the condition of factory workers there.

LABOR UNIONS.

The right of labor to organize is well established in the manufacturing industries of Massachusetts and the rest of New England. Such right is very seldom recognized or exercised in the South. There can be no doubt that the condition of labor is, generally speaking, much better in a community where labor unions are found. Wages are apt to be higher, hours to be shorter, and conditions surrounding the work better.

Mr. Roosevelt said very recently:

I believe in unions. I believe that labor organizations have been one of the greatest factors in improving the material and moral conditions of the wage earner and in raising the standard of industrial citizenship. The union is as necessary an outgrowth of our modern industrial system as is the corporation. The wise and far-sighted employer will recognize this fact. He will appreciate that the men in the employ of a great corporation have the right of collective bargaining.

The labor union, in the North at least, has come and come to stay. I fully believe that its existence and prosperity tell directly for good in our industrial communities. But because of that very fact a resulting increase in the cost of production inevitably follows.

I have spoken of four of the elements which tend directly to a lower labor cost in the South as compared with the North—the employment of women and children, lower wages, longer hours, and the absence of self-helping organizations on the part of labor. Can it be said, however, that in spite of these advantages—if they can be called such—enjoyed by the southern manufacturers, other surrounding conditions are such as to counterbalance them? The answer is clearly in the negative. I can not take the time to do more than to enumerate some of the other respects in which the cost of production in the South is, or should be, less than that in the North:

First. The proximity of the cotton, with a resultant saving in freight rates.

Second. The lower cost of mill buildings, due to cheaper labor and material.

Third. The location of most industries in towns or small cities, which means a reduction of insurance rates and a lower cost of living to the wage earner, and which indirectly inures to the advantage of the employer.

Fourth. The presence of many negroes, the employment or threatened employment of whom tends to knock down the scale of wages.

Fifth. The increased use of water power, especially in the new mills of Georgia and Alabama.

Sixth. A mild climate in winter, lessening the cost of heating and, in some instances, the cost of the original construction as well.

All these elements are on the side of the southern manufacturer and against his northern competitor. Many of those enumerated are natural and inherent advantages to which he is entitled and which he will always enjoy. This circumstance, however, furnishes but another and more potent argument for insisting that those artificial advantages which constitute a crime against civilization and humanity shall no longer be tolerated.

EXTENT OF CHILD LABOR IN THE SOUTH.

I have up to this point made no attempt to consider the extent to which child labor to-day prevails in the South. It may be said by some that while the arguments are sound as far as they go, I am unduly concerned, because, forsooth, the child-labor problem in the South is a thing of the past, and the proportion of child workers there is to-day almost negligible. Let us see.

The fourth volume of the 1910 census, entitled "Population—Occupation Statistics," has been published within the last few weeks. On page 71 and following are elaborate tables setting forth the number and proportion of males and females in each age group engaged in "gainful occupations." This report shows that of nearly 11,000,000 children between the ages of 10 and 15 in the United States nearly 2,000,000—18.4 per cent—were "engaged in gainful occupations." In other words, throughout the United States as a whole one child out of every five is

working for his bread and butter. The situation for our purpose may be summarized by the following table:

Engaged in gainful occupations.

Division or State.	10 to 13				14 to 15			
	Male.	Per cent.	Female.	Per cent.	Male.	Per cent.	Female.	Per cent.
United States	609,030	16.6	286,946	8.0	744,109	41.4	350,140	19.8
New England	3,518	1.6	872	.4	34,578	31.1	24,971	22.5
Massachusetts	1,378	1.2	305	.3	17,794	31.7	13,268	23.5
North Carolina	53,457	49.7	30,822	29.3	38,192	74.0	22,161	44.1
South Carolina	39,258	50.6	29,974	39.5	27,124	74.4	20,896	57.7
Georgia	57,927	45.4	35,171	28.4	43,721	70.7	24,770	41.8
Alabama	56,591	55.0	37,003	37.5	37,535	76.1	23,583	49.1

Division or State.	10 to 15			
	Male.	Per cent.	Female.	Per cent.
United States	1,353,139	24.8	637,086	11.9
New England	38,096	11.4	25,843	7.7
Massachusetts	19,172	11.3	13,573	8.0
North Carolina	91,649	57.5	52,983	34.1
South Carolina	66,382	58.2	50,870	45.4
Georgia	101,648	53.7	59,941	32.7
Alabama	94,126	61.9	60,586	41.3

In the column of female workers between 10 and 13, it will be seen that in Massachusetts but 1 child in 335 was at work, while in the four Southern States from 93 to 133 of such children out of every 335 were so employed. It should be said, however, for the other States in the Union that the four Southern States which we are considering are worse than almost any others, Mississippi being the only other State with a figure as high as the lowest of the four. More than half of the States of the Union—25 in number—showed a proportion of less than 1 per cent in this column, and 33 States showed a proportion less than 2.5 per cent. Indeed, the only ones other than those mentioned with a percentage greater than 5 are: Virginia 7, Florida 13.7, Tennessee 11.2, Louisiana 13.9, Texas 20.2, and Arkansas 27.6. The newspapers of September 17 last tell us that Arkansas has just adopted a greatly improved child-labor law. This is good news; but it must be remembered that Arkansas has few factory children to be helped. It does not require discussion to show the disaster which may result, not only to the present generation but to posterity, from the employment of these little girls between the ages of 10 and 13.

The column showing female workers between 10 and 15 is also significant. The only States, other than the four southern manufacturing States listed, which show a percentage higher than 15 are: Florida 16.6, Mississippi 43.3, Arkansas 30.5, Louisiana 18.3, and Texas 22.5.

Bearing on the situation prevailing in 1910, as compared with that in 1900, the United States Census significantly says:

> In each geographic division outside of the South there was a decrease from 1900 to 1910 in the proportion, both of the males and of the females, 10 to 15 years of age engaged in gainful occupations. In each of the three geographic divisions of the South, however, a considerably larger proportion, both of the males and of the females, 10 to 15 years of age was gainfully occupied in 1910 than in 1900.

It can not be said, therefore, as uninformed people often attempt to say, that the situation is improving and will be cured by mere lapse of time.

In 1910, 5.7 per cent of all wage earners in Massachusetts cotton mills were under 16 years of age; the proportion to-day would be greatly reduced. In North Carolina the corresponding figure was 18.9 per cent, in South Carolina 18.7 per cent, in Georgia 15 per cent, and in Alabama 18.7 per cent.

Owen R. Lovejoy, secretary of the National Child Labor Committee, stated recently:

> Twenty per cent of all employees in the southern cotton mills are under 16 years of age. In some mills the percentage ran much higher. One cloth mill in South Carolina had 39.6 per cent of its employees children, and a yarn mill in Mississippi had 42.8 per cent of its entire working force children. Many mills were found actually trying to hide the facts from Government agents. Even the low age at which children may be legally employed did not satisfy. In 91.7 per cent of the mills visited in South Carolina children were employed illegally. In North Carolina 74.6 per cent of the establishments were trampling upon this State law, and in one mill in that State 12 per cent of the entire working force was under 12 years of age. In Georgia 64.5 per cent of the mills were violating the law. The chief manufacturing States of the South have been lagging behind; Alabama, Georgia, and the two Carolinas stand almost where they stood eight years ago.

I trust that I have shown sufficiently the extent to which child labor prevails throughout the United States, and that while it is far more rampant in the southern manufacturing States than elsewhere in the Nation, it is by no means negligible in the North and in the West. Quotations could be multiplied to show in detail the extent of the evil, but time is lacking.

It is sometimes said by well-meaning people, "Oh, yes; child labor may result in abuses occasionally, but on the whole it is a good thing, because it keeps the children off the streets and out of mischief." If this contention were sound, it would of course go far toward obviating the necessity of any change in present conditions. I assert positively, however, that it is utterly unsound and absolutely fallacious. I assert that child labor—and unregulated woman labor—is mentally, physically, and morally prejudicial to the toilers of to-day and to the children of to-morrow. Let us consider from each of these three aspects the truth of my statement.

EFFECT OF CHILD LABOR ON MENTAL CONDITION.

It stands to reason that a child put to work for long hours among the conditions so frequently surrounding textile manufactures is handicapped through life in the matter of education in at least two respects: First, through the outright lack of schooling at the period when school attendance is most natural; and, second, through the lack of development along mental lines at the age when acquisition of knowledge is easy and permanent. It is interesting to examine the extent to which inability to read and write prevails throughout those States of the South where child labor predominates as compared with those States of the North where it is infrequent.

A. ILLITERACY.

There are many tables in the United States census for 1910 throwing some light upon this question. Take, for example, that which gives the statistics of illiteracy by States for the entire population over 10 years of age.

Percentage of illiteracy to total population 10 years of age and over.

Division or State.	All.	Native whites of native parents.	Negroes.
New England	5.3	0.7	7.8
Massachusetts	5.2	.4	8.1
North Carolina	18.5	12.3	31.9
South Carolina	25.7	10.5	38.7
Georgia	20.7	8.0	36.5
Alabama	22.9	10.1	40.1

The only States in the Union having a percentage of all illiterates as high as North Carolina—the best of the four Southern States above mentioned—are Mississippi, Louisiana, Arizona, and New Mexico. Indeed, the only States besides those mentioned having a proportion as high as 10 per cent are Virginia, Florida, Kentucky, Tennessee, and Arkansas.

It is often said that the high percentage of illiteracy in the Southern States is due to the large proportion of negroes in those States. This table shows that to a certain extent this is undoubtedly true. Two facts, however, deserve mention in this connection: First, that the proportion of illiterate native whites of native parents in the four Southern States in which we are interested is from twenty to thirty times that of Massachusetts; and, second, that the proportion of illiterate negroes in these same Southern States is from four to five times that of Massachusetts. It is difficult to escape the inference from these figures that the South's illiteracy is partly chargeable to child labor, and it is equally difficult to see how the South can gain any especial satisfaction from considering these statistics.

The following table is interesting as showing the percentage of illiteracy in the various States in the period when child labor most flourishes in the South, but when it is almost universally rooted out in the North—namely, between the years of 10 and 14:

Percentage of illiteracy to total population between 10 and 14 years of age.

Division or State.	All.	Native whites of native parents.	Negroes.
New England	0.4	0.2	0.4
South Atlantic	10.0	5.0	18.9
East South Central	10.7	5.8	20.7
Massachusetts	.2	.1	.3
North Carolina	10.1	6.8	16.6
South Carolina	17.1	8.3	23.1
Georgia	13.6	5.7	22.1
Alabama	16.4	7.7	27.5

It will be seen from this table that the proportion of illiterate children between the ages of 10 and 14 in North Carolina

is fifty times that of Massachusetts; in South Carolina, eighty-five times that of Massachusetts; in Georgia, sixty-eight times that of Massachusetts; and in Alabama, eighty-two times that of Massachusetts.

The only States in the Union worse than North Carolina—the best of the four Southern States—are Florida, 10.3 per cent; Mississippi, 12.8 per cent; Louisiana, 24.6 per cent; New Mexico, 11.1 per cent; and Arizona, 15.2 per cent. No Northern State except Nevada exceeds a percentage of 1.5. Here again it can not be said with great plausibility that the negroes quite supply the explanation, the percentage of illiteracy among white children of native parents in North Carolina being sixty-eight times that of Massachusetts; in South Carolina, eighty-three times; in Georgia, fifty-seven times; and in Alabama, seventy-seven times.

The Neill report so often referred to shows that of children under 14 years of age at work in cotton mills there were unable to read and write 53.8 per cent in North Carolina, 53 per cent in South Carolina, 42.7 per cent in Georgia, and 65.5 per cent in Alabama.

Turning now to the condition of illiteracy among those from whom our voting lists are made up, we find the situation to be as follows:

Illiterate males 21 years of age and over.

Division or State.	All.	Native whites of native parents.	Negroes.
New England	6.3	1.0	8.9
Massachusetts	6.1	.5	9.4
North Carolina	21.3	14.1	38.6
South Carolina	27.1	11.0	43.1
Georgia	22.8	8.9	41.6
Alabama	24.3	10.9	43.4

It will be observed that one man out of every five men old enough to exercise the suffrage is illiterate in the four Southern States in question; the only other States in the Union having so high a proportion are Mississippi and Louisiana. This proportion is from four to five times that of Massachusetts.

Turning to the column showing illiteracy of adult white males of native parents, the proportion in the four Southern States is from 18 to 28 times that of Massachusetts.

B. SCHOOL ATTENDANCE.

The following table shows the proportion of children in several age groups attending school in the various States with which we are concerned:

Percentage of school attendance to total population between 6 and 14 years of age.

State.	6 to 9.	10 to 14.	6 to 14.
Massachusetts	90.9	94.5	92.9
North Carolina	62.4	79.8	71.7
South Carolina	51.8	71.9	62.6
Georgia	57.9	72.2	65.6
Alabama	49.1	71.7	61.1

These figures require no especial elucidation. They show that while 5 or 6 out of every 10 children between the ages of 6 and 9 are attending school in the Southern States, 9 out of every 10 are so attending school in Massachusetts; and while 14 to 16 out of every 20 between the ages of 10 and 14 are attending school in the Southern States, 19 out of every 20 are so attending school in Massachusetts.

C. COMPULSORY EDUCATION.

A rigorous compulsory education law is operative in Massachusetts and in most of the Northern States; compulsory education is virtually unknown in the South. At first blush it might be thought that this circumstance and not child labor is responsible for the high percentage of illiteracy in the Southern States. The fact is, however, that the three elements are inextricably connected. Those interested in the continuance of child labor fight vigorously against the enactment of a compulsory education law, and hence go far to perpetuate the conditions which are generally deplored throughout the South. It follows from this that a compulsory education law and a strict child-labor law should logically, and in fact often do, go hand in hand.

A prominent North Carolinian, interested in the welfare of his State, wrote not long ago:

The confinement for the long hours, combined with improperly chosen and badly prepared food, is enough to stunt the growth and lessen the vitality of a great number of children. Unfortunately the departments most commonly operated at night are those in which the children are extensively employed. Probably the monotonous routine introduced so early in their lives has a tendency to hinder mental development. Certainly the power of initiative is lessened. The greater injury is the deprivation of educational advantages. A child who goes into the mill is too often a fixture; if illiterate when he enters, too often he remains illiterate.

Dr. A. J. McKelway, testifying recently before the Committee on Labor of the House, said:

There are practically no children over 12 years of age in the cotton-mill districts of South Carolina who are attending school, the reason being obvious—that there is demand for their labor.

EFFECT OF CHILD LABOR ON PHYSICAL CONDITION.

I shall not attempt to discuss at length the undoubted physical effect of employment of children at too early an age. Common sense instantly tells us all that the most elaborate treatises could convey. Miss Julia Lathrop, head of the Children's Bureau of the Department of Labor, appeared before the Committee on Labor a few months ago. I quote briefly from her testimony:

The CHAIRMAN. Do the medical authorities find it to be a fact that the stress of continuous labor, industrial labor, affects the growth of the child, the ordinary physical development of the child?

Miss LATHROP. I think that all European and American authorities alike agree upon that. Of course the labor of children is very largely surrounded by such other disadvantageous conditions outside of the factory as go to make the factory injury from impure air or overspeeding even more disadvantageous to the child than if the child came from a happy and luxurious home, to which he or she returned, where health and comfort were preserved in every respect outside of the hours of labor.

The CHAIRMAN. What age or period of the child's life has been indicated by the physicians as the appropriate age at which labor could safely begin?

Miss LATHROP. I am not aware that there is any uniform decision by the medical profession on this matter, but I notice that every year those who study most carefully the growth and development of American children push that age further and further ahead, whether they are educators or whether they are physicians, or whether they are interested in any form of civic improvement where the interests of the child are concerned.

The CHAIRMAN. I do not know whether that indicates a general sympathy for childhood or whether it indicates a medical opinion as to the fact.

Miss LATHROP. I think it very emphatically indicates a medical opinion.

Edwin Markham, taking as his texts "We must not grind the seed corn," and the ancient injunction of the Talmud, "Children must not be taken from the schools even to rebuild the Temple," has this to say of the conditions in the southern mills:

In the southern cotton mills, where the doors shut out the odor of the magnolia and shut in the reeking damps and clouds of lint, and where the mocking bird outside keeps obligato to the whirring wheels within, we find a gaunt goblin army of children keeping their forced march on the factory floors—an army that outwatches the sun by day and the stars by night. The South, the center of the cotton industry, happens to have the bad eminence of being the leader in this social infamy. With the springing up of new mills there must now be 50,000 children at the southern looms. This is 30 per cent of all the cotton workers of the South—a spectral army of pigmy people sucked in from the hills to dance beside the crazing wheels. In the South for every 1,000 workers in the mills over 16 years of age there are 353 under 16. Some of these are 8 and 9 years old and some are only 5 and 6. For a day or a night at a stretch these little children do some one monotonous thing—abusing their eyes in watching the rushing threads; dwarfing their muscles in an eternity of petty movements; befouling their lungs by breathing flecks of flying cotton; bestowing ceaseless, anxious attention for hours, where science says that "a 20-minute strain is long enough for a growing mind."

Fifty thousand children, mostly girls, are in the textile mills of the South. Six times as many children are working now as were working 20 years ago. Jane Addams saw in a night factory a little girl of 5, her teeth blacked with snuff, like all the little ones about her—a little girl who was busily and clumsily tying threads in coarse muslin. The average child lives only four years after it enters the mills. Pneumonia stalks in the damp, lint-filled rooms and leads hundreds of the little ones out to rest. Hundreds more are maimed by the machinery, two or three for each of their elders.

The labor commissioner of North Carolina reports that there are 261 cotton mills in that State, in which nearly 40,000 people are employed, including nearly 8,000 children. The average daily wage of the men is 57 cents; of the women, 39 cents; of the children, 22 cents.

Elbert Hubbard has been through the mills of South Carolina. "I know," says he, "the sweatshops of Hester Street, New York; I am familiar with the vice, depravity, and degradation of Whitechapel, London; I have visited the Ghetto of Venice; I know the lot of the coal miners of Pennsylvania; and I know somewhat of Siberian atrocities: but for misery, woe, and hopeless suffering, I have never seen anything to equal the cotton-mill slavery of South Carolina."

The Neill report, referring to the much greater liability to accident in the case of children, says:

Though employed in the less hazardous work their rates steadily exceed those of their older coworkers, even when in that group are included the occupations of relatively high liability. The child is then apparently more liable to all kinds of accidents and especially liable to those of severity. It appears, then, that comparison of the number employed with the number injured in each age group, the consideration of a group of particular severity, and the examination of particular kinds of injury all point in the same direction—the hazard of the child is high. Another phase deserves some attention. A given injury is a more serious matter for the child. With the child there is much more likely to be a far-reaching series, the intrusion of infectious disease at an unguarded moment, a lasting damage to the functions of the nervous system, leading forward to consequences of the most serious kind in after years. A long history of degeneracy and dependence may have its beginning in exposure to industrial hazard.

Miss Elizabeth C. Watson, who has investigated the southern cotton mills for the International Child Welfare League, stated to the Committee on Labor:

In Alabama you will find very few children—I think you will find no children—under 12 years old working in the mills; chronologically they may be 12 years old, but physiologically those children are not more than 8 or 9 years old. I remember one little girl in an Alabama mill, which is the property of an ex-governor of the State, who was so small that I asked her how old she was, and she promptly replied that she was 14. The child really looked about 10 years old, as she was very short and had a little, old face. She could not have been more than 4 feet high. I found her sitting on the stairs outside the room where she worked. She had her feet all wrapped up in some old rags, and I asked her what that was for, and she said she was so tired that she felt like her backbone would go up into her head. I then asked her if her boss would say anything to her about that, and she said no, that they let them stay out there on the stairs if they wanted to. There are no seats provided for them, and they let them go out and sit on the stairs or on the floor, and in one instance I saw some children lying on the floor. In the nine mills I visited last week the boys have no opportunity to go outside; they have to hang around in the spinning room or the dye room, and can not go out of doors. All the time they are there in that close, humid atmosphere, amid the noise that prevails at all times in the cotton mills.

You can go into any community down there in Georgia and Alabama—and I think it is also true in the Carolinas—and put your hands on the children who have worked in the mills. They are pale and listless and anemic, and seem to have absolutely no interest of any kind in life. I have talked with teachers in the schools of Alabama, and they tell me that it is almost impossible to teach these children anything. The law in Alabama says that every child who works in the mills shall go to school at least eight weeks in the year; but the teachers I talked to down there told me it was almost impossible to teach the mill children anything when they came to school, because they were so tired out. They have no capacity for learning, and none of the mill children ever go beyond the three primary grades. I visited one place where they had established a night school for the children who could not attend school in the daytime; but the teacher told me the children soon fell asleep and that it was nonsense to awaken them, as they could not learn if she did.

I talked with some children in Georgia and also in Alabama—boys and girls—who told me they had been working since they were 8, 9, and 10 years old, and they were now 14 years old and could not read and write. Some of them could write a little, but they could not read.

I talked with one woman in a factory down there, who told me she was 25 years old and had been working in the factory ever since she was a child, and she looked a wreck—stooped shoulders, hollow chested, and chewing snuff. She said that all the workers had to chew snuff—that even the children used it—because it keeps them from swallowing the lint, which causes them to get consumption. This woman was engaged in a domestic factory, where she said she had been at work ever since she was a child big enough to reach the machines. I asked her if she had any children working there, and she said no; her children were not working there because "you don't get anywhere." I then asked her what she meant by saying they didn't get anywhere, and she said, "Well, when you grow up you don't get any better wages than when you are a little child."

They stand all day long at their work, from the time they start in the morning until they quit at night. I saw in Georgia the other day children who went to work at 6 o'clock in the morning and did not stop till 6 o'clock at night, and they stood all day long at their work.

The mortality statistics are so ill kept in the South that it is difficult to obtain helpful information in the way of statistics upon the effect on the death rate of child labor. Such evidence as there is, however, corroborates, if corroboration is necessary, the truth of the statements and quotations above.

I have tried to indicate the twofold nature of the physical menace to the little children in the cotton mills—the danger to life and limb and the danger from disease. There should also be emphasized the danger to the generations yet unborn, for those children who begin their life work at 7 or 8 or 10 or 12 years of age under the surroundings which we have seen prevail can not, on the average, grow up into as strong men and women as if they had had the playtime of the more fortunate boys and girls, nor can it be expected that they will become the fathers or mothers of as healthy children as would otherwise be the case.

It has been a temptation, especially in this subdivision of the discussion, to cite some of the pathetic individual cases with which the records dealing with this subject fairly teem. I have not done this, however, both because to do it would have meant an enormous extension of a speech already too long and also because I have deliberately preferred to present the subject in an abstract way rather than in a way which critics of my position might see fit to denominate as sentimental. Those who may be interested to read for themselves the heart-rending individual cases which result from the cruelly backward labor laws in these States will find abundant material both in the 19-volume Neill report and in the quarterly bulletins of the National Child Labor Committee, among the trustees of which are Felix Adler, Charles P. Neill, Paul M. Warburg, and Jane Addams.

EFFECT OF CHILD LABOR ON MORAL CONDITION.

The Neill report states:

There is a very general agreement among those who have been brought into touch with child workers and child delinquents that the connection between early employment and delinquency is close, and to a large extent causal. Night work was found among these delinquents in a greater number of cases than might have been expected.

After setting forth in tabular view the proportion of working and nonworking delinquents, the report says:

It will be seen at once that the ratio of working delinquents is very much larger than the nonworking. Among the boys the ratio of the working children is from three to over ten times as great as of the nonworking. Among the girls this proportion is even more striking. Putting children to work prematurely is not an effective method of training them for good citizens. The most immediately striking feature is the large proportion of offenses committed by the working children. The proportion varies somewhat between the sex groups, but, roughly speaking, the nonworkers are responsible for a little over one-third, the workers for something under two-thirds of the offenses. The ages at which these offenses were committed ranged from 6 to 16 years. When it is remembered that a majority—and presumably a large majority—of all the children between these ages are not working, this preponderance of offenses among the workers assumes impressive proportions. The excess of working delinquents is not confined to any one class of offenses. With a few exceptions, to be discussed hereafter, they lead in all forms of wrongdoing. Generally speaking, the excess of working delinquents is slightly larger in the offenses which are inherently serious than in those which are or may be trivial.

To these statements, which represent the latest and most authentic views upon this lately developed branch of knowledge, nothing needs to be added. The child put prematurely to work does not have an equal chance to grow up into a law-abiding citizen.

IN GENERAL.

The considerations set forth above irresistibly lead, I think, to the conclusion that neither physically, mentally, nor morally does the child put to work at a tender age have a fair chance to grow up into a useful, strong, contented, and law-abiding member of society.

Although my resolution permits the regulation by Congress of the labor of both women and children, it will be observed that these remarks have concerned themselves much more with the conditions attending the employment of the latter than of the former. I do not wish that any inference be drawn therefrom that the regulation of the employment of women is devoid of enormous importance. There are, however, several reasons for the difference in the emphasis to which I refer. In the first place, of course, "children" include girls as well as boys; in the second place the available statistics dealing with the employment of women are not so full or so satisfactory as those concerned with the employment of children. But still more important is the natural and fundamental difference between the two great subdivisions of our population. Adult women, unlike little children, can think and reason for themselves, and to a large extent care for themselves in these as well as other respects. Hence, while it is vitally important that safeguarding legislation should surround them, it is not in quite the same way, as Secretary Wilson pointed out, the province of the community to regard them as "wards of the State."

As I stated at the outset, there should be no feeling, either in the North or in the South, that the regulation of the labor of women and children is a sectional issue. It is, on the contrary, a national issue, and as such it can under our Constitution be adequately remedied only by national legislation. The enlightened men of the South recognize as fully as can any man in the North the woeful curse which the child-labor evil has been to that part of our country.

The selfishness of parents has, alas, been a considerable obstacle to progress. But the selfishness and greed of employers have undoubtedly been far and away the most potent element standing in the way of true reform. This is, it is to be feared, not unnatural; certainly it is nothing new. In the words of a great English judge, uttered over a century ago in sentencing an employer to 12 months' hard labor for overworking his young apprentices:

If the manufacturers insist that without these children they could not advantageously follow their trade, I say, that trade must not, for the sake of filthy lucre, be followed, but at once, for the sake of society, be abandoned.

These words are as sound at this moment as they were when originally uttered.

The southern manufacturers feel that a change in child-labor laws will check the unexampled growth and prosperity with which they have recently been favored. They do not take into account that the natural advantages of their locality, to which I have previously alluded, are sufficient without the barbarous and artificial ones which they are struggling to hold. Apropos are a few sentences from one of Dickens's crusading novels, Hard Times, published just 60 years ago:

Coketown had been ruined so often that it was amazing how it had borne so many shocks. Surely there never was such fragile chinaware as that of which the mill men of Coketown were made. Handle them never so lightly, and they fell to pieces with such ease that you might suspect them of having been flawed before. They were ruined when they were required to send laboring children to school; they were ruined when inspectors were appointed to look into their works; they were ruined when such inspectors considered it doubtful whether they were quite justified in chopping people up with their machinery. Whenever a Coketowner felt that he was ill-used—that is to say, when-

ever he was not left entirely alone, and it was proposed to hold him accountable for the consequences of any of his acts—he was sure to come out with the awful menace that he would "sooner pitch his property into the Atlantic." This had terrified the Home Secretary within an inch of his life on several occasions.

However, the Coketowners were so patriotic after all that they never had pitched their property into the Atlantic yet, but, on the contrary, had been kind enough to take mighty good care of it.

Anyone reading the testimony of the three southern manufacturers before the Committee on Labor recently—who were, by the way, the only persons appearing in opposition to a bill regulating child labor—would swear that the manufacturers of Coketown were present in the flesh in Washington. One of their stock arguments is that, as manufacturing is a recent thing in the Southern States, it must be nurtured carefully, not interfered with by legislation. This argument, however, if closely examined, will not hold water; one of the most progressive States in child-labor legislation in the Union (Oklahoma) is that in which the manufacturing industry is of very recent origin.

The manufacturers of the South, as they are obdurate, must, for the common weal, be forced to be humane. The medicine which is offered to them is wholesome for the body politic, and they must be forced to swallow it whether or no. More and more to-day is heard the demand, both in the North and in the South, that as certain States in the South, subject to the domination of cotton kings, will not save themselves, the Nation must step in and save them, even against their will.

I have shown at some length the importance to Massachusetts of this question. At present she is every day being more and more penalized for the humanity and progress which she has written into her statutes. It may be said that she should reduce the cost of production so that she may be able to meet the competition of the South. Can she do this? Take the case of the Lowell cotton mills, for example. An examination of their dividends for the past 8 or 10 years shows an average for all of between 4 and 4¼ per cent per year—about the Massachusetts savings bank rate. It is said that the reproductive cost of the plants alone of these mills exceeds their capitalization.

If, then, the profits are not unduly swollen or the stock watered, how can competition be met? Of course, the greatest single item in the cost of production is that of labor; but surely Massachusetts must not reduce her wage scale. Similarly, if we should take up, one by one, the various elements entering into the cost of production of those articles in the manufacture of which Massachusetts has met and must meet the competition of the South, I believe that we should find that, as a practical matter, there could be no real hope of an appreciable saving.

The only solution seems to be, therefore—certainly from the standpoint of Massachusetts—that the terms upon which the South is able to compete with the North shall be so modified that the competition shall be fair. This is, of course, no new creed in Massachusetts. For years it has from time to time been uttered. The most recent authoritative expression which I recall is that of the Massachusetts Republican platform of 1913, in the framing of which I, as a member of the resolutions committee, was proud to play a small part. The plank in question reads:

> We favor a Federal constitutional amendment which shall give to Congress the right to prescribe maximum hours of labor and a minimum age for workers throughout the United States.

I can not forget that I represent in Congress a great manufacturing State and a great manufacturing district; hence I may be pardoned for referring to the importance of this question along material lines to every man, woman, and child among my constituents. But I do not forget that I am also a Member of the Congress of the United States, charged with the duty of striving to advance the physical, mental, and moral welfare of the whole Nation. And it is in this capacity, from this point of view, that I prefer to make my appeal. The slavery of the South to-day is a slavery of children, perhaps the most pathetic, vicious, and barbarous of all human bondage. That slavery is first of all a curse, economic and moral, to the community which tolerates it; experts, practical as well as theoretical, agree that the condition of the South would be materially as well as morally improved if the child-labor evil were eradicated. But still further, child labor is a curse to the whole Nation; its abolition would tell directly for the onward and upward progress of every section of the land.

The problem, then, is national; let the Nation, through its Congress, promptly seek its wise and permanent solution. Success will mean a better South and a better Nation; it will mean better wages, better morals, better schooling, better health, better homes, better descendants, and better citizenship; it will mean that we have saved the South from itself.

Why This War Tax?

EXTENSION OF REMARKS

OF

HON. WILLIAM J. CARY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. CARY. Mr. Speaker, the party now in control of both Houses of Congress, as well as the executive administration, was elected on several issues, but I think it will be conceded that one of the most prominent issues was the protest of the people against gag rule in the House of Representatives. I had the pleasure of being one of the first to vote against this rule in the Sixtieth and Sixty-first Congresses. Over and over again have our Democratic friends protested and promised that when they were in power they would see that every bill was carefully considered, and that no measure was to be rushed through the House by the Committee on Rules or any other small coterie of Members. Yet now they introduce this bill, affecting the whole country, and will not even permit the introduction of a single amendment; limit the debate to a few hours; and order the previous question. If this is not gag rule, I do not know what to call it. Verily they have out-Cannoned Cannon.

I had desired to offer an amendment to tax Coca-Cola and other products and to ask that the burden of taxation be equalized a little more and that beer, instead of paying 50 cents more on the barrel, be taxed 25 cents, which would be a sufficient tax to place on a single industry, especially when we consider that a barrel of whisky is worth about as much as 45 barrels of beer and costs a great deal less in both labor and material to produce and market.

If it was absolutely necessary to place taxes on intoxicating material, a tax on inflammatory magazines and newspapers, which serve no useful purpose but keep the public mind in a state somewhere between hysteria and delirium tremens, and make money at it, would have had some semblance of justice.

Furthermore, the tax is manifestly unjust geographically, and I can not say how deeply I regret the necessity of calling attention to the fact that every industry taxed heavily in this bill is an industry carried on principally in the northern part of the United States; and this certainly does not look like a square deal to me.

I introduced a bill and two resolutions, which I will insert here, and if the witnesses in the steel industry had been protected and given some percentage of the money their testimony would have returned to the United States Treasury, there would have been sufficient cash on hand at the present day to obviate the necessity of this iniquitous tax.

A bill (H. R. 7601) authorizing the Navy Department to offer and pay rewards for the detection of violations of the antitrust act of July 2, 1890.

Be it enacted, etc., That the Secretary of the Navy of the United State be, and he is hereby, authorized and directed to offer and pay rewards to the person or persons who shall first furnish to the Government of the United States information which shall lead to the detection of violations of the antitrust act of July 2, 1890, in cases where such violations shall injuriously affect the Navy Department or any business connected with the national defense, or in cases where the Government has been defrauded in the character, quality, or price of the material furnished and where, as a result of information or evidence so furnished, the Government succeeds in recovering money or property as fines, forfeitures, or otherwise the reward shall be 20 per cent of the amount so recovered.

House resolution 506.

Whereas certain Chiefs of the Bureau of Ordnance have made misleading reports to their superiors and to Congress; and

Whereas Chiefs of Ordnance have attempted to deceive Congress on the effect of high explosives; and

Whereas our Navy and coast defenses are being constructed as recommended by officers who are disloyal to their official oath; and

Whereas the Armor Trust is being favored by said misleading reports: Therefore be it

Resolved, That the Speaker of the House of Representatives is hereby authorized and directed to appoint a committee of nine Members of the House, of which number five shall be of the majority and four of the minority. Said committee is hereby directed to make an investigation of the subject matter embraced, misleading Congress by false reports. Said committee is also directed to investigate if there has been a conspiracy between the United States officers and the armor manufacturers or other persons in defrauding the country or the Government.

Said committee is authorized to sit during sessions of Congress and recess of Congress, to compel the attendance of witnesses, to employ such clerical and other assistance as may be necessary, and to administer oaths to witnesses. The cost and expenses of said committee shall be paid from the contingent fund of the House of Representatives.

Said expenses shall be paid out on the audit and order of the chairman or acting chairman of said committee.

House resolution 544.

Whereas the Hon. Josephus Daniels, Secretary of the Navy, has stated in testimony before the Committee on Naval Affairs of the House and in an official letter to the Senate that there exists a combination and conspiracy of armor manufacturers who are "holding up" the Government of the United States and forcing the Navy Department by a monopoly combination to pay extortionate prices which amount to a robbery of the Government of several million dollars each year: Therefore be it

Resolved, That the Secretary of the Navy is hereby requested to inform this House what steps, if any, he has taken to have his colleague, the Attorney General, take action for the prosecution of this monopoly combine of armor manufacturers; and

Resolved further, That the Attorney General is hereby requested to inform this House what steps he has taken to prosecute civilly and criminally this Armor Trust above mentioned.

I therefore vote against this bill and voice my opposition to its passage on the ground that it is in every way a most obnoxious piece of legislation, unnecessary to be brought up at all at the present time, violating the promise of economy contained in the platform of the party that now controls Congress, and distinctly unfair in nearly every one of its provisions.

Our country is at peace. It has been stated frequently by the press, by men of large business experience, and by statesmen great and small, that the war in Europe must bring us a period of wonderful prosperity, of great business opportunity, and be in every way beneficial to us financially.

There is no apparent necessity for any sudden increase in our expenditures. We are not called upon to place any armies in the field; there is no sign of mobilization of such troops as we have, and yet we are called upon in this peaceful and prosperous time to submit to the imposition of a war tax as high as the tax on the people during the War with Spain, against which so many Democratic Members at that time made vociferous protests.

The Democratic Party were committed by platform promise and campaign pledge to curtail the expenses of the Government, cut down the annual appropriations, and rebuke Republican extravagance.

Instead of doing so they have increased the expenditures of the Government at the same time that they decreased the revenues. Long and wasteful investigations, wasting precious hours of some of our ablest Members that should have been used for necessary constructive legislation, costing immense sums of money and accomplishing pitifully meager results, have made appropriations swell.

Oh, the financiering of our Democratic friends has been remarkable for its consistency. We spent days of wrangling to save the people a few paltry pennies in mileage; we saved a few paltry dollars by lopping off the usual annual mileage of a number of poorly paid employees in the Capitol and Office Building. They reduced the number of police and elevator men in the Office Building so that useful doors have to be locked and expensive elevators can not run; and then they piled up appropriation after appropriation, creating clerkships for investigating committees, hiring counsel at exorbitant fees, printing tons of hearings that nobody would ever have the patience to read, and if they did would not be one whit the wiser; and now, after all of these sham protestations of economy, after campaigns of rebuke to Republican extravagance, they saddle this oppressive tax on the people of the country and add to the still burdensome grievance of the high cost of living an onerous and, I repeat, a totally unnecessary tax.

And when they come to place the tax, the utter lack of any principle of justice and equity is glaringly apparent. The whole burden of this tax will be borne by a few sections of the country and others will escape practically scot free.

Yesterday Virginia was added to the column of what are called "dry" States. West Virginia was made dry a few months ago, and the advocates of prohibition are claiming that several are going dry soon; and Kentucky, according to the following statement in to-day's Post, is about to go dry:

"DRYS" WIN IN KENTUCKY—CARRY NINE OF TWELVE COUNTIES VOTING ON LIQUOR QUESTION.

LOUISVILLE, KY., *September 23.*

Nine of twelve Kentucky counties in which local elections were held to-day voted "dry," according to unofficial returns to-night. Those counties voting to remain "wet" were Henderson, with a majority of 1,053; Fayette, 3,264; and Anderson, with 64.

Counties voting "dry" were Carroll, Montgomery, Mason, Bell, Boone, Clark, Shelby, Bourbon, and Scott.

Three counties—Davies, McCracken, and Christian—recently voted "wet."

To-day's election leaves 14 of 120 counties in the State "wet."

Now, everybody who knows anything about a dry State knows that the only thing that is dried up is the State treasury, and the department of the United States Internal Revenue collecting the taxes from that State. No tax for the use of the Federal Government is a fair tax unless it be distributed amongst all of the States, and yet the very first paragraph of this bill places a tax on beer and wine, which will be borne entirely by brewers and wine producers, who do their work in the open; by honest men, like those of Milwaukee, who when they drink do so decently, openly, and soberly, and obey the laws of their State and country; and the tax will be shirked by the bootlegger, the moonshiner, and the stealthy and hypocritical flask-carrying boozer of the dry State, who wants to rule the country, spend its money, pay no taxes, and make a small minority pay the bills.

In this oppressive tax measure they tax the small dealer and consumer and let the big trusts go scot free. It looks as if the American Tobacco Co., otherwise known as the Tobacco Trust, has its friends placed on the committees of the House and Senate, so that it is impossible to reach them for taxing purposes. Mr. UNDERWOOD jammed the tobacco schedule through the House without discussion in just three minutes, in a shape which permits the trust to rob the consumer of one quarter of the tobacco which he formerly got for his money by the simple expedient of reducing the size of the packages which were formerly fixed by law in multiples of 2 ounces each. Now they can make any size package they please in multiples of one-half ounce each. Formerly the workingman got 2 ounces for his nickel; now he gets 1½ ounces—robbed of one-quarter of his tobacco without his consent. This robbery enables the trust to pocket $55,000,000 extra annually and escape without an extra cent of taxation. During the Cuban war an extra tax of 8 cents per pound was levied on tobacco. The trust, through their friends in Congress, promptly got permission to reduce the size of their packages, and when the tax was taken off after the war they failed to restore the size of the package. They then reduced the poor man's 2-ounce package to 1⅔ ounces. The Underwood tariff schedule permits them to still further reduce the quantity of the workingman's package to 1½ ounces without the addition of one penny of extra taxation. They place the tax on the small dealer. All other countries tax their tobaccos and derive a proper revenue therefrom except the United States, where the tax is merely nominal, and the trust pockets all the money.

We lose on account of this laxity much more than the entire amount which is to be raised by this emergency tax, and nobody is the gainer except the big trusts. The discussion of this question in the Senate of the United States on May 14, 1909, and June 24, 1909, pages 2022 to 2028 and 3724, shows a tobacco tax loss of $184,000,000 per annum. Why is this trust practically immune from taxation? Ask the committeemen in charge, respectively—Messrs. UNDERWOOD and SIMMONS. They know. Ask Thomas Fortune Ryan. He knows. Examine the Senate's hearings on campaign contributions and you may get a definite idea of the underlying cause.

Neither the Secretary of the Navy nor the Attorney General of the United States have vouchsafed a reply to my House resolution 544. Why not? I will be able to answer the question if they give me the power asked for in my other resolution, No. 506, and if they pass my H. R. 7601—all of which I have herein quoted—I will show by sworn testimony that a bureaucratic oligarchy corruptly controls these matters, and that if the Government collected the fines, penalties, and forfeitures from the Armor Plate and other criminal trusts they would not face the necessity of this tax, but would have millions to spare after paying the expenses of the Government.

I think I would also be able to show why our Navy is not in harmony with modern science; why we have no large-caliber guns which can throw high-explosive shells, such as are now being used in the European war; why we have no armored automobiles with automatic machine guns; why our inventors have been turned down by our Navy Department when they offered their inventions exclusively to our Government; why American inventors are obliged to sell their inventions to foreign countries, where they are received with honor and profits. England knighted our American citizen, Hiram Maxim, and made him rich for his invention of the automatic machine gun, while he received only snubs and ridicule from our bureaucracy. Germany is relying on the "Gathmann system" of high explosives and large-caliber guns to conquer the whole of Europe. Yet this Chicago inventor, after offering his various inventions exclusively to the United States Government, was rebuffed and ignored by the "ring" which controls and was forced to lay his lifework to Germany and Japan, which have adopted them, and his only hope now is that they will never be used against the Government which spurned him.

I will give only a partial list of American inventors who were first in every line of modern improvements, none of which improvements were adopted by our hypnotized Government officials, because some of them are on the pay rolls of the trusts,

whom they serve, but, of course, in the nature of things, could not be rewarded by a poor inventor:

Cotton Distress and Mill Distress.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 30, 1914.

Mr. MOORE. Mr. Speaker, the gentleman from Texas [Mr. HENRY], chairman of the Committee on Rules, has just advised us that President Wilson thinks Congress should not adjourn until the bill introduced by the gentleman from Missouri [Mr. ALEXANDER], providing for the purchase of foreign ships, shall be passed. But the gentleman from Texas [Mr. HENRY] in the five minutes' extension of time allotted to him gives as his principal reason for the passage of this bill and other legislation which he regards as equally important the salvation of the cotton crop. The gentleman from Texas pictures the distress of cotton and proposes to stay here "until the death," if it shall be necessary, to obtain relief.

Apparently it is not sufficient that northern industries are suffering, that other people besides the cotton growers are in need of money, or that we have already provided American registry for foreign ships to carry cotton and Government insurance for cargoes to be carried into the war zone; we are to go on with the scheme for purchasing ships up to $30,000,000, in spite of the fact that the Democratic Party stands for economy and has already overreached itself to the extent of $100,000,000, which the President and Congress propose to levy as a tax upon the people. Cotton is to be the first consideration, and all legislation, from the viewpoint of the gentleman from Texas, is to be directed toward that end.

COTTON HAS NOT BEEN IGNORED.

I do not suppose it would be fair, Mr. Speaker, to say that cotton has been wholly ignored by this and preceding Congresses. On the contrary, it has received all the consideration of a "special interest," with frequent appropriations attached. As I observed in all kindness a few days ago when discussing the iniquities of the $100,000,000 tax, cotton has had such a splendid monopoly in the foreign market that the incident of the European war has shattered its confidence in its own strength and induced it to appeal in various forms to the United States Treasury. But, as I then observed, other industries have suffered just as cotton is now said to be suffering, and they have come back and made good. It is largely a question of confidence in the fairness and ability of the legislation we enact. If cotton in days gone by had aided American cotton mills to a suitable protection, things would be different now. To this extent cotton is to blame for having placed its sole reliance upon its European friends.

THE MILLS PUT OUT BY THE TARIFF.

I have been interested in what the gentleman from Texas [Mr. HENRY] has had read in his time, because it chimes in with what others have said about the need of money in southern banks to move the crop and to keep the price of cotton at such a rate as to give the planter a profit. It will be remembered that when we were discussing the Democratic tariff bill "the profits" of northern manufacturers, and particularly those in the cotton industry, were to be eliminated. That was the Democratic cry, and the effect of the tariff bill was to cut profits out of the mills. It did more than cut profits; it turned the workmen out of employment. Whether distress came to the mills or not did not worry the framers of the Democratic bill, because, so far as cotton was concerned, it had a dead sure market in the cheap-labor factories of Germany and Great Britain. The European war was only an accident which interfered with the cotton program, though it induced the President to levy taxes upon the American people. If that war had not occurred, the southern cotton market would have been as strong as ever in its foreign relations and as indifferent as ever to the welfare and progress of the American mills. Hence, since the gentleman from Texas pleads for those who now find themselves in distress in the cotton fields it is fair to set off against that plea the distress of those in the mill districts who are not the victims of a foreign war, but who are in distress because of the low-tariff legislation which the cotton interests themselves persisted in enacting.

WAGE EARNERS IN ACTUAL WANT.

As against the need of southern banks for money to move cotton, let us here consider the actual want of those in the mill district who need bread. "Mill workers in Kensington are idle," says one of the great Philadelphia dailies, "and some of them are desperate." So here is another phase of the cotton question which may fairly demand a hearing along with the appeal of the gentleman from Texas [Mr. HENRY]. Pause, for instance, and read the story on which the Public Ledger of September 29 based its statement of the distress of the mill workers:

IDLE MILL WORKERS, FACING STARVATION, APPEAL FOR HELP—RICHMOND SOUP SOCIETY'S SECRETARY MAKES PLEA FOR AID, SAYING SHE IS BESIEGED BY HUNGRY WOMEN.

"For Heaven's sake, give me some food or my baby will die."

A woman, weak and emaciated, with a half-dead baby in her thin arms, made this plea to Mrs. M. W. Ketchum, secretary of the Richmond Soup Society, last night at her home, 3024 Frankford Avenue.

"I have had no potatoes nor meat for weeks, and all I eat are crusts of bread, picked up anywhere. If I can't get nourishing food, my little girl will die."

This is only one of the many heartrending applications made to Mrs. Ketchum in the last fortnight.

"Never has Kensington experienced such poverty and destitution," asserted Mrs. Ketchum. "Virtually all mills in this part of the city have shut down, and the poorer employees are absolutely without food. In many cases also they lack clothing. Thousands are undergoing the tortures of hunger. Fathers and sons tramp the streets despondently, while wives and little ones cry for food at home. Children can not go to school for lack of shoes. Each morning hundreds of people line up before the offices of the mills still in operation in a vain attempt to receive work.

"To make matters worse, many fathers are daily deserting their families. Already in want, they are now facing actual starvation. Relief must come from some source immediately or I don't know what will happen."

The soup society's funds are exhausted, according to Mrs. Ketchum. While the soup house closed last April, its secretary has continued, through donations by merchants and others in Kensington, to relieve the poor. The demands have become too great for her individual efforts, however, and Mrs. Ketchum calls for aid.

"If the people who are so anxious to sympathize with and help the destitute of Europe could spend one day at my home and see starving children and mothers beg me for food, they would realize that there is more than enough for them to do here in Philadelphia," added Mrs. Ketchum. "Morning, noon, and night my home is besieged. Women were waiting for me this morning before I was awake, and the number increased as the day wore on.

"One little girl in a starving condition told how her father had just deserted his family, leaving her mother and six children with no food in the house. One family of six, having been without food for two days, sold a bureau for 75 cents and lived on the proceeds for a week.

"Self-respect has kept many families from seeking aid, but the limit has been reached. Strong men are coming to me in desperation. One man had been out of work for six weeks."

There is no need nor time for "investigation," asserted the soup society's secretary. The need is so evident and pressing that relief must be immediate.

Mrs. Ketchum has been the good Samaritan of the Kensington poor for 16 years. She will visit a number of influential men to-day to enlist their aid.

CARE FOR AMERICANS FIRST.

The gentleman from Texas insists that the President says we shall remain here until Congress authorizes the purchase of $30,000,000 worth of foreign ships to aid in the transportation of cotton. Will the effect of this purchase be to reduce the taxes now about to be imposed upon our people, or will it add to our own circulation in this country through the wages paid to men who furnish the material and the labor for the construction of American ships? Is the proposition to purchase foreign ships of so much advantage to cotton that it will justify the American Congress in still further increasing the distress of American wage earners by depopulating the mills and destroying the shipyards? I trust the gentleman from Texas and the President for whom he speaks and the other great leaders of the Democratic Party, in their mad rush for legislation to specially aid a single industry, will have some regard for the humanitarian side of this question. They have an American market to cultivate and American mouths to feed, and the legislation they put through this Congress should be in the interest of the American people as a whole, rather than in the interest of some of the American people in conjunction with their European allies against most of the American people.

MORE MONEY FOR COTTON BANKS.

It is something of a coincidence that on the very day the gentleman from Texas takes his stand for cotton-shipping legislation, the New York Herald should publish the statement of Secretary McAdoo indicating the allotment of Treasury funds in addition to $34,000,000 already assigned in generous part to southern banks for the movements of cotton. In his address to Congress asking for $100,000,000 taxes the President indicated that the Treasury had on deposit in the banks approximately $75,000,000. It now appears that up to yesterday $34,000,000 of this, largely deposited in southern banks, was for the relief of cotton. To-day's announcement shows that of more than $13,000,000 fresh Treasury money assigned to the banks, approximately $9,500,000 is assigned exclusively to the cotton States. The States designated according to this morning's report and the amount of deposits assigned to their respective banks are given as follows:

Alabama	$300,000
Arkansas	175,000
Florida	81,250
Georgia	368,750
Kentucky	1,375,000
Mississippi	150,000
Louisiana	700,000
Maryland	1,450,000
North Carolina	456,250
South Carolina	525,000
Tennessee	675,000
Texas	793,750
Virginia	798,750
Missouri	1,539,000
Oklahoma	93,500
	9,492,250
New York	1,000,000
Colorado	499,969
Illinois	1,200,000
Indiana	150,000
Iowa	250,000
Kansas	25,000
Nebraska	325,000
Washington	87,500
	3,537,469

OTHER INDUSTRIES NOT SO FAVORED.

Here, Mr. Speaker, is evidence that relief is being given to the cotton States; such relief as is not given to industrial States under like conditions, nor to any other industry or community that raises the flag of distress. Suppose, Mr. Speaker, we should ask Congress to appropriate money to buy the products of the mill workers of Kensington? Their labor was honest labor and their services to the community at large were useful services. Suppose we were to ask Congress, when there is a glut in the tomato market in New Jersey or in the potato market in Maine, to appropriate funds to purchase the output, to tide over the emergency of lowering prices? Is it conceivable that Congress would listen to that appeal? On the contrary, these products of the farm, unless the owner sacrificed or otherwise disposed of them, would rot, as they frequently do, and the producer would necessarily stand the loss. If the shipper of these commodities were to ask the Government to provide vessels to carry the products either of the mills or of the farm, would Congress provide the ships? This, in substance, is what the gentleman from Texas, speaking for the President, desires shall be done for cotton. He asks for more than that, he seeks to have the burden placed upon the revenue producers of the country whom he has denied protection even to the extent of enabling them to raise revenue in the usual way.

I shall oppose the bill to tax the American people and to deprive them of employment in order to purchase foreign ships not only because I believe it the duty of cotton to encourage the American market, but because I do not wish to see further distress of capital and labor in those enterprises that evolve around the shipbuilding industry in the United States. I had hoped the President, satisfied with the passage of the ship-registry bill and with the bill providing Government insurance for exports into the war zone, would abandon the ship-purchase bill, which is fraught with such danger to American institutions. In the opinion of shipowners and shipping men generally such a bill is not warranted even by the conditions of war now prevailing abroad. But if the bill is to be brought forward, it is perhaps timely that some expressions of opinion with regard to it by authorities qualified to speak should now be introduced.

MARITIME EXCHANGE PROTEST.

I append the protest of the Philadelphia Maritime Exchange:

PROTEST AGAINST THE PASSAGE OF BILL H. R. 18666.

THE PHILADELPHIA MARITIME EXCHANGE,

Philadelphia, September 14, 1915.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

This memorial of the Philadelphia Maritime Exchange respectfully represents:

1. That a bill (H. R. 18666) providing for Government ownership and operation of merchant vessels in the foreign trade of the United States is pending in the Congress of the United States.

2. That by the provisions of the bill a shipping board composed of the Secretary of the Treasury, the Postmaster General, and the Secretary of Commerce may subscribe to the capital stock of any corporation now or hereafter organized under the laws of the United States, or of any State thereof, or of the District of Columbia, for the purpose of purchasing, constructing, maintaining, and operating merchant vessels in the trade between the Atlantic, Gulf, or Pacific ports of the United States and the ports of Central and South America and elsewhere to meet the requirements of the commerce of the United States.

3. That question is raised as to whether this proposed legislative action by the Government of the United States is justifiable and technically right, while the real question at issue is whether in the present emergency it is either necessary or advisable.

4. That the advocates of the measure advance the theory that shipping facilities for the transportation of our exports abroad under existing conditions are inadequate, but appear not to accept the testimony of experienced and practical men that there is no lack of vessels, and that the prevailing conditions are due largely, if not entirely, to the present paralysis of foreign exchange operations, and that with relief in this direction greater activity will immediately follow and the present and future requirements of commerce be amply met by private enterprise.

5. That under the terms of recent legislation providing for the transfer of foreign-built vessels to American registry, with necessary revision of our navigation laws to enable us to compete on equal terms with foreign shipping, instant impetus and a steady, wholesome growth will be given to our merchant marine, which, however, could not survive against Government competition.

6. That the effect of this legislation should be fully demonstrated before any other is undertaken.

7. That in dealing with this important subject the neutrality obligations of the United States should be seriously considered and any ground for criticism or even suspicion of our good faith avoided.

8. That the Philadelphia Maritime Exchange, strongly advocating the upbuilding of the merchant marine of the United States, regards the provisions of bill H. R. 18666 as dangerous in the extreme, and is of the opinion that the ownership and operation by the Government of merchant vessels is a backward rather than a forward step, and will not only discourage but destroy all private initiative in the direction so earnestly desired.

9. For these reasons the Philadelphia Maritime Exchange urgently protests against the proposed measure being enacted into law.

THE PHILADELPHIA MARITIME EXCHANGE,
By J. S. W. HOLTON, *President.*

Attest:

E. R. SHARWOOD, *Secretary.*

PROTEST OF THE CHAMBER OF COMMERCE.

Also that of the Philadelphia Chamber of Commerce:

PHILADELPHIA CHAMBER OF COMMERCE.

PROTEST AGAINST PASSAGE OF BILL (H. R. 18666) PROVIDING FOR GOVERNMENT OWNERSHIP AND OPERATION OF MERCHANT VESSELS IN THE FOREIGN TRADE OF THE UNITED STATES, NOW PENDING IN THE CONGRESS OF THE UNITED STATES.

The freight committee gave serious consideration to H. R. 18666, and unanimously agreed to recommend that the chamber of commerce protest against the proposed measure being enacted into a law for the following reasons:

1. The project is not based on economic necessity, there being at the present time no lack of ships available for cargoes and ocean freight being abnormally low.

2. It is an experiment in Government ownership and operation which we can not afford to try at the present time. It is the general experience that governmental agencies can not be conducted with the efficiency and economy resulting from private operation, and we believe such lines could not fairly compete in rates with those offered in normal times by the commercial ships of other nations. The burden of insurance, depreciation, and operating deficit would have to be borne by the taxpayer.

3. Its effect on our attitude of neutrality is by no means clear. Our Government has discouraged private loans to France, and now

appears to propose a large purchase of German ships, which are at present useless to their owners, thus releasing a large amount of money.

4. The object does not tend in a permanent and consistent manner to build up our merchant marine by overcoming the handicap which has driven our ships from the over-seas trade. It is well known that our existing navigation laws impose conditions which render the operation of shipping under the American flag so much more expensive than that of our foreign competitors as to make competition impossible, especially as it is the foreign practice to assist the merchant marine where necessary by substantial Government subsidies or their equivalent.

5. We recognize, however, that this is an opportune time for the establishment of a regular line of steamers connecting Philadelphia and New York with the principal seaports on the east and west coasts of South America, and we would welcome any assistance which the Government could offer by subsidy to the establishment of such lines.

It must be borne in mind, however, that to maintain such successfully they will have to be able to offer freight rates which will be fairly competitive with those that will be given in normal times by vessels sailing under foreign flags.

Respectfully submitted.

COLEMAN SELLERS, JR.,
Chairman Freight Transportation Committee.

Attest:

N. B. KELLY, *Secretary.*

BOARD OF TRADE PROTEST.

Also that of the Philadelphia Board of Trade:

PHILADELPHIA BOARD OF TRADE,
Philadelphia, September 15, 1914.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

This memorial of the Philadelphia Board of Trade respectfully represents:

That there is nothing in the present emergency, so called, which justifies the Government of the United States embarking in the ownership of merchant vessels either directly or under the guise of a stock ownership, as contemplated in bill H. R. 18666, providing for the ownership and operation of vessels in the foreign trade;

That from testimony of the most experienced and practical men the present paralyzation of foreign trade is due not to the lack of shipping facilities but to the foreign exchange situation;

That so long as the Government enacts laws which entail serious extra expense upon all American bottoms as compared with vessels under foreign register; so long as American steamships are compelled to carry an extra large force of men—many more than carried by vessels of the same class under foreign registry; and so long as the Government caters to an influence which by legislation is striving to add extra cost to the operation of vessels under the United States flag, so long will it be impossible to build up a merchant marine;

That the only way to reestablish a merchant marine is to overcome the disadvantages under which it now labors in competition with foreign tonnage;

That nothing can be more impracticable than the attempt to resuscitate the American merchant marine through the plan set forth in the bill under criticism;

That an undertaking of the character proposed, under Government management, in comparison with the running of steamships in private ownership, must necessarily be uneconomical, and it is highly improbable that the 49 per cent of the stock to be allotted to the public of the corporation contemplated will be subscribed;

That Government ownership of vessels, which takes the money of the people to conduct an unprofitable business, is an indirect subsidy, while a direct subsidy with proper revision of the navigation laws would be effective in building up our merchant marine as well as insuring the continued operation of American shipyards;

That the possibility of complications in the purchase of vessels under the flags of belligerent nations by reason of the neutrality obligations of the United States should be seriously considered;

Therefore, your memorialist, the Philadelphia Board of Trade, earnestly protests against the proposed measure (H. R. 18666) being enacted into law.

And your memorialist will ever pray.

(True copy.)

WM. M. COATES, *President.*

Attest:

WM. R. TUCKER, *Secretary.*

VIEWS OF THE NEWSPAPERS.

I also attach an editorial from the Philadelphia Public Ledger of September 3 and another from the Philadelphia Record (Democratic) of the same date:

[From the Philadelphia Public Ledger, September 3, 1914.]

SHIP PURCHASE A HERESY AND A PERIL.

Every day furnishes new and unanswerable arguments why the Federal Government should abandon the ill-advised and unnecessary project for the purchase of foreign vessels as a means of rehabilitating the merchant marine. That consummation, so devoutly wished by every patriotic American, will be brought about only by the enterprise of its citizens, actuated by that most potent of influences—the hope of gain. To suppose that Government participation in the carrying trade, in Government-owned ships, is going to solve the problems which have baffled the business men of America is to put faith in the power of the Government that is childlike. The solution is going to be found, if at all, in the restoration of confidence in the financial and commercial world and in the determination that American investments in the foreign carrying trade shall have the same protection that is accorded by navigation laws of other maritime countries to their own investors. Open the way to that freedom by a wise revision of our antiquated navigation laws and the chief obstacle in the path of shipping under the American flag will be removed.

The right of the United States to buy the German ships now driven from the seas by the potential power of British and French naval strength is largely academic. Perhaps we have that right; probably we could defend it by accepted principles of international law. But is it wise to exercise a right which is bound to bring with it the imminent danger of friction? Is there any emergency which would justify the risk of sacrificing our present unique position of neutrality? Is there such a need of shipping for the carrying trade that would warrant a departure from the principle which has for more than a century governed the activities of the Federal Government and its embarkation upon the field of private commercial enterprise?

To all these questions the attitude of several of the powers now at war, the condition of the shipping trade, and the lessons of political economy all give an emphatic negative. From the standpoint of England and France the purchase by the United States Government of the idle German ships, even though we were to employ them solely in the South American trade, would have the effect of nullifying the advantage which sea power has won for both belligerents. Such a nullification might be protected and justified by abstract "right"; but would it be in full accord with the spirit of real neutrality of which President Wilson has spoken so earnestly and eloquently? There is just enough doubt about it to make it imperative that we should proceed very slowly in that direction; and the spectacle of steamships leaving our ports for European destinations with partial cargoes is a sufficient answer to the argument based on alleged necessity.

Every reason, therefore, of prudence, of good business policy, and of sound economics dictates the abandonment of a scheme that would, if adopted, inevitably spell trouble and complications for the United States. If the discussion of this subject shall hasten action looking toward the serious study of the conditions surrounding the merchant marine, it will have done no harm, but otherwise it is a mischievous project, which can not be too strongly condemned.

—

[From the Philadelphia Record, September 3, 1914.]

RESUMPTION OF SAILINGS.

No one has yet explained why the United States Government should, without precedent in its own history or that of other nations, go into the shipping business. There is an impression that our commerce was embargoed, that we could not get our wheat and cotton out, and that we hadn't facilities for sending to South America the goods that that market is in need of on account of the interruption of commerce with Europe.

Some of these reasons never existed, and the rest of them are fast ceasing to exist.

Sailings for Western Europe are nearly normal. Exports of wheat in the week of August 13 were only 3,726,000 bushels, but in the week of August 20 they were 6,941,000 bushels, or within 92,000 bushels of what they were in the same week of 1913. During last week, according to the New York Journal of Commerce, "it is estimated that fully 20 steamers loaded with grain from Montreal, Boston, New York, Baltimore, and ports in the Gulf have sailed for London." The paper adds that "quite a few steamers have been chartered during the past week to load car grain cargoes for delivery in England with the option of unloading at French ports." Yesterday's New York Sun says:

"Foreign buyers at the Produce Exchange made heavy cash purchases of wheat and oats yesterday for immediate shipment. England and France led, although Greece continued to add to her stock of provisions. The reports yesterday indicated that 559,000 bushels of wheat left the Atlantic and Gulf ports. * * * The announcement by the Illinois Central Railroad that it had lifted its grain embargo was taken to mean that exports from New Orleans will show a large increase very soon. Exporters expressed themselves as pleased yesterday at the exchange situation. Their bills were taken by the banks at fair rates."

The New York Journal of Commerce heads an article, "No lack of shipping," and says editorially:

"It is made clearer every day that the trouble with our foreign trade in this emergency, whether with South America or with Europe, is not lack of shipping ready to do the carrying whenever it can be safely done and there is demand for it. The main trouble has been with arrangements to insure payments for consignments of goods to be carried. Without this assurance shipments will not be made. There is plenty of shipping waiting for these adjustments, and as fast as they are made it gets into action."

The same paper gives a list of 15 steamers to sail from New York this month for Mediterranean ports, and its advertising columns give the announcements of sailings for South America by the following list of steamship companies, not counting the Panama steamers:

Norton Line.
Merchants' Line.
West Coast Line.
New York & South America Line.
Booth Line.
Lloyd Brazileiro.
Prince Line.
Lamport & Holt Line.
United States & Brazil Steamship Line.
Barber & Co.
Houlder, Weir & Boyd.
Peruvian Steamship Co.

What possible excuse is there for the United States Government to do the unprecedented thing of engaging in merchant shipping?

THE EMERGENCY HAS DISAPPEARED.

A more recent editorial—from the Philadelphia Record of yesterday—indicates what the port statistics generally now show—that even if an emergency requiring the temporary use of foreign ships did exist, it is rapidly passing away.

[From the Philadelphia Record, September 29, 1914.]

The experience of this port is the same as that of New York and other ports; there was something close to a paralysis of shipping in August, but September is showing normal results, or something a little better than last year. In September, 1913, 18 ships cleared from here with 1,147,323 bushels of grain, and during the present month 13 ships have cleared with 1,151,640 bushels. One steamer will sail this week with 400,000 bushels of oats for France, and two ships will leave presently for England with grain cargoes. The situation created in the middle of August has entirely disappeared, except that vessels are not sailing for Germany and Austria. From all ports the wheat shipments of five weeks have been nearly 50 per cent greater than a year ago. Steamers are leaving for South America constantly, and, while the vast war must suspend a great deal of trade, the exports from this country are normal, or nearly so, and the imports are approaching that point except for shipments to the North and Baltic Seas.

Emergency Revenue Legislation.

EXTENSION OF REMARKS
OF
HON. J. M. C. SMITH,
OF MICHIGAN.

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. J. M. C. SMITH. Mr. Speaker, extending my remarks under the rule on the bill to increase the internal revenue, and for other purposes, I wish to occupy a short time to speak about that war-tax measure, so called, and other things.

I do not think it is necessary at this time when business in the country is so depressed and so many workmen are out of employment to put this additional tax upon the people. Neither do I think the necessity for this tax was brought about by the war in Europe, but by a breaking down of the Underwood tariff law and its failure to produce enough money to run our Government.

Mr. Speaker, on the 4th day of September, present month, the President came before both branches of Congress, jointly convened, and delivered a message, in which he set forth the necessity for additional revenue. Quoting from that message, he said:

* * * * * * *

During the month of August there was, as compared with the corresponding month of last year, a falling off of $10,629,538 in the revenues collected from customs. A continuation of this decrease in the same proportion throughout the current fiscal year would probably mean a loss of customs revenues of from sixty to one hundred millions. I need not tell you to what this falling off is due. It is due, in chief part, not to the reductions recently made in the customs duties, but to the great decrease in importations; and that is due to the extraordinary extent of the industrial area affected by the present war in Europe. Conditions have arisen which no man foresaw; they affect the whole world of commerce and economic production; and they must be faced and dealt with.

* * * * * * *

The Treasury itself could get along for a considerable period, no doubt, without immediate resort to new sources of taxation. But at what cost to the business of the community? Approximately $75,000,000, a large part of the present Treasury balance, is now on deposit with national banks distributed throughout the country. It is deposited, of course, on call. I need not point out to you what the probable consequences of inconvenience and distress and confusion would be if the diminishing income of the Treasury should make it necessary rapidly to withdraw these deposits. And yet without additional revenue that plainly might become necessary, and the time when it became necessary could not be controlled or determined by the convenience of the business of the country. It would have to be determined by the operations and necessities of the Treasury itself. Such risks are not necessary and ought not to be run. We can not too scrupulously or carefully safeguard a financial situation which is at best, while war continues in Europe, difficult and abnormal. Hesitation and delay are the worst forms of bad policy under such conditions.

And we ought not to borrow. We ought to resort to taxation, however we may regret the necessity of putting additional temporary burdens on our people. To sell bonds would be to make a most untimely and unjustifiable demand on the money market; untimely, because this is manifestly not the time to withdraw working capital from other uses to pay the Government's bills; unjustifiable, because unnecessary. The country is able to pay any just and reasonable taxes without distress. And to every other form of borrowing, whether for long periods or for short, there is the same objection. These are not the circumstances, this is at this particular moment and in this particular exigency not the market, to borrow large sums of money. What we are seeking is to ease and assist every financial transaction, not to add a single additional embarrassment to the situation. The people of this country are both intelligent and profoundly patriotic. They are ready to meet the present conditions in the right way and to support the Government with generous self-denial. They know and understand, and will be intolerant only of those who dodge responsibility or are not frank with them.

* * * * * * *

In order to meet every demand upon the Treasury without delay or peradventure and in order to keep the Treasury strong, unquestionably strong, and strong throughout the present anxieties, I respectfully urge that an additional revenue of $100,000,000 be raised through internal taxes devised in your wisdom to meet the emergency. The only suggestion I take the liberty of making is that such sources of revenue be chosen as will begin to yield at once and yield with a certain and constant flow.

* * * * * * *

Now, Mr. Speaker, I am not claiming that it will not ultimately be necessary to raise additional revenue to run our Government if the extravagant expenditures of the Democratic Party continue, because the Underwood tariff law has broken down and failed to support the expenditures of the Democratic administration, as we shall presently see. But let us give the true reason and not another. On the 21st day of September a bill was introduced to raise this revenue by direct tax upon certain articles and by certain methods, which we find in the report to be:

THE PROPOSED EMERGENCY MEASURE.

The taxes proposed in this measure with two exceptions were assessed subsequent to and during the Civil War and in the war-revenue act of June 13, 1898. Therefore this measure opens up no new and untried system of taxation. While this country is not at war, it finds its Treasury balance rapidly falling off because of the decline in importations due to the present war in Europe. In framing this measure the committee has endeavored to propose taxes that can be collected by the present force of internal-revenue officials, slightly increased in number, with a small additional expense, and with a minimum disturbance of trade.

The bill (H. R. 18891) proposes to supplement the Government revenues by increasing the tax that is now levied on beer, lager beer, ale, porter, and other similar fermented liquors by increasing the present tax of $1 a barrel to $1.50 a barrel. It is estimated that this increase in taxation will produce an additional annual revenue amounting to $32,500,000.

The proposed bill levies a tax of 12 cents a gallon on dry wines manufactured and sold in the United States, and a tax of 20 cents a gallon on sweet wines manufactured and sold in the United States. It is estimated that the annual revenue derived from this tax will amount to $6,000,000.

A tax of 2 cents per gallon is levied upon gasoline, naphtha, and other similar products obtained from crude, partially refined, or residuum oils. It is estimated that this tax will bring to the Government a revenue of $20,000,000 a year.

SPECIAL TAXES.

It is proposed to levy the following special taxes: A tax on bankers of $2 for each $1,000 of capital used or employed; brokers, $50; pawnbrokers, $20; commercial brokers, $20; customhouse brokers, $10; proprietors of theaters, museums, and concert halls in cities having more than 15,000 population, $100; proprietors of circuses, $100; proprietors of other public exhibitions or shows, $10; and proprietors of bowling alleys and billiard rooms, $5 for each alley or table. It is estimated that the above special taxes will yield $10,000,000 during the first 12 months this law is in effect.

SPECIAL TAXES ON TOBACCO DEALERS AND MANUFACTURERS.

In addition to the above special taxes, it is proposed to tax dealers in leaf tobacco and manufacturers of tobacco, whose annual sales do not exceed 50,000 pounds, $6; those whose annual sales exceed 50,000 and do not exceed 100,000 pounds, $12; and those whose annual sales exceed 100,000 pounds, $24. The bill levies the following taxes on manufacturers of cigars: Manufacturers of cigars whose annual sales do not exceed 100,000 cigars, $6; those whose annual sales exceed 100,000 and do not exceed 200,000 cigars, $12; and those whose annual sales exceed 200,000 cigars, $24.

Each manufacturer of cigarettes will be taxed $24, and a special tax of $4.80 per year is levied on all other dealers in tobacco. It is estimated that the Government will receive $5,000,000 per year from the taxes levied on tobacco dealers and manufacturers.

The bill also proposes a tax upon telephone companies of 1 cent for each message or conversation for which a charge of 15 cents or more is made and a tax upon telegraph companies of 1 cent for each dispatch or message sent. It is estimated that the tax upon telephone and telegraph companies will yield to the Treasury during the first year this bill is in operation $1,500,000.

STAMP TAXES.

Articles upon which a stamp tax is levied and the rate of tax.	
Bonds, debentures, or certificates of indebtedness, etc., for each $100	$0.05
Certificates of stock, original issue, for each $100	.05
Certificates of stock, transfers, for each $100	.02
Sales of products at exchanges, for each $100	.01
Promissory notes, for each $100	.02
Express receipts	.01
Freight receipts or domestic bills of lading	.01
Bonds of indemnity and bonds not otherwise specified	.50
Certificate of profits, for each $100	.02
Certificate of damage	.25
Certificates not otherwise specified	.10
Broker's contract	.10
Conveyances, exceeding $100, for each $500	.50
Entry of goods at customhouse (according to value)	.25–$1.00
Entry for withdrawal of goods from customs bonded warehouse	.50
Insurance:	
Life, on each $100 of the amount insured	.08
Marine, inland, and fire, on each $1 of premium charged	.0½
Casualty, fidelity, and guaranty, on each $1 of premium charged	.0½
Mortgages and conveyance in trust, exceeding $1,000, for each $1,500	.25
Passage ticket (according to value)	1.00–5.00
Power of attorney to vote	.10
Power of attorney to sell	.25
Protest of note, check, etc	.25
Sleeping and parlor car tickets	.02

GOVERNMENT REVENUES.

Should this bill become a law as proposed by the committee, we confidently estimate that the revenue that will be derived during the first 12 months this bill is in operation will amount to $105,000,000, distributed as follows:

Fermented liquors	$32,500,000
Wines	6,000,000
Gasoline	20,000,000
Special taxes	16,500,000
Stamp taxes	30,000,000
Total	105,000,000

From the foregoing we see that the purpose is to raise $105,000,000 per annum by direct taxation. The report states that it is necessary to raise this tax because of the war in Europe, but is silent as to the great falling off of our revenue prior to any

thought of war in Europe or any other place, and is due to the breaking down of the Underwood tariff law.

The European nations declared war on the following dates:

DECLARATIONS OF WAR.

Since Austria-Hungary first declared war against Servia, on July 28, the number of war declarations exchanged between the various States has grown to 13, viz:

1. Austria-Hungary against Servia, July 28.
2. Germany against Russia, August 1.
3. Germany against France, August 3.
4. Germany against Belgium, August 4.
5. England against Germany, August 5.
6. Austria-Hungary against Russia, August 5.
7. Montenegro against Austria, August 5.
8. Servia against Germany, August 6.
9. Montenegro against Germany, August 11.
10. France against Austria-Hungary, August 11.
11. England against Austria-Hungary, August 13.
12. Japan against Germany, August 23.
13. Austria against Belgium, August 29.

The war was not anticipated by this country, but came like a bolt out of a clear sky.

RECEIPTS FROM CUSTOMS DUTIES.

The Underwood tariff bill took effect on the 3d day of October, 1913, and for the months thereafter up to and including August of 1914 the receipts as compared with the same months of the preceding year were as follows:

Customs revenue and total ordinary receipts for the fiscal years 1912, 1913, 1914, and 1915 to date.

CUSTOMS REVENUE.

Months.	1912	1913	1914	1915
July	$23,404,502.50	$28,136,502.27	$27,806,654.54	$22,088,465.04
August	25,952,466.21	30,205,331.96	30,934,952.44	19,431,362.52
September	24,746,309.77	27,475,127.85	26,794,494.25	
October	25,757,030.40	30,216,824.02	30,138,049.37	
November	24,704,345.15	25,666,353.25	21,173,627.85	
December	24,587,327.35	24,248,161.30	21,510,139.99	
January	24,654,652.30	29,334,124.09	23,528,079.83	
February	26,337,528.23	27,605,115.83	17,609,603.70	
March	30,408,561.39	27,457,489.20	25,927,212.90	
April	26,184,467.79	23,693,966.76	22,232,766.57	
May	26,578,973.14	20,434,749.21	20,800,573.25	
June	28,005,501.99	24,417,650.12	23,672,372.94	
Total	311,321,672.22	318,891,395.86	292,128,527.63	42,419,827.56

TOTAL ORDINARY RECEIPTS.

Months.	1912	1913	1914	1915
July	$52,085,061.76	$59,536,333.50	$60,231,524.12	$73,224,173.55
August	54,803,682.82	60,205,002.32	61,600,197.16	51,072,898.30
September	56,335,353.09	55,682,556.08	56,073,397.05	
October	56,054,411.33	64,469,504.07	64,196,633.15	
November	56,588,831.93	59,089,393.94	55,515,132.92	
December	53,749,605.62	55,821,538.88	53,152,435.89	
January	52,461,711.56	60,542,363.45	53,977,886.39	
February	53,932,609.01	54,803,419.47	43,633,857.33	
March	59,296,026.64	56,720,083.57	54,803,890.84	
April	53,305,711.82	53,452,556.72	50,488,806.53	
May	58,369,952.26	55,370,363.84	55,289,211.77	
June	84,795,507.53	88,438,114.00	125,280,727.05	
Total	691,778,465.37	724,111,229.84	734,343,700.20	124,297,071.85

This table is taken from the remarks of Mr. UNDERWOOD, in which he stated:

The gentlemen seem to overlook the fact that when the present Democratic law was brought before this House the country was advised of the fact that we proposed to reduce the receipts collected at the custom-house, and in lieu thereof levy an income tax to make up the difference. [Applause on the Democratic side.]

This table clearly shows that during and after the very first month after the passage of the Underwood bill to the present time, except for May, 1914, there had been a falling off of revenue from duties on imports as compared with corresponding month of the preceding year 1913 under a protective tariff, as follows:

Imports and exports under Underwood law.

Months.	Total imports.	Total exports.	Excess of—	
			Imports.	Exports.
1913—October	$132,949,302	$271,861,464		$138,912,162
November	148,236,536	245,539,042		97,302,506
December	184,025,571	233,195,628		49,170,057
1914—January	154,742,923	204,066,603		49,323,680
February	148,044,776	173,920,145		25,875,369
March	182,555,304	187,499,234		4,943,930
April	173,762,114	162,552,570	$11,209,544	
May	164,281,515	161,732,619	2,548,896	
June	157,529,450	157,072,044	457,406	
July	159,677,291	154,138,947	5,538,344	
August	129,399,496	110,369,114	19,030,382	
Total, 11 months	1,735,204,278	2,061,947,410	38,784,572	365,527,704

Imports and exports under Payne law for corresponding months of preceding year.

Months.	Total imports.	Total exports.	Excess of—	
			Imports.	Exports.
1912—October	$177,987,986	$254,633,504		$76,645,518
November	153,094,898	278,244,191		125,149,293
December	154,095,444	250,315,807		96,220,363
1913—January	163,063,438	227,032,930		63,969,492
February	149,913,918	193,998,942		44,083,024
March	155,445,498	187,426,711		31,981,213
April	146,194,461	199,813,438		53,618,977
May	133,723,713	194,607,422		60,883,709
June	131,245,877	163,404,916		32,159,039
July	139,061,770	160,990,778		21,929,008
August	137,651,553	187,909,020		50,257,467
Total, 11 months	1,641,478,556	2,298,375,659		657,897,103

Which shows that the imports were $93,725,722 more under the Underwood law in the 11 months it has been in operation than for the corresponding 11 months of the year previous under a protective tariff, while the total exports were $236,428,249 less during the same time than under the Payne law the year before.

MONTHLY REVENUES.

Months.	Revenue received on imports.	Increase under Payne law.	Increase under Underwood law.
October, 1912	$30,216,824.02		
October, 1913	30,138,049.37		$78,774.65
November, 1912	25,666,352.25		
November, 1913	21,173,627.85		4,492,724.40
December, 1912	24,248,161.30		
December, 1913	21,510,139.99		2,738,021.31
January, 1913	29,334,124.09		
January, 1914	23,528,079.83		5,806,044.26
February, 1913	27,605,115.83		
February, 1914	17,609,603.70		9,995,512.13
March, 1913	27,457,489.20		
March, 1914	25,927,212.90		1,530,276.30
April, 1913	23,693,966.76		
April, 1914	22,232,766.57		1,461,200.19
May, 1913	20,434,749.21		
May, 1914	20,809,573.25		$364,824.04
June, 1913	24,434,749.21		
June, 1914	23,672,372.94		762,376.27
July, 1913	27,806,654.54		
July, 1914	22,988,465.04		4,818,189.50
August, 1913	30,934,952.44		
August, 1914	19,431,302.52		11,503,649.92

Which shows a total falling off from custom revenue alone of $43,186,768.93; less increase for May, 1914, of $364,824.04, or a total revenue loss of $42,821,944.89 for the 11 months since the Underwood law was in effect, as compared with the Payne law for the 11 corresponding months of preceding year.

IMPORTS INCREASE AND EXPORTS DECREASE UNDER THE UNDERWOOD TARIFF LAW.

Mr. Speaker, the Underwood tariff or revenue bill became a law on the 3d day of October, 1913; since that time the imports of foreign countries have increased and our exports have decreased. I gave the figures above for those months as furnished by the Department of Commerce, and found on page 17157 of the CONGRESSIONAL RECORD of September 25, 1914.

This must prove to any fair-minded man that there is a complete breakdown of the Underwood bill as a revenue-producing measure. What does that mean? It means that of the manufactured articles imported there was just that much labor furnished to foreign laborers that would have been done by American workmen if these goods were made in this country. A plain way of stating the proposition is that articles made in a foreign country and shipped into this country furnished work to the foreign workman and deprives the American workingman of just that much labor. You can not have the work done in foreign countries and keep the wheels of industry turning in this country. No rifle, automobile, cloth, implements, or anything else made in a foreign country furnishes a day's work to a laborer in this country or builds a factory. The idea that we should buy our manufactured articles in foreign countries

because we can get them cheaper is not American, and following out that practice has always brought stagnation and depression to our country. It is a better policy to manufacture our own commodities, keep the price down by competition, and sell our surplus abroad. Women, children, and the whole family work in the factories and on the farms in foreign countries at insignificantly low wages as compared with the wages paid in our country. When we must compete with the labor of other countries we can not pay high wages here as against the low wages paid there. If we do, we involve a social question, and no one wants the women and children in this country to go into the factories and fields and work the same as they do in foreign countries. We should not make beasts of burden of American citizens.

WAR IN EUROPE.

There was no war in Europe during the months from October, 1913, when the Underwood bill went into effect, and not until August 1, 1914. But during that time our imports increased and our exports decreased. Our revenue under this bill during that time likewise fell off. They fell off $11,000,000 in August, 1914, and they fell off $9,000,000 in February, 1914. Why did you not bring in a bill to increase our revenue in February—or at least bring this falling off to the attention of the country? We are at peace with all the world. In February, 1914, there was no war in Europe. And why has no other nonbelligerent country not engaged in war not proposed to levy a war tax, as you call it? It is because of the breakdown, pure and simple, of the Underwood bill; because after the enactment of this law the revenue began falling off each month, while imports increased and exports decreased.

MONEY IN THE BANKS.

The President says in his message that we have $75,000,000 in the banks, deposited there on call, and if we draw it out inconvenience, distress, and confusion would follow. Who ever in his private business had money in the bank on call and did not draw it out when he needed it in his business? It is the people's money, and instead of taking it out of the banks as needed you propose to make the people go down into their pockets and duplicate it at a time when hundreds of thousands of workmen are out of employment; at a time when the care of the unemployed is a vital question in many of the principal cities and municipalities of the land. There is on deposit in the national banks of the country over $6,000,000,000. It is proposed to raise this revenue at the rate of $8,000,000 a month. Do you suppose that withdrawing the people's money at the rate of $8,000,000 a month for the period of one year would seriously affect the banks or hamper trade? It is a poor business proposition to tax the people for the money they have already in the banks. If you take it out of the pockets of the people you take it out of the channels of trade as much as you do to take it out of the banks. Spreading it out over a year would be a mere incident to the banks and not felt by them. It would be but a small fraction of 1 per cent a month of their deposits. The banks themselves are not saying they could not or would not pay it conveniently. No banker would say that this would seriously affect his bank. Nor would $8,000,000 a month drawn out of the banks diminish the production of $20,000,000,000 worth of manufactured products made each year in this country. If withdrawn, it could readily be placed back by emergency currency if the banks so desired. If withdrawn, it would find its way back, first, into the channels of trade and then into the banks. The $100,000,000 per year is needed by the Government because the Underwood bill failed to produce enough revenue to meet the administration expenses. The Underwood bill failed to raise enough revenue for this purpose before the war in Europe. While the war in Europe will lessen our customs receipts, why are you not fair about it and say so, and raise this war tax because your tariff-for-revenue-only bill failed to do so. The way to remedy this is to put into effect a sufficient protective tariff law. I once knew a man who would not pay his debts out of the money he had in his pocket; he would make you wait until he got hold of other additional money. This made it all right for the man, but made it a burden to the creditor and was not fair business.

The capital stock of all the national banks is $1,058,192,335. This internal-revenue tax bill proposes to place a tax of $2 a year upon each $1,000 of the capital stock of such banks. This will amount annually to $2,116,384, which is quite 3 per cent per annum on the $75,000,000 Government deposits. But let me further add, Mr. Speaker, another thing this bill proposes to do. The President said:

I need not point out to you what the probable consequences of inconveniences and distress and confusion would be if the diminishing income of the Treasury should make it necessary rapidly to withdraw these deposits.

Look at the proposition in the light of the people who have the tax to pay. It is a proposition to tax the people $105,000,000 a year for the purpose of leaving $75,000,000 of Government money on deposit with the banks. I think the reason given by the President is unsound. It can not be justifiable on any such ground. It taxes notes and mortgages of people in debt. We should look at it in its true light—the revenue is needed because of the breakdown of the Underwood tariff law, and which would not have happened under a proper protective tariff law.

TARIFF ACT OF 1913.

The act is discriminatory. It puts a duty of 15 per cent ad valorem on the goat hair of Texas, but puts the wool of the North on the free list. It puts a duty of three-eighths of a cent a pound on peanuts of the South, and puts potatoes on the free list. It puts a duty of five-eighths of a cent per pound on the rice of South Carolina, and puts wheat conditionally on the free list. It puts cotton bagging and cotton ties on the free list, but puts a duty on wool sacks and wheat sacks. The new tariff law is not fair to our farmers.

PARTY PLATFORMS.

The question is now being raised as to what is meant by a party declaration or a party platform. It is stated that a platform is made to stand upon and to sacredly carry out; that it is not like molasses, to catch flies.

The passage of the Underwood tariff law was especially pleasing to other countries. Canada refused to ratify the Canadian reciprocity act. It was claimed at that time by Premier Borden that by waiting they would get something better. The subsequent passage of the Underwood tariff law proved Canada knew what she was talking about. When this new tariff law brought depression to business throughout our country it was proclaimed that the effect was merely psychological and the American manufacturer was advised to whet up his wits. Perhaps it would have been more practically stated that the manufacturers would have plenty of time to sharpen their wits while the wheels of their machinery were idle.

The farmers of this country were opposed to reciprocity with Canada. They have more reason to complain of the present tariff law which opens their markets to the products of the world.

I herewith insert a table put into the CONGRESSIONAL RECORD by Hon. JAMES R. MANN, and taken from a circular letter issued by the Department of Commerce, showing the increase of importations of farm products from October 3, 1913, during the following 11 months as compared with the corresponding 11 months the year preceding under a protective tariff law:

Increase in importations.

Cattle	$11,968,347
Corn	9,775,179
Oats	7,984,053
Hides and skins	13,523,927
Fruits and nuts	8,201,183
Leather and tanned skins	5,926,782
Meat and dairy products	30,453,388
Paper and manufactures of	5,452,729
Flaxseed	7,741,139
Vegetables	4,791,525
Wool, unmanufactured	30,136,171
Wool, manufactures of	22,506,828
Sugar	8,829,374
Cotton, manufactures of	5,056,927
Fertilizers	5,026,772
Fish	3,239,031
Silk, manufactures of	3,441,080
Wheat	1,473,040
Sheep	483,546
Butter	1,517,019
Eggs	928,680

Increase in importations Jan. 1, 1914, to Aug. 31, 1914, eight months, over same months in 1913.

Australia	$26,196,590
Belgium (decrease)	7,391,082
Brazil	858,984
Canada	3,576,631
China (decrease)	26,803,944
Argentina	728,335
Cuba	13,376,519
France (decrease)	7,141,653
Germany	1,830,854
India, British	3,974,854
Italy	1,170,248
Japan	10,818,211
Mexico	10,652,160
Netherlands (decrease)	1,128,745
Russia (decrease)	1,899,626
United Kingdom of Great Britain and Ireland	18,593,245

The statement also shows that during the same eight months we increased our imports from $78,786,141 in 1913 to $105,590,085 in 1914, and that our exports to Canada during the same eight months fell off from $282,903,099 in 1913 to $219,960,317 in 1914. There was no war in Europe during that time, and it was due to the Democratic tariff law, and deprived us of the revenue.

There is signed to the Declaration of Independence such a galaxy of patriotic names that will make it an inspiration to all future generations. By the terms of that sacred instrument we are declared to be an independent Nation. We are now told, "The future growth of our American industries lies beyond the seas." The enunciation of that saying will never make it so. The war will stimulate American industry. When we import foreign goods we must ship out the gold from this country to pay for them. Lincoln said that he was in favor of protection to American industries, and that if we buy our goods at home we have both the goods and the money, but if we purchase them abroad we only have the goods and the foreigner has the money. Lincoln knew what he was talking about.

PLATFORMS AND PROMISES.

We find in the Democratic platform of 1908 this exordium and grave charge against the expenditures of the Republican Party:

ECONOMY IN ADMINISTRATION.

The Republican Congress in the session just ended made appropriations amounting to $1,008,000,000, exceeding the total expenditures of the past fiscal year by $90,000,000, and leaving a deficit of more than $60,000,000 for the fiscal year just ended. We denounce the needless waste of the people's money, which has resulted in the appalling increase, as a shameful violation of all prudent considerations of government and as no less than a crime against the millions of working men and women, from whose earnings the great proportion of these colossal sums must be extorted through excessive tariff exactions and other indirect methods. It is not surprising that, in the face of this shocking record, the Republican platform contains no reference to economical administration or promise thereof in the future. We demand that a stop be put to this frightful extravagance and insist upon the strictest economy in every department, compatible with frugal and efficient administration.

What have you now to say about the expenditures of the Republican Party, when the amount of your appropriations for the fiscal year of 1915, when you are in full control of all branches and departments of Government, being over $31,000,000 more than the preceding fiscal year of 1914, when you had control of the House, and nearly $100,000,000 more than the last Republican Congress of 1912?

I further call your attention to the fact that when you came into power in 1912 there was great business prosperity in this country. Since that time business has been halting and depressed. To show just how the chairman of the Democratic Committee on Appropriations feels about the expenditures of the Democratic Party since it came into power, I quote the following from the speech of Mr. FITZGERALD, chairman of the Appropriations Committee, on April 10, 1914:

Mr. Chairman, it may seem somewhat strange, but I hope it is not out of place, to remind Members on this side of the House that the Democratic platform pledged us in favor of economy and to the abolishment of useless offices; but it did not declare, Mr. Chairman, that the party favored economy at the expense of the Republicans and the abolition of useless officers in territory represented in this House by Republicans while favoring a different doctrine wherever a Democratic Representative would be affected. In a few months I shall be called upon in the discharge of my official duties to review the record that this Democratic House shall have made in its authorization of the expenditure of the public money. Whenever I think of the horrible mess I shall be called upon to present to the country on behalf of the Democratic Party I am tempted to quit my place. I am looking now at Democrats who seem to take amusement in soliciting votes on the floor of this House to overturn the Committee on Appropriations in its efforts to carry out the pledges of the Democratic platform. They seem to take it to be a huge joke not to obey their platform and to make ridiculous the efforts of the members of our party who do try to live up to the promises they made to the people. * * * My colleagues upon this floor seem either to be so indifferent to a very perilous situation for our party, or else, which I do not wish to believe, have so far forsaken Democratic practices and Democratic principles as not to deserve to continue in control of this Government.

We charged the Republicans for 12 years of my service in the House under Republican administration with being grossly extravagant and reckless in the expenditure of the public money. I believed that charge to be true. I believed that my party, when placed in power, would demonstrate that the charges we had made in good faith were true. We are entitled to the help and to the support of the Members on this side of the House in honest efforts to carry out the pledges of the Democratic Party, and in our attempts to show that what we charged in order to get into power was true. We have not had that support. Our Democratic colleagues have not given that support to us thus far during this session of Congress. They have voted against recommendations they should not have voted against. They have unnecessarily piled up the public expenditures until the Democratic Party is becoming the laughingstock of the country.

I appeal to them now before it is too late; I appeal to them now before we have gone beyond recall to stop the conduct of which they have been guilty. Do not continue to vote for these improper and improvident appropriations. Those who propose to continue to do so should at least have the courage openly to assert upon the floor of this House that they believe the professions of the Democratic Party have not been made in good faith, that they can not be carried out, and that we are not entitled to power because of those professions.

This statement, made by Hon. JOHN J. FITZGERALD, of New York, one of the leading Democrats of the country, charges the Democratic Party with profligate expenditures. If Mr. FITZGERALD was a cowboy we would call that shooting up his Democratic colleagues.

To show just what the amount of these appropriations are, and by way of comparison with the preceding years under a Republican administration, I insert the following table of appropriations for the last five years:

Total appropriations, excluding river and harbor acts.

1911	$978,521,087.68
1912	995,709,462.72
1913	988,353,340.41
1914	1,057,665,694.40
1915	1,089,408,777.26

May I further call your attention to the fact that there is apparently no restraint upon the Democrats' conscience in making these appropriations.

And now they propose to make a gift of $25,000,000 to Colombia as a balm, and, as said by Mr. FORDNEY, of Michigan, "Roosevelt has never cracked a smile since Mr. Bryan made this proposal."

HIGH COST OF LIVING.

May I call your attention further to the declaration in the Democratic platform of 1912 on the high cost of living?

The high cost of living is a serious problem in every American home. The Republican Party, in its platform, attempts to escape from responsibility for present conditions by denying that they are due to a protective tariff. We take issue with them on this subject, and charge that excessive prices result in a large measure from the high tariff laws enacted and maintained by the Republican Party and from trusts and commercial conspiracies fostered and encouraged by such laws, and we assert that no substantial relief can be secured for the people without import duties on the necessaries of life are materially reduced and these criminal conspiracies broken up.

Since coming into power the Democratic Party has put nearly all farm products on the free list. If anyone has purchased any commodity, whether food or raiment, from a diamond pin to a loaf of bread, cheaper since the Democrats have been in power, he has not been heard of yet. But some Democrats say, then you were not injured by the adoption of the Underwood tariff bill if prices have not been reduced. I wish to say in reply that if prices have not been reduced, then free trade has been a failure. One effect so far has been a loss of revenue to the Government, and the claim made by the Democratic Party in its platform above quoted has not been fulfilled. Subsequent times and subsequent conditions have proven that the passing of a free-trade bill has not met with their prediction in lowering prices or serving the purpose intended by it. The intention of the Democratic Party to lessen the prices of commodities to the consumer was clearly defined in their platform, but the law has not had that effect. It has reduced our revenue, and we are paying as much to-day as we did under any Republican administration for our provisions and wearing apparel, with no increase in prices to the farmer and with no benefit to the American consumer.

I herewith give a list showing the effect of placing the farmers' products on the free list:

The following imports and exports of farm products during the month of June, 1914, is taken from the last monthly summary of the Department of Commerce:

Articles.	June, 1914.	
	Imported.	Exported.
Corn	$1,005,959	$724,764
Oats	126,736	94,266
Rice	421,361	64,191
Hay	218,882	53,382
Cheese	838,228	31,426
Beans and peas	225,878	71,745
Onions	87,447	30,152
Fresh meats:		
Pork	250,545	25,277
Mutton	314,974	41,130
Beef	2,706,732	72,607
Wool, manufactures of	5,460,395	422,316
Sugar and molasses	15,717,770	211,247

This shows that there is being imported into this country more farm products in a number of instances than is being exported. This in time will affect the farmer's market, and it has not been shown anywhere that the farmer can produce or raise farm products for less than the prices usually received by him for them.

FREE TOLLS.

The Democratic Party in its platform declared for free tolls to coastwise vessels through the Panama Canal:

We favor the exemption from toll of American ships engaged in coastwise trade passing through the canal.

And either because of lobbying or some other purpose not satisfactorily explained, the Democratic Party openly, publicly, and notoriously did not keep its promise. It was like an Indian

gift, which he holds out in his hand, and when one reaches for it he draws back his hand.

We have spent over $200,000,000 for improvements of the Mississippi River; we ply the Mississippi River with our American vessels and products free. The American people built the Panama Canal and paid for it, and they are as much entitled to the free use of it, without the intervention of any other nation, as they are to the use of the Mississippi River or any other public waterway constructed with the money of our people.

Mr. Speaker, I do not underrate the fact of the great conflict and war in Europe. It will affect us commercially and otherwise. We are at peace with all the world. In it all and through it all our glory, if any, that comes to us out of this war lies in observing the strictest neutrality, in being most circumspect to avoid agitation or partiality of any kind, the exercise of forbearance, patience, and economy is the road in which our duty lies, with the hope that eventually the clouds of war may disappear from the earth as suddenly as they came.

A Great New Party.

EXTENSION OF REMARKS
OF
HON. ARTHUR R. RUPLEY,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Monday, September 14, 1914.

PART 1.

Mr. RUPLEY. Mr. Speaker, the Progressive Party, in State and Nation, is only two years old. Its principles are the greatest constructive program for human advancement in the history of political endeavor.

The history of the Progressive Party in the United States is replete with a great record of genuine effort for the general welfare of all the people of the Union. Although but a span of two years marks its milestone, it is as difficult to put in concrete form the history of the Progressive Party as to put in the same form the history of the two older political parties.

As the logical answer to human evolution, the progressive principle has been breaking through the crust of conservatism for many years. The action of the Republican Cossacks, corporation-serving bosses who received their commissions and offices by the wholesale purchase and corruption of the voters in the primaries or of delegates in the conventions, their public and notorious display of misrepresenting their constituents in a Republican national convention, accomplished the formation of the Progressive Party and the framing in a national convention a platform that more nearly represented the wishes and desires of the many as against the few than the platform of any other party within the history of the Republic. Its declarations and principles were a covenant with the people who accepted and dedicated it "the great human rights party."

In Pennsylvania this progressive movement enlisted all the forces opposed to reactionism, ultra-conservatism, political bossism, in a fight upon a political machine that notoriously defied the people at the polls, in convention, in the legislature, in the gubernatorial office, in city government, and reached the highest perfection of political rascality known among the States. Pennsylvania's political machine system—a stench in the nostrils of all good citizens of the Nation—was universally derided and condemned. This system was so firmly entrenched, so gigantic in its power to corrupt, that it was unbelievable that this independent progressive force could win a victory in a primary.

The victory was won—the people's representatives were elected to the State convention to carry out the program of progress and good will. Between the progressives and reactionaries the line of cleavage was well marked and clearly defined, and the Republican State Convention of these progressives, which met in Harrisburg in May, 1912, adopted a platform, with the following salient features:

First. We hereby declare our faith in the cardinal principles of the Republican Party of Abraham Lincoln, which we have been instructed by the electorate to reaffirm.

Second. Obeying the clear mandate of the Republican voters of Pennsylvania, we pledge our support to Theodore Roosevelt for the Republican nomination for President of the United States and urge the adoption of measures advocated by him, because we believe they will aid in the restoration of the government of the people, for the people, and by the people.

Third. The people should have the right to vote on all acts regulating the conditions of employment, payment of wages in store orders, tenement-house conditions, and other acts designated to correct the social and economic injustices or to protect the health and safety of the citizens, which are declared unconstitutional by the State courts.

Fourth. We believe in a simple, direct, and short ballot, properly safeguarded to insure purity, as the easiest and most certain means of registering popular will.

Fifth. We pledge the Republican Party of Pennsylvania to such legislative and executive action as will:

Provide for the nomination by direct vote of all candidates for public office;

Give the party members in each congressional district and in the State at large the right by direct vote to record their choice for President and make the result binding on the delegates elected;

Enable the people by direct vote to indicate their choice for United States Senator, and make the result binding on the members of the general assembly;

Define the purposes for which money may be contributed and spent in any general or primary election; limit the total expenditure; and, in addition to penalties for violations, make as a condition precedent to the right of taking office the grant of a certificate of election to be had only after due accounting and public audit; and

Make the willful violation of all laws governing elections felonies punishable by imprisonment.

Sixth. We believe that our entire system of primary and general elections and laws governing and relating to the same should be recast.

We stand for the election of United States Senators by a direct vote of the people and an amendment to the National Constitution to bring this about.

Seventh. We pledge the party to the enactment of a comprehensive and effective public utilities law; to an employers' liability and workmen's compensation act; to whatever legislation may be necessary for the protection of women and children in industry, and to whatever measures will best check the surface caving in the mining regions of the State and fix responsibility therefor.

Eighth. We pledge the party to continued generous support of the public schools and public charities; to liberal appropriations for the promotion and protection of public health, and especially for keeping up the fight against tuberculosis.

Ninth. With a view to an equitable distribution of State appropriations to the eleemosynary institutions and the efficient expenditure of the same, we favor the creation of a department of charities.

Tenth. We pledge the party to a pure-food law which will prevent fraud and deception and prohibit the sale of debased, adulterated, or misbranded foods.

Eleventh. We pledge the party to a system of road building which shall insure to the agricultural districts their full share of the benefits. The State should apply its road appropriation to the dirt road as well as to the macadam, both in construction and maintenance.

Twelfth. We urge the enactment of a law to stop the swindling of the people through the sale of stock in fraudulent corporations.

Thirteenth. The government of cities must be given special attention. The single legislative body elected at large in cities of the second class should be continued, and its operations carefully observed, as an important experiment in municipal policy. Metropolitan districts should be provided for the administration of metropolitan matters. Laws exempting corporate property from local taxation and from assessment for special benefits should be repealed, and a revision of the present laws relating to the assessment and collection of county and city taxes should be considered.

Fourteenth. We favor the constitutional and legal changes necessary to permit of the increase of city and county indebtedness for the erection of bridges, tunnels, subways, wharves, docks, sewers, streets, and other public works, when such improvements can be made self-supporting by the collection of tolls, charges, or special benefit assessments.

Fifteenth. We favor a law permitting the conveyance of title in fee to counties and cities under the power of eminent domain. We favor the enactment into law of the principle of excess condemnation under proper restrictions. We favor a revision of the laws relating to the assessment of special benefits to make the same more just and equitable, and in general we declare in favor of the enlargement of municipal powers.

Sixteenth. We demand that the next general assembly shall pass appropriate legislation to that effect. So far as there may be constitutional obstacles to the immediate carrying out of such reforms, we pledge our representatives in the legislative and executive departments to the taking of immediate steps for the amendment of the State constitution, so that the will of the people, lawfully expressed, may be carried into legislative effect.

Seventeenth. We reaffirm our belief in the true American doctrine on the subject of protective tariff. That is, that the duties should be based on the difference of cost of production in this country and abroad. We believe that the pledge of revision in that platform was a pledge for revision downward, and we hereby express regret that such a pledge was not kept to the people.

Eighteenth. We demand such national legislation on the currency as will decentralize control of the Nation's money and commercial credit, just as we demand the decentralization of control in party government.

Nineteenth. We commend to the State and the National Government the policy of the conservation of natural resources, as laid down by that eminent son of Pennsylvania, Gifford Pinchot, and vitalized by Theodore Roosevelt when he was President.

Particularly do we deem it advisable for the State of Pennsylvania to take a firm grasp upon its water problems. Transportation, flood prevention, reclamation, sewerage, water power, and other incidents of water flow are questions of extreme importance to the Commonwealth. While these questions present different aspects from the National, the State, and the municipal viewpoints, their solution can not be adequately and efficiently effected except by some plan of harmonious and cooperative action. The State of Pennsylvania, standing as it does between the Federal Government and multitudinous demands pressing upon it, and the counties and municipalities with their limited powers, must take the lead in the preparation of a comprehensive plan of development.

Twentieth. We pledge the enactment of laws permitting and providing for joint action and joint contribution of funds for these purposes. We pledge immediate State appropriations for the improvement of the Delaware River and the port of Philadelphia, and for flood prevention in the western part of the State. We further pledge immediate State appropriations for complete surveys of a canal between the Ohio River and Lake Erie, and favor legislation providing for joint action on the part of the States of Pennsylvania, Ohio, and West Virginia in the planning, construction, and operation of this great project.

Twenty-first. We urge a program of progressive government action. Nothing else will still the widespread and menacing unrest. Social and industrial justice must be made the rule and not the exception. Contentment of the people, which rests upon their well-being, will alone

in the long run make property secure. This is an irrepressible conflict. It can not be evaded. To temporize with it is to invite great national peril.

Twenty-second. Laws for social and industrial justice must be enacted to square with modern economic conditions. The people no longer are held tightly by party ties. Already the dangerous doctrine of socialism is looked upon with favor by millions of our people as the only hope for relief or for revenge. Socialism grows upon social and economic injustice, and upon nothing else. Give to the masses that justice to which they are entitled and socialism in America will cease to be a threatening factor in our civilization.

Twenty-third. We do not favor confiscation. We do not favor a "redistribution" of wealth. We reject the principle that all shall be rewarded equally. But most strongly do we demand a restoration and a continuance in this country of equal opportunity for all and special privilege for none.

PROGRESSIVE CONVENTION.

This same convention adopted resolutions pledging the party to the enactment of specific laws. To draft these measures and urge their passage by the 1913 legislature, it named a committee which has since become famous as the legislative and executive committee of the Washington Party. Their work is known to all reading citizens of Pennsylvania, and it gives me pleasure to recognize this committee and to dedicate and designate them as pioneers in an honest effort to secure progressive legislation in Pennsylvania, and I present their names, representing the eastern, middle, and western divisions of the State of Pennsylvania:

EASTERN DIVISION.—John J. Gheen, chairman, West Chester; William Draper Lewis, Philadelphia; William Jay Turner, Philadelphia; Thomas A. H. Hay, Easton; Robert D. Dripps, Philadelphia.

MIDDLE DIVISION.—Robert C. Bair, York; William H. Hoerner, Chambersburg; A. Nevin Detrich, secretary, Chambersburg; William Fawcett, Pottsville; W. Lovell Baldridge, Hollidaysburg.

WESTERN DIVISION.—William Flinn, Pittsburgh; Guy B. Mayo, Smethport; Henry K. Siebeneck, Pittsburgh; George T. Weingartner, New Castle; John B. Elchenaur, Pittsburgh; Stephen G. Porter, Sewickley; Henry G. Wasson, Pittsburgh.

The resolution creating the committee set forth the specific laws that were to be drafted. This resolution was as follows:

We, the Republican Party of Pennsylvania, in convention assembled, for the purpose of fulfilling the pledges in the platform heretofore adopted, do hereby resolve:

That a committee of nine, to be known as the executive and legislative committee, be created by this convention, with the power to add to its number six persons, who may or may not be members of this convention.

That the said committee be authorized and directed to draft bills on the following subjects in accordance with the pledges made in our platform:

First. A bill for the extension of the direct primaries to all officers elected by the people, including United States Senators, and the expression of the presidential preference.

Second. A bill defining by whom and the purposes for which money may be contributed or spent in any general or primary election, limiting the total expenditure and requiring full accounting at public audit, and such amendments to the election laws as shall guarantee the freedom of said elections from fraud, coercion, and undue influence.

Third. A bill making a willful violation of any or all laws governing elections a felony, punishable by imprisonment.

Fourth. A comprehensive and effective public utilities law.

Fifth. A fair employers' liability and workmen's compensation act and regulating the employment of women and children.

Sixth. A law to stop the swindling of the people through the sale of stocks in fraudulent corporations.

Seventh. A law creating the department of public charities, with full control, in order that the State's appropriations may be equitably and economically distributed and institutions receiving State aid may always be open to the unfortunate.

For the purpose of fulfilling these instructions, be it

Resolved, That this committee be given the power to fill all vacancies caused by death, resignation, or otherwise in the committee.

And it is hereby declared to be the clear intent of this convention that this committee shall represent this convention and shall have life until the successors of this convention are duly seated.

Resolved further, That this committee shall be empowered, as our representatives, to appear before the general assembly and the governor of the Commonwealth, demanding that the pledges of the Republican Party be enacted into law; And be it further

Resolved, That when this convention adjourns it do not adjourn without a day, but to meet at the call of the committee hereby created, or a majority thereof, for the purpose of reaffirming our demands as Republicans of Pennsylvania and for such other business as the convention may elect.

Resolved, That the State chairman is hereby instructed to mail to each candidate for the Senate and legislature the platform of this convention, with the request that each of the aforesaid state in full his position in regard to the platform, and the answer of each candidate be published as an advertisement in his district.

WASHINGTON PARTY IN PENNSYLVANIA.

All of this work was taken over by the Washington Party—the Progressive Party in Pennsylvania—the same committeemen being authorized to perform the same work and under the same resolution referred to.

PRESIDENTIAL ELECTION.

The election of 1912 is now history. The Progressives swept the State. The new party polled 457,000 votes against 273,000 votes for Taft and 395,000 votes for Wilson. The Washington Party—the Progressive Party in the State—became, by the will of the people, the dominant party in the State.

CONVENING OF THE LEGISLATURE.

When the legislature organized the Progressive sentiment in the house of representatives dominated and controlled that body. The committeemen referred to became constant attendants upon its sessions.

The legislation recommended in the platform was presented in concrete form to both of the legislative branches, and the majority of the lower house answered by their actions and votes to the pledges made and the commissions entrusted to them.

The senate, consisting of 50 senators (25 of whom were elected at the November election of 1912) refused to carry out the specific pledges made to the people, and a great deal of legislation was strangled to death in the committees of the senate. Many senators openly defied the electors to whom they had made promises to support Progressive legislation recommended by the said legislative committee. Others made dickers and deals with the old machine, accepting the promise of office, of contracts, of political preferment, of appropriations for their districts. The governor of the State, aided by a coterie of politicians, henchmen, and lieutenants, cooperated with those opposing the enactment of progressive legislation. Men in high office displayed their servility to the machine by condoning political rascality of a type that they would not tolerate in their own private business.

Senators William E. Crow, of Uniontown, Fayette County, and James P. McNichol and Edwin S. Vare, of Philadelphia, Russianized that body and were the leaders in this monumental fraud perpetrated upon eight millions of people of the great State of Pennsylvania.

Many measures were defeated in the senate, such as the bill regulating the employment of children, the bill making a willful violation of any or all laws governing elections a felony punishable by imprisonment, the bill for the repeal of the general assistance clause to voters, and a bill for a fair employer's liability and workmen's compensation act. Another sample of their handiwork was the emasculation of the public utility bill and highly flavoring it with provisions favored by the corporations and tending to destroy it as an effective public utility measure.

LAST DAYS OF THE LEGISLATURE.

In the last days of the session the nefarious enrollment act was passed and promptly signed by the governor. It provided for the personal registration and enrollment of every voter before he could participate in the primary. The registration and enrollment provisions embodied in that act applied to every hamlet, borough, small city, and township of the State, although it was designed for and only fitted in part for large cities. Electors in small precincts of less than 100 voters were compeled to register and enroll before being permitted to receive the nomination ballot of their party.

RESULT OF CROOKED ACTS.

These flagrant breaches of trust resulted in the Republican Party, that had cast a total of 840,000 votes for Theodore Roosevelt in 1904, and nearly as large a vote for William Howard Taft in 1908, dwindling at the primary in May, 1914, to only 300,000 votes. More than 400,000 progressive electors in the State refrained from enrolling or participating in the primaries and elections of 1913 and the primary of 1914. The election and primary returns disclose that these figures are not exaggerations, but numerical facts.

PART 2.

ORGANIZATION FOR THE FUTURE.

After the election of 1912, the Progressives throughout the State of Pennsylvania held many meetings and conferences, organized themselves into many leagues and organizations, meeting with many successes in the by-elections of 1913.

By reason of the registry and the assessors' lists being padded by falsely enrolled Washington Party names in the city of Philadelphia and other cities in the State (all of which was perpetrated under the enrollment law referred to, enacted by the bosses through connivance with traitors in the State senate), the Progressives decided that a general canvass should be taken of the choice of the honestly enrolled Progressives for the representative positions of United States Senator and Congressmen at Large, and the offices of governor, lieutenant governor, and secretary of internal affairs.

TOWN MEETINGS.

These conferences were held in the open and resembled the town meetings of the founders of the Republic. Although they were misrepresented in the subsidized and reactionary press of

the State, they resulted in the honestly enrolled Progressive voters nominating a ticket reflecting the Progressive sentiment and typifying and representing the great mass of electors in the State subscribing to Progressive principles, thereby defeating the raid contemplated by the old machine.

THE OTHER KIND.

At a midnight conference in Philadelphia the present candidate for governor on the Republican ticket, Dr. Martin G. Brumbaugh, met with Senator Penrose, Senator McNichol, and the Vares, to discuss the advisability of presenting his name to the Progressives of the State as a candidate for the Washington Party nomination for governor, and the reason for his failure to carry out his announced purpose of entering the primaries and seeking the Washington Party nomination remains a secret to this day.

CANDIDATES ON WASHINGTON PARTY TICKET.

The candidates on the Washington Party ticket, who were nominated at the primary, are Gifford Pinchot, of Pike County, for United States Senator; William Draper Lewis, of Philadelphia, for governor; Percy F. Smith, of Allegheny County, for lieutenant governor; Fred E. Lewis, of Lehigh County, for secretary of internal affairs; and Lex N. Mitchell, of Jefferson County, Arthur R. Rupley, of Cumberland County, Anderson H. Walters, of Cambria County, and Harry Watson, of Mercer County, for Congressmen at Large.

Following the primary, the State committeemen, elected under the rules of the party by the people at the primary, met at Harrisburg and elected A. Nevin Detrich, of Chambersburg, chairman, and completed the organization by electing the following gentlemen to the other State committee offices: Vice chairman, Thomas W. Hendrick, Punxsutawney; secretary, H. D. Lindemuth, Auburn; treasurer, Robert K. Young, Wellsboro; assistant treasurer, W. L. McCullach, Pittsburgh. Executive committee: Berkey H. Boyd, Scottdale; William A. Stone, Uniontown; William H. Sponsler, New Bloomfield; Robert F. Rich, Woolrich; Melvin P. Miller, Lancaster; Louis Reibe, Lansford; William F. Remppis, Reading; George F. Holmes, Philadelphia.

The following platform was adopted and promulgated by the Washington Party of the State of Pennsylvania:

We covenant with the people of Pennsylvania to carry into effect, if entrusted with power, every pledge herein made.

PENROSE AND PENROSEISM.

The paramount issue in Pennsylvania to-day is Penrose and Penroseism. The man who stands as the greatest living exponent of corrupt politics and special privilege is not only a political but a moral issue.

To defeat Penrose and destroy for all time the immoral system for which he stands is the greatest task which confronts us. We believe that only through the success of the Washington Party can this be accomplished, and we call upon every citizen who has the love of his Commonwealth at heart to join with us in this task.

Until this has been done, no plan for betterment of the administration of State affairs or for the promotion of social and industrial justice can be successfully carried out.

WILL PENNSYLVANIA BE DISGRACED?

Penrose's election would mean Pennsylvania's disgrace. The Washington Party does not believe that the people of this State will continue in power the man whose acceptance of a $25,000 certificate of deposit from the Standard Oil Company became a national scandal, whose subservience to special privilege resulted in the passage of the Payne-Aldrich tariff law, and the broken pledges of the Taft administration, who played the leading rôle in the crime of 1912, which finally wrecked the Republican Party and placed a Democratic administration in power at Washington.

THE TARIFF.

The Washington Party stands for protection. The tariff is a matter of business, not politics. Schedules should be adjusted on a business basis, free from political influence. Only in this way will the benefits of protection reach the great body of the people. To this end we advocate a nonpartisan tariff commission, and the revision of the tariff, one schedule at a time. Reckless haste, improper influence, sectional party politics, and the vast range of subjects affected, all unite when a general tariff bill is enacted to produce unscientific and haphazard legislation suddenly disorganizing business and menacing our prosperity as a commercial nation.

There is no hope for changed tariff conditions from Penrose. In 1909 Theodore Roosevelt left the presidency with the Republican Party firmly in power. Penrose, as party leader, engineered a course of platform repudiation which brought about a Democratic House before the end of Taft's term. The great majority of the Republican voters elected delegates to the Chicago convention opposed to Penroseism. By outrageous frauds he defeated their will as he has so often defeated the will of the voters of Pennsylvania. Under his leadership the Republican Party must continue to be what he made it—a powerless and discredited minority party. The only hope for the future is the elimination of Penrose and his kind.

PROGRESSIVE PRINCIPLES.

We reaffirm our belief in the principles enunciated by the national Progressive platform of 1912, and renew our allegiance to our great leader, Theodore Roosevelt.

The magnate system of private monopoly has dominated the politics of State and Nation, stifled equal opportunity, raised the cost of living, and skimmed the cream of industry for the overrich. The destruction of private monopoly in natural resources or the products of industry is the prime duty of the State. The power of monopolists lies in exclusive privileges. To end their power to raise the cost of living their exclusive privileges must be destroyed.

In order that monopolistic control of industry may be rendered impossible, we advocate the establishment of an interstate trade commission, with such powers as are conferred by the Progressive antitrust bills now before Congress. These bills would effectively destroy monopolistic power to fix prices and at the same time promote instead of hamper productive efficiency.

We favor the enactment of the Rupley workmen's compensation law, the Copley child labor bill, the Nolan convict labor bill, and other bills on the Progressive congressional legislative program.

The Washington Party stands for government by the people, the conservation of our human and natural resources, the encouragement of efficiency in private business, and the insistence upon efficiency in public affairs.

LOCAL OPTION.

We stand for the right of the people to deal directly with the liquor traffic. We, therefore, reaffirm our position upon this matter, and pledge ourselves to the immediate passage of a local option law with the county as a unit. We believe that the Hobson amendment to the Federal Constitution should be submitted to the States.

CONSTITUTIONAL CONVENTION.

Our State constitution stands in the way of many desirable reforms in law and administration, chief among which are home rule in local government and a reorganization of the machinery of our State government. The constitution should be thoroughly revised by a representative convention elected on a non-partisan ballot. We are opposed to further constitution tinkering by amendment.

We stand for the initiative, the referendum, and the recall of executive officers as being essential to the destruction of machine rule in politics and the preservation of our institutions. A constitutional convention should consider that method of constitution amendment misnamed "The Recall of Judicial Decisions." It should not be necessary in order to prevent the enactment of a law forbidden by a general clause in the constitution to destroy the clause. There should be a method of qualifying the clause to make the desired law possible without nullifying the entire constitutional principle.

FOR GOOD ELECTION LAWS.

Good election laws lie at the foundation of all reforms in government. We reaffirm our position in favor of a rigid corrupt practices law, which shall define the purpose for which money can be contributed and spent in any general or primary election, limit the total expediture, and prescribe penalties for violation, and require, before any elected candidate can take office, the grant of a certificate of election showing that the law has been obeyed. We therefore pledge ourselves to fight for the enactment by the next legislature of the corrupt practices act embodying these principles, which was defeated by the Penrose-McNichol-Vare forces in the senate of 1913.

We believe in the simple, direct, and short ballot, so that it may be easy rather than difficult for the voter to express his will at the polls.

Assistance to voters should be prevented except to those who are physically unable to see or mark their ballot.

Willful violation of election laws should be made felonies punishable by imprisonment.

We favor the nonpartisan ballot for local officers.

The enrollment act passed by the last legislature should be repealed.

LABOR LAWS.

Laws preventing the exploitation of labor are vital to public welfare. We therefore stand for the enactment of the following bills, defeated in the 1913 senate by the Penrose-McNichol-Vare State organization:

First. The workmen's compensation bill, so limited as not to apply to farm labor and domestic service. It should include provisions to protect employers, through insurance at reasonable rates, from loss and the payment of workmen, whether their employers are solvent or not.

Second. The child-labor bill. We should place Pennsylvania in line with other great industrial States, in which the movement for child welfare has triumphed.

Third. The minimum wage bill. Only through such a law, so framed as to apply to work for which compensation is made by time or piece, can the evils of the sweatshop be successfully attacked.

We pledge the party to a pure-food law which will prevent fraud and deception and prohibit the sale of debased, adulterated, or misbranded foods.

We stand for the right of workingmen to organize in unions and for the right of unions to be recognized in dealing with employers.

Cooperation among farmers will help farmer and consumer alike. We pledge ourselves to the enactment of a law to permit such cooperation.

We believe in standards of health, safety, and employment in mines, railroads, mills, and factories and pledge ourselves to local roads.

Plans for road improvement should primarily keep in view the industrial and agricultural development of the State. Good roads to the nearest local market or shipping point are the right of our agricultural population. Money appropriated for roads should be honestly expended, and not as at present wasted to support a political organization, by paying a horde of superintendents, inspectors, bookkeepers, and paymasters, with no new roads or repairs to inspect, and no workmen to pay but idle partisan job holders. We pledge ourselves to the abolition of Bigelowism and to an immediate reorganization of the highway department on a nonpolitical basis.

STATE CHARITABLE APPROPRIATIONS.

We believe that the proportion of public moneys devoted to State institutions should be increased, and that the constitutional prohibition against giving money to sectarian or denominational institutions should be observed. We do not believe that the State should attempt to manage from a central bureau of private charities, but we do believe that the State should exercise supervisory control over charitable institutions, especially those receiving grants from the State treasury.

EQUAL SUFFRAGE.

We believe women should be enfranchised. We advocate the passage by the next legislature of the resolution submitting the suffrage amendments to the voters, and we pledge ourselves to do our utmost to secure its ratification.

THE EMERGENCY MEN OF 1863.

We believe that the obligation to pay veterans is primarily a Federal obligation, and that every effort should be used by our Representatives in Congress to have this obligation generously fulfilled. We believe however, that the State should provide for the emergency men of 1863,

who went to the defense of the State and the Nation at the call of the governor during the Civil War, who are not pensionable under the Federal laws.

PUBLIC-UTILITIES LAW.

We believe that the public-service law passed by the last legislature is an imposition upon the people of Pennsylvania and that it should be amended to make it conform to the bill which originally passed the house. The senate amendments now in force threaten the interests of the public and interfere with the just rights of the people of a locality to control their own affairs.

We pledge ourselves to a prompt and thorough revision of our tax laws in order that present glaring inequalities and injustices may be done away with.

ECONOMY AND EFFICIENCY IN STATE GOVERNMENT.

We pledge ourselves to an honest, economical, and efficient administration of the State government.

The daily cost of running the State government now amounts to upward of $100,000 a day, or approximately $38,000,000 a year. We believe that a large amount of this sum has been wasted and favor such supervision of the expenditure of the State funds by the various departments and such inspection of institutions receiving aid as will prevent waste, extravagance, and graft and insure to the people of this State a just return for the money expended.

APPOINTMENTS BY MERIT.

To the end that the State administration may serve the people, we favor the enactment of a civil-service law which will recognize the merit system in appointments and promotions, while preserving the right of responsible officials to dismiss those in whom they have no confidence. The civil-service law must not be made the means by which a corrupt political machine, defeated at the polls, can keep its hold upon the State.

DEFEAT THE PENROSE MACHINE.

The people of this State will have this fall a priceless opportunity not only to defeat the candidate, Penrose, but to destroy Penroseism. To do so we must obtain complete control of the executive and legislative branches of the State government, and reorganize the State administration from top to bottom. To this end we must defeat the Republican organization's candidate for governor. The man who, as a candidate, can not repudiate Penrose, will, as governor, be unable to oppose Penrose and his associates. Without a governor who can do this thing, any reorganization of the State government is impossible.

Upon these declarations we rest our cause, which is the cause of the people of Pennsylvania.

Gifford Pinchot occupies such a prominent place in the State and Nation that he is a platform in himself.

Following are the principles for which he stands and the reforms for which he will work:

I. CONSERVATION OF HUMAN RIGHTS.

The rights of the people will best be conserved by—

CONDEMNING PRIVATE MONOPOLY.

The destruction of private monopoly in natural resources or the products of industry. The power of the monopolists lies in exclusive privileges. To end their power to raise the cost of living their exclusive privileges must be destroyed. That is our greatest task.

HONEST COMPETITION.

The regulation of all large corporations not monopolies. Honest competition and fair dealing with the public must be assured.

RIGHT OF WORKMEN TO ORGANIZE IN UNIONS.

The right of workmen to organize in unions, and by every fair means to compel recognition of such unions by employers. Only through their unions can the workmen meet the employers on equal terms.

FAVOR CONSTITUTIONAL CONVENTION.

A constitutional convention in Pennsylvania, so that our constitution may be adjusted to the needs of our time, and our system of taxation may be thoroughly revised.

A PROTECTIVE TARIFF.

A protective tariff which shall equalize the conditions of competition between the United States and foreign countries, and which shall be based upon the findings of a nonpartisan scientific commission. The tariff must be taken out of politics.

INHERITANCE TAX.

A sharply graduated inheritance tax. Swollen fortunes drain the people.

HONEST CLOTH.

A law to prevent fraud in clothing. Honest clothes are more needed than undoctored whisky.

II. CONSERVATION OF NATURAL RESOURCES.

Conservation of the natural resources of our country will be a reality when legislation is enacted dealing with the following subjects:

PROTECTION OF THE FORESTS.

The protection of our forests in Pennsylvania. They can be made to yield four times the lumber they do now.

LIMITED FRANCHISES.

A law to limit franchises and require compensation from waterpower companies. We have no right to facilitate the robbery of our descendants.

COOPERATION AMONG FARMERS.

State and national laws to promote cooperation among farmers. The prosperous farmer helps us all.

SAFETY OF MINERS.

A better law for the safety of miners. Over two hundred more miners were killed in Pennsylvania last year than the year before.

LIMITED WHOLESALE PRICE.

A law giving to a national commission the power to limit the wholesale price charged by the anthracite monopoly or its agents in interstate commerce. The price fixed should consist of a reasonable price for coal at the mine, sufficient to provide good wages for the miners, and a reasonable charge for transportation and handling. A reasonable profit should be included. The saving to the public should be applied in part to greater safety for miners, and in part to lowering the cost of living by reducing the price of coal. The monopoly in anthracite coal, which is a necessity of modern life, should be subject to the obligations of public service. This monopoly charges high prices because it has the power. That power must be destroyed.

III. CONSERVATION OF HUMAN WELFARE.

Human welfare will best be conserved when the whole social program of the national Progressive platform is carried out, and in particular—

WORKMEN'S COMPENSATION LAW.

A workmen's compensation law. The great transportation, manufacturing, and building industries, and not the wage earners and their families, should bear the burden of industrial accidents. Farmers and domestic employers should be excluded.

SAFEGUARD POVERTY.

A workmen's insurance law. The dread of poverty from accident should be removed.

WELFARE OF THE WORKER.

Standards of safety, health, and employment in mines, railroads, mills, and factories. The welfare of the workers comes first.

MINIMUM WAGE FOR WOMEN.

A minimum-wage law for women, and a law regulating the terms of their employment. The comforts and decencies of life should not be denied to the mothers.

CHILD-LABOR LAW.

A national child-labor law. The exploitation of childhood for profit must cease.

AN EFFECTIVE MINE-CAVE LAW.

An effective mine-cave law effectively enforced. It is outrageous that men and property should be engulfed without notice and without redress.

IV. CONSERVATION OF CITIZENSHIP.

Citizenship will have reached its highest degree of conservation when the Progressive Party will be in a position to carry out its promises to the people respecting:

INITIATIVE AND REFERENDUM.

The initiative, referendum, and recall, and direct primaries and direct voting in all elections. The people must control their Government.

EQUAL SUFFRAGE.

Equal suffrage for men and women. The women are needed in public affairs.

LOCAL OPTION.

Local option as to the liquor traffic. Each county and large city should decide for itself.

NATIONAL OPTION.

National option as to the liquor traffic through a constitutional amendment giving the people of the Nation the right to decide for themselves.

OPENING THE SCHOOL BUILDINGS.

The spread of knowledge by the State to all our citizens, old and young, to help them in solving their private and their public problems, and opening the school buildings to the people.

DESTROY MONOPOLY OF TRANSCONTINENTAL RAILROADS.

I believe in our right to exercise sovereignty over the Panama Canal, and in free tolls for the coastwise trade. Cheap transportation in American coastwise ships will break down the present monopoly of the transcontinental railroads. That monopoly must be destroyed.

A PATRIOTIC ACT.

William Draper Lewis, nominated for governor, deliberately and most patriotically requested the Washington Party to allow him to withdraw and to indorse Vance C. McCormick, thus uniting all the Progressives of the State against Brumbaugh, PENROSE's tool, and insuring his defeat.

When the boss system organize, fusionize, and unionize those of every political faith engaged in the distilling, brewing, and retail liquor business, and the unafraid and unapologetic boss, BOIES PENROSE, is able to hoodwink and deceive a man of morality and respectability to stand on his platform and lead his ticket for governor, it would be criminal negligence for the forces of right not to accept the challenge and make a united battle against this hypocrisy and rascality.

MOBILIZATION OF CANDIDATES.

All candidates on the ticket have mobilized into a force to fight PENROSE and Penroseism, regardless of their individual candidacies, willing to make any sacrifice necessary to clean the escutcheon of the Keystone State.

Progressive Legislation Enacted in Congress During the Past Three Years.

EXTENSION OF REMARKS

OF

HON. ROBERT E. LEE,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 30, 1914.

Mr. LEE of Pennsylvania. Mr. Speaker, I wish to review briefly the great work that has been accomplished by the Sixty-second and Sixty-third Congresses, of which I have had the honor to be a Member. Congress has been in almost continuous session since April, 1911, in order that the Democratic Party might carry out the pledges made to the American people in accordance with its platform. It is a source of pleasure to me to know that I have been a Member here during these three and a half years, and that I have done my full part during the period when more real progressive legislation was enacted than in 30 years before.

During my service in this House I have honestly endeavored to carry out every promise that I made to my constituents. I have been continuously at my post of duty, attending strictly to their business at all times, and I have voted for the following bills beneficial to the masses of the American people:

First. We amended the rules of the House by eliminating Cannonism, taking the power of appointing the committees of the House out of the hands of the Speaker and thus preventing him from controlling legislation.

Second. The Department of Labor bill, creating a separate department with a Secretary, thus giving the wageworkers for the first time a representative in the President's Cabinet, who shall have the power of mediation in trade disputes and the right to appoint conciliators when, in his judgment, it is wise to do so.

Ex-Congressman William B. Wilson, former treasurer and secretary of the United Mine Workers of America, a real friend of the working man and, indeed, of all the people, has the honor to be the first Secretary of Labor. His biography, as taken from the Congressional Directory, shows that he is a self-made man and a true son of toil. It reads:

William Bauchop Wilson, of Blossburg, Pa., Secretary of Labor, was born at Blantyre, Scotland, April 2, 1862; came to this country with his parents in 1870 and settled at Arnot, Tioga County, Pa. In March, 1871, he began working in the coal mines; in November, 1873, became half member of the mine workers' union; has taken an active part in trade-union affairs from early manhood; was international secretary-treasurer of the United Mine Workers of America from 1900 to 1908, having been elected each year without opposition; is engaged in farming at Blossburg; is married and has nine children; was elected to the Sixtieth, Sixty-first, and Sixty-second Congresses from the fifteenth congressional district of Pennsylvania; chairman Committee on Labor, House of Representatives, Sixty-second Congress. Took the oath of office as Secretary of Labor March 5, 1913.

Third. The Bureau of Mines bill, for the purpose of conducting, in behalf of the public welfare, inquiries and investigations with a view to improving health conditions and increasing safety, efficiency, and economy in the mining industry and safeguarding the lives of the miners.

This bureau is of great importance to all the miners of the United States and of special value to those who work in the mines of Pennsylvania, as is shown by the following extract taken from a press bulletin recently issued by the Geological Survey:

PENNSYLVANIA MINES ONE-FIFTH OF WORLD'S COAL—RECORD-BREAKING OUTPUT—LAST YEAR'S PRODUCTION REACHED THE ENORMOUS TOTAL OF 265,000,000 TONS, A GAIN OVER 1912 OF 23,000,000.

Pennsylvania mined more coal in 1913, both anthracite and bituminous, than in any previous year in the history of the industry, according to a statement just issued by the United States Geological Survey from figures compiled by E. W. Parker in cooperation with State officials. The production reached the enormous total of 265,306,139 short tons, valued at the mines at $388,220,933. Of this 91,524,927 tons was anthracite, valued at $195,181,127, and 173,781,217 tons was bituminous or soft coal, valued at $193,039,806. The total tonnage broke the previous record for 1912 by 19,079,053 short tons, or nearly 8 per cent, the proportionate increase being about the same for both anthracite and bituminous. The gain in the value of anthracite, however, was $17,558,501, or about 10 per cent, over 1912, and in bituminous coal $23,669,309, or 14 per cent. The total gain over 1912 was $41,227,810, or nearly 12 per cent.

PENNSYLVANIA MINERS WORKED MORE DAYS THAN IN ANY PREVIOUS YEAR.

There was a decided gain in 1913 in the number of working days made by the employees in Pennsylvania in both the anthracite and bituminous mines, the former making an average of 257 days, compared with 231 days in 1912, and the latter 267 days, compared with 252 days in 1912. The anthracite mines gave employment to 175,745 men and the bituminous mines to 172,196 men. The unusually large number of working days enabled the miners to make exceptionally high records, the bituminous workers mining an average for the year of 1,009 tons each and the anthracite miners 522 tons.

Fourth. A provision in the naval appropriation bill requiring that all coal purchased for the use of the Navy shall be mined in an eight-hour workday. I have the honor to be a member of the great Committee on Naval Affairs.

Fifth. The eight-hour bill, extending the operation of eight-hour law to all work done for the Government as well as work done by the Government.

Sixth. The dredge-workers' eight-hour bill, which remedies a decision of the Supreme Court and brings all mechanics and laborers engaged in river dredging under the provisions of the eight-hour law.

Seventh. The Children's Bureau bill, to promote child welfare and to devise means for the development of the children who are to be the citizens of to-morrow.

Eighth. The Bureau of Safety Devices, a bill to create in the Department of Labor a clearing house for devices that will eliminate, as far as possible, industrial accidents. The creation of this bureau is to supply employers and employees with the best methods of preventing loss of life and limb.

Ninth. The farmers' and laborers' free-list bill, placing on the free list every farming implement, from a garden hoe to a thrashing machine.

Tenth. The parcel-post law, which brings the farmer, merchant, and manufacturer in direct touch with the consumer at a great saving to the people, and which will also help to reduce the cost of living.

Eleventh. The good-roads bill, which appropriates $25,000,000 for the purpose of giving Federal aid in the construction of roads in rural districts.

Twelfth. The Lever agricultural extension bill, appropriating $3,480,000 to promote the welfare of the farmer.

Thirteenth. Rural credits, a provision in the Federal reserve act permitting national banks to make loans on farm lands and to rediscount the notes of farmers based on staple agricultural products. It is estimated that the new currency law makes available $500,000,000 of additional credit for the benefit of the farmer and the development of agriculture.

Fourteenth. The bureau of markets, with an appropriation this year of $200,000, for the purpose of investigating the present system of handling, marketing, and utilizing farm products. It will aid producers, consumers, and manufacturers, and will tend to reduce the cost of living.

Fifteenth. A provision placing sugar on the free list, thus saving more than $100,000,000 annually to the American people.

Sixteenth. The income tax, which places a tax on the incomes of the rich, thus lifting from the backs of the toiling masses of America the heavy burden of taxation forced upon them by the millionaires and tax dodgers of the country. For years the plain people of the United States have been clamoring for an income tax, and the Sixty-third Congress, marching in the van of progress, inserted a provision in the tariff bill compelling the rich man to pay his just share of taxation.

When we look around and see the rich becoming richer and the poor becoming poorer; when we read of men drawing dividends of a million dollars a month, while millions of our people have a hard struggle for bread; when we consider that one or two dozen men were in a position to create at will a financial panic worse than had ever been experienced in any age or country, that would paralyze for the time being the industrial life of the Nation and bring untold misery and suffering to the people of this country, we should feel thankful that the change has come at last.

Mr. Speaker, the idle rich would like to repeal this law. Why? Because it does not tax the men who go down in the bowels of the earth to dig our coal; because it does not tax the men who build our railroads and work upon them for a livelihood; because it does not tax the farmers who till the soil to feed the world; because it does not tax the men who build our cities and our towns; because it does not tax the men who work in our shops or behind our counters, but because it does tax the rich man, and under its provisions John D. Rockefeller, having an estimated capital of $500,000,000 and an annual income of $50,000,000, will be compelled to pay an annual tax of over $3,000,000 a year.

Seventeenth. The election of United States Senators by direct vote of the people, which will free the Senate from possible control by special interests.

Eighteenth. A bill providing for the publication of campaign expenses before and after election, also fixing a limit on the amount which Senators and Representatives may expend in elections.

Nineteenth. The phosphorus match bill to protect the health of those employed in the match industry.

Twentieth. The railway employees' arbitration act, creating a board of mediation and arbitration. This board is independent of any Government department and reports directly to the President of the United States. The first case handled by the board involved 42 eastern railroads, employing 92,000 conductors and trainmen. Their grievances were satisfactorily adjusted and without one cent of loss to the employees.

Mr. Speaker, in the Sixty-second Congress the chairman of the Labor Committee of the House was Representative William B. Wilson, who worked in the coal mines of Pennsylvania, and to whom I have already referred.

In this Congress that great committee is presided over by Hon. DAVID J. LEWIS, who was also a coal miner in his early days, and who worked in the mines of Schuylkill County, the district which I have the honor to represent. I know of no abler friend of labor's cause, and certainly none more loyal, than DAVID J. LEWIS.

During the consideration of the bill providing for the leasing of coal lands in Alaska Mr. LEWIS succeeded in having the following eight-hour amendment adopted for the benefit of the miners:

Including a restriction of not exceeding eight hours' actual labor in any one day for underground workers, except in cases of emergency; provisions securing the workmen complete freedom of purchase, requiring the payment of wages at least twice each month in lawful money of the United States, and providing proper rules and regulations to insure the fair and just weighing or measurement of the coal mined by each miner.

I had the pleasure of supporting this amendment.

Twenty-first. The Alaskan Railway bill, which provides for the construction of a Government owned and operated railroad in Alaska for the purpose of developing the territory which is teeming with coal, timber, minerals, and other natural resources. It is estimated that the saving to the Government on naval fuel alone will amount to $1,350,000 a year.

Twenty-second. The railroad compensation bill, granting compensation for injuries to workingmen engaged in interstate commerce.

Twenty-third. The banking and currency bill, which provides a plan for concentrating the reserves of 25,000 banks under one great Federal reserve association. This bill sounds the death knell of the Money Trust and puts an end to trust-made financial panics. It makes it impossible for a few high financiers ever again to concentrate the wealth of the country in Wall Street or elsewhere. Forty-nine Republicans and Progressives voted with the Democrats on the final passage of this bill.

Twenty-fourth. The Trade Commission bill, which makes unlawful every form of unfair method of competition and creates a commission with the power to destroy monopoly. This bill passed the House without a dissenting vote. Why was it not passed years ago? Because Cannonism blocked its way.

Twenty-fifth. The railroad securities bill, which prohibits the issuance or sale of so-called watered stocks and bonds by railroad companies. This bill passed the House by a vote of 352 to 12, and will prove a great safeguard to the small investor.

Twenty-sixth. The Clayton antitrust bill, protecting the rights, existence, and operations of fraternal, labor, and farmers' organizations, passed the House by a vote of 297 to 54. Its anti-injunction provision is as follows:

SEC. 7. That nothing contained in the antitrust laws shall be construed to forbid the existence and operation of fraternal, labor, consumers', agricultural, or horticultural organizations, orders, or associations instituted for the purpose of mutual help, and not having capital or conducted for profit, or to forbid or restrain individual members of such organizations, orders, or associations from carrying out the legitimate objects thereof, nor shall such organizations, orders, or associations, or the members thereof, be held or construed to be an illegal corporation or a conspiracy in restraint of trade under the antitrust laws.

Mr. Speaker, why should workingmen in cases of dispute between employer and employee be restrained by injunction from consulting with each other, informing and peacefully advising their fellow members in matters of grave importance to their unions? Do not the employers of labor meet during the period of strikes and trade disputes to confer with one another? Then, why should the men who toil be deprived of the same right that is given to the representatives of corporations and big business? For the past 20 years the representatives of labor have been knocking at the doors of Congress pleading for this legislation. I wish to say, Mr. Speaker, that I did my full share in support of this bill. I would not deny the workingman of this great Nation any of the comforts of life to which he is entitled, whether he labors in the mill or in the mine, in the factory or upon the farm. I yield to none in my regard for the man who earns his living by the sweat of his brow. Having stood behind the anvil for 10 long years myself, I know what it means to labor hard, and I know that labor does not get its full reward.

Twenty-seventh. The Key widows' pension bill, granting pensions to the widows and helpless children of soldiers and sailors who served 90 days or more in the Spanish-American War, the Philippine Insurrection, or the Boxer War in China. This law will bring comfort to many a home made desolate by the death of the father who in the day of his youth and vigor went forth to defend the flag.

Twenty-eighth. The Sherwood dollar-a-day pension bill, granting a substantial increase to the old soldiers in their declining years.

This bill brings relief to every gray-haired veteran and will insure well-deserved comfort to the men who went to the front a generation ago, suffered hardships, sacrificed their homes and health for the perpetuation of the Union and the preservation of our Government. In supporting this measure I have not only followed the dictates of my heart, but my vote has been in accord with my best judgment. I believe we owe to these old warriors a debt of gratitude which we will never be able to pay in dollars and cents. Think of the hardship they endured, the wounds they received, the great battles they fought, the privations they went through, the untold sufferings they experienced, and the wrecking of careers that otherwise might have been successful. Then, add to all this many years of broken health, handicapped throughout life by affliction and disease contracted during their service, and who would deny them liberal pensions in their old age?

Who would contend for one moment that the debt we owe them can ever be paid? Had it not been for their sacrifices and their heroic services this would be a divided country and our standing among the nations of the world would be far from what it is to-day. Thank God, we are at peace with all the world, and the men who fought on the side of the North and those who fought on the side of the South, those who wore the blue and those who wore the gray, now rejoice in the progress that their common country has made and are proud to stand shoulder to shoulder, united as brothers under one government and one flag.

WATCHFUL WAITING.

Mr. Speaker, it is fortunate for the American people that we have a great man at the head of our Government at this critical time, a man in whose calm courage and sound judgment we have the same strong confidence that we have in his ability and patriotism.

The people of the United States should feel deeply gratified that President Wilson pursued the "watchful-waiting" policy and did not plunge this Nation into a war with Mexico. If he had issued a proclamation of war against Mexico, a great struggle would now be at its height and some three hundred thousand or more American soldiers would be fighting on Mexican soil, trying to "restore order" by shooting down the Mexicans and getting shot in return. Thanks to President Wilson's steadfast adherence to the ways of peace, in face of a widespread hysterical clamor for war, this country is to-day a great workshop instead of an armed camp; instead of planting the seeds of lasting hatred in the bosom of a neighboring people, he has strengthened our bonds of friendship, and gained the respect and admiration of all the nations of the world.

President Wilson has worked faithfully and untiringly and with unquestioned sincerity for what he considered the best interests of all mankind. He has worked unceasingly and without complaint day in and day out for the rank and file of the people and not for any powerful few. He has worked for peace—peace at home as well as peace abroad—and his name will go down in history as one of the greatest Presidents this country has ever known.

Mr. Speaker, President Wilson believes, first of all, in duty to country, on the theory that "he serves his party best who serves his country well." His devotion to duty and the path that he has blazed for every Congressman at a time when personal advantage would be best served by campaigning in our respective districts is well illustrated in the correspondence between President Wilson and the chairman of the national Democratic congressional committee. I feel that I can not better conclude these remarks than by quoting that correspondence:

CHAIRMAN DOREMUS'S LETTER TO THE PRESIDENT.

SEPTEMBER 1, 1914.

MY DEAR MR. PRESIDENT: For some time the national Democratic congressional committee has been receiving requests from every State in the Union urging us to enlist your active participation in the important election contest just before us. These requests come from scores of friends of your administration, who view with intense pride and satisfaction the splendid achievements that have resulted through, to use your own phrase, the cooperation of one "human being with other human beings in a common service."

I hazard nothing when I say that you are very near to the hearts of the American people and that your presence among them would be to them a source of much gratification.

I realize how occupied you are in these trying days and how steadfastly you have remained at your post of duty, safeguarding the best interests of all the people in this great crisis, and for that reason I almost hesitate to take up with you the matter of a speaking campaign. However, it is important that we who are responsible for putting before the American people in the coming election contest as best we can the splendid record of achievement of your administration should know as early as possible to what extent, if any, you can give us your valuable time.

Yours, very sincerely,

FRANK E. DOREMUS.

THE PRESIDENT'S REPLY.

SEPTEMBER 4, 1914.

MY DEAR MR. DOREMUS: I have read your letter of September 1 with a keen appreciation of its importance. It appeals to me as the leader of the party now in power with peculiar force and persuasiveness. The close of a very extraordinary session of Congress is at hand, which has, I venture to say, been more fruitful in important legislation of permanent usefulness to the country than any session of Congress within the memory of the active public men of our generation. A great constructive program has been carried through, for which the country has long waited, and has been carried through with the approval and support of judicious men of all parties, and we have abundant reason to congratulate ourselves upon the record that has been made during the busy 17 months we have devoted to our great legislative task. Certainly in ordinary circumstances, if we were free to disengage ourselves for the purpose, we would be warranted in now directing our energies to a great campaign in support of an appeal to the country to give us the encouragement of its indorsement at the autumn elections.

We could go to the country with a very sincere appeal in which there need be no pretense or boast of any kind, but a plain statement of things actually accomplished, which ought to be, and I think would be, entirely convincing. It is a record which shows us at peace with all the world; the questions which plagued business with doubt and uncertainty and irresponsible criticism out of the way, thoughtfully settled and disposed of; the apparent antagonism between Government and business cleared away and brought to an end with the plain reckoning accomplished; the path for sure-footed adjustment clear ahead of us, prosperity certain to come by means which all can approve and applaud.

MORE WORK TO BE DONE.

Moreover, there is a program of another kind ahead of us to which it is inspiriting to look forward—a program free from debate except as to the best means by which to accomplish what all desire. The great questions immediately ahead of us are the building up of our merchant marine with all that that means in the development and diversification of our foreign commerce and the systematic conservation and economic use of our national resources, subjects much talked about but little acted upon. There are other great pieces of constructive legislation waiting to be done to which we could turn without any controversy except, as I have said, as to the best ways of doing them.

I believe that ways can be found to do these things readily enough if the country will give us its generous support and trust us to do them; and it would have been a genuine pleasure to me to ask to be given again colleagues such as I have had in the two Houses of Congress during the present memorable session. I trust that there will be many occasions upon which I may have the privilege of calling the attention of my fellow countrymen to the fine and unselfish service which has been rendered them by their present Representatives, ready at all times to respond to any appeal which spoke convincingly of the public welfare.

But in view of the unlooked-for international situation our duty has taken on an unexpected aspect. Every patriotic man ought now to "stay on his job" until the crisis is passed, and ought to stay where his job can best be done. We must do whatever is necessary and forego whatever is necessary to keep us in close and active concert in order to relieve in every possible way the stress and strain put upon our people during the continuance of the present extraordinary conditions. My job, I now know, can be done best only if I devote my whole thought and attention to it, and think of nothing but the duties of the hour. I am not at liberty and shall not be, so far as I can now see, to turn away from those duties to undertake any kind of political canvass.

A TWOFOLD RESPONSIBILITY.

In the present emergency I am keenly aware of the twofold responsibility I am called upon to discharge—the responsibility which devolves upon me as President of the United States and the responsibility under which I am laid as leader of a great political party. Of course, the whole country will expect of me and my own conscience will exact of me that I think first of my duties as President, responsible for exercising so far as I have the ability a constant guidance in the affairs of the country, both domestic and foreign. The labors of Congress have a natural and customary limit; the work of the Houses can be and will be finished; Congress can adjourn. But the President can not, especially in times like these, turn away from his official work even for a little while. Too much depends upon his keeping all the threads of what is occurring in his hands.

I have, therefore, reached the conclusion that I can not in any ordinary sense take an active part in the approaching campaign; that I must remain here to attend to the serious work sure to fill the months immediately before us—months that will carry with them obligations, no doubt, of the most tremendous sort. I know that you will feel similarly about your own obligations; that Members of Congress, too, without distinction as to party affiliations, will feel that they must remain to do their work of necessary and pressing service and bring it to a successful conclusion.

TO BE JUDGED BY RECORD.

I shall no doubt take occasion as opportunity offers to state and perhaps restate to the country in the clearest and most convincing terms I can command the things which the Democratic Party has attempted to do in the settlement of great questions which have for many a long year pressed for solution, and I earnestly hope that they will generously open their minds to what I may have to say; but I shall not allow my eagerness to win their approval or my earnest desire to be granted by their suffrages the support of another Congress to interfere with the daily performance of my official duties or distract my mind from them. The record men make speaks for itself. The country can not be deceived concerning it, and will assay it justly. What it chiefly expects and demands and what it will certainly be most surely won by is the performance of duty without fear or favor and without regard to personal consequences.

And certainly this is a time when America expects every man to do his duty without thought of profit or advantage to himself. America is greater than any party. America can not properly be served by any man who for a moment measures his interest against her advantage. The time has come for great things. These are days big with destiny for the United States, as for the other nations of the world. A little wisdom, a little courage, a little self-forgetful devotion may under God turn that destiny this way or that. Great hearts, great natures, will respond. Even little men will rejoice to be stimulated and guided and set an heroic example. Parties will fare well enough without nursing if the men who make them up and the men who lead them forget themselves to serve a cause and set a great people forward on the path of liberty and peace.

Cordially and sincerely, yours, WOODROW WILSON.

Atlantic Deeper Waterways Association.

EXTENSION OF REMARKS

OF

HON. JOHN H. SMALL,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 29, 1914.

Mr. SMALL. Mr. Speaker, under the leave granted by the House, I have the honor to submit a copy of the address delivered by Hon. J. HAMPTON MOORE, president of the Atlantic Deeper Waterways Association, at the recent meeting of the association held in New York, beginning September 22, 1914. I also append a copy of the resolutions adopted by the association. This association was organized in the city of Philadelphia in 1907, since which time annual meetings have been held at Baltimore, Norfolk, Providence, Richmond, New London, and Jacksonville, all of which have been attended by a large number of delegates representing all the States on the Atlantic seaboard.

This association was organized for the purpose of promoting the most important series of waterways in the United States. It stands for the construction of an intracoastal waterway from Maine to Florida. It comprises a series of canalized links connecting the various sounds and bays along the seaboard. It will comprise a trunk line connecting with each other thousands of miles of rivers extending into the interior, and will intersect and serve that section of the country most largely populated with varied and large industries and offering the most prolific commerce.

The recent session was unique in that it was not held continuously in the same city. The session convened in New York City on September 22, 1914, and on the following day the delegates boarded the steamer *Berkshire*, the largest river steamer in the world, upon which the delegates lived during the remainder of the week. On the 23d an inspection was made of the harbor of New York, including both the Hudson and East Rivers and a visit to Perth Amboy. On the 24th, 25th, and 26th the delegates visited West Point, Newburgh, Poughkeepsie, Kingston, Hudson, Albany, and Troy. In each of these cities the most generous courtesies were extended and the utmost enthusiasm prevailed. Particularly was this true of Albany and Troy, where longer stops were made. Unquestionably these visits were educational, and the citizens of the Empire State recognized in a peculiar way the relation of the great Hudson River to transportation, and the importance of their great State barge canal connecting the upper Hudson at Troy with Lake Erie at Buffalo. To the citizens of all these cities upon this beautiful river the delegates expressed the deep sense of their appreciation for their generous reception and for the opportunity of mingling with so progressive a citizenship.

ANNUAL ADDRESS OF THE PRESIDENT.

The address of President MOORE follows:

"Ladies and gentlemen of the convention, when New York's representatives came to Jacksonville last year to ask for the seventh annual convention of the Atlantic Deeper Waterways Association some of us had misgivings about meeting in the great metropolis. The annual conventions held elsewhere, from Rhode Island, on the north, to Florida, on the south, had aroused the civic spirit of the communities into which we had gone, and we wondered if we would be equally successful in New York. We did not cherish the thought of being engulfed in the whirlpool rapids of this city's mighty commercial activities. Some of us were even skeptical, as the friends of Bunyan were when he sought their opinion on the wisdom of printing 'The Pilgrim's Progress.'

"Some said, 'John, print it'; others said, 'Not so';
"Some said, 'It might do good'; others said, 'No.'

"But the invitation was cordial, and we saw in it an opportunity to gratify the long-pent desire of many of the delegates and members to view the historic Hudson to the entrance of the Erie Canal, which is now officially called the New York State Barge Canal system, and which leads our intracoastal waterway project on to the Great Lakes and through to Canada. We relished the thought of meeting our loyal friends of Albany and Troy and of visiting various points along the Hudson, where the spirit of waterway transportation has not wholly died out and where there is evidence of intent to again do business by water with the outside world. We wanted to see the work that is being done to clear the river and to prepare for trade with the Pacific coast through the Panama Canal. We were proud of the part we had played in producing a revival of interest along the river and promoting the work of its improvement. We were also desirous of inspecting the harbor of New York, for, as Americans, we were proud of New York and cheerfully accorded it first place amongst the American ports. So finally we decided to come to New York, not only to enjoy the pleasure of the visit, but to unfold our plans, to discuss our progress, and to invite cooperation; and this whether Father Knickerbocker condescended to put his ear to the ground or not.

"NEW YORK'S SUPREMACY CONCEDED.

"We all concede New York's supremacy as a port. Limited as it is for area in which to do business, it must necessarily expand, and in expanding it must effect new combinations and cooperate on new projects. Here is where we believe the actual necessities of the port require a closer attention to inland waterway development. But great as it is and greater as its future may be, New York was not always the port of first importance in the United States. A little over a century ago Philadelphia, 100 miles inland from the sea, held the first place. It was the struggle to reach the West through Pennsylvania from the port of Philadelphia that stirred the energies of New York, and it was the inspiration of Clinton to attach the Great Lakes to the sea, through the Mohawk Valley and the Hudson, that made sure and lasting the greatness of the port.

"BUILT ERIE CANAL UNAIDED.

"The realization of the dreams of Clinton and his confreres was not affected without great labor and expenditure. The public documents of 1811, 1812, and thereabouts tell the story of an unsympathetic Congress and a doubting commercial world. Did the other States cheerfully cooperate with New York in the construction of the Erie Canal? They did not. Congress even disregarded a proposition that public lands such as we are still giving away to settlers in one form or another should be mortgaged to raise money for the enterprise. But the canal was built and it was New York money that built it, and the expenditure of that money aided in the development of the western country from beyond the Great Lakes to the sea.

"ERIE CANAL MADE NEW YORK.

"The port of New York, now grown to such proportions that its boundary lines are bulging with the accumulations of trade, may have forgotten some of its history, but the Erie Canal contributed more than any other factor in putting it upon the world's map. The people of New York have spent more than $150,000,000 building the old canal and reconstructing it for modern use, and that $150,000,000, whether in New York it be a mere bagatelle or not, is more than our glorious Federal Government spent upon all the rivers, harbors, and canals along the 1,800 miles of the Atlantic coast from the Continental era down to 1907.

"NEW YORK GREATEST REVENUE PRODUCER.

"The value of the port of New York to all the States of the Union, including those who refuse to assist in the construction of the Erie Canal, is beyond the realm of computation, but in the matter of customs receipts alone the report of the United States Treasurer for the fiscal year ending June 30, 1913, shows that there was collected at the customhouse of New York and turned into the United States Treasury the sum of $208,600,000, or approximately two-thirds of all the customs revenues collected at all the ports and customhouses of the country. It may be argued that in collecting these enormous duties New York is acting as the agent of the Government and that all the people of all the States are entitled to participate in them, but even so it is a fair question whether, when confronted by its own necessities for properly doing business for the Government and the rest of the States, New York shall be obliged to stand aside and yield an unequal proportion of all these revenues to nonproducing rivers and harbors elsewhere, and then tax itself and its own people for the improvements required for the benefit of other States.

"GIVES MUCH, RECEIVES LITTLE.

"Attention is drawn to this matter particularly because it has not yet dawned upon many of the great journals of New York, nor upon most of its active citizens, that brilliant as has been the city's career in the world of commerce and finance, New York is yet contributing, through its enormous population and its tremendous revenue-creating power, to the upbuilding of the whole country while it has been indifferent to many of the essentials of its own welfare. What, for instance, does the average New Yorker of to-day know of the antiquated canal across the State of New Jersey to the Delaware River that once, before it was absorbed by the railroads, was one of the greatest, if not the chief, feeder for New York's commerce? And though New York of to-day, in its search for operating space, is building to the clouds and tunneling beneath the rivers, though it is dependent upon railroads that are crowded with freight, what has it done to aid in the relief that might be afforded if this old-time avenue of communication were opened up to the public service?

"Until a few brief years ago New York was content that its picturesque and serviceable stream, the Hudson, should sink into disuse. A swifter means of communication had paralleled the river and the onward rush of trade and commerce was diverted from its channel. What did the mighty metropolis do to restore the Hudson to its rightful use as a burden bearer of commerce when the railroads groaned under their burdens and shipments were everywhere delayed?

"INTEREST AWAKENED.

"It was not until 1909, when the agitation of the Atlantic Deeper Waterways Association for a restoration of water communication in the East began to take a firm hold upon the people that Congress was induced again to turn its attention to the Hudson River. The average New Yorker was too busy to pay attention to the Hudson River, through which had come the very foundations of the city.

"And what of the other serviceable channels of the city's business life? Two of the most productive streams of the whole country are the Arthur Kill, which separates Staten Island from New Jersey, and the Harlem River, which separates Manhattan from The Bronx. Only in recent years have these two small streams, each of them many times stronger in tonnage than the Mississippi, received even the friendly notice of Congress. It is noteworthy that up to 1907, when, according to White House conference statistics, the substantial and thickly populated States of the Atlantic seaboard had received but $140,000,000 of a total of all Government appropriations for rivers and harbors then amounting to $552,000,000—the little Arthur Kill, only 12 miles long, and contributing vastly to New York's customs receipts, was receiving $5,000 per annum from the Government for maintenance, while the people of the lower Mississippi, from St. Louis to New Orleans, were suggesting a 14-foot channel that would cost $128,000,000, at an annual maintenance cost of $6,500,000.

"'PORK-BARREL' CRY OLD.

"The great magazines were then complaining of the 'pork barrel' very much as they do now, and as the reader who is looking for sensations seldom discriminates it is possible the Arthur Kill, with its thirty-odd millions of tonnage, suffered its share of criticism for accepting $5,000 of "pork" when more than $200,000,000 of customs were taken in at the port of New York. Conditions have improved since then, for instead of being satisfied with efforts to secure a 21-foot channel the present Arthur Kill project contemplates a 25-foot channel, at an estimated cost of $2,130,000 and an annual maintenance cost of $50,000. The Harlem River, which, reporting a tonnage of upward of 15,000,000 in 1912, had not received from the Federal Government more than $1,500,000 for improvement up to 1907, has also been doing better under the vigorous pressure of the local Congressmen, who have also been active in the work of this association. The present project for a deeper Harlem contemplates the expenditure of $3,550,000. Thus, from mere driblets in the bucket, appropriations for these worthy eastern projects began to advance just as others had been advancing, many of them without the same high degree of merit and necessity.

"The conditions that held in New York in 1907 were reflected in other eastern cities like Philadelphia, Boston, Baltimore, Norfolk, Savannah, and Jacksonville, and the purpose of the Atlantic Deeper Waterways Association was to enlist the interest of these great factors in life and trade along the coast, to the end that recognition might ultimately be obtained for eastern streams that, once improved, would come to the relief of a growing and congested population.

"A HUMANE PROPOSITION.

"In other sections of the country associations had been organized and were pressing hard upon Congress for recognition. They were making great progress, and gradually, through effective organization and cooperation, were building up their rivers and harbors and their sections of the country, while great rivers and harbors of the East were languishing and forsaken. A union of forces for the ultimate attainment of a great intracoastal waterway from New England to Florida, therefore, was timely. It was no extravagant or chimerical proposition, but one which nature had pointed out, and which our forefathers had kept steadily in mind. And there were intense human considerations behind it. In 10 years, from 1900 to 1910, the number of sea disasters along the coast had increased to 5,700. They involved the loss of 2,200 lives and the destruction of $40,000,000 of property. In addition, the coastwise sailing vessels were disappearing from the sea and barge traffic was asking for free and unobstructed passage on the inland waterways. The growth of population and the increase of commerce called for relief. The railroads of the country were then overdone, and cheaper transportation rates, especially for bulky freight, were generally demanded. So communities were aroused, and they in turn aroused their Representatives in Congress, with the result that every Eastern State began to thrill with waterways enthusiasm. The association asked for a survey of the proposed intracoastal waterway, and Congress granted it. This was in 1909.

"Incidentally many other long-neglected projects were stimulated. The Hudson River improvement between Troy and Coxsackie commenced. Projects round about the harbor of New York were revived and a new interest was awakened in the New Jersey kills. Progressing steadily and surely along the coast, holding our main project intact and gaining recognition for subsidiary projects from Maine to Florida, the association continued to gain popular favor.

"NEW YORK'S AWAKENING.

"At the Richmond convention in 1911 we had the great satisfaction of welcoming an important convert in the lamented Mayor Gaynor, of New York. With clear vision, Mayor Gaynor pictured the possibilities of the continuous waterway chain as advocated by the association. He saw it connected up link by link, until the terrors of the sea were no longer formidable and until the North and the South were united through the inland waters which nature had evidently provided for the purpose. He told of the influence this natural highway for the interchange of commerce would have upon the other carriers in relieving congestion and in moderating the rates of freight. He acknowledged the part that New York should play in this great development. If that city, greater in his judgment than any other in the world, was to continue to hold its prestige, the avenues of approach must be as numerous, as safe, and as serviceable as possible. He observed what it meant to improve the East River by Hell Gate and to connect New York with Boston through Long Island Sound and the waterways projected to avoid Point Judith and Cape Cod. He discerned that the influence of the city would extend north by way of the Hudson River to Canada and the Great Lakes; and with keen perception he pointed out the advantages that must accrue to the North, to the South, to the East, and to the West through the improvement and liberation from railroad control of the incompetent canals, now holding under toll the water roads across the State of New Jersey to the Delaware River, through the peninsula of Delaware and Maryland into the Chesapeake Bay, and on to the fertile lands of Virginia and the Carolinas. The voice of the mayor was the voice of prophecy, and now after his departure, it is gratifying to note the interest manifested in our great project by those who have succeeded him in prominence and power.

"GOV. GLYNN AND MAYOR MITCHEL INTERESTED.

"The present governor of New York has already indicated his sympathy with the work. He spoke effectively at the last meeting of the Rivers and Harbors Congress in Washington, but it remained for the present mayor of New York, Mr. Mitchel, to make an official New York request in support of the Congressmen seeking Government recognition for the waterway needs of that city. In company with our veteran Member, Col. JOSEPH A. GOULDEN, and other earnest New Yorkers, Mayor Mitchel put in an appearance before the Rivers and Harbors Committee of Congress early in the present year. The mayor supported the project for the improvement of the East River at Hell Gate, the Harlem River, and the Bronx Kills. Due to his work and the aroused interest of the New York Representatives, favorable consideration by the House and Senate committees was finally obtained. The project, as a whole, contemplates the expenditure of $13,500,000, and though it is in danger along with other eastern projects in the rivers and harbors bill now pending in the Senate, it is nevertheless an achievement, indicating that New York has at last determined to stand up for what is right.[1]

"REVIEW OF PAST YEAR'S WORK.

"With these well-intentioned references to our busy New York friends, I shall take up the general work of the association since the Jacksonville convention. The resolutions of that convention cited the favorable reports of the United States Army engineers on the various links of the intracoastal chain and urged the immediate acquisition of the Chesapeake & Delaware Canal, or in default of an agreement of sale by the present owners, then the acquisition of the canal by condemnation proceedings. The fight was made before the Rivers and Harbors Committee of Congress, which granted a hearing January 15, 1914, and finally incorporated the project in the House bill. It was fought upon the floor, but the advocates of the project were able to hold the item in the bill, and it passed with an appropriation of $1,300,000. This sum being deemed insufficient, the fight was resumed before the Senate Committee on Commerce, and after investigation by the Committee on Coast and Insular Survey, of which Senator SAULSBURY, of Delaware, was chairman, the valuation of the canal was raised to $2,250,000 and provision was made for condemnation proceedings if the Secretary of War should fail to purchase at a price within the appropriation.

"FILIBUSTER HINDERS BILL'S PASSAGE.

"Owing to a filibuster started in the Senate with the obvious purpose of defeating the bill, an amended bill in the nature of a substitute was reported from the Committee on Commerce September 14, the present month. This substitute cut out the appropriation for the canal property, but let the condemnation clause remain. Numerous other items in the bill for eastern, western, and southern projects were also attacked, and at the time this address was written, Saturday, September 19, a new compromise suggestion was being considered looking to the elimination of all new projects from the measure. At that time, unfortunately, bad feeling on the part of Senators and Representatives, charges and countercharges with regard to extravagance, night sessions of the Senate to kill off speeches, and not a little politics, all superinduced in part by the desire of worn-out legislators to quit Congress and go home, seriously threatened the bill.[1]

"DELAY HAS CAUSED WASTE.

"The bill should have been passed and made effective before the 1st of July. The failure of appropriations because of the delay resulted in the stoppage of work upon many important revenue-producing streams like the Delaware River on the Atlantic coast and the Columbia River on the Pacific. A serious and unpardonable interruption of public work occurred at the Troy Dam, which we are to inspect on Saturday. By reason of the failure of appropriations, due to these senatorial filibusters, work upon the great walls of the dam has been stopped in midstream. This sort of waste is not creditable, even though those responsible for it believe a public service is being performed in attacking projects which they think are unworthy. There ought to be some method by which the work can be continued to completion when once the Government authorizes the start.

"INTRACOASTAL PROJECT SET BACK.

"Whatever the fate of the rivers and harbors bill, the damage already done and the delay occasioned need not necessarily continue beyond the 4th of next March. Another bill must be considered before the close of the present Congress, and if the business interests believe themselves aggrieved the way is open for them to discuss the question with their Senators and Representatives. Our regret with respect to the action of the Senate arises from the fact that further delay will ensue before our task in connection with the Chesapeake & Delaware Canal and the other links of the intracoastal chain is completed.

"CHESAPEAKE & DELAWARE CANAL CRUCIAL LINK.

"The way is open to the sea below Cape Hatteras; the Chesapeake & Albemarle Canal has been taken over by the Government, and its improvement is under way. The course now leads up from below Cape Hatteras, through the sounds of North Carolina and the waterways of Virginia, into Hampton Roads and Chesapeake Bay. The next step is to clear the Chesapeake & Delaware Canal barrier from Chesapeake Bay to the Delaware River, and the course will then be open to Trenton, N. J. Thence it lies across New Jersey to the harbor of New York. The Chesapeake & Delaware Canal is the crucial link, and it means much to commerce. Thirteen miles across the peninsula and 500 miles of inland waters are connected. The cost of the improvement at 12 feet, as estimated by the Army Engineers, is

[1] This item finally went down with the bill.

$10,500,000, purchase cost and all. Nearly 1,000,000 tons now pay tolls annually to the existing canal monopoly. Ten times that tonnage would use the canal if it were improved and made free. Even the Panama Canal does not offer a better immediate prospect than this. The canal will save an outside sailing distance around the peninsula of approximately 325 miles. It is too big a project, too worthy a project, too needful a project to be longer delayed. The Government needs this waterway for strategic purposes as much as commerce needs it for shipping.

* * * * * * *

"NAVIGABILITY OF SUSQUEHANNA.

"Your president took up in Congress and with the War Department the question of the navigability of the Susquehanna River, which in 1904 with all its tributaries had been declared nonnavigable above the Maryland line, and is privileged to report the revocation of the executive order which brought about that odd condition. The construction of bridges and dams across navigable streams has played no little part in the general problem of waterways, and in New England in particular bridges and dams have obtained decided advantage over navigation and to some extent have impeded progress in that direction. The danger of this sort of thing on the Susquehanna and its tributaries was apparent; not that overland transportation should necessarily be impeded, but that waterway transportation should also not necessarily be destroyed.

"The Susquehanna River courses through New York, Pennsylvania, and Maryland and empties into Chesapeake Bay. It is a great feeder of the intracoastal waterway. To close it up for 400 miles and take it out of the jurisdiction of the United States Army Engineers involved a serious question. Therefore the action of the War Department in declaring the stream navigable, in accordance with the opinion of the Judge Advocate General in line of the questions raised by this association, relieves an embarrassing situation and contributes to the maintenance of hitherto conceded rights of navigation.

"CAPE COD CANAL COMPLETED.

"I do not wish to close this address without a word of congratulation to Mr. August Belmont, of New York, and his associates, who have succeeded in completing the Cape Cod Canal, in which work the association has had a friendly interest. For more than 200 years the opening of a canal through Cape Cod to aid shipping and save life imperiled in rounding the cape had been agitated in State and Nation. Nothing but surveys ever resulted. Neither the State nor the Government cared to undertake the work, although in 25 years prior to 1910 the wrecks upon Cape Cod had mounted up to 1,000. Mr. Belmont may have had the business side of the undertaking in mind, but I am persuaded the terrific loss of life and property in fog and storm outside the cape had something to do with his final determination to embark in the enterprise. The 8-mile cut was made, and in July last the canal was sufficiently advanced to open for business at a depth of 15 feet. It is a great piece of work, creditable alike to the founder and the engineers. If there be critics of the canal among the economists, the engineers, or the deep-sea sailors, it should be remembered that the task was enormous, and that the difficulties in connection with it have been overcome. What the Government failed to do Mr. Belmont and his associates did. They stepped in where the Government neglected or 'feared to tread,' and the glory of the achievement is theirs.

* * * * * * *

"WORK MUST CONTINUE.

"The work of the association, of course, is not yet finished. Until the filibuster in the Senate threatened the success of the river and harbor bill it was believed the long and earnest seven years' fight for the vital link in the Atlantic intracoastal waterway had been won. But the opposing allies have obtained a technical advantage, and again the friends of the project may have to gird on their armor and drum up recruits. Senators and Representatives must be pursued with every honest and reasonable endeavor until in this respect the public welfare is effectively served. The project is big, but it is meritorious; it may cost something, but it is urgently needed; and the agitation for it should continue until victory perches upon our banners. Men in public life may tire of the repetition of well-worn facts, but, after all, the voices of individual citizens are potential in public affairs. When those voices are united they will be heard. They are the more likely to be heard when they speak the truth, and the strength of the Atlantic intracoastal project rests upon its merit and the truth."

Resolutions adopted by the Atlantic Deeper Waterways Association at its seventh annual convention, September 26, 1914.

We, the delegates and members of the Atlantic Deeper Waterways Association, in seventh annual convention assembled, in the city and State of New York, reaffirm to the Congress and people of the United States the importance and wisdom of assured progress toward completion of the series of connecting waterways advocated by this association, approved by the Engineer Corps of the United States Army, and already adopted in part by Congress. Completion of these connecting waterways will establish a standard-gauge trunk line, utilizing the existing bays and sounds along the Atlantic seaboard, and providing through communication between New England and Florida. It will connect also the great seaports of the Atlantic seaboard, its industrial centers, and its areas of natural production. It will join the navigable rivers of the Atlantic slope, now unrelated units of traffic, into a comprehensive interconnected commercial system. It will, furthermore, by utilizing the Hudson River and the New York State barge-canal system, join the traffic of the Great Lakes and the St. Lawrence Valley to the entire coastal region.

The traffic to be developed on this great waterway system is of a type required by changing conditions of commerce. Increasing cost of construction, operation, and maintenance are seriously crippling the coastwise sailing fleet. The diversion of its tonnage to established steamship lines tends to concentrate traffic at the larger ports and to diminish the activities of intermediate sections less favorably situated for ocean trade. Such separation of the seaboard districts into areas alternately progressive and retrograde is a bad economic policy. The prosperity of the entire region depends upon the continuous productiveness of all its sections. The prosperity of the Atlantic seaboard is important to the entire Nation, because of the preponderance of population and industry there existing, dependent for its subsistence in large part on the great interior. The interests of the seaboard are closely interwoven with those of the inland States.

The cheapest method of transportation is by water, and the cheapest form of water transportation is by unrigged craft or barge. Government statistics show that as the coastwise fleet declines the barge fleet grows, and it is evident that the barge can reach and serve great areas which can not be served by other forms of water conveyance. The intelligent expansion of barge traffic on comprehensive lines is an important factor in reducing the costs of all commodities, in lowering the cost of living, and in increasing the efficiency of the United States for domestic and foreign commerce.

These principles repeatedly stated by the Atlantic Deeper Waterways Association have been fully indorsed by the Army Engineers and recognized in Congress by the partial adoption of measures calculated to carry them into effect. In reaffirming them at this time we call upon commercial and industrial interests of the entire Nation to support them and to press steadfastly toward their realization: It is therefore

Resolved, That we urge upon Congress the advisability and importance of steady progress at a reasonable rate of speed on all the links of the intracoastal-waterway chain as recommended by the Army Engineers, and more specifically as follows:

"*Resolved*, That we favor the immediate acquisition of the Chesapeake & Delaware Canal upon such terms as may be agreed upon, or, in default of agreement, by condemnation proceedings;

"*Resolved*, That we urge upon Congress the prompt improvement of this waterway into a sea-level canal of the dimensions recommended by the engineers;

"*Resolved*, That we favor the adoption by Congress of the New Jersey Canal project, as recommended by the Army Engineers, for a modern waterway between Raritan Bay and the Delaware River; the conclusion of an arrangement with the State of New Jersey for presentation of the right of way, and for early inception of the work;

"*Resolved*, That we favor the steady progress of work on the waterway from Norfolk to Beaufort until its completion in accordance with the plans of the engineers already accepted and realized to the extent of the purchase of the Chesapeake & Albemarle Canal;

"*Resolved*, That we favor the construction of the necessary links to provide a continuous waterway between Beaufort, N. C., and the Cape Fear River, N. C., and thence to the St. Johns River, in Florida, and the continuance of this waterway by the acquisition by the Government, upon such terms as the Army Engineers may recommend, of the Florida East Coast Canal and the subsequent improvement of the same;

"*Resolved*, That the improvement of the navigable rivers and waterways within the Atlantic seaboard district and connecting with the intracoastal waterway upon standard dimensions of the capacity determined by the engineers is of much more than local importance and should be considered in relation to the general intracoastal waterway plan;

"*Resolved*, That as an essential part of the intracoastal system, we favor such further Federal improvement of the upper Hudson River and of Lake Champlain as may be needed for the handling of modern traffic;

"*Resolved*, That we reaffirm the opinion of this association as included in the resolutions adopted at our New London convention, in 1912:

"'That we demand the adoption of a national policy of waterway improvement which shall gauge the amount of the appropriation according to the commerce, existing and prospective, that will be served by such improvement;

"'That the Atlantic intracoastal waterway, exceeding, as it does, in its commercial importance all other projects of waterway improvement, deserves and should receive the means for its completion in a ratio at least equal to that accorded to projects in other sections of the United States.'"

DEPLORE OPPOSITION TO THE BILL.

We deplore the opposition to the improvement of our harbors and waterways manifested in the Congress of the United States during the present session. The spirit exhibited was peculiarly unfortunate and ill timed. The attack was limited to a few Members and Senators, and could not have succeeded even in part except for the indifference of others and the support of some newspapers and periodicals. There were some distinguished legislators from whom their constituents rightly expected support of this important appropriation bill whose indifference has occasioned disappointment. Charging generally that the pending bill was a "pork barrel," and under the guise of economy its critics have in effect aligned themselves against the improvement of all interior waterways and against the development of transportation by water. It is not for us to impugn the motives of any Member or Senator in the Federal Congress, but we have the right and it is our province to call to the attention of the country the public attitude and record of a few distinguished gentlemen of that body against improving the facilities for water-borne commerce. If, in their opinion, there were any projects in the bill of doubtful merit or lesser merit, it was appropriate to point out the facts in support of their contention and leave the question for the determination of that body. Filibustering is a sort of legislative boycott, which should not be exercised in opposition to one of the rightful functions of government.

An annual budget followed by annual appropriations is equally as essential for the consistent and economical improvement and maintenance of our harbors and waterways as for any of the other activities and functions of the General Government.

Resolved, That this association requests the Congress to make provision at this session for the continued improvement of all meritorious projects heretofore adopted and for such additional projects as require immediate consideration in the interest of our expanding commerce.

TERMINALS AND RATES.

We realize that the deepening of harbors and providing channels for our interior waterways does not of necessity result in the development of commerce. Water carriers must be provided. These carriers must be provided with other facilities. At every considerable transfer point terminals must be provided. These terminals should have ample water front and be provided with capacious warehouses. They should be equipped with modern appliances for transferring freight cheaply and expeditiously, and should be physically connected by belt lines with all the railroads serving the community. These water terminals and belt lines should preferably be owned by the municipality or the State and operated in the interest of the public, which they are designed to serve. There must be put into effect a system of prorating in traffic rates between the water carriers and the railroads such as exists between connecting lines of railways.

Resolved, That we urge upon the Interstate Commerce Commission the enforcement of existing law for prorating between water carriers and railways in interstate traffic and that gradually appropriations for waterways be conditioned upon local cooperation in providing terminals. The States should discharge a similar function in intrastate traffic.

Resolved, That water carriers and railways should be coordinated as carriers of traffic.

NEW YORK BARGE CANAL.

Resolved, That we earnestly deplore the inaction of Congress by which the great canal system of New York State, now nearing completion, is being deprived of access to deep water on the upper Hudson River. By the intervention of the Government the State was prevented from constructing the necessary dam and lock at the head of river navigation at Troy, Congress having made that dam and the river itself a Federal project of improvement as far as Waterford, where the Barge Canal enters the river. Work is discontinued on the Troy Dam indefinitely, and even if resumed will probably be unfinished when the State work is completed. A State investment of nearly $140,000,000 is thereby held unproductive until Congress provides for the completion of the $5,200,000 Federal project. The annual loss in interest to New York State is greater than the total cost of the Government's undertaking. This is one of many important projects which are jeopardized by hesitation and parsimony in waterway improvement.

WATERWAYS OF NEW YORK CITY AND VICINITY.

Resolved, That we testify to the urgency of prompt action by Congress in providing for the improvement of the East River, the Harlem River, and the Bronx Kills, as recommended by the Army engineers. Municipal improvements of vast importance are being blocked until the Government undertakes this work. This work, essential to the commerce of New York and to the development of New York City, is one of the many projects eliminated from the river and harbor bill by the sweeping amendment in the Senate which cut out all new projects from the pending bill. We unhesitatingly assert that the policy of excluding new projects from the river and harbor bill because they are new, and the retaining of old projects because they have already been approved, is a bad policy, because it settles nothing as to the relative merits of the different projects and sets a bad precedent for future legislation.

CANADIAN CONNECTION.

Resolved, That in the opinion of this association the United States Government through appropriate legislation should enter into negotiations with the Dominion of Canada by which the two Governments will cooperate upon equitable terms in the construction of a canal or waterway connecting Lake Champlain with the St. Lawrence River, the termini and route to be located as best to subserve the interest of commerce.

On the Depositing of Additional Money in the Banks for Crop-Moving Purposes.

EXTENSION OF REMARKS

OF

HON. CHARLES H. BURKE,

OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 1, 1914.

Mr. BURKE of South Dakota. Mr. Speaker, on the 4th of last month the President addressed the Congress, assembled in joint session in this Chamber, and said:

I come to ask very earnestly that additional revenue be provided for the Government.

He further said:

The Treasury itself could get along for a considerable period, no doubt, without immediate resort to new sources of taxation, but at what cost to the business of the community? Approximately $75,000,000, a large part of the present Treasury balance, is now on deposit with national banks distributed throughout the country. It is deposited, of course, on call. I need not point out to you what the probable consequences of inconvenience and distress and confusion would be if the diminishing income of the Treasury should make it necessary rapidly to withdraw these deposits.

The proposition of the President, in substance, amounted to a demand that legislation be immediately enacted to provide for levying a direct tax upon the people of the country to the extent of $100,000,000 annually in order that no part of the money of the Government loaned to the banks at 2 per cent might be withdrawn or disturbed. It would hardly seem, in view of what the President stated, that since his message more money would be taken from the Treasury and deposited in the banks, but if the statement published in the New York Herald of yesterday morning is true that is what has happened. This is what the Herald published:

PLACES CROP-MOVING FUNDS—TREASURY DEPARTMENT DEPOSITS $13,029,746, OF WHICH $1,000,000 IS SENT HERE.

William G. McAdoo, Secretary of the Treasury, announced to-day that $13,029,746 of Government funds had been deposited with the national banks of various States for crop-moving purposes. The original allotment for this purpose was about $34,000,000, to be deposited at intervals, as needed.

At first Mr. McAdoo thought no funds would be needed in New York State. Several banks in New York City, however, applied for funds, and $1,000,000 has been sent to them.

The statement continues by giving a list of the deposits and the States that have been favored by the Secretary of the Treasury, as follows:

Alabama	$300,000
Arkansas	175,000
Florida	81,250
Georgia	368,750
Kentucky	1,375,000
Mississippi	150,000
Louisiana	700,000
Maryland	1,450,000
North Carolina	456,250
South Carolina	525,000
Tennessee	675,000
Texas	793,750
Virginia	798,750
Missouri	1,550,000
Oklahoma	93,500
Total	9,492,250
New York	1,000,000
Colorado	499,969
Illinois	1,200,000
Indiana	150,000
Iowa	250,000
Kansas	25,000
Nebraska	325,000
Washington	87,500
Total	3,537,469

It is quite evident that the administration, as usual, is careful in protecting the interests of the South, as the totals given in the statement show that nearly three times as much money has been deposited in the banks located in the Southern States, including Missouri, as in the banks located in the North and West.

If it is true, as stated by the President, that there was $75,000,000 on deposit in the banks throughout the country at the date of his message, and to avoid drawing it out it is necessary to levy a direct tax, one would suppose that the condition of the Treasury must have materially improved, and that the revenue receipts have increased; otherwise the Secretary would not now be adding to the deposits in the banks, as this newspaper statement would seem to indicate. The fact is the revenues have not increased, as shown by the statement of the Treasury at the close of business on September 29. The statement does show, though, that there has been no letting up in the expenditures of the Government, as the disbursements since July 1 are $11,418,583.22 greater than for the same period last year. This means that so far in the present fiscal year it has cost $125,478 more each day to run the Government than it did last year.

I have no doubt that the banks of the South are very glad to be able to borrow money from the Government at 2 per cent, to be loaned out at the high rates of interest that now prevail in that section of the country; but I am sure the people of the whole country will resent being taxed $105,000,000 annually in order to further favor the banks in the South or elsewhere. If the money already on deposit in the banks can not be withdrawn, it would seem as if more money ought not to be deposited, when it may be needed to meet the expenses of the Government.

The distinguished gentleman from Texas [Mr. HENRY], a leader on the majority side of the House, chairman of the important Committee on Rules, the recognized friend of the President, and I assume authorized to speak for him, told us yesterday, in a formal message read by the Clerk, in effect, that Congress will be kept in session until a number of bills are passed which will take large sums from the Treasury—one to authorize the expenditure of $30,000,000 to buy foreign ships. Among other bills that he would have passed is one that he introduced on September 22, only 18 days after the President's revenue message was delivered. This bill is H. R. 18916, and is entitled "For

the temporary relief of cotton growers in the South." The first paragraph of the bill is as follows:

That the Secretary of the Treasury shall deposit in national banking associations and State banks situated in the following States, to wit: Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, Missouri, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and Virginia, $500,000,000, to be advanced to the producer of cotton, or owner of lands upon which the same was produced, at a rate of interest not exceeding 3 per cent per annum.

I presume, if this bill should be passed, then the gentleman from Texas would want to have Congress continue in session to pass another bill introduced by him on September 3, which is H. R. 18655, and is entitled "For the temporary relief of American farmers engaged in the production of cotton, to indemnify the United States against loss, and for other purposes." The first section of this bill is as follows:

That it is hereby made the duty of the Comptroller of the Currency of the United States to immediately direct the depositing in the Federal reserve banks in each Federal reserve district in which cotton is grown or produced such an amount or such amounts of Federal reserve notes, not exceeding in the aggregate $300,000,000, as may be necessary for the purpose of carrying this act into effect.

Section 2 of the bill provides that when the Federal reserve notes are deposited in the Federal reserve banks, it shall be the duty of said banks to advance on cotton 12 cents per pound.

It would hardly seem possible that Congress would seriously consider such ridiculous legislation as is proposed by these bills, but with the party now in power we may expect anything. In the Washington Star of last evening appeared a statement with glaring head lines, reading "Promise of relief to cotton growers—President to consider proposed emergency currency by State banks," and then follows the statement:

President Wilson to-day promised a delegation from the cotton conference which met here yesterday to take up with the Treasury Department a request that State banks in the South be allowed to issue emergency currency under the Aldrich-Vreeland Act without paying a 10 per cent tax. The President declared that he realized the seriousness of the situation in the South and would do everything in his power to afford relief.

This same article calls attention to the cotton conference held here during the week, composed of governors of cotton-growing States with the representatives from the South, and states that resolutions were adopted by the conference recommending action by Congress to aid the cotton producers, and pledging the governors and Members of Congress to do all in their power to maintain the price of cotton above 10 cents a pound.

This would seem to indicate that we can expect a determined effort on the part of the Members of this body from the cotton-growing States to do everything within their power to enact legislation along the lines proposed in the bills presented by the gentleman from Texas [Mr. HENRY].

It seems very strange, in view of the financial condition of the Treasury, that there should have been added $13,000,000 to the $75,000,000 already loaned to the national banks at 2 per cent, if that has been done, and that the administration and our Democratic friends in Congress would seriously entertain the consideration of legislation proposing to deposit $500,000,000 in national and State banks, to be loaned to the producers of cotton, or owners of land upon which cotton is produced, at 3 per cent. Truly it has been said of this administration, "The South is in the saddle."

War Tax Bill.

EXTENSION OF REMARKS

OF

HON. EDWARD E. BROWNE,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. BROWNE of Wisconsin. Mr. Speaker, this bill proposes the raising of over $100,000,000 by levying taxes on the people of the United States. This means a tax of at least $5 on every American family.

I am against this bill because I believe it is unnecessary, and also because it is not a fair way to raise revenue.

TAX NOT NECESSARY IF THE DEMOCRATIC PARTY HAD PRACTICED ECONOMY.

The Democratic Party came into power upon a platform of economy. The Democratic Party never adopted a county, State, or national platform without having the economy plank the most conspicuous plank in it. In the Baltimore platform the economy plank reads as follows:

We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a democratic government and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

After this solemn and often-repeated declaration of Republican extravagance and Democratic economy the Democratic Party in Congress appopriated $1,100,000,000, or over $100,000,000 more than any preceding Republican Congress.

The expenses of every single department of the Government have been increased and many new positions have been created.

I herewith give a number of offices created by this administration and the increase of salaries which amount to an increase of $278,000:

New banking law creates five new offices with salaries at $12,000 each	$60,000
Salary of Comptroller of Currency increased from $5,000 to $12,000	7,000
New Trade Commission, five commissioners at $10,000 each	50,000
Secretary	5,000
New board of appeals created in the office of the Secretary of the Interior, three members, $4,000 each	12,000
For commercial attachés appointed by the Secretary of Commerce, and for clerk's traveling expenses, appropriated for the year	100,000
Private secretary to the Secretary of the Treasury increased from $2,500 to $3,000, which means an increase of pay to all other private secretaries to Cabinet officers	500
Six Attorneys General, increase from $5,000 to $7,500	15,000
Salary of assistant to Attorney General increased from $7,000 to $9,000	2,000
Salary of our diplomatic representatives to Argentina, Chili, and Spain raised from $12,000 to $17,500	16,500
Mission to Paraguay and Uruguay divided and a new minister authorized with a new salary of $10,000	10,000
Total	278,000

Time and space prevent me from going into the matter at greater length, but these serve to show the hypocracy of the platform pledge of the Democratic Party to do away with and not create more offices.

The rivers and harbors bill, which carried an appropriation of $35,000,000 and which passed the House of Representatives, is still pending in Congress. I will therefore leave that out in the computations I herewith give.

The annual appropriations for the four years including 1912, 1913, 1914, and 1915 are as follows:

Republican administration.	
1912	$995,799,462.72
1913	988,353,340.41
Democratic administration.	
1914	$1,057,605,694.40
1915	1,089,408,770.26

In other words, in the last two years, under the Democratic administration, the Government has cost the people $163,851,661.53 more than the preceding two years under the Republican administration.

It should be noted that on account of death the amount paid out of pensions was $11,150,000 less than the previous year under the Republican administration. Twenty million dollars less was required this year for the Panama Canal than for the previous years, and yet with over $30,000,000 less expense on these two items alone the total appropriations amount to $100,000,000 more than for the corresponding year of the last Republican administration, which the Democrats denounced as shameful and extravagant.

MANY WAYS IN WHICH THE GOVERNMENT COULD ECONOMIZE.

There are many ways in which the administration could have economized.

This Congress appropriated $35,000,000 to build a railroad in Alaska to serve 65,000 people. This law could be repealed or amended so as to go into effect later, as no money has yet been expended on this project.

Congress could have refused to have passed the Senate amendment to the river and harbor bill, and thus saved $20,000,000. The large appropriation made by Congress last year for rivers and harbors, amounting to $41,000,000, ought to extend over a time like this when the emergency is claimed to be so great as to warrant the levying of special internal taxes amounting to over $100,000,000.

In 1898, under a Republican administration, during the Spanish War, when the expenses of a war in which this country was involved had to be met, we levied an internal-revenue tax, but the Fifty-sixth Congress in that year refused to make any appropriation for rivers and harbors and retrenched in every way possible.

COULD WITHDRAW ARMY FROM MEXICO AND SAVE LARGE EXPENSE.

The Government could save a large amount of money by withdrawing its Army from Mexico. Huerta and his refusal to salute the flag by firing 21 guns, the pretexts for sending our Army and Navy to Mexico, are no longer reasons for keeping our Army and Navy in Mexico at the estimated additional expense of $3,500,000 per month.

When Huerta gave up the struggle several weeks ago there was certainly no further need of having our fleet and Army in Mexico under great expense.

In addition to the extravagance already incurred, the chairman of the Committee on Rules has announced on the floor of the House that his committee is prepared to report out for passage the ship-purchasing bill, which provides for an appropriation of $10,000,000 out of the Treasury and for the sale of $30,000,000 worth of Government bonds, and the President has indicated very forcibly that he is in favor of this bill.

Is it any wonder that the business interests of this country are petitioning Congress to adjourn?

I protest against such reckless extravagance and such experimental ventures.

EXTRAVAGANT APPROPRIATIONS NOT CONSISTENT WITH CLAIM THAT TREASURY IS DEPLETED.

This administration in one breath is claiming that this is such a financial crisis with this Nation that an internal revenue or war tax is necessary and that every one who opposes such a tax is not patriotic.

The gentleman from Tennessee [Mr. HULL] begins his speech by saying, "If playing politics in the face of a great crisis were proof of patriotism, I could pronounce a eulogy on the Republican side of the House."

This is characteristic of the attitude of the Democratic majority. I answer, if this is such a crisis as the Democrats claim, then why make extravagant appropriations and venture on unexplored seas of hazardous business enterprises?

It is just as inconsistent for this Nation to do these things if it is in a real financial crisis, as it would be for a man who was in such financial straits that he was obliged to mortgage his property, take the earnings of his family, and then use the money to purchase high-priced automobiles for each one of his family and buy stock in a South American rubber plantation.

THE DEMOCRATIC ADMINISTRATION PRACTICING ECONOMY ON THE FARMER.

To show how hard-pressed this great Government is, and how it is economizing, and the people it is practicing its economy upon, I insert in the RECORD a letter received by me September 19, 1914, from the Fourth Assistant Postmaster General, giving the reason why the Government failed to establish a rural route that had been approved June 16, 1914, and which would serve a large community of farmers who will have to walk miles for their mail the coming winter:

POST OFFICE DEPARTMENT,
FOURTH ASSISTANT POSTMASTER GENERAL,
Washington, September 19, 1914.

Hon. EDWARD E. BROWNE,
House of Representatives.

MY DEAR MR. BROWNE: Referring to your inquiry of the 18th instant, as to the status of proposed rural routes from Aniwa, Wis., I beg to state that these cases have been investigated and are held in the department awaiting the more favorable condition of the national finances.

It is apparently advisable to withhold for a time all applications for additional postal facilities that involve increased expenditures except in case of urgent necessity, and I think you will agree with me that much can be accomplished in this line by deferring the establishment of additional rural routes. The residents of the community to be served by the routes in question, having a full understanding of the conditions confronting the Government, will doubtless cooperate with the department in the effort to contribute a share toward meeting the situation now at hand.

Sincerely, yours,
JAMES I. BLAKSLEE,
Fourth Assistant Postmaster General.

Mr. Speaker, our farmers are the ones this administration is practicing rigid economy upon.

The farmer asked that this Government, which has appropriated in the last 30 years over $1,000,000,000 for waterways and harbors, appropriate $25,000,000 for wagon roads, and the party in power has denied their request.

The last Democratic platform reads as follows:

We favor national aid to State and local authorities in the construction and maintenance of post roads.

The farmers of this country have not for a hundred years received a dollar from this Government to aid them in building the wagon roads over which the whole food supply of this Nation is annually hauled and over which the 1914 crop, estimated at from ten to fifteen billions of dollars, will be hauled in wagons to market by millions of sweaty, tired horses driven by men toiling long hours.

Can the Democratic Party afford to spend the millions of dollars this Congress has appropriated for other things? Can it afford to appropriate $20,000,000 for rivers and harbors and $40,000,000 for ships to aid the commerce of the seas and entirely neglect the commerce on the land?

Can it afford to deliver the mail miles and miles to the humblest citizen's front door within the confines of a city and refuse to establish rural routes that have been investigated and approved and compel a community of farmers to go from 5 to 10 miles for their mail?

WHY NOT RECALL GOVERNMENT MONEY THAT IS IN BANKS?

I ask again, if this Nation is in a financial crisis, why not gradually withdraw the $75,000,000 of the people's money that you deposited in certain banks, drawing 2 per cent interest, upon which the banks are receiving a high rate of interest?

Are you justified in levying internal revenue taxes upon the people and legitimate business to raise money to loan to banks for 2 per cent interest?

Every man that uses a gallon of gasoline, that takes out a fire or life insurance policy, that sends a telephone or telegraph message, that sends a package by express or freight, every person that signs a note, gives a deed, or is unfortunate enough to be obliged to give a mortgage, is taxed by this Government to enable this Government to expend $35,000,000 for railroads in Alaska, purchase ships to the amount of $40,000,000, loan certain large banks $75,000,000 at 2 per cent interest, and appropriate $20,000,000 for rivers and harbors upon which the Democratic administration has expended the sum of $41,000,000 the previous year.

Any political party that will levy such an unjust and unwarranted tax upon the people under the pretext of a financial crisis and at the same time make such unnecessary and extravagant appropriations, I predict, will not long be allowed by the people to remain in power.

River and Harbor Bill.

EXTENSION OF REMARKS
OF
HON. FRED A. BRITTEN,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, September 29, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. BRITTEN. Mr. Speaker, on the 4th day of September the President delivered a message to Congress requesting this body to enact legislation that would produce an additional annual revenue of $100,000,000, and in compliance with this request we are now expected to vote upon a war-tax measure when our country is at peace with the world. We are asked to pass this bill, and are going to be forced to pass it by the Democratic majority at a time when this same majority is seeking to put through a "pork-barrel" river and harbor bill, the finished improvements of which will cost the people of this country more than $90,000,000; at a time when a Democratic administration is attempting to fasten upon an unsuspecting public the Colombian treaty, with its $25,000,000 burden on our taxpayers; and when the Chief Executive of the Nation is recommending the spending of $30,000,000 for the purchase of ships to enter the South American trade, notwithstanding the fact that many of the ships now operating between United States and South American ports are unable to secure more than half a cargo.

There are conditions, Mr. Speaker, in the country that Congress had better concern itself about than to load more taxes upon the people.

Instead of laying additional burdens upon our people, why not, like prudent business men, retrench in expenditures? Why not, you Democrats, wipe from your calendar about nine-tenths of the public-building schemes that will come up at the next session; most of them should never have been passed? Why not stop the irrigation of southern trout streams and cut the "pork barrel" down to the last stave? Abolish some of the useless offices you have created; fire the bench warmers and the supernumeraries who are falling over each other in every department of the Government. Why not postpone the Alaska railroad for a year; postpone the unnecessary public buildings; postpone the doubtful experiment of the Government investing $40,000,000 in the shipping business and cut out $30,000,000 of the rivers and harbors appropriations, and thus save more than $100,000,000?

Everybody knows the bill to improve rivers and harbors, covering $53,000,000 appropriations, goes largely to improve "political prospects." Two-thirds of this sum can be saved by

merely cutting useless and unnecessary items. Since you Democrats have taken the reins of government every department leaks money like a sieve leaks water. If the people could know how their money is wasted, a storm of anger would sweep the country from one end to the other. No up-to-date business house would permit the waste and extravagance that every Member knows exist here. Put the administration of the Government on an economical—not a niggardly, parsimonious, cowardly, nor panicky—but on a plain, sensible, business basis, and you can save every year double what you expect to raise by this tax. The President in his message asks us to vote a war tax. But why? We have no war, and expect none. The President may call this a war tax, but what he really proposes is to patch up a deficit in our national revenues caused by the Democratic so-called "tariff-for-revenue" tariff bill passed by this Congress, which has not only proven a failure as a revenue producer but has opened our markets to the manufacturers of the world and has resulted in increased importations of foreign merchandise, which is in turn responsible for the industrial depression which we are now experiencing.

Perhaps, to be a little facetious, I might say that this is a "war tax," but it would be in an entirely different sense from the idea which the President means to convey.

It is a tax made necessary by the war the Democratic Party has been waging upon American industry. Of course no one believes that our Democratic brethren desired the war that is now raging in Europe or that they rejoice at it, but they have accepted the political advantage that it has brought to them with a cheerfulness and a fortitude that commends profound admiration.

The echoes of the first shot of the great conflict had scarce died away when the Democratic Party was demanding additional tax to meet the expense of government. They were anxious to take advantage of the situation promptly for fear that something might occur that would take from them this excuse. It is true the war did slightly lessen our revenues, but it only hurried the inevitable. With decreased income and the most extravagant Congress in the history of the Nation an additional tax upon the people or a bond issue was near at hand, and would have come whether war had occurred in Europe or not. With decreased revenues on one hand and enormously increased expenditures on the other, only a Democratic statesman could fail to see what the end would be. History repeats itself. A Democratic administration and an empty Treasury are synonymous.

Our Democratic friends assure us that the falling off in revenue and therefore the necessity for taxing the people is caused by the war in Europe. They tell us the war reduced the revenue for the month of August more than $10,000,000 as compared with the same month a year ago. I wonder if it was the war in Europe that caused a decrease of $4,818,189 in the revenue last July as compared with the corresponding month of the year before. But if it is claimed the shadow of war reached back over July, when no one in all the world anticipated it, I wonder if it was the war that caused the decrease in the customs revenues of $5,806,044 last January as compared with the same month a year ago. I wonder if it was the war that caused a loss in revenue of $9,995,512 last February as compared with the same month in 1913. Here is a loss almost as great as we sustained in August, and it came six months before the war. I wonder if it was the war that caused a decrease in the customs revenue for the year 1914, up to August 1, of $23,360,549 as compared with the corresponding period of 1913. I wonder if it was the war in Europe, in the face of this falling income, that caused a Democratic Congress to forget its economy pledges, to forget its denunciation of Republican extravagance, and appropriate already at this session of Congress the staggering sum of $1,089,409,777, the largest amount ever appropriated in a single session in the life of the Nation. I wonder if this unexampled extravagance was due to the war. And there is more to follow, as this mighty sum does not include either the rivers and harbors bill or the pending ship-subsidy bill that will call for probably $60,000,000 more after they are passed.

What is the matter with this Nation to-day? Is it the war in Europe that has closed mills and factories, brought idleness and poverty, universal business depression, that has turned the balance of trade against us, sent our gold abroad, and left us with an empty Treasury?

During the first seven months of this year—before the war began—we lost in foreign trade the tremendous sum of $248,234,673. I wonder if this was due to the military war in Europe or due to the Democratic industrial war in this country?

But the staggering loss of $248,234,673 in our foreign trade in the first seven months of 1914 apparently meant nothing to the Democratic administration. They continue to spend money more lavishly and more extravagantly than has ever been done before by any other Congress. This $248,234,673 of trade against us means that much gold or its equivalent taken out of the country. It means a loss in trade of more than $1,000,000 a day. It means that more than $1,000,000 a day, as compared with a year ago, is taken from the American workman and given to the foreigner. Remember, this is the result of the tariff law that was to enable us to go forth and capture the markets of the world. And yet our Democratic friends, looking upon these figures, made public by their own official, express a profound surprise that mills and factories are closed or running on short time, that we have tramps and beggars, that millions are idle, and that there is universal business depression, and that our gold is going from us, and that we are facing an empty Treasury, and that the people must be further taxed to pay the expenses of the Government.

The trouble with this country is not the war in Europe, but the Democratic tariff law upon our statute books. It is not the war in Europe but free trade that has brought our industrial ruin.

When the President delivered his address on September 4 there was a balance in the Treasury of $122,843,190, of which $75,000,000 was deposited in national banks on call. It is a splendid thing for the Government to deposit funds in the banks to assist in moving crops and to otherwise assist the agricultural and industrial interests of the country, and this was a Republican policy adopted many years ago; but the difference is that when the Government needed the money the Republicans withdrew it gradually as the Government needed it; but you Democrats are going to tax the people in order to keep it in the banks, and tell us that if you withdraw it it might disturb business by its withdrawal. I fail to see why the drawing of $100,000,000 from the pockets of the people is preferable to the drawing of $75,000,000 from the vaults of the banks.

I trust that the people of this Nation may be made to understand that they are taxed, not entirely to pay the expenses of the Government, but to accommodate certain favored banks. What would be thought of a man that had money in the banks drawing only 2 per cent interest that would leave it there and borrow money at from 6 per cent to 12 per cent to run his business? Yet the Government does even worse. It takes the money of the people and loans it to the banks at 2 per cent and then taxes the people to pay the expenses of the Government, thereby permitting the banks to again loan this money to the taxpayer at from 6 to 12 per cent interest, and all this is done in the name of the people. All this is done in the name of reform; in the name of freeing the people from the burdens that the "interests" have so long placed upon them.

But our Democratic friends reply, "If you take the money out of the banks, you will disturb business and take it out of the channels of trade." Can it be possible that such a proposition is seriously urged by sober-minded men? When money is taken out of the pockets of the people, is it not taken out of the channels of trade as much at if it were taken out of the banks? In fact, is not the money in the banks there for the express purpose of being placed in the pockets of the people in order that it may be used in the channels of trade? When the money is taken out of the pockets of the taxpayers, is it not taken out of general circulation as much as if it was taken from the banks? Is it possible to more widely disturb business than by direct taxation? Can you possibly conceive of any method that would more generally take the money out of the channels of trade than a direct tax?

Can it be possible that drawing but $8,000,000 per month from these banks, having on deposit more than $75,000,000 of Government money, would disturb business as greatly as to levy this direct "war" tax of $105,000,000 upon the American people at this time, as you now admit, of general business depression and uncertainty?

Under this wise Democratic provision the taxpayer takes the money out of his pocket and gives it to the Government. The Government then gives it to the bank, and the bank again loans it out at a high rate of interest to the taxpayer, and he again puts it into his pocket. And yet our Democratic friends tell us that if they take it out of the banks in the first place it disturbs business.

The President says that the Treasury could get along with the money it has if it were not for this $75,000,000 deposited in certain national banks in certain portions of the country. Let me read from his message of September 4:

> Approximately $75,000,000, a large part of the present Treasury balance, is now deposited with national banks distributed throughout the country. It is deposited, of course, on call. I need not point out to you what the public consequences of inconvenience and distress and con-

fusion would be if the diminishing income of the Treasury should make it necessary rapidly to withdraw these deposits.

When, I ask, in the name of the American people, did it become the policy of the Government to impose burdensome direct taxes upon the people to enable an administration to deposit large sums of money in certain national banks in certain sections of the country? A free people will willingly bear the burden of taxation when necessary to sustain their Government in a defensive war, but it is an insult to the intelligence of the American people to assume that they will willingly pay taxes to enable any administration to deposit money out of the Treasury of the United States in national banks in any portion of our country.

Do you think that you can fool the people by calling this a war tax? Do you think that they can be deceived by the mere pretense that this is a war tax when we are at peace with all the world? Ah, no; the poor who, in the hour of their necessity, are compelled to make notes and mortgages, upon which you propose a stamp tax, will not be deceived. Every one of them will know that they are taxed to supply the Treasury, as the President requests in his message, for money to enable the administration to maintain large deposits in national banks.

Can you populistic Democrats go before your constituents in defense of that sort of taxation? You were elected to Congress because you said that you would reduce the burdens of the people. You to-day propose, before two years have passed, to increase their burdens, and for what? The cost of living is as high or higher than ever. Your appropriations are more extravagant and profligate than those of any Congress in our history. And yet you complain because there is opposition to your bill, and that is made the excuse for bringing in a gag rule, the iniquity of which has never been equaled in any Congress. Some of you Democrats say that the rule is made necessary because it has been announced that the Republicans will oppose this bill. When did it become necessary in the American Congress to prepare and pass gag rules because it was announced that an administration measure like this could not have the unanimous support of the Congress?

When the Underwood bill was under consideration you boasted that every item was open to amendment and debate. You propose to pass this bill in the House without an opportunity to offer an amendment or to vote upon any separate item in the bill. What is your defense? The necessity of raising money by burdensome taxes upon the people to enable the Treasury to deposit money in the national banks. Oh, you Democrats, when was Congress empowered to use the taxing power for such a purpose? Yet that is the excuse upon which the President largely rests his case.

Mr. Speaker, the fact is that you are driven to this action because of the failure of your new freedom; the failure of your new constitution of peace; the failure of your tariff for revenue to supply the Treasury with sufficient money to meet your extravagant expenditures; the failure of your policies to revive a widespread depression that exists all over the country; the failure of the balance of trade in our favor in our commerce with the world, making it necessary to export the gold of the country to pay our trade balances to the largest extent since you were in power before—in short, the failure of the administration to successfully manage the affairs of the Nation. These are the conditions that have made the deficit in the Treasury. These are the conditions that make it necessary for the administration to bring in this measure for a burdensome tax on the people.

The Democratic Party went into power upon the general promise that they would better the conditions which had existed in this country under Republican rule. For years they had preached that labor was oppressed, that business was shackled, and that if the Democratic Party once went into power it would reduce the cost of living, increase wages, bring business expansion, and widen our markets. They went into the campaign joyfully preaching the doctrine of the "new freedom." The President declared that what the men of this Nation needed was to sharpen their wits in competition with the rest of the world; that what was needed was to break down the tariff wall.

Under the Payne tariff law the receipts from the tariff had proved sufficient to meet the expenses of the Government and at the same time a sufficient protection to American industrial pursuits, but at the behest of the President and in the enthusiasm of your new-found power you repealed that law and enacted the Underwood law in its stead. The effect of the Underwood law has been to increase importations and to decrease exportations, to decrease the receipts of the Government, to destroy American industries, and to leave the American laborer without employment. You now find yourself in the predicament which your policy invites—a failure.

We have now had a little more than nine months' experience under a Democratic tariff law and the "new freedom," and what is the result? Will any man in this Nation outside of a padded cell or a Democratic office say that he prefers the conditions existing to-day to those that existed for 16 years under Republican rule?

My Democratic friends, your policy is a failure, your Underwood tariff bill will not produce the revenue which you predicted upon its passage, but it has jeopardized or destroyed a great part of the American industries. It is the fallacy of free trade, and if continued will reduce the American Nation to the level of the Asiatic nations and races.

I wonder how many Democratic Members of this House recall a plank in their last platform which read as follows:

> We denounce the profligate waste of money wrung from the people by oppressive taxation through the lavish appropriations of the recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a democratic government and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

No one but a scared office-seeking Democrat can read that plank to-day without smiling. That plank of the Democratic platform has been demonstrated to be merely "molasses to catch flies." It has been brazenly repudiated, as will be the plank in regard to a second term for the President. Yet that Baltimore platform closes with these solemn words:

> Our pledges are made to be kept when in office.

In the light of the present that is one of the most humorous sentences ever uttered by a Democrat. What an altogether lovely picture Democratic promises and Democratic performances make when placed together.

This Democratic Congress, pledged to economy, that came into power with the hot denunciation of Republican extravagance upon their lips, has not only created many useless high-priced offices which have been filled by faithful Democrats as a reward for public service, but has already appropriated $100,000,000 more this session than was ever appropriated in any session by any Republican Congress that ever met in this Capitol. Yet, says the Democratic platform:

> Our pledges are made to be kept when in office.

Is this a time to indulge in unlimited expenditures? The people everywhere are compelled to economize. The people of this Nation to-day are spending far less money than they did under Republican rule. They are buying less clothes; they are eating less food; they are spending far less for pleasures and enjoyments; they are denying themselves the luxuries and many of the comforts of life. In such times as these why should not the Democratic administration practice at least reasonable economy? Why should they now tax the people that they may be indulged in the most extravagant and wasteful expenditure in all the Nation's history? Why in such times as these should this single session of Congress appropriate the enormous sum of nearly $1,100,000,000, a sum more than $100,000,000 in excess of that ever appropriated in a single session by any Republican Congress?

In the light of these facts, what becomes of the promise of Democratic economy, and upon what grounds can they now justify taxing the American people?

One by one the theories and promises under which the Democratic Party was intrusted with power are discredited by the experiences of the American people. What is the sum of the whole matter? War taxes of $105,000,000 in time of peace is the price we pay for Democratic war on American industries, for Democratic extravagance, for Democratic incompetency.

Emergency Revenue Legislation.

SPEECH

OF

HON. GEORGE E. GORMAN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. GORMAN. Mr. Speaker, I wish to submit some observations on the war revenue taxation and to state the reasons which prompt me to vote for this measure.

The request for this legislation comes from President Wilson. I very much regret the partisanship which has been displayed in the discussion of this bill. Those who oppose it assume that it is a Democratic measure and that President Wilson's request

that it be passed is a partisan request. Nothing could be further from the fact. The President of the United States, under the Constitution, is charged with greater responsibility than any other citizen of the Republic. He is in a position to know more about our national and international affairs than any Member of the House or Senate, and he is not at all times at liberty to let the public know all that he knows of governmental affairs. I think we can all agree, notwithstanding our partisan feeling, that President Wilson has no desire to impose unnecessary burdens of taxation upon the American people. He was elected upon a platform which committed him to a policy of tax reduction, and that policy was entered upon and the platform pledge in that regard was fulfilled by the enactment of the Underwood tariff law. That law went into effect on October 3, 1913, and during the 10 months that it was in operation before the world's greatest disaster occurred it worked with entire satisfaction. Treasury receipts from imports had fallen off considerably as a result of the lower tariff duties, and this deficiency was supplied by the tax on incomes, as provided for in the income-tax law, which is one of the very admirable features of the Underwood tariff bill.

But in August of this year England, France, Germany, Belgium, Austria, Servia, Russia, and Montenegro became involved in the greatest war the world has ever seen. Within a few days 10,000,000 men were suddenly ordered into the field of mortal conflict, and all the pursuits of industry and production were abandoned for the work of destruction. This sudden mad rush to arms resulted in an unprecedented demand for gold by every country in Europe. Millions of dollars' worth of American securities held by Europeans were instantly thrown upon the market and their price declined rapidly and in enormous proportion. Many such securities were held as collateral by American banks, and to protect their collateral American bankers were obliged to buy the securities so thrown upon the market. Gold began to flow in streams from America to Europe. We were on the brink of panic. In this emergency Congress acted promptly and $300,000,000 were put into circulation under the terms of the Aldrich-Vreeland emergency currency act. This prompt action by the Government stemmed the tide and averted the crisis.

During the month of August, following the outbreak of hostilities in Europe, the customs receipts fell off approximately $10,000,000. The falling off in customs receipts, as everyone knows, was due to the falling off in dutiable imports from the countries now at war. There is a sufficient balance now in the Treasury to make up this deficiency in customs receipts, and there is on deposit in national banks about $75,000,000 of Government money, which may be withdrawn on demand by the Secretary of the Treasury. But every business man knows, and none will deny, that this is no time to make withdrawals of large sums from banks for the relief of the Treasury. If the falling off in customs receipts, such as we experienced in August, is to be only temporary, then there would be no need to resort to additional taxation. The falling off in customs receipts, however, will last as long as the war in Europe lasts, and for a considerable length of time thereafter. When peace in Europe is finally restored—and I sincerely hope that will be soon—the number of those who marched forth to battle will be much reduced. Those who return from the conflict will return to barren fields, to factories and workshops laid in ruins, to desolated homes, and to poverty and wretchedness. Their first efforts will be to supply their own necessities, and it will be long, indeed, before they will have raw material or manufactured articles to send to foreign ports.

During this period of reconstruction in Europe our Treasury will have to be provided for and our Government will have to be maintained. We might have provided additional Treasury receipts by the sale of bonds and the mortgaging of the future, a proceeding which some bankers recommended and all bankers no doubt favored. It is the banker's business to sell bonds at a profit to the bankers. It was President Wilson's judgment that we should not at this juncture attempt to sell bonds, and I would rather accept the judgment of President Wilson on a proposition involving the duty of the Government than the judgment of any banker in the country. We could not, of course, raise more money by taxing imports, because it is the absence of imports which necessitates the raising of additional revenue. President Wilson is in a position to see and does see the situation clearly and, in all probability, farther into the future than any Member of the House or Senate. In making his request that Congress provide additional revenue for the Government, the President said:

I come to you to-day to discharge a duty which I wish with all my heart I might have been spared; but it is a very clear duty, and therefore I perform it without hesitation or apology. I come to ask you very earnestly that additional revenue be provided for the Government.

In asking us to provide additional revenue for the Government President Wilson was performing a patriotic duty, and in enacting this legislation we are doing likewise.

President Wilson's policy has been "national safety first," and every patriotic citizen should sustain him in that policy. With his superior opportunities for information, in recognition of his infinitely greater responsibilities, and in the patriotic discharge of a conscientious duty to his country and posterity, he has asked Congress that this additional revenue be provided now.

Those who oppose this legislation are asking why it is being urged at this time; why not delay action for a few months and see how our Treasury receipts will run, and then, if necessary, bring in a bill providing for additional revenue.

Such a course would be out of harmony with President Wilson's policy of "National safety first." If this additional taxation is not imperatively necessary now, it will be in a very short time, and we should never "leave for to-morrow what we can just as well do to-day." In a matter of such vast consequence, delay would be dangerous. We are not only concerned with the fact that a war is going on in Europe, involving all of the great European powers and an Asiatic power, and that it has already seriously affected our revenues, but we must look to and anticipate the consequences to us of the results of that war.

I realize that this war-tax measure is unpopular; all tax bills are unpopular; but the unpopularity of a revenue measure does not determine the justice of it. The party in power in our Government is charged with the responsibility to provide for the maintenance of the Government, and any party that is not willing to rise to whatever emergency presents itself is not a proper party to be intrusted with the affairs of government.

In an emergency like the present one, it matters not what party is in power, additional revenue would have to be provided. And with our imports very considerably reduced there would be but two courses of raising additional revenue, and they are by internal taxation or the issuance of bonds. In the present instance the latter method was carefully considered and rejected.

It has also been suggested that this war-tax measure should not have been presented to Congress until after the congressional election, because its unpopularity might result in the defeat of Democratic candidates for Congress. Such a course would possess the questionable virtue of expediency, but it would also bear the brand of cowardice.

President Wilson wants to have the support of a Democratic House of Representatives in the next Congress, and he possesses sufficient confidence in the American people to know that they will not condemn him and his party for responding to a plain duty in the interest of the entire country.

If the necessity for this revenue measure exists now, and no citizen will have the hardihood to question the veracity of President Wilson when he says it does, it is our plain duty to provide it now. To postpone action until after the election upon a revenue measure that should be provided now, so as to avoid the effect of such legislation on the election, would be equivalent to obtaining money under false pretenses. In demanding that this legislation be enacted now, President Wilson has risen to the supreme heights of constructive statesmanship; he sees his duty plainly; he knows it is imperative; its performance may make him and his party unpopular, but the consequences to himself and his party are minor considerations; the welfare of the country is his paramount concern, and with rugged honesty and sincere devotion to duty, he has called upon the Congress to enact this legislation at once.

It is estimated that the measure will provide about $105,000,000; approximately, about $1 for every one of our population. With a large area of the world in arms, this is a very small contribution to the support of a Government dedicated to the pursuits of peace. Several times has the war cloud floated dangerously near to our own shores since President Wilson entered the White House, but thanks to his rare genius and wise statesmanship, we are still pursuing, and under his leadership we will continue to pursue, the paths of peace.

For the purpose of waging war upon one another, the countries of Europe are taxing their people to the full measure of their possessions. They are abandoning the fields, the factories, the workshops, and offices; productive enterprise is almost paralyzed; thousands, yes, tens of thousands of fresh young lives will be sacrificed before the bloody conflict is ended, and widows, orphans, and crippled men and boys in countless thousands will drag their weary way through life, the unhappy victims of the awful carnage. This is the price of

war to the people of Europe. It is costing the United States about $10,000,000 a month in Treasury receipts. Our sympathy goes out in full measure to the people of those unhappy countries now at war. We all fervently pray the bloody conflict will soon end, and with fervent thanks to Almighty God for the blessings that are ours, with full appreciation of the splendid service rendered to our country by President Wilson's administration, every American citizen will gladly contribute his share to the support of his Government and hope for peace in perpetuity to all the nations of the earth.

Emergency Revenue Legislation.

EXTENSION OF REMARKS
OF
HON. BENJAMIN I. TAYLOR,
OF NEW YORK,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. TAYLOR of New York. Mr. Speaker, as debate on the bill under consideration has been limited to seven hours, it has been impossible for me and practically the entire membership of the House to express our views in open debate. Such a course would consume months of time and accomplish but little. Still I feel that I should not remain silent upon a measure of its importance.

The war that is now raging in Europe has destroyed their industries and interfered with the transportation of commerce on the high seas. As a result millions of dollars of imports which have come from these countries into our ports have stopped, so that the Government has and will lose the revenue which it was to derive from the tax on these imports.

Primarily I was of the opinion that this measure was unnecessary at this time. We have to-day about $125,000,000 in our Treasury, $75,000,000 of which is distributed among our banks, where it is used for business and commercial purposes. The Treasury to-day is about $10,000,000 better off than it was a year ago, and no doubt could stand this loss of revenue for some time to come. It is evident that the present European conflict will continue for at least a year, and no doubt it will be many years before the industries of these countries are reestablished. The millions of dollars in raw materials that heretofore have been imported into this country have now practically ceased. We must seek elsewhere for these materials. Under these changed conditions, coupled with the fact that the countries of the world are making demand on this country for gold and currency, it would be the height of folly to cripple business and commerce by withdrawing the millions of dollars now lodged in our national banks from circulation.

It is contended by the minority that these funds could be withdrawn gradually as they are needed or we can issue bonds and borrow funds.

The better business method is to pay as we go. It makes no difference to the consuming public of the United States whether they pay the tax when they use the imported article or pay an internal-revenue tax. The money must be collected from the American people. It is merely a different method of collection.

Would the minority have felt better if in place of levying an internal-revenue tax to collect a hundred million dollars, we were at war with Mexico and perchance with the world, and not only sacrificing the lives of our young men, our commerce, and industries, but squandering our wealth and levying three or four hundreds of millions of dollars upon the American people to pay current expenses, to say nothing about the hundreds of millions it would be necessary to levy the next 100 years to pay pensions and to cover the cost of a destructive war?

Credit should be placed where credit is due. The minority criticizes, but offers no remedy. The sudden plea for economy which we hear emanating from the minority can fool no one, when it is considered that the last Republican Congress entered into contracts aggregating millions of dollars which the present Congress has been obliged to inherit and provide for out of the Public Treasury, and at the same time, in order to put the present Democratic Congress in a bad light, made appropriations which they knew at the time would not be sufficient to properly carry on the governmental affairs in each of the departments, and the Democratic Congress which was to succeed would be obliged to make these different appropriations, and in this way apparently increase its appropriations and furnish material to be used by the minority to cry extravagance.

Such methods are easily disclosed and must necessarily be denounced by an honest, generous people as unfair, unbusinesslike, with the earmarks of a deplorable partisanship.

As a matter of fact, the appropriations to date by this Democratic Congress are millions of dollars under the last Republican Congress. It is true the House has passed appropriations, including $25,000,000 for public roads, $28,000,000 to be paid Colombia and Nicaragua, and $53,000,000 for rivers and harbors. These measures were passed in the time of peace, when it was assumed that the revenue of the Government collected upon imports would be more than sufficint to pay them. They have not been passed by the Senate, which has already deducted $33,000,000 from the river and harbor bill, and under present conditions will doubtless refuse to confirm the appropriation of $25,000,000 for public roads and the $28,000,000 for Colombia and Nicaragua, these items can be held in abeyance. With these appropriations eliminated and an appropriation of about $34,000,000 taken out of the General Treasury to finish the completion of the Panama Canal, the appropriations of this Congress are about $30,000,000 under the total appropriations of its preceding Republican Congress. I refer to the $34,000,000 used in the completion of the Panama Canal, for the reason that the act authorizes the issuance of bonds for the construction of the canal, and by finishing it now we save the interest and the expenses contingent upon a bond issue. In other words, we are paying as we go, which is the best business method. So it is foolhardy for the minority to confuse facts and figures in a vain effort to prove that this Congress has been extravagant.

The fact that we have about $10,000,000 more to the credit of the Treasury this month than one year ago is the best evidence of the fact that the Underwood tariff bill under normal conditions was producing as much, if not more, revenue than its sponsors expected. It would be absurd for the minority to say that we have not collected as much money in taxes upon imports under the Underwood bill as they collected under the Payne-Aldrich measure. This was provided for at the time of the passage of the Underwood bill, it being the intention to levy as little tax as possible upon imports, many of which are the necessities of life. The tax upon incomes, which was levied in conjunction with the Underwood bill, was made for the purpose of making up the difference, the supposition being that the wealth of the country could much easier pay the tax than its poorer classes. The bill we have under consideration levies these taxes upon the luxuries of life; there is no tax upon the necessities.

The minority contends that the Underwood bill has not decreased the high cost of living. They assert that these articles are just as high to-day as ever. On the other hand, they contend that the Underwood tariff bill has caused a depression; that our manufacturers have not been able to compete with the foreign manufacturers; still they say the price has not decreased. It is the same to-day as it was under the Payne-Aldrich bill. These positions are inconsistent. If the prices are the same, then our manufacturers have been undisturbed. As a matter of fact, many articles have been reduced, such as the cheaper grades of clothing. The price of sugar decreased until the war increased the demand for it. Economists who have studied the question rightfully claim that disturbed business conditions and depressions have existed the world over. We have at last realized that every nation in this world is connected; that there is one nervous system which governs the entire world. Unusual conditions which affect one country reflect upon the rest. The Balkan-Turkish Wars, the acute Mexican situation, and now this European conflagration, have each in turn affected the heartbeat and pulse of the world, caused the people to hoard their gold and wealth and disturbed business conditions. It is unfair and unreasonable to charge these conditions to the Democratic administration. They are general. Were they confined to this country, there may be some reason for such a construction.

The minority have contended that this Congress has been legislating against the business interests of this country. We deny this; but we do say that certain business interests, animated with greed and avarice, control the Republican Party; and its control over that party was so effective that every item of legislation it passed for the last 15 years was at the direction of these interests for their greedy benefit. The Payne-Aldrich tariff bill is a shining example. Their greed and avarice carried them so far that many legislators and statesmen in the Republican Party were obliged for decency's sake, if no other, to openly rebel against the demands of these interests. As a result of their greed, the railroads in this country lie prostrate, millions of dollars belonging to corporations and their stockholders have been squandered in watered stocks, dividends have been

paid by the issuance of railroad obligations and notes, when, in fact, they should have been paid only from the revenues. Their revenues have been manipulated and misapplied for political campaign funds and fraudulent manipulations. To-day there is a clamor to require those who use the railroads, either as passengers or for the purpose of transporting freight, to be compelled to pay increased traffic charges. If their stocks had not been watered, political favoritism had not been shown, and their institutions had been managed to the interest of the people and the stockholders, there would be no necessity to-day to require these increases. This is but one of the numerous products resulting from unsafe Republican prosperity.

European armies are destroying millions in property which it has taken generations to acquire. The world must suffer these losses. Through unjustifiable manipulation and knavery millions of dollars have been lost to the stockholders of the New York, New Haven & Hartford Railroad Co. and other large corporations in this country. The loss of these millions must be felt by all. Everyone must stand his or her share. This is the inheritance the Democratic administration received from the Republican Party, manipulated and controlled by the interests, and still it is brazenly contended that these standpatters can be returned to office. If progress means anything, it means that we are to go ahead and not backward. The election of these standpatters would mean our country is going backward; that we want more Republican inflation, necessarily resulting in our destruction.

The minority claim we are interfering with the rule of supply and demand; that our legislation is hysterical and without a general coherent plan; we are the victim of presidential coercion and our inspirations are received entirely from the White House.

The antitrust bills which were voted for by many Republicans and Progressives do not interfere with the rule of supply and demand. They tend to relieve this rule of unnatural shackles which certain special interests, business combinations, speculators, and unfair transportation conditions have placed upon it. Mr. H. O. Havemeyer, at that time president of the Sugar Trust, while a witness before the Industrial Commission, testified there were 48 refineries in the United States, 18 became bankrupt, and of the 22 remaining 18 combined. As soon as the combination was effected 11 of them were abandoned and 7 left to do the refining that formerly 40 did. Having been asked how this combine controlled the entire output, regulated the price of sugar and its profits, he testified as follows:

Q. Would it not be the utmost limit that the consumer would pay? [Meaning the largest price the consumer would pay, regardless of the supply.]

A. Until we had competition we should be in that position, but whether or not we would exercise it is quite another matter.

This combination has killed competition. The directors of this corporation can arbitrarily say how much the American people shall pay for the sugar consumed. The Shoe Machine Trust, the Standard Oil Co., and other combinations have the same control over their products and the fixing of the price of their products and their profits. This can also be said of the Beef Trust. When a handful of men can say to the great majority of the American consumers what they shall pay for the necessities of life our free institutions are of but little value. Their power is greater than that of the tax collector. They dip their hands in the pockets of the American consumer without restraint. In this way the supply of the commodities in which they deal has been limited, the rule destroyed.

Thousands of tons of fish are destroyed each year because of our inadequate marketing conditions and transportation facilities. The same can be said of the garden products, potatoes, apples, grain, and wheat. Speculators buy great quantities of these products from the producer at insignificant prices, place them in warehouses, and thus control the entire output, supplying the market, not with the real supply but with just as much as they see fit, in order to keep up the price.

It was to remedy these conditions that the antitrust bills have been passed, making these combinations and the leasing contracts and unfair method employed by them to stifle competition illegal, and preventing the board of directors, the brains of these illegal transactions, from hiding behind the cloak of a corporation and holding them criminally responsible. These bills make attempts to throttle and divert the supply a crime and place the blame equally upon the perpetrators, whether they are individuals or corporations.

With the same idea in view, we passed the Federal reserve act, which is more than an asset-currency act. It creates new and free channels through which the currency and money of this great country can flow with freedom. It spreads it over the entire country, so that the farmer, merchant, and banker can have equal access to it. Every time an individual in this country deposited a dollar bill in a national bank, a State bank, or other banking institution at least 35 cents, and frequently 60 cents, of it found its way into the maw of Wall Street, where it was used for speculating and gambling purposes. It was these funds supplied by the people that were used by the railroad wreckers and speculators in their raids upon the railroad properties in this country. They borrowed these moneys from the national banks, which they controlled, and used it for speculation. This Federal reserve act stops this unreasonable speculation with the money of the people.

I do not oppose selling of stocks and bonds and dealing in future contracts when it is necessary to carry on the business of this country, but I do oppose those gambling operations which wreck our railroads and bring misery on our people.

It is common knowledge that much fault was found with the reserve act until it became a law, when of a sudden everybody recognized it was a good thing. Some of the money interests did everything in their power to frustrate us and divert us from the public course we laid out, and the Wall Street newspapers denounced us as know-nothings and incompetents. No one, from their viewpoint, could possibly know as much about banking and currency as their special interests.

A part of the minority, including its leader, were arrayed against this measure in favor of these interests. Still they have the hope of getting back into office, these very standpatters, who can only see prosperity and healthy conditions in legislation conducive to further the schemes of these special interests.

These same interests have been attacking our labor legislation and declaring we have been legislating for the masses and against the classes, and they point to the Clayton bill as an example. It is true that this measure does contain three distinct provisions beneficial to the laboring clases.

The courts have decided that a labor union is a trust and equal with a monopoly in violation of the Sherman antitrust law. This bill rightfully provides that a labor union shall not be considered in violation of the Sherman antitrust law. Such a union is an organization of men who work by the sweat of their brow for their livelihood and join together for their mutual benefit and advancement. The special interests have been proclaiming, for the purpose of discrediting this legislation, that this was class legislation, meaning legislation in favor of the masses and against the classes. Surely no sane man can contend that the Sugar Trust, created by Mr. Havemeyer for the purpose of controlling the supply and creating a monopoly in sugar, one of the necessities of life, is on a par with a labor union, nor can anyone seriously contend that the special interests are really a class. This would mean that all the people of wealth are interested in these unlawful monopolies and are on equal class with them. This is absurd. No doubt in some instances labor unions have been improperly managed; so have railroads and large corporations; but this fact is no reason why they should be wiped out and not allowed to exist. The decisions of the court under the Sherman antitrust law are to the effect that it should not exist. Labor unions may exist. Of course, if they commit unlawful acts and crimes they can be punished the same as the individual. I believe that the labor union and the trusts are here to stay, and it is our duty not to destroy but to build them up and make these institutions wholesome and American in every respect.

The majority of Federal judges have been the advocates of corporations and special interests. Our judges have been selected from our most prominent lawyers, and these lawyers, because of their superior intelligence and knowledge, have usually been retained by these interests, who could well afford to pay them, and naturally advanced to the bench when a vacancy occurred. They have usually taken to the bench, in many instances, an unknown prejudice or feeling in favor of the interests they have served so long. They fail to look upon the human side of the labor question, and have often granted injunctions restraining the laboring man from demanding his just rights and obtaining what is due him. This measure prevents this practice and prohibits the granting of an injunction order restraining a labor union or laborers unless first an affidavit is filed showing that the party asking the order has a good ground for it, and that there is liable to be an injury to person or property committed; at the same time the party asking the order is required to put up a bond to protect those restrained. Many of the minority protested against this provision of the bill. All that they could see was that those dear old special interests were being gradually deprived of their power and their unjustifiable use of the order restrained, and they protested loud and often.

We passed this bill with the further provision preventing these same judges from incarcerating an American citizen for

a contempt of court not committed in their presence without giving the party charged a trial by a jury of his peers. This change is entirely within the theory of our Constitution and the principles upon which this Government was founded.

There is no doubt that the trend of legislation to-day is to protect the human being and advance humanity. The eight-hour laws we passed had this idea in view. The bill which prevents the employing of females in the city of Washington for over eight hours a day was passed with the same idea to protect these frail people from the greed and avarice of wealth. Can there be any doubt that these are wholesome laws, and that they are not made for the progress and advancement of the people of this Nation?

Having this record, we Democrats naturally expect to be returned to office and receive the support of our respective constituents. Our entire legislative program has been for the purpose of restoring our country to the principles upon which it was founded by our forefathers. With this record I am neither annoyed nor afraid to appear before my constituents and ask their support.

Considering that it is impossible at this time to collect taxes on imports—and the Constitution prohibits a tax upon exports—it is therefore our duty to tax the people in another direction for the purpose of raising revenues to run our Government. We American people have pride enough in our country and its institutions to uphold our Government, and, as I stated above, we can thank President Wilson that to-day we are not involved in this war; that he kept us out of the Mexican trouble; and that we are not paying a large war tax and giving up the lives of our young men. When these facts are considered, it seems that we should all cheerfully stand behind the Government, uphold and support it, for if it ever did need supporting it surely needs it now.

Some Things Needed.

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HUMPHREY,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 30, 1914.

Mr. HUMPHREY of Washington. Mr. Speaker, looking at the condition of the country to-day, remembering the history of this Nation, and forgetting not the experience of the last few months, I want to emphasize my belief in the following propositions:

First. That the tariff law should be immediately repealed and a law enacted that will give American markets to American producers; give our work and our wages to our own labor; that will keep the money now sent abroad at home; that will revive American industries and produce sufficient revenue to meet the expense of our Government.

Second. That we should have American ships built in American yards by American labor, paid American wages, manned by American officers and American seamen, and flying the American flag, to carry American commerce.

Third. That the law permitting American ships to pass through the Panama Canal without the payment of tolls should immediately be reenacted, and thereby give the benefits of the canal to the American people and redeem the promises made by all political parties.

Fourth. That a battleship fleet should be at all times kept in the Pacific Ocean and that the Pacific coast should be fully protected by fortifications and by submarines and torpedo boats.

Fifth. That a third dry dock should be immediately constructed at Bremerton.

Sixth. The immediate passage of laws for the development of Alaska, that will open to the world its marvelous riches and give it a permanent population of American citizens.

Seventh. The ending of constant attempts to pass legislation for political purposes that injures business, destroys confidence, and disturbs our industries. What this Nation needs to-day is more prosperity and less agitation, more business and less legislation.

Eighth. That it is the highest duty of this Nation, not only to ourselves but to humanity, to maintain strict neutrality as to all the nations now at war; that we should use every precaution to see that the anxiety for the dollar, under the plea of emergency, does not lead us into complications. And, above all, I believe that in every matter relating to the great European conflict we should stand united as one man, and that there should be no party, no partisanship, and no politics; that we should be only Americans, and our only purpose the good of our own country.

The Effect of Legislation on the Business of the Country.

EXTENSION OF REMARKS
OF
HON. HENRY T. HELGESEN,
OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 1, 1914.

Mr. HELGESEN. Mr. Speaker, the farmer feeds the Nation. The Democrats promised to lower the cost of living. They said living is high because the Republican protective tariff gives to the American farmer the exclusive right to feed the United States. Strike down the farmer's protection and let cheap produce the world over come in to feed the Nation. So they said, and so they bartered the American farmer's prosperity in their plan to make living cheaper.

In their platform they said:

> The high cost of living is a serious problem in every American home. The Republican Party, in its platform, attempts to escape from responsibility for present conditions by denying that they are due to a protective tariff. We take issue with them on this subject and charge that excessive prices result in a large measure from the high-tariff laws enacted and maintained by the Republican Party. * * *

Upon assuming control of the Government they hurried to remove the farmer's protection. They did it with a vengeance. About every product of the farm was placed on the free list—that is, about every product of a northern farm—and the American farmer at once saw Canadian wheat, Argentine corn, Chinese eggs, Australian butter, Canadian hay, and German potatoes bought in American markets in place of his own products.

The Department of Commerce has furnished figures showing just what the Democratic tariff is doing to the American farmer. During the first four months the present Democratic free trade in farmers' products tariff law was in operation we find the following:

Importations of corn.	Bushels.
During four months ending Jan. 31, 1914	7,034,159
Importations same period previous year	250,000
Importations of oats.	
During four months ending Jan. 31, 1914	16,194,145
Importations same period previous year	23,580
Importations of potatoes.	
During four months ending Jan. 31, 1914	3,261,000
Importations same period previous year	79,000
Importations of butter.	Pounds.
During four months ending Jan. 31, 1914	4,573,079
Importations same period previous year	470,000
Importations of eggs.	Dozen.
During four months ending Jan. 31, 1914	2,885,561
Importations same period previous year	None.

And so we might go on down through the whole list of farmers' products. This Democratic tariff law, this free trade in farmers' products law, proved a success in one thing, it opened the American market to the cheapest farm products of the world, and the resulting increase of importations was tremendous. Then, too, this increase in importations is progressive, it grows with the passage of time. Above are given the figures for the first four months. The present increase is greater. The first rush of waters was quite a flood, but a deluge is on the way.

There are some 27 products of the farm from which the tariff was either entirely removed or greatly reduced. There has been a tremendous increase in importation of all these products. During the first 10 months of the operation of this free trade in farmers' products law there were imported into the United States $143,766,341 worth of these products. Just that much was lost to American farmers. The progressive increase in importations of farmers' products is shown by the fact that during the first 4 months it was 140 per cent; during the first 8 months, 149 per cent; and during the first 10 months, 168 per cent.

Not only have these enormous importations taken the American farmer's customers from him, but they have, of course, lowered the amount he has received for his own products. The framers of the law expected this. That is what they had in mind. That is what they wanted to do. Again they were successful.

If two bodies of water, one somewhat higher than the other, be connected, the higher level will drop down until a common level is attained. Such has been and always must be the effect of opening a free channel between the products of the American farm and the products of the world's farms. The price to the American farmer of his product must be reduced until a common level is reached.

By this depression of the price he receives for the products he sells the American farmer is directly affected and his prosperity seriously reduced. Had normal conditions continued, the American farmer would have paid hundreds of millions of dollars each year for the blessed privilege of having a tariff law written by Democrats. The war in Europe, unprecedented in its magnitude, and turning the great nations of the world from producers into consumers, will of course stop farm products from coming to America and greatly advance the price the American farmer will for a time receive for the things he sells. But when that war is over, then normal conditions will prevail, and what will happen we know from our experience under this law prior to the opening of the war, as, for example, in Nebraska, where just before the European war was declared the farmers sold their new crop of wheat at about 60 cents per bushel.

And then it does seem strange that the northern farmer is not as much in need of and entitled to protection as the southern farmer. At all events, the Democrats, who control the Government, do not think so. Some inquiring mind may find a connection between this and the fact that Democrats from southern States at present absolutely control the Government. Not strange, perhaps, they should look out for their own farmers. So while southern Democrats glibly placed northern-grown wheat practically on the free list, they put southern-grown rice on the protected list, to the extent of about 60 cents per bushel when clean or hulled; while they put northern-grown corn on the free list, they put southern-grown tobacco on the protected list; while they put northern-grown wool on the free list, they put southern-grown wool from the Angora goat on the protected list; and while they put northern-grown meats on the free list, they put southern-grown peanuts on the protected list.

Cotton bagging and cotton ties for the South are on the free list, while wool sacks and wheat sacks for the North are taxed. Mr. UNDERWOOD in his campaign for United States Senator said that free cotton bagging and cotton ties had saved $5,000,000 to the farmers of the South, which means that the farmers of the South have an advantage over the farmers of the North to the extent of $5,000,000 per year, and that the revenues of the Government were thereby decreased $5,000,000, and that the special revenue bill now before Congress had to be increased $5,000,000 to make up this loss.

Uncle Sam is now hard up. He can not pay his bills. Democratic extravagance has run riot. This Democratic tariff has failed as a revenue producer every month since it was enacted. Democrats are now further taxing the American people to pay for their extravagance and economic failure. So it is interesting to note that the placing of farmers' products on the free list has deprived Uncle Sam of a lot of money. The loss in revenue on these products alone has been more than $40,000,000.

There are two countries from which we receive cattle and meats—Mexico and Argentina. When the Democrats placed cattle and meats on the free list Mexico promptly placed an export duty on these items and pocketed the money. Our loss was her gain. Now the people are being specially taxed to make this up.

According to a Government investigation, meat and cattle from Argentina are brought in almost exclusively by the great Chicago meat packers. The sum of $2,856,859.21 is already lost to Uncle Sam on these items thus brought in from Argentina under the Democratic bill. But we are cheered by the thought that this sum went into the pockets of the meat packers; and, while we must now tax ourselves to make it up, we are consoled by the thought that we have contributed a splendid sum to a needy and hungry trust.

Trade figures published at Ottawa, Ontario, on July 26 by the department of trade and commerce for the past 12 months show a decrease of imports from the United States into Canada of $40,000,000 from the figures for the corresponding period of 1913.

On the other hand there is an increase of exports to the United States of $32,000,000.

Yes; that is the way it works. The Underwood free-trade tariff benefits every people on earth excepting the American people. Here is a shift to the wrong side of the ledger of $72,000,000 in one year's business with Canada. Thus does our favorable trade balance, always good under protection, go aglimmering under a free-trade system which decreases our sales the while increasing our purchases from foreign countries. At this rate our trade balances will soon disappear altogether.

When the farmers raise a "bumper crop" it often results in lowering the price to a point that leaves no profit; and no law can wholly prevent this. But when the farmers' crops are short and an increased price is necessary to save them from loss, protection assures them against the flooding of this country with foreign grain at less than the foreign price plus the amount of protection provided by our tariff law.

Democratic free trade compels our farmers to sell in competition with the cheapest grain in the world, whether our crops are large or small; and this catches our farmers both "coming and going," and means ruin to our farmers when their crops are short.

The Democrats claim that a protective tariff upon agricultural products does not benefit the farmer. This claim is in accord with their theory of free trade in agricultural products. The Republicans are not interested in theories unless they work out in practice. The Democrats put their theory into practice in the enactment of the Underwood tariff bill; and its effect is best illustrated by corn, which was placed on the free list. We do not need to theorize as to the effect of free corn, for we have the testimony and experience of experts upon that point.

Last May the Committee on Agriculture of the House held hearings on a bill providing for the standardization of grain, and at that hearing grain experts from all over the United States appeared. Among them was Mr. George W. Eddy, of the Chamber of Commerce of Boston, Mass., who, by reason of his location on the seaboard and being an exporter and importer of grain, is peculiarly qualified to testify as to the effect on the price of importations of Argentine corn. Examined by Congressman HELGESEN, of North Dakota, Mr. Eddy testified:

Mr. HELGESEN. To what extent do you think the small amount of corn we export fixes the price of corn that is consumed in this country?

Mr. EDDY. When we have a surplus of corn for export in this country it comes pretty near making the price of the crop while we have that surplus, in my opinion.

Mr. HELGESEN. Then, reversing it, do you think if we import corn that the imported corn, even in small quantities, tends to establish the price also?

Mr. EDDY. It does; and I think corn would have sold from 10 cents to 15 cents per bushel higher this year if it had not been for our importations.

The CHAIRMAN. How much did we import this year?

Mr. EDDY. That is hard to say how much has been engaged, but I should say that in the neighborhood of 12,000,000 bushels have been engaged to come in from Argentina.

Mr. Paddock was another grain dealer who thoroughly understands the effect of exports and imports of grain upon our home market and who testified as follows:

Mr. HELGESEN. How much cheaper can you buy corn from a foreign country, anywhere along the seaboard, under free trade than you can under a duty of 15 cents a bushel? How much cheaper can you land it in this country?

Mr. PADDOCK. Well, I should think the difference between the duty; 15 cents a bushel.

Mr. HELGESEN. If we have an ordinary average crop we would not need to ship in any corn from abroad. If you were on the seaboard, where you deal with people in New England and all along down the coast, would you pay more for American corn, even though we had plenty of it in this country, than you can import it for from Argentina?

Mr. PADDOCK. No, sir; I do not think so.

Mr. HELGESEN. Well, even though we have an average crop, enough corn, even though we do not import any to amount to anything, nevertheless the fact that we can buy corn at a certain price from abroad will establish the price of our own corn, will it not?

Mr. PADDOCK. Yes, sir. We are feeling very seriously at this time the importation of Argentine corn as a competitor of native corn, which is already largely through New England, New York, and central Pennsylvania.

Mr. HAWLEY. In what way have you felt it?

Mr. PADDOCK. We have felt it in the matter of price. Placed at the seaport the Argentine corn at New Orleans and Montreal points was brought in at a rate ranging down to 13 points lower, at 4½ cents a bushel less than corn can be shipped from the interior.

Mr. HAWLEY. Have you lost any markets by reason of it?

Mr. PADDOCK. Yes, sir. We have not sold a car of corn in Boston in three weeks, where we usually sell 10 to 20 cars a day. We have not sold a car of corn in Buffalo in six weeks, where we usually sell 10 to 20 cars a day.

Mr. HAUGEN. What is the reason for that?

Mr. PADDOCK. The reason for that is the Argentine corn comes in so low. * * *

Mr. HAUGEN. Does your company think the price of our corn has been affected by the importation of corn from Argentina?

Mr. PADDOCK. Undoubtedly.

Mr. HAUGEN. To what extent?

Mr. PADDOCK. We had a 2,000,000,000-bushel crop last year, and if it had not been for the importation of Argentine corn I think the farmers would have realized 10 cents per bushel above the present price of corn on account of its coming.

Mr. HAUGEN. You mean the importation of Argentine corn?

Mr. PADDOCK. Yes, sir. * * *

I will tell you, gentlemen, in my judgment in the past four years our total exports have been less than 1½ per cent of our corn crop, and I believe the exportable surplus of 1½ per cent has had much to do with regulating the price at which corn was sold in the United States. The importation of 1½ per cent of Argentine corn this

last year and the prospective importation of 10 per cent more has fixed the price of our corn to our farmers by and large, and eventually will supply the demand and will absolutely result in its exportable surplus of acceptable imports fixing the price. * * *

And the probable importation of 10 per cent more. That is the menace.

Mr. HAWLEY. The importation of 1¾ per cent, with the possible increase to 10 per cent, a little more than 1 per cent of our crop, has diminished the price to the farmer about 13 per cent?

Mr. PADDOCK. About 10 cents, I said. * * *

The CHAIRMAN. Is it not a fact the price of corn to-day is anywhere from 12 to 15 cents a bushel higher than last year at this time?

Mr. PADDOCK. Yes, sir; and we raised 750,000,000 bushels less.

The CHAIRMAN. You think the increase in price is due to the failure of the supply?

Mr. PADDOCK. The failure in our country; and then the coming in of the Argentine corn. The price at Chicago a few days ago was 70 cents, and now that the crop of Argentine corn has begun to arrive in western points, into the interior and as far back as Syracuse, N. Y., and Troy—I have had letters from a great many customers along the line of the New York Central Road, stating they were buying at less money, so that it is now in actual competition. * * *

Mr. MOSS. Now, upon that basis, I ask you, had we had a normal crop, would the price have been so high as now?

Mr. PADDOCK. I do not think so.

Mr. MOSS. Very well.

Mr. SLOAN. Then the producers of corn this year did not get the benefit in price on what they sold that they would have gotten if the Argentine corn had not been shipped in in competition?

Mr. PADDOCK. I think not, sir.

Mr. SLOAN. In other words, when the farmers suffer a shortage of crop the competition from abroad comes in and robs you of the price they otherwise would have obtained?

Mr. PADDOCK. That is my judgment. * * *

Mr. SLOAN. In your opinion, would 15,000,000 bushels of Argentine corn have come in if the 15 cents had not been taken off of the import duty?

Mr. PADDOCK. I can say very clearly, in my judgment, it would not.

Mr. Eddy and Mr. Paddock were not indulging in the pastime of advancing chimerical theories at the expense of the American farmer. They were not trying to extract sunbeams from snowballs. They were giving opinions based upon actual experience. They were telling facts. These facts are that the price of corn to the American farmer was reduced by the Underwood bill at least 10 cents per bushel, and by reason of the importations from Argentina, American farmers lost the great New England market for their corn. The great European conflict has turned thousands of producers into consumers and will probably temporarily check the importations of corn to this country; but after the war—what?

What is true of corn will apply with equal force to oats, barley, wheat, and flax. In fact the price of everything that our farmers raise is affected by importations in the same manner that these witnesses demonstrate that the price of corn has been affected by our comparatively small importations from Argentina. In other words, it is not the amount of the importations that makes the matter serious to our farmers, but it is the effect that those importations have upon the market price of farm products in our own country.

Emergency Revenue Legislation.

EXTENSION OF REMARKS

OF

HON. HORATIO C. CLAYPOOL,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. CLAYPOOL. Mr. Speaker, I hope it is not speaking abruptly to say in the very beginning I am going to support this pending bill, for it must be admitted by all fair-minded men that the Democrats of the Ways and Means Committee did not bring it into this House by their own volition, but were compelled to do so by conditions over which they had no control. A war, the equal to which is unknown in history, ancient or modern, is now raging in Europe, thus cutting off practically all imports from that continent. That the necessity for this bill would have been obviated by a higher rate of tariff is simply the silly talk of a minority party, which feels it to be its duty to hinder, delay, and obstruct. I say a silly attempt at an argument, for the merest novice can see how utterly impossible it is to obtain revenue from tariff duties on imports when practically nothing is being imported. Under such conditions what has the tariff rate to do with it?

At the very outset, and before the real issue is reached, a doleful wail has gone up, almost a supplication, for the good old days when the Republican majority, with Uncle Joe Cannon in command, reigned supreme in the land. The disconsolate minority expressed exceedingly their regrets of the new order of things wrought by this man at the White House, Woodrow Wilson, and a Democratic Congress. The lobbyist of the National Manufacturers' Association and those of kindred associations are no longer filling the halls and controlling legislation.

The Speaker, with more despotic power than the Czar of Russia, frowning down upon committees of his own making, no longer holds forth, but in his stead presides Speaker CLARK, with no motive but to be fair, and with committees not of his own choosing but selected by the membership of this House. We are not surprised that this abrupt change jars the sensitive nerves of these stand-pat Republicans, thus in a material degree deposed. We have due sympathy, but they may as well know the old order of which the Republicans still dream has departed forever. But think of the nerve of these old stand-pat Republicans, standing on this floor and crying out against "gag rule," as they term it, when four hours are allotted for this discussion, and in spite of the minority's admission that they had no desire to offer a single amendment. And all this in the face of the facts that these same Republicans have been worshipers of Cannonism and similar methods for lo these many years, and are now looking with tear-stained eyes for "Uncle Joe's" return.

It is indeed to be regretted that the remnant of what was once, to say the least, a majority party with some kind of theories of government has degenerated into a band of calamity howlers without a suggestion of change of the bill under consideration.

But, Mr. Speaker, we readily agree that there is perhaps no other question upon which the American people differ so widely as upon the subject of collecting revenues. The underlying difficulty is that everybody is trying to escape payment. But in addition to this feature, the special-privileged class desire the great mass of consumers taxed, not alone for revenue, but for their benefit as well, under the guise of protecting American industries, American labor, if you please, while at the same time they bring to our shores a million laborers a year to take the places of our American laborers. Oh, how solicitous these protected interests are of the American laborer.

It took the American voter a long time to fully understand that if a protective tariff did not raise the price of a commodity to the consumer it could not possibly protect, and if it did raise the price so as to protect then the consumer had to pay the additional price. But this fact has finally dawned on the mind of the American citizen, and he now sees how he has been deceived and imposed upon.

In the campaign of 1908 there was a demand for a revision of the tariff downward, and to satisfy the voters the Republican "spellbinders," as well as the Democratic platform, declared for revision downward. The Republicans won. But finding themselves with a new lease of power, they showed no disposition to make good their campaign promises but proceeded at once to raise the tariff rate instead of lowering it. But, to be fair with them, they were in no position to make good to the people their pledge, for they were under everlasting obligations to the special privileged class for both votes and money to run the campaign, and they were lulled into the belief that they could again fool the people and still retain the very valuable friendship of the privileged class. But alas, they had presumed too strongly on the credulity of the voter. He refused longer to be deceived. They repudiated the Payne-Aldrich tariff law and proceeded at the first opportunity to depose those who had thus betrayed them in what they thought to be their own house.

There will still ever remain two distinct methods of collecting revenue—one by direct taxation and the other indirect or by a tariff system. The fundamental difference between the Democrats and Republicans in applying the tariff system is that the Republicans rely on tariff for protection of the millionaire manufacturers for protection's sake, making collection of revenue merely incidental or a secondary object, while the Democrats apply the principles of tariff for revenue only and make protection a secondary object.

We can readily see why the collection by the indirect method is more popular than by direct taxation. By the tariff method the consumer pays without knowing it; it is simply added to the price of the article he is buying, and he is purposely kept from knowing he is being held up not only for the necessary revenue, but held up for the protection of some wealthy firms who are at the same time growing wealthier year after year on the consumer's industry. And yet those who contend for this high protection pretend great concern and pity for the laboring man, but it is only a pretense.

Victor Berger, the Socialist, who but recently left Congress, wisely says: "You can tax the shirt off a man's back without much complaint if you do it indirectly by tariff methods." He never spoke more wisely.

HENRY GEORGE, Jr., says it is a way of getting the most feathers from the duck with the least amount of squawking. He has also expressed the idea well.

But we must all admit the manufacturers have been very adroit in covering up this fraud. They fully understood the value of a good label. They have almost shed tears when talking of the poor laborer, but ever kept well concealed the fact they were giving him $1 a day for his work but were stealing one-half of it away from him while he slept, and doing this under the name of protection. He was told we could not compete with the pauper labor of Europe, but at the same time a million paupers from Europe and Asia were landed on our shores every year to compete with our workmen in America.

But there is one feature more astonishing still, and that is that the great farming communities of the Middle West should vote to pay tribute to the East, should consent to be cruelly taxed on practically all they bought under the delusion that thereby they were enabling their eastern friends to come West and purchase their grain, hogs, and cattle at advanced prices, overlooking the further fact that they were compelled to sell their product on the open market of the world, the price being regulated by the European markets—buying on a protected market, selling on a free-trade market. Is there any wonder the farmer for a generation found it impossible to lift the mortgage from his farm? But finally the Republican politicians, by and with the consent of their allies, the woolen manufactures, took the farmer into their confidence and, in order to hold his vote, placed a few cents of protection on wool and then allowed the importing manufacturer of wool to "skirt" the wool imported, so as to make the tariff insignificant, but left it looking well to the farmer. With the tariff on wool dropped entirely and wool placed on the free list, the farmer is receiving a better price than when he supposed himself duly protected. But Uncle Abe's trite saying, "You can fool all the people part of the time, part of the people all the time, but you can't fool all the people all the time," never applied so forcibly as when applied to the delusion of protection of the laborer and farmer.

We realize that this taxing measure will not be especially popular. When was any tax measure popular, even if it came as an absolute necessity? It is not a pleasant duty for us to impose a tax on the gasoline used in your stove or automobile. But let those who object show us a better article to tax.

It is not pleasant to tax the bankers, but when we must choose between him and the fellow who works in the fields, in the mines, or in the factories, we do not even hesitate to place it on the bank stock, for it is a well-established principle of Democracy that those should pay the taxes who are best able to pay it. But our Republican minority in the House actually shed tears when they see the consumer of cheap clothing and sugar escaping this burden and the more wealthy asked to pay it, and they pray for the return of those good old times when the poor could be inveigled into willingly paying the Government's expenses, lulled to sleep by the thought of protection which in fact always missed him, but made a millionaire of his employer.

But, Mr. Speaker, I want to briefly call attention to other legislation of this Congress and of the present administration, and I venture the assertion here and now that the Sixty-third Congress has to its credit more constructive legislation enacted for the relief and benefit of the American people than has been enacted for the masses in the last half century. With these achievements, with these promises to the people faithfully kept, we go to them for their indorsement. If the American people wish to return to the high protection of the Payne-Aldrich bill, they will have an opportunity of saying so by voting the Republican ticket; if they want the consumer of sugar to be again obliged to pay a hundred million dollars to the Louisiana sugar planters, so they may grow rich at the people's expense, their course is easy. Of course these calamity howlers will tell you sugar is higher than before the passage of the law relieving the consumer of the payment of the hundred millions, but the person who has not enough intelligence to know that the price of sugar is advanced by the European war will hardly find the way to the polls.

And again, after relieving the masses of the sugar poll tax, which was practically $1 for every man, woman, and child, we were obliged to place this tax on those better able to bear it. Without the slightest hesitation we placed this deficiency caused by the relief of the burdens of the people upon incomes. But, again, I am ready to admit if any voter is distressed that we Democrats should thus relieve the poor and collect the same from the wealthy, he has his remedy by voting the Republican ticket, for practically every member of the Republican Party in Congress protested against this change, and they give us timely notice that they are ready to return to the old order of things whenever the people will restore them to power.

A Republican Member from Ohio, in a flight of oratory so vehemently expressed that his voice might have been heard in the capital of the Buckeye State, asked when this Nation had launched out upon the troubled waters of depositing money in national banks, thus making it necessary to collect revenue from the people, only to be promptly informed that sixty of the seventy-five millions were so deposited by the Republicans before the Democrats came into power, and deposited without interest, while the Democrats are compelling payment of interest. But that Member does not even yet seem to fully understand what struck him; but we hope it will eventually soak in. He, along with his Republican brethren, may object to the banks being charged with interest on the people's money, just as for many years they objected to the banks in Ohio paying interest on State funds to anybody other than Republican officeholders. It took a Democratic State administration to cure that difficulty in Ohio, and it also required a national Democratic administration to bring about a like reform in the Nation.

But there are some other achievements of this Democratic administration equally praiseworthy. For at least a quarter of a century the laboring classes appealed to the Republican Party—nearly all that period the Republicans being in power—for progressive legislation. Many bills were from time to time introduced, but all were allowed to quietly sleep in committee and never to appear on the floor of the House lest they might embarrass the Republican Members. But a Democratic Congress originated a bill which added to the President's Cabinet a representative of labor, and that branch is now headed by Mr. Wilson, of Pennsylvania, for many years a leader of organized labor. With this recognition of the demand of the honest toilers of the men seldom thought of in the days of Cannonism, do you think the laboring people of this country are desirous of returning to the old Republican standpat order of things?

For 50 years we have been laboring under a banking system under which Wall Street and a few of their allies could create a panic at will. Several times during that period the money power has found it extremely profitable to plunge the country into a panic, and the Government had no means of preventing it. At the least threat of the great banking center each national bank standing as a separate unit began to call in its loans and we at once had a financial panic the proportions of which depended solely on the persistence of Wall Street in restricting loans. We believe we have forever put a quietus to this financial disturbance by the enactment of the Federal reserve act, which is sufficiently elastic to permit the Government to come to the rescue in time of financial need. Besides this assistance, it will be the first time in a half century one could deposit money in a national bank or State bank, which is a member bank, and feel that the Government guarantees payment, regardless of panics; and this confidence can hardly fail to prevent runs on banks, thus causing a panic. Next, we expect to pass a rural credit act, especially relieving and furnishing cheap money to those engaged in agriculture. But Rome was not built in a day, and a single Congress must not be expected to pass all the remedial legislation necessary to the very best interests of our citizenship, even if we do remain in session 12 months in the year.

But why all this protest on the Republican side of the House against Democratic rule? Their wails almost startle the natives. One gentleman from the State of Washington is weeping over the cheapness of shingles and lumber, as if the poor fellow who wishes to build himself a frame house and cover it with shingles for the protection of his wife and babies has no rights that a great shingle factory and a Republican Congressman need respect, but must be held continuously to pay a high price for shingles and lumber in a protected market, because, as this noble standpat Congressman expresses it, the man buying lumber and shingles can get them cheaper of some one else than the Washington factory, if we do not forbid his buying elsewhere. In other words, the builder of a house should have no right to buy material where he can get it the cheapest. This illustrates well the Republican doctrine of protection.

If it were not for being cruel to our opponents, I would call attention to the foreign policy of this administration and the comments thereon by the opposition. A few months ago a number of speculators having invested in Mexico, and finding their property interests somewhat jeopardized by civil dissension, asked this Government to declare war with that country for no other purpose than defending the private property of the Standard Oil Co. and a few other similar interests. When President Wilson refused to expend millions of the people's money and endanger the lives of our young men he read every morning from a subsidized press such statements as "this Government is

the laughing stock of all Europe." But the President proceeded on his course, as the sequel shows, having implicit confidence in the right. To-day his manly courage is the theme of millions of American citizens, while in Europe uneasy lies nearly every head that wears a crown. And, referring to the European war, it now looks as if in a few months quite a number of second-hand crowns can be purchased at pawnshops at much less than original cost.

But I must not dwell on Democratic achievements longer. A great reading public is already familiar with many of the leading features of these enactments, and while time has not yet demonstrated the wisdom of many of them we believe the American people have confidence and will give us an opportunity of showing what good is in modern progressive legislation, for we must move forward. There is no such thing as a great nation like ours standing still. We must progress or go back. To go forward is to reach that state wherein the man who toils will eventually come into his own and enjoy the full usufruct of his labor. Our laws must be so administered that we may be able to properly distribute the products of the soil, factory, and mines, so as to give equal opportunities to all mankind. But, permit me to say here, as long as we keep our faces to the front, moving toward a higher and nobler civilization, there will never need be the slightest fear of a return to Cannonism or the days when the lobbyist dictated legislation, as was notorious in the last days of Republicanism.

Emergency Revenue Legislation.

EXTENSION OF REMARKS
OF
HON. JOHN A. MAGUIRE,
OF NEBRASKA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. MAGUIRE of Nebraska. Mr. Speaker, it is over 18 months since the present administration came into power, pledged to the principles of Democracy and to specific reforms in legislation and in the Government. I shall always feel a pride in having contributed my constant and enthusiastic support to the marvelous record of achievements under this administration. The people of the country appreciate and will vindicate the President, who needs no apology. As statesman, diplomat, and scholar Woodrow Wilson takes first rank. As a prudent, tactful leader of men his marked success speaks for itself. He thinks great thoughts and does great deeds.

PEACE AND NEUTRALITY.

The same public necessity which has kept Congress in session through the long summer still prevails, but to a greater extent by reason of the unfortunate conditions in Europe. By his unselfish devotion to duty the President has set an example which inspires courage to enable Members of Congress to remain here and give every possible aid to the Chief Executive in his present difficult task. The attention of the entire world has been directed to President Wilson as the most successful exponent of peace and the most available mediator of the war trouble in Europe. In his foresight and wisdom the President lost no time in declaring an attitude of neutrality for the United States and at the same time offered his services as mediator among the warring nations. He did not stop there in his patriotic efforts for peace. In a touching proclamation the President has designated October 4 as a day of prayer for peace, and all the people of the country will join in this commendable effort of President Wilson, sincerely hoping that the nations of Europe now engaged in terrible strife will soon accept the tender of good offices of this country to end the wreck and ruin of war.

While discharging the high duties to the cause of peace among the nations of the world our domestic affairs which might have suffered seriously from the war disturbance have not been overlooked. Congress provided without delay for bringing home American citizens stranded in the war zone, and through the effective cooperation of the State and Treasury Departments practically all of our citizens have been returned safely to their homes.

EMERGENCY WAR LEGISLATION.

The sudden outbreak of the war created a financial shock to the whole world, and to avoid a threatened crisis quick and wise action was necessary. Europe was going to a cash basis. American securities were unloaded to get cash and the stock exchanges were forced to close. Upon recommendation of the Secretary of the Treasury Congress amended the emergency currency law, which greatly added to our volume of currency for the banks of the country. This effectively relieved the currency scare. Congress then enacted the foreign-ship registry law and the war-risk law to still further counteract the influence of the war on ocean shipping. These measures will enable us to get our products to neutral markets of the world and also build up our long-lost merchant marine. All these new problems growing out of the European conflict have been met and solved by this administration promptly, patriotically, and successfully.

WAR REVENUE NECESSARY.

The bill now before the House presents another problem to the administration and to the party in power which was not contemplated two months ago, and we propose to do our duty with the same fidelity which has marked our conduct in dealing with the issues presented to us by our pledges to the American people. To levy a tax on our people is never a pleasant task, but as the causes which have made it necessary are not within our control as a Nation and could not have been foreseen we confidently trust that the patriotic citizens of the country will understand it to be what it really is—an emergency war tax made necessary by the falling off in custom revenues. The marked falling off since the war began is due not to the rates of duty high or low, but to the fact that the war has caused importations from the great importing nations to stop. From the eight or nine countries at war we received for the fiscal year June 30, 1914, imports valued at $385,989,551, and, estimating the same for the next fiscal year, we would lose duty to the amount of $125,811,000, assuming that all importations from these countries cease. But as it is not probable that all importations will stop we can estimate that the falling off in revenue will not exceed $100,000,000, according to the committee's estimate based upon Treasury figures.

Those who oppose this bill and those who usually oppose the President on any measure insist that if their Payne-Aldrich tariff law was still in force there would have been plenty of revenue. Inasmuch as the war would have caused importations from the countries affected to practically stop, it is plain that no tariff law could have supplied revenues at the customhouses. Their argument means, if anything, that by the exorbitant rates of the Payne-Aldrich law they could have collected from the consumers of this country enough revenue to tide over these times of failing custom revenues. In other words, their plan would have collected from the consumers of the country what we propose to collect from luxuries and privileges, and generally from those able to pay the tax. Not only that, but about $100,000,000 which we now raise by a tax on incomes would have to be raised under their plan by a war tax. The Democratic tariff law lifted that big burden from the consumers of necessities by shifting it from the customhouses to big incomes. It is admitted that our custom revenues alone for 1914 fell off $26,762,868, but this was contemplated and provided for by an income tax, which raised $42,189,268.

ONLY SAFE AND HONORABLE COURSE.

To meet the present emergency so ably presented by our distinguished President in his recent message, there are only three courses open. One is to call in the money deposited by the Treasury in the banks of the country. There is about $75,000,000 of this drawing 2 per cent. Under former administrations this money was deposited in the big banks without interest. To call this in for use in running the Government, as pointed out by President Wilson, would greatly embarrass the credits of the smaller banks and work great inconveniences to the borrowers during a time when this money is needed to move the great crops of the West. Bonds could be sold, but this course seemed impossible in the limited money market and would not meet the present needs for immediate revenue to take the place of that which fails to come in from custom duties.

The only effective and practical course open is to levy a tax as carried in this bill, which in brief will raise $32,500,000 on beer and liquors; $6,000,000 on wines; $20,000,000 on production of gasoline; $10,000,000 by special taxes on commercial paper except checks; $5,000,000 on tobacco; $1,500,000 on telephone and telegraph; and $30,000,000 by stamp tax, or an estimated total of $105,000,000 each year the tax remains in force while the war continues. The total taxes to be collected will not be increased, as it is simply shifting the taxes from one source to another. Confidence in the Government and in the solvency of the Treasury must be maintained at all times, but especially during times of financial stress, and I am confident the people will sustain the President in acting wisely and frankly by calling the attention of Congress to the situation.

The present administration has been marked by many national and international policies, which have been followed by the people generally with unusual interest. In the hope that a brief statement of the work of Congress and the Wilson administration will serve a proper and useful purpose, I venture to review briefly the accomplishments during the past 18 months.

In his inaugural address President Wilson said:

This is not a day of triumph; it is a day of dedication. Here muster not the forces of party, but the forces of humanity. Men's hearts wait upon us; men's lives hang in the balance; men's hopes call upon us to say what we will do. Who shall live up to the great trust? Who dares fail to try? I summon all honest men, all patriotic, all forward-looking men, to my side. God helping me, I will not fail them if they will but counsel and sustain me.

TRUE TO THE PEOPLE.

In his thought and words Woodrow Wilson was able to perceive the great tasks that lay before him—problems the people confidently expected him and his supporters in Congress and the Cabinet to solve. Reviewing the many trying situations, foreign and domestic, and the great record of constructive legislation, the people to-day express entire satisfaction with Wilson's administration. They have not been disappointed. They have learned to know and to appreciate the great leader, thinker, and statesman now at the head of the Government.

ABLE CABINET.

He called around him a Cabinet of able and experienced men who have made their respective departments of the Government reflect credit upon themselves and the President by ridding them of official scandal and by efficient, effective service. There have been many evidences that the special interests and favor-seeking corporations are no longer in control of the Government departments. Secretary Bryan will soon have united the great powers of the world by a chain of peace treaties which will reduce to a minimum the possibility of war. Dollar diplomacy has given way to a policy of justice and fair dealing in our foreign relations. "Watchful waiting" has won for Mexico what promises soon to be a stable constitutional government and peace without intervention and war. The Treasury Department has served all the people instead of the big banks in New York City. The Navy and War Departments have forced the Armor Plate and Powder Trusts to meet competition. The Post Office Department is extending parcel post against the protest of the express companies and making the department of every-day working use to the public. The Interior Department is working out conservation in the interests of all the people. The Department of Justice is dissolving the trusts rather than giving immunity baths.

DROVE OUT THE LOBBY.

With a clear purpose and a strong determination to carry out the promises for great legislative reforms this administration began to clear the way for reform by routing the lobbyists from the Capitol. The President's wrath came upon them like a bolt out of the blue sky. This done, Congress found itself free to work and act uncontrolled by any influence except the welfare of the country. A new tariff law was passed which was an honest revision and was fair to the people of the country. It reduced the rates from the high, protective, and prohibitive rates of the Payne-Aldrich law to competitive rates now in the Underwood law. This law, in spite of the unsettled conditions usually attending a tariff revision, is working entirely successfully both as a revenue producer and as a stimulant to genuine prosperity. Up to the time of the European war our revenues were amply sufficient for the needs of the Government. The income tax law which was enacted as a part of the tariff legislation would justify the friends of the measure in reducing the rates of the tariff schedules. If at any time more revenue is needed in normal times the tax on incomes can be made to raise whatever is necessary.

BANKING.

Then Congress enacted a new currency and banking law, the Federal reserve act, which is now about ready for complete operation. Party lines were lost in support of this splendid piece of statesmanship, now accepted by the country with universal confidence in its merit. The law is based upon the principle of Government control through a regional banking system, providing a more elastic currency and a better system of rediscounting commercial paper growing out of industrial, commercial, and agricultural transactions. Twelve regional banks are authorized and the temporary organization has located these banks in 12 geographic divisions of the United States. A Federal Reserve Board acts as the controlling Government authority, indicating and directing the policy of the bank, while the whole system of everyday banking details is left largely with the individual banks within the system. All national banks are compelled to join or surrender their charters, while State banks and trust companies are permitted, under regulations, to become a part of the system. So well was the legislation considered, and so acceptable was it to the country, that immediately after the passage of the law 98 per cent of the national banks made application to be permitted to come under the provisions of the new law.

For nearly half a century we have lived under a banking system enacted as an emergency war measure, based for its circulation on a fixed war debt, and which for years has been considered wholly out of date and failed to meet the business and banking needs of the people. It seemed to be a panic breeder rather than a business steadier and regulator, and whenever symptoms of financial ills developed in the business world, the system itself cultivated timidity and encouraged the hoarding of money in times of great financial stress. This law puts an end to the control of Wall Street speculators of the money, finances, and credit of the business world, and permits of the mobilization of currency and credits by the Government and makes more liquid and available the credit of the country. Loans on farm lands are permitted and liberal provision is made for the loaning, discounting, and rediscounting of agricultural commercial paper not having more than six months' maturity. This banking system will soon go into operation, and my judgment is that in years to come the law will stand out as one of the greatest pieces of constructive legislation enacted in recent years. While this administration has numerous accomplishments to its credit, still if the administration and Congress had no more to their credit than this law, they could readily and confidently go to the people for a vote of confidence.

TRUSTS.

This administration and this Congress have dealt with big problems, and when one important subject of legislation was out of the road another was taken up. Three bills have passed the House looking toward the regulation of trusts, corporations, and big business. The first was the Trade Commission bill, which has already become a law, and is for the purpose of regulating the evils of business through a commission, much the same as the railroads are regulated by the Interstate Commerce Commission, and having in a general way very much the same powers. The subject was handled in a very limited way in the past by the Bureau of Corporations, but the bureau had powers only of investigation. The bureau and its powers were taken over by the Trade Commission, which was given a very large range of powers, giving authority of regulation of business and arbitration between business and corporate concerns and the public. A very large part of these violations are properly administrative and not judicial for settlement and could be settled promptly.

The Clayton bill for the regulation of trusts is supplemental to the Sherman antitrust law and further strengthens the law in the weaknesses developed by the experience of business practices and judicial interpretation. It prevents to a large extent the evils growing out of interlocking directorates, makes holding companies unlawful, fixes guilt in all unlawful corporate acts, and makes the Sherman law possible and certain of enforcement in its criminal provisions. The bill also greatly limits and modifies the power of courts to issue injunctions in labor disputes, and in many ways defines the Sherman law and removes the doubt existing for many years surrounding many of its provisions. The bill has passed both the House and the Senate and is now in conference, and it is hoped that an adjustment of the differences will soon be reached and the bill become a law.

The third one of the trust bills is the railroad-securities bill, to regulate the issuance of stocks and bonds, and is aimed to effectively do away with stock watering. This power under the provisions of the bill is given into control of the Interstate Commerce Commission. One of the purposes of rate regulation is to arrive at a reasonable profit on investments, and through the physical valuation of railroads it is found necessary to arrive at the real value of stocks and bonds. The measure, if enacted, will remove largely the evils of forced alliance of the transportation companies with the big financiers and banking concerns and will lessen the network of banking companies, fiscal agencies, and investment brokers over transportation. The exploitation and financial wrecking of railroad companies, such as the New Haven case, will cease and honest investors and railroad operators will be permitted to conduct the business of transportation without outside collusion. While this bill has yet only passed the House, it is expected to receive favorable consideration in the Senate and be enacted into law in the near future.

AGRICULTURAL EXTENSION.

No Congress has ever passed so many beneficial and far-reaching laws for the purpose of aiding the farmer and looking to the development of our agricultural resources. The Lever agricultural extension act was passed with a view of bringing to the farm and rural homes the results of scientific investigations and best farm practices for the purpose of encouraging increased production and profits of the farms and the improvement of life and social conditions on the farm. This law carries an appropriation which will ultimately reach about $4,000,000 yearly, and will be distributed among several States through the State agricultural colleges according to the number of farms and rural population.

HOG CHOLERA.

Further emphasizing the importance of agriculture, this Congress appropriated this year $500,000 looking to the effective elimination of hog cholera and attempting to reduce to a minimum a yearly loss from this disease of about $75,000,000 to the American farmer. One year ago the item was introduced by myself and $75,000 was appropriated as a start along this line, and the success through the serum remedy and sanitary practices promises great results.

OFFICE OF MARKETS.

Last year the Office of Markets was established in the Department of Agriculture, and this year $200,000 was appropriated for the purpose of investigation and impartially furnishing information on markets and market conditions, supply and demand, packing of products for shipping, storage and warehouses, routing of products, and related subjects looking to the marketing of farm products. The public—particularly the producing public—will be furnished with the information now confined to a few, with larger returns and advantages to the farmers and corresponding benefits to the consuming public.

FARM CREDITS.

Bills on good roads, grain grading, antigambling in grain and food products, parcel post, and numerous other subjects of legislation of advantage and benefit to the farmers have been passed or are now pending in Congress. Bills are now under consideration and exhaustive hearings are being had looking to the establishment of a system of rural credits and farm loans. There is a need and a growing demand among the farmers for easier and longer time loans and lower rates of interest for the purpose of giving the farmer the same advantage as other lines of industry and business activity to borrow money for the purpose of conducting his business. While the new banking law will do much to meet the needs of the farmer, making about $500,000,000 available for agricultural purposes, still a system of farm loans separate and apart from commercial banks is needed, and is quite certain to be enacted before this Congress closes.

MONEY FOR MOVING CROPS.

Something like $50,000,000 of the Government's money is deposited by the Secretary of the Treasury in the local banks all over the country for the purpose of meeting any shortage of money in the moving of the crops. For years and up till the time of the present administration, the surplus money of the Government was deposited in the big banks of New York without interest; but the wisdom of the present Secretary of the Treasury turned these deposits into the banks all over the country, at the same time compelling the bankers to pay the Government interest on the deposits. Thus it can be seen by this and numerous other acts how consistently President Wilson, the Cabinet officials, and Congress are zealously watching the interests of the people engaged in agriculture and caring for their public needs.

CONSERVATION.

This administration and Congress have kept well in mind the big problems of our natural resources, not alone of the present time but for the future. Conservation, with use and development, is the present Government policy. Simply a reservation and inactivity on the part of the Government means in a large measure failure of intelligent conservation. A bill was carefully considered and passed the House a few weeks ago amending the laws and enlarging the powers providing for the use under limitations of our water power on navigable streams. The measure provides for a proper system of fees and charges for the use only with carefully guarded leases and franchises with conditions and terms revocable and at any time on the part of the Government for good reasons or violations on the part of using companies and concerns. Bills looking to the use of water power on our public lands and public domain under proper regulations are also under consideration. Bills are now being considered for a system of leasing of oil and phosphate lands for definite periods fully guarding the interests of the public both now and in the future, control at all times remaining in the Government. Many other bills have been considered touching upon public lands, mineral wealth, fisheries, forest resources, and other natural resources in possession of the Government.

A law was passed this session of Congress appropriating $35,000,000 for the building of a railroad to the extent of about 1,000 miles in Alaska. A portion of the sale of public lands in that Territory is to be used as a sinking fund in repayment of this large expenditure. The big interests have been till lately in control of Alaska and were laying plans for permanently controlling its mineral wealth along with its rivers and harbors and other avenues and natural highways of travel. After an exhaustive investigation of the subject of dealing with the Territory this was considered one of the safest means of the development of its wonderful mineral wealth, forest, fisheries, fur industries, and agricultural possibilities, and at the same time reserving permanently for the public these great resources.

IMPERIALISM.

Imperialism is on the wane, and our policy toward the Philippine Islands is frank and definite for gradual self-government, until they are able to take complete control of their own affairs, and a bill is now pending with that in view.

The President is committed to a presidential primary, and such a bill will doubtless add another reform to the record of achievements.

The cause of labor has been given a seat in the Cabinet and an able Secretary, in sympathy with the problems surrounding labor, is now presiding over the department. An industrial arbitration law was passed which will empower the department to aid in the settlement of labor disputes.

The power of the people will now be more effective that we have provided for the direct election of United States Senators by the people. This reform was sorely needed, and was repeatedly rejected by former Congresses. The corrupt-practices laws have also been strengthened with a view of eliminating corruption in politics.

THE PRESIDENT AND CONGRESS.

To the scoffers and legislative obstructionists who said the Democrats would fail to make good and would bring a panic, this great record of reform, both as to foreign policy and domestic, touching the diplomatic, financial, industrial, and commercial problems in a short period of one and a half years is a complete answer. The country needs Wilson at the helm. His sincere, self-sacrificing devotion to duty; his patient, dignified self-control, intellectual grasp of great problems; his splendid fortitude; his high moral standards and Christian spirit make him indispensable in these times when danger and disaster threaten the civilized countries of Europe. It is equally important that the country return a Congress in full sympathy with the President. This is no time for divided authority and responsibility. President Wilson and his constructive policies would be of little service to the country if men are elected to Congress who would make it their business to hamper and obstruct the completion of the legislative program which the business of the country and the best interests of our Government demand.

On Public Ownership.

EXTENSION OF REMARKS
OF
HON. A. W. LAFFERTY,
OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 2, 1914.

Mr. LAFFERTY. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD, I submit the following:

Public ownership against private ownership; public welfare against private greed. Both sides of the question fully presented and thoroughly debated by C. N. McArthur and A. W. LAFFERTY, rival candidates for Congress from the third Oregon district. Election, Tuesday, November 3, 1914. Jury, the electorate.

INTRODUCTORY.

I have just received a copy of the Sunday Oregonian of September 27, containing the full text of the speech of Hon. C. N. McArthur, as delivered before the Portland Transportation Club, in answer to my speech in this House on "Government ownership of railroads," delivered March 11, 1914.

BOTH SPEECHES REPRODUCED IN FULL.

Both Mr. McArthur's speech, opposing Government ownership, and my speech, favoring Government ownership, are here reproduced in full, so that the voters of the district may know where we each stand upon this very important question. It will be cheaper for me to print both of these speeches and send them out to the registered voters, so that all may see what we have to say, than it would be to buy four columns of space in the Sunday Oregonian in which to answer Mr. McArthur. Besides, by sending out the speeches in pamphlet form, not merely will the readers of the Oregonian have opportunity to read Mr. McArthur's fine speech, but all others will have the same privilege.

M'ARTHUR'S SPEECH "INSPIRED."

If ever a collosal humbug was attempted to be palmed off on intelligent voters, this alleged "speech" by Mr. McArthur before the "Transportation Club" is it. I venture the assertion that not one word of the speech was written by Mr. McArthur, and I shall cite conclusive internal evidence, supplied by the speech itself, to prove my assertion.

The speech was written by a professional defender of private ownership of railroads in the employ of the railroads. It was sent to Portland to the transportation interests, a meeting was arranged for the "Transportation Club," and when the stage was thus set Mr. McArthur read off what had been given him to read, being in the hands of the transportation interests as mere clay in the hands of a jug maker.

INTERNAL EVIDENCES CITED.

The alleged McArthur "speech" gives as authority for most of its facts the Archiv für Eisenbahnwesen, a work printed in German by Julius Springer, of Berlin. Mr. McArthur knows no more about the contents of the Archiv für Eisenbahnwesen than he knows about the contents of the moon. Let Mr. McArthur state who furnished him his alleged data from the Archiv für Eisenbahnwesen.

Mr. McArthur also quotes "Baron Von Eltz" in a talk "before the New York Railroad Club," in 1913. Who would be expected to make a Government-ownership speech before "the New York Railroad Club"? Baron Von Eltz was doubtless procured to perform the same service for the railroads before the "New York Railroad Club" that Mr. McArthur was procured to perform before the "Portland Transportation Club," which is the same kind of a club on a smaller scale. Let Mr. McArthur state who furnished him with a copy of the baron's remarks before the "New York Railroad Club."

DECEPTION MOST TRANSPARENT.

The most casual reader can not help but see through the attempt to deceive the public by foisting on it this alleged speech of McArthur, as an original production by McArthur. For example, in the very second paragraph of the McArthur "speech" will be found this language:

> There is another reason why it should be answered, i. e., that the misrepresentations in it are typical * * *.

Note the "i. e." in this quotation. That is a form of expression that is never used in oral speech, but is characteristic of "essay" writers, scores of whom are hired by the railroad interests in the United States to-day. The "speech" delivered by Mr. McArthur was merely an essay written back East, probably right here in Washington, D. C., by one of the hired "molders of public opinion" of the railroads.

In Washington, D. C., the railroads maintain a permanent bureau of essay writers, called the "Bureau of Railway Economics." It has a large part of one floor of the Munsey Building and watches out for "molding public opinion" in favor of private ownership.

M'ARTHUR'S FIGURES RIDICULOUS.

As stated, McArthur's speech was probably written right here in Washington, and a more ridiculous production, from the standpoint of "statistics" and exaggerated statements contained therein, was never offered to the public.

The McArthur speech quotes the Archiv für Eisenbahnwesen, which he says shows only 1,758 miles of Government-owned railroads in North America. Why did not McArthur quote some American authority? Government Ownership of Railways, by Van Wagenen, published by G. P. Putnam's Sons, in 1910, gives the mileage of Government-owned railroads in Mexico alone as 5,890 miles, and Canada has 1,700 miles. Mr. Van Wagenen gives the American Consular Reports as his authority. So at the very outstart the high-brow article by Mr. McArthur which was intended to show in dignified fashion how "unreliable" my figures were, misses the mark as to Government-owned railroads in North America by nearly 6,000 miles.

FRANCE CONTROLS HER RAILROADS.

The McArthur speech also criticizes me severely for listing the railroads of France as Government owned. They are listed as Government owned by Van Wagenen, who gives his reasons as follows:

> In the above table the entire mileage of France is included in the Government ownership column for the reason stated before that France has optional contracts embodied in the charter provisions which, together with the strict control and the fact that all the railways are built on the plans of Government engineers, make the ownership of the private companies nominal only.

The McArthur essay states that the average length of haul in Germany is 62 miles and in the United States 143 miles. While the average distance hauled is considerably over twice as far in the United States, the McArthur statement admits that the average freight charge per ton-mile is only 45.5 per cent greater in Germany.

So that as a matter of fact a ton of freight is hauled for less money in Germany than in the United States, on the average, but it does not go quite as long a distance as in the United States.

OTHER ARGUMENTS FOR GOVERNMENT OWNERSHIP.

Again, the railways in this country are paid an enormous sum for carrying the mails, Government employees, troops, and Government property, all of which goes free on the German railways. Besides, all the German railways carry express as freight. A higher rate is charged, of course, but this fact brings up the average charge per ton-mile.

Moreover, according to Van Wagenen—

> The right of way in Germany cost more than the entire equipment in this country, and her railroads are worth $140,000 per mile.

So that, taken altogether, it is perfectly apparent that Government ownership furnishes far the cheaper rates to the public.

MR. M'ARTHUR'S FAKE EXCLAMATION.

The author of the McArthur essay pretends to be greatly astounded at my figures when he uses this language:

> Mr. LAFFERTY actually succeeds in finding in the 50 countries which he names 30,000 more miles of State railways than there are in the whole world!

The truth is that I gave the amount of Government-owned railways as 218,358 miles, the same as G. P. Putnam's Sons, while McArthur's essay puts the mileage of State-owned railways as almost that much, to wit, 188,258 miles, and, as heretofore shown, he leaves out nearly 6,000 miles of Government railroads in Mexico alone. He also leaves out the railroads of France, which I included, and that makes up for his entire exclamation point from the top to the bottom thereof.

The McArthur exclamation was a fake, pure and simple, intended to convey the idea to the reader that my figures are not dependable. If my figures were not reliable they would have been torn to shreds long ago.

SATURDAY EVENING POST'S SPECIAL WRITER.

The McArthur essay says:

> If one wishes an intelligent and unbiased presentation of the facts regarding State railways, telegraphs, and telephones in Europe, let him read the series of articles on Government ownership in Europe recently contributed to the Saturday Evening Post by Will Payne. Mr. Payne was sent to Europe expressly to study the subject. * * *

And here is part of the "unbiased presentation" of Will Payne, as quoted in the McArthur essay:

> I do not know whether you have ever ridden in the caboose of a way freight on a third-class railroad in the United States when there were as many passengers as the vehicle could well hold, most of them addicted to pipes and the sort of tobacco that comes in large, loose, brown paper packages. There was a time when it was my privilege to enjoy that experience rather frequently; and except for the free-and-easy sociability of the caboose, that comes much nearer to conditions of travel on some of the State trains in France than anything else I have ever seen in the United States.

The mendacity of the foregoing fantasy can only be appreciated to the full by those who have actually ridden on the palatial Government-owned trains of France, as I have done; but any man with one eye and a grain of sense, who ever heard of France, will know that there is not a word of truth in Payne's statement. I have traveled in France third class and received far cleaner and more comfortable accommodations than I have ever found on the first-class chair cars of the United States.

SUBSIDIZED "NEWS."

Following the remarkably fair and "unbiased presentation" of "Will Payne," I deem it an appropriate place to call attention to the methods of the railroads in "educating the public." The railroads spend hundreds of thousands of dollars yearly for this purpose, and they are probably getting Mr. McArthur's services free.

An investigation by the Public Utilities Commission of Massachusetts, conducted in 1913, brought to light the fact that during the sitting of the Massachusetts Legislature the New York, New

Haven & Hartford Railroad had on its pay roll the reporters for the Boston Globe and the Springfield Republican, two of the leading papers of that State. The Globe reporter's name is W. A. Murphy and the Republican reporter's name is H. W. Kendall.

The same investigation brought to light the fact that the same railroad had on its secret pay roll the Hon. Bruce Wyman, professor of law in Harvard University, and was paying him secretly $10,000 a year. Wyman was going around over the State telling the citizens what sort of legislation ought to be passed, without disclosing his employment by the railroad. He resigned for the reasons here given in December, 1913.

EXTENT TO WHICH INTERESTS WILL GO.

The fact here related will show to what lengths the interests will go in fooling the public. I have tried to do my duty without fear or favor. It has not been a pleasant duty, but I have not flinched. The welfare of the country is supreme, and every public servant should act accordingly.

The special interests have no politics. In this fight they will disregard the Democratic and Progressive candidates and concentrate on the election of McArthur, although either of the other two candidates might serve them just as well. But they know they must concentrate in order to beat me. Therefore, the duty of every honest citizen who has the welfare of his country and his children and his children's children at heart is plain. You made me your trusted agent. I have rendered to you the best service that was in me. I have reported to you the facts. Your vote will probably be the most far-reaching of any you will ever cast. It will either turn the tide for you or against you. I submit the case to you.

MOULTON AND FLEGEL OPPOSE GOVERNMENT OWNERSHIP.

Both Moulton and Flegel stand with McArthur in opposing Government ownership. Flegel is the same stripe of conservative as McArthur, and received indorsements along with McArthur for nomination at the primaries by the "Voters' Protective League," a sort of A. P. A. organization, and by the "Nonpartisan League," an adjunct of the employers' association. Flegel was a standpatter in the city council, and he is a standpatter now. He admits himself that he opposed woman suffrage until after the amendment was adopted—this at the Lincoln High School in May, 1914.

MOULTON AN INGRATE.

Arthur I. Moulton is worse than a standpatter. He is the basest ingrate that ever asked for public office at the hands of Multnomah County. Moulton is only 27 years of age, and was formerly a clerk in my office. He came to Portland from Walla Walla, Wash., in January, 1908, to work for me at $75 a month. Instead I voluntarily paid him $100 a month from the start, and he worked for me until September, 1909—nearly two years. In that period he was admitted to the bar. In that period he was married. In that period he became acquainted with my business and my clients. When I was elected to Congress in 1910 Moulton inherited nearly all of my business. Moulton enthusiastically supported me for Congress in 1910. He was even more enthusiastic in his support in 1912, going all over Multnomah County with A. C. Marsters, E. E. Jones, and others, making laudatory speeches in my behalf. Moulton was himself a candidate for the Republican nomination for the State legislature in 1910, and was properly gloriously defeated. Now Moulton thinks he ought to be Congressman in my place.

MOULTON'S PLATFORM STOLEN.

Every plank in Moulton's platform is stolen bodily from my platform, except that of prohibition; and if Moulton were sincere in his protestations he would be out supporting me now, as he did two and four years ago. Let him state what has happened within the last two years to transform me from a gentleman worthy of his enthusiastic support to one deserving of his cowardly and insinuating abuse. Let him give one specific incident, except the fact that the swell-headed Moulton, 27 years old, my former clerk, who has been made what he is by me, wants the office himself. The answer is that Moulton is merely one of the many ingrates with which this country is filled. He should and will be rebuked.

THE PANAMA RAILROAD.

Mr. McArthur states that the Panama Railroad, owned by the Government, charges a higher freight rate than privately owned roads. It does per ton-mile, but it must be remembered that the Panama Railroad is only 47 miles long and the company goes to the same expense of loading and unloading and switching charges as if the haul were from New York to Portland.

That the Panama Railroad furnishes cheaper service than private carriers and is making the Government an enormous profit at that is proved by the following statement from Hon. Joseph N. Teal, of Portland, before the National Rivers and Harbors Congress, in Washington, D. C., December, 1911. Mr. Teal said:

At the present time the prevailing freight rate by water, eastbound, on coast productions is $8 per ton, of which the steamer lines on the Pacific side receive 60 per cent, or $4.80 per ton.

For handling this freight across Panama by rail, and thence to New York by water, the Panama Railroad Co., which owns and operates a line of steamers, receives only 40 per cent of the rate, or $3.20 per ton. It carries canal employees at greatly reduced rates from New York to Colon. It handles all Government business on the railroad for a lump sum which, I am advised, is unremunerative. It has a contract for transporting cement at $1.25 per ton from New York to Colon, which, under existing conditions, certainly does not pay a profit, yet I am advised it made during the last fiscal year ending June 30, 1911, a net profit of 23 per cent on its capital stock and charged off $600,000 for depreciation on its steamships. Over 70 per cent of its business was commercial, the balance Government business. Yet this is a line owned and operated in every detail by the United States Government.

Mr. McArthur and I are so near together on the matter of the number of employees that would be required to run the railroads that I do not deem that point worth while to debate, though I contend that my original figures were and are correct.

PROFITS FROM GOVERNMENT OWNERSHIP.

Mr. McArthur disputes my claim that Government ownership would be profitable should we take the lines over at their claimed value, $20,000,000,000, and he actually figures out that the Government would lose money on the deal. If that be true, then we ought to allow the railroads to raise their rates so as to make a fair profit. I suppose Mr. McArthur would favor that if elected to Congress. Probably he would also favor letting the Southern Pacific keep its land grant, which it agreed to sell to settlers to compensate it for the great service it is rendering us in furnishing transportation at less than we could furnish it to ourselves.

But Mr. McArthur's figures on this point are absurd. Page 46 of the last Interstate Commerce Commission report shows that the railroads of the United States made a net profit in 1913 of nearly $1,000,000,000, to wit, $939,956,966.47, which was nearly $100,000,000 more than they made in 1912. In other words, the net operating income for 1913 was equal to almost 5 per cent on the claimed value of the railroads. So that if the Government should take over the roads at their claimed value, and pay 3 per cent for the money, it would make 5 per cent from the start, as the railroads are doing, and would therefore have a clear profit of 2 per cent after paying interest. This 2 per cent profit would be equal to $4 per person in the United States. Of course if we took the roads over at their physical valuation, which we would do, that valuation would be found to be far less than the $20,000,000,000 claimed value. The true value would probably be found to be not more than $10,000,000,000. In the latter case the savings to the people on freight rates would be about 50 per cent under Government ownership.

ALL NOW WORK OVER ONE DAY A WEEK FOR RAILROADS.

The average family income is $650 per year. The gross receipts of the railroads are $3,057,000,000 a year, or $30.57 per capita, or $152.50 per family of five. Therefore to pay this railroad tax, which we all do pay indirectly, we must work over one-sixth of our time now for the railroads.

The Portland Railway, Light & Power Co. collects annually gross receipts of over $6,000,000, or about $20 per person in Portland, or $100 per family in Portland. The Portland Railway, Light & Power Co. is now sending East as "interest and dividends" over $3,000,000 a year, or over half of its gross income. These figures are taken from Moody's Manual, of New York, the official guide on Wall Street of public utility corporations.

Mr. McArthur fears that Government ownership of public utilities would build up a "machine." Think what a "machine" it is now, and how it is being ruthlessly manipulated to absolutely control the Government. It is a machine. I admit it. It will never be a safe machine, one to contribute to the happiness of all, until it is taken over bodily by Uncle Sam.

M'ARTHUR'S SPEECH IN FULL.

[Delivered before Portland Transportation Club September 15, 1914.]

The speech of Congressman A. W. LAFFERTY on "Nationalization of American Railroads," delivered in the House of Representatives on March 11, 1914, is a remarkable document in that it contains hardly one statement that is not wholly disproved by the official reports of the Interstate Commerce Commission of this country and by the official reports of other Governments concerning their railroads. If those who know the truth should

let Mr. LAFFERTY's speech go unanswered, they would consciously permit the readers of it to be misled.

There is another reason why it should be answered; i. e., that the misrepresentations in it are typical of those indulged in by many advocates of public ownership, and unless something is done to stop them an entirely mistaken public sentiment may be created which might lead to public action of an unfortunate character. It is for these reasons, and not from a desire to engage in controversy, that I make this public reply to him.

GOVERNMENT MACHINE FEARED.

Mr. LAFFERTY advocates public ownership not merely of railways but of telegraph and telephone systems, steamship lines, and several other industries also. The adoption of this policy would greatly increase the number of Government employees. Many apprehend that this would have evil political consequences. This army of Government employees, it is feared, would dominate the politics of the country. Mr. LAFFERTY opposes this view. The number of Government employees would not be increased enough, he says, to do any harm. The statistics he gives in support of this view are all erroneous.

He says the Government already has 500,000 employees; but the total number of Federal civil employees, according to the statistical abstract of the United States, was, in 1912, only 396,000. He says that if we nationalize the railways we will at once make civil servants of the 1,500,000 now working for the railroads. The number of railway employees in the United States on June 30, 1912 according to the statistics of the Interstate Commerce Commission, was 1,699,218.

He says that the number of telephone employees does not exceed 100,000 and that the number of employees of telegraph and express companies is not more than 100,000. But the Bell telephone system alone, on December 31, 1913, had 157,178 employees; and it is estimated that other telephone companies now have 70,000 employees making a total of approximately 225,000 telephone employees. The express companies had 80,000 employees in 1907 and the telegraph companies have about 50,000 employees, exclusive of those employed jointly with the railroads, making a total of at least 130,000 express and telegraph employees. If the steam railways should be acquired, the Government doubtless would take over the electric railways which compete with them, and would most certainly take over the sleeping-car business of the Pullman Co. and also the various private freight-car lines which operate over the railways.

LIST REACHES MILLIONS.

Even excluding the employees of electric railways, the Pullman Co. and the private freight-car lines, the steam railways, telegraph and telephone companies and express companies have 2,055,000 employees, who, together with the 396,000 persons already in the service of the Government, would make a total of 2,451,000 Government employees. Furthermore, the work of Government employees is restricted to 8 hours a day, while railway employees work 10 hours. If, therefore, no change were made in the laws regulating the hours of work of Government employees, it would be necessary to increase the number of railway employees approximately 20 per cent, or about 340,000, which would make the total number of Government employees 2,790,000 instead of 2,200,000, as estimated by Mr. LAFFERTY.

Mr. LAFFERTY, on the basis of his erroneous figures, asserts that only 2.2 persons in every 100 of the population of the United States would be in Government employ. But the thing which would determine the political effect of Government ownership would be, not the ratio between the number of persons in Government employ and the total inhabitants of the country, but the ratio between the number of voters in Government employ and the total number of voters in the country.

EMPLOYEES WOULD BE VOTERS.

Now, practically every Government employee would be a voter, and the total number of votes cast for President in 1912 was a little more than 15,000,000, while it is estimated that the total number of votes in the country is 21,000,000. In other words, with 2,790,000 Government employees, we should have 13.5 voters in Government service for every 100 voters in the country and 19 voters in Government service for every 100 who voted for President in 1912.

Mr. LAFFERTY says that Government ownership has had no bad political effects in other countries. This statement is far from the truth. In France, for example, 900,000 out of a total of 8,000,000 voters, or 11 in every 100, are Government employees; and, as a result, according to William Morton Fullerton, an English writer, in his recent book, Problems of Power, government in France has become "a tyrannical monopoly of a minority," this minority being the Government employees.

FIGURES ARE EXPOSED.

Continuing, Mr. LAFFERTY says that Government ownership of railways is not "socialistic," and gives statistics intended to show that this policy has been generally adopted. "The world is not socialistic," he asserts, "yet 50 out of the 54 countries of the world have Government ownership of the railways, the only exceptions being the United States, Turkey, Spain, and Great Britain."

He then gives figures purporting to show the private and Government mileage in these 50 countries, their total private mileage being represented as 86,894 and their total Government mileage as 218,358 miles. He adds: "The fact that 50 out of 54 countries of the world have substantially adopted Government ownership and operation of railways as their national policy ought to be complete refutation of the claim that it is socialistic."

Either Mr. LAFFERTY is ignorant regarding his subject or the purpose of all these statements and statistics is to deceive. They tend to give the impression that Government ownership is the preponderant policy of the world, while the truth is that private ownership is and always has been the preponderant policy of the world. The Archiv für Eisenbahnwesen is the official publication of the Prussian Government railways. The latest investigation of the relative mileages of the Government and private railways throughout the world was made by this publication, and its investigation showed that on January 1, 1910, the total railway mileage of the globe was 639,621 miles, of which only 188,258 miles, or 29.4 per cent, was owned by Governments, while 451,363 miles, or 70.6 per cent, was owned by private companies.

STATISTICS FULL OF ERRORS.

The statistics given by Mr. LAFFERTY are full of the most glaring errors. For example, he credits France with 24,849 miles of Government railways and no private railways. The fact is that there are in France only 5,500 miles of State railways, while there are 25,159 miles of private railways. He credits Argentina with only 10,000 miles of private railways, whereas it has more than 15,000 miles of private railways.

Mr. LAFFERTY actually succeeds in finding in the 50 countries which he names 30,000 more miles of State railways than there are in the whole world. The mileages of railways owned by States and companies on the six great continents, as given by the Archiv für Eisenbahnwesen, are as follows:

Continents.	Mileage of State-owned railways.	Mileage of company-owned railways.
Europe	107,663	99,502
North America	1,759	284,880
South America	10,431	29,804
Asia	36,710	2,581
Africa	13,668	9,222
Australia	18,027	1,235
Total	188,258	451,363

The largest mileage of private railways is in the United States, but even outside of this country the privately owned mileage is more than 22,000 miles greater than the total State-owned mileage.

LAFFERTY'S PLAN DISCUSSED.

Proceeding, Mr. LAFFERTY attempts to show that by acquiring the railways the Government could save the people of the United States from $400,000,000 to $700,000,000 a year. The railways, he says, are capitalized for $20,000,000,000, and earned 5 per cent on this in 1913, or $1,000,000,000. The Government could acquire them for their capitalization and pay interest on the bonds issued at 3 per cent, which would enable it to save $400,000,000 annually. Not satisfied with having effected this great economy, he adds that the railways are really capitalized for twice their value, and therefore the Government probably would not have to pay more than $10,000,000,000 for them. Its interest would then be only $300,000,000 a year, and the saving would be $700,000,000 a year.

The trouble with these figures is that every one of them is either incorrect or absurd. The railways never have earned $1,000,000,000 net money in their history. On page 15 of his own pamphlet Mr. LAFFERTY gives statistics of the Interstate Commerce Commission showing that in the year ended June 30, 1913, the net operating income of railways earning more than $1,000,000 gross each was only $815,600,000.

INTEREST TOO LOW.

If the net operating income of the various small roads earning less than $1,000,000 gross each were included, they would not increase the total net operating income much—certainly not to more than $850,000,000. The Government could not borrow the large amount of capital required to buy the railways for 3 per cent. It is highly improbable that it could borrow it for less than 3½ or 4 per cent. The Prussian Government, which owns the largest mileage of railways of any country in the world, recently found itself unable to sell 4 per cent bonds at par. Mr. LAFFERTY's estimate that the Government could acquire the railways for $10,000,000,000 is extremely absurd. Charles A. Prouty, formerly chairman of the Interstate Commerce Commission, and now director of the valuation of all the railways of the United States, which the commission is making, estimated in a recent address that it would cost $20,000,000,000 to acquire them.

If the Government should pay this for them, and its interest rate were 3½ per cent, its annual interest would be $700,000,000. The interest and dividends paid by the railway companies at present amount to $675,000,000 a year. On this basis the Government would lose $25,000,000 a year by buying the railways. The railway companies invest in their properties the money they have left after paying interest and dividends; and if the Government did not do likewise it would not maintain the properties as well as the companies do now.

OPERATING COST IGNORED.

Mr. LAFFERTY says nothing of the heavy increase in operating expenses which probably would occur under Government ownership, thereby greatly reducing the net earnings unless passenger and freight rates were increased. In every country in the world where Government ownership has been adopted there has been a large increase in the number of employees and in operating expenses. Within three years after the Western Railway of France was nationalized in 1908 the number of its employees had increased by 5,280, or more than 10 per cent. Its operating expenses increased in four years from $29,600,000 to $44,500,000, or 50 per cent; and meantime its gross earnings increased only 12 per cent. Within three years after Government ownership was adopted in Italy the number of railway employees increased from 97,000 to 137,000.

As has already been shown, unless the present Federal law regarding the hours of work of Government employees were changed, the number of railway employees under Government ownership here would have to be increased by about 340,000, which, on the basis of present wages, would add about $245,000,000 a year to the operating expenses of the railways.

SALARY RULE NOW SMALL.

While Mr. LAFFERTY says nothing about these probable increases in expenses, he predicts that expenses would be curtailed by the abolition of the "princely" salaries now paid to railway officers. It is true that there are some large salaries paid on railways. But, on the average, the official salaries paid are small, and the total saving that could be made by reducing them is trifling.

The total operating expenses of the railways of the United States in the year ended June 30, 1911, the latest year for which we have complete statistics, were $1,844,065,958. The total salaries paid to the 15,824 officers in that year were $39,864,265, or but 2.16 per cent of the total operating expenses. Therefore to reduce these "princely" salaries 50 per cent would reduce operating expenses only 1 per cent, and to completely abolish all official salaries would reduce operating expenses only 2 per cent.

ISSUE ON RATES TAKEN.

Continuing, Mr. LAFFERTY states that railway rates are lower under Government than under private ownership. "If," he adds, "the German (State) railroads were operating in the United States, where they would have the benefit of the long haul, it is safe to say their rates would not be more than one-half of what we are now paying. The railway rates in Germany now are much cheaper on the average than they are in the United States."

It is true that the passenger rates on the State railways of Germany are lower than the passenger rates on the railways of the United States, but the amount of passenger traffic per mile on the German roads, owing to the greater density of population, is five times as great as on the American roads. Besides, the low average passenger rate in Germany is due chiefly to low rates made on grades of service inferior to any known in this country. The rate for first-class service in Germany is higher than, and that for second-class almost as high as, the average rate in the United States.

As to freight rates, it is the exact opposite of true to assert that they are lower in Germany than in the United States, even when full allowance is made for the fact that on the average freight is hauled a greater distance in this country. The average rate per ton per mile in Germany in 1911 was 13.9 mills; in the United States in the same year it was only 7.57 mills, or 45.5 per cent less. The average haul in Germany was only 62 miles, while in this country it was 143 miles, which tended to make it possible for the railways of the United States to handle their freight more economically.

WAGES HERE HIGHER.

But there was another and more important influence which tended to make the expense of hauling both passengers and freight much greater here than in Germany. This was the difference in the wages paid to railway employees in the two countries. The average wage paid in the United States in 1911 was $724, while in Germany it was only $392, or 46 per cent less. This difference between the wages paid is more than an offset to the difference between the lengths of the average hauls; and, all things considered, it is a fair inference that freight rates in this country are not much more than one-half as high, relatively, as they are on the Government railways of Germany.

AMERICAN FREIGHT RATES LOW.

That freight rates in this country are relatively low is conceded by German students of this subject. In a talk before the New York Railroad Club in May, 1913, Baron von Eltz, technical attaché of the German Consulate General of New York City, said: "I believe that a comparison between the American and German rates tends, indeed, to strengthen the impression that American freight rates are low, if not too low."

And in its annual report, referring to the industrial situation in the United States, the Deutsche Bank of Berlin said: "The American railway companies require higher rates, the existing freight rates are the lowest in the world; a fraction only of the English rates; although the wages in the United States are more than twice as high as the average paid in Europe."

ISSUE BECOMES VITAL.

As the view of the disinterested foreign observer it will be of interest to add the following comment which the Deutsche Bank makes: "This question (that of freight rates) is, therefore, one of decisive importance for the whole political economy of the United States, since the possibility of securing the urgently needed new capital, the consequent thriving of important industries and the increased additional opportunities for labor depend on the profit-yielding management of the great railway systems."

Generally speaking, Government railways tend to make their passenger rates relatively low while private railways tend to make their freight rates relatively low. And low freight rates are much more important because the amount of freight traffic handled is larger on almost all railways than the amount of passenger traffic handled.

It will be noted that the Deutsche Bank said that the existing freight rates in the United States "are the lowest in the world." The average rate per ton per mile on the railways of this country, as already stated, is 7.57 mills. The average rate per ton per mile on some State railways are as follows: France, 15.5 mills; New South Wales, 17.8 mills; Belgium, 11.8 mills; Switzerland, 30 mills; Denmark, 21.4 mills; Bulgaria, 17.6 mills; Austria, 14.7 mills; Hungary, 13.3 mills, and in most of these countries the railway wages are no more than half as high as those paid in the United States.

PANAMA LINE CHARGES HIGH.

To reenforce his argument for Government ownership, Mr. LAFFERTY refers to the rates made and the financial results gained on the Panama Railroad since it has been owned and operated by the Government. Now, the fact is that the average rate per ton per mile on the Government-owned Panama Railroad in 1912 was 3.99 cents, or more than five times as high as the average on the railways of the United States. The Panama Railroad earns large profits, but this is because of its excessive freight rates. Its net earnings in 1912 were $1,802,000. If its average rate per ton per mile had been only twice as great as the average on the railways of the United States, or, let us say, 1.5 cents, its net earnings would have been $1,836,000 less than they were, and instead of earning a profit it would have failed by $34,000 to earn its operating expenses. The statistics of the Panama Railroad indicate that under Government management it costs it three or four times as much to handle its traffic as it would cost an ordinarily well-managed railway in the United States to handle the same traffic.

GOVERNMENT COMPANIES SLOW.

Mr. LAFFERTY contends that Government service is much more expeditious and satisfactory than that of private companies. It is not so easy to refute this statement as it is to refute others made by him, because to do so would involve the presentation

of masses of statistical and other evidence too great to be included here. It must suffice to say that a large majority of persons who have had experience with the State railways, telegraphs, and telephones of the United States entirely differ from Mr. LAFFERTY in their opinions of the relative qualities of the service rendered in Europe and in the United States.

If one wishes an intelligent and unbiased presentation of the facts regarding State railways, telegraphs, and telephones in Europe, let him read the series of articles on Government ownership in Europe recently contributed to the Saturday Evening Post by Will Payne. Mr. Payne, who was sent to Europe expressly to study the subject of Government ownership, and especially Government service, for the Saturday Evening Post, gives fact after fact and specific incident after specific incident tending to show that the service given by State industries in Europe is far inferior to that given by private concerns in this country.

POOR SERVICE DENOUNCED.

Furthermore, the State railways, telephones, and telegraph concerns of Europe are bitterly criticized by their own newspapers for their poor service. For example, last January the London Daily Mail said in an editorial: "Why is it that Government ownership and management of telephones is practically always a failure? Why is it that for every thousand Europeans there is only 1 telephone, while for every thousand Americans there are 15? Why is it that not one of the many discoveries that have transformed the telephone industry in the past 30 years has emanated from a department of state? Why is it that throughout the length and breadth of Great Britain and the Continent hardly a single efficient long-distance service is to be found?"

Regarding the service of the railways of France, Mr. Payne says in an article in the Saturday Evening Post of May 2, after having severely criticized the service of the French Government railways:

"Of course, a good deal of this is true of the privately owned roads as well as of the State owned, yet there is an overwhelming mass of testimony to show that the State-owned roads give the poorest service and have been the slowest to make improvements."

STATE TRAINS ARE CABOOSES.

Referring again to the service of the French State railways, he says: "I do not know whether you have ever ridden in the caboose of a way freight on a third-class railroad in the United States when there were as many passengers as the vehicle could well hold, most of them addicted to pipes and the sort of tobacco that comes in large, loose brown-paper packages. There was a time when it was my privilege to enjoy that experience rather frequently; and, except for the free-and-easy sociability of the caboose, that comes much nearer to conditions of travel on some State trains in France than anything else I have ever seen in the United States."

If one will but look about him and contrast the kind of service usually rendered in his own city, his own State, and his own country by Government and private concerns, he will speedily disabuse his mind of any notion he may have that Governments ordinarily do things better than private companies.

STATEMENTS CALLED UNRELIABLE.

Mr. LAFFERTY makes numerous assertions in support of his plea for Government ownership besides those mentioned, which are equally as misleading. Enough has been said, however, to show that his statements of facts are wholly unreliable and his deductions from them entirely untenable. Like many other advocates of public ownership, he seems to believe so strongly in his cause as to think that he may rightfully resort to every form of misrepresentation in order to bolster up his argument for it.

But the public is not likely to regard the matter in that light. It is likely to conclude that a policy for which a case can not be made out except by the use of all manner of misstatements and misrepresentations is hardly a safe policy to adopt, and that men who resort to the use of such means of creating public sentiment are not safe leaders to follow.

LAFFERTY'S SPEECH IN FULL.

[Delivered in the House of Representatives March 11, 1914.]

I take advantage of this opportunity to present to Congress the reasons which have convinced me during the past three years that the American people should nationalize their railways.

In thus declaring outright for Government ownership of railroads, which, of course, would mean also the ownership of the telegraphs and telephones and the superseding of the express companies through the extension of the parcel post, I have not reached a hasty decision. Indeed, the facts in favor of Government ownership, developed by my investigations and my personal observation of Government-owned railroads in other countries, seemed overwhelming before I reached my present conclusion. I gave most careful consideration to every objection that has been urged against Government ownership.

It is my opinion that if this Congress should pass a law for the taking over of all the American railways at their actual physical value no one would be injured thereby, and that the American people would be saved billions for the future which otherwise will go to special-privilege corporations. Yet these corporations would not be hurt by such a law, because they would be paid the present value of their property. They would have no right to the speculative profits of the future.

"ARMY OF EMPLOYEES" BUGABOO.

The first objection urged against the nationalization of our railways is that it would create "an army of employees" who would dominate the politics of the country. None of the other 50 countries having Government ownership of railroads has had that experience, so let us look into the facts and see if there is any ground to believe that we would be "dominated by an army of employees." We now have 100,000,000 people, and we have 500,000 Government employees, or 1 person in 200. If we nationalize the railways we will at once make civil servants of the 1,500,000 employees now working for the railroads. That would bring the total number of Government employees up to 2,000,000, or 2 persons in 100. The total number of telephone employees in the United States does not exceed 100,000, and the total number of telegraph and express company employees will not aggregate more than 100,000. So if we nationalize the railway, telephone, telegraph, and express companies and take all the employees of those concerns into the civil service, the then total of our employees will not exceed 2.2 persons in 100. Therefore the cry that an "army of employees" would dominate our politics is the merest bugaboo. We now have 300,000 postal employees. They vote independently; they are found in all parties. The same would be true if we should have railway, telegraph, and telephone employees. Besides, there would be 97.8 persons in private life to only 2.2 persons on the Government pay roll, and any Congressman or Senator who favored the Government employees to the detriment of the private citizens would certainly be left at home at the next election.

The next principal objection to Government ownership of railways is that it is socialistic. The world is not socialistic, yet 50 out of the 54 countries of the world have Government ownership of railroads, the only four exceptions being the United States, Turkey, Spain, and Great Britain. Not all of the 50 countries owning and operating railroads own all of their lines, but they own and operate a substantial part thereof, and not a single one of those 50 countries has found Government ownership and operation of railroads a failure. On the other hand, they have found it a great success, and not one of them would take a step backward toward private ownership.

The following table gives approximately the private and Government mileage of the world by countries, excepting the United States, Turkey, Spain, and Great Britain:

Countries.	Private mileage.	Government mileage.
Alsace-Lorraine	17	1,079
Argentina	10,000	2,500
Austria-Hungary	6,931	19,694
Baden	134	1,653
Bavaria	605	3,772
Belgium	330	2,500
Brazil	6,265	4,939
Brunswick	119	274
Bulgaria	19,956	1,562
Cape of Good Hope	608	2,664
Ceylon		579
Chile	1,453	2,201
China	2,870	470
Colombia	210	220
Denmark	855	1,131
Dutch East Indies	300	1,156
Ecuador	125	80
Finland	151	1,885
France		24,849
Germany	1,248	31,000
Greece	700	(1)
Guatemala	400	(1)
India	3,973	25,321
Indo-China (France)		1,430
Italy	1,240	8,520
Japan	489	4,399
Mexico	6,319	5,890
Natal		776
Netherlands	822	985
New South Wales		3,390
New Zealand	113	2,391

[1] Small.

Countries.	Private mileage.	Government mileage.
Nicaragua	20	160
Norway	219	1,329
Orange River Colony		1,500
Queensland		3,092
Roumania		2,295
Peru	302	884
Portugal	952	531
Russia	11,450	27,691
Servia	14	360
Siam	25	350
Africa (except as above)	1,000	5,000
South Australia		1,805
Sweden	5,072	2,559
Switzerland	582	1,524
Tasmania	168	462
Venezuela		3,529
Victoria		3,398
West Australia	665	1,568
Total	86,894	218,358

The fact that 50 out of the 54 countries of the world have substantially adopted government ownership and operation of railways as their national policy ought to be a complete refutation of the claim that it is socialistic.

UTILITY OWNERSHIP PROPER GOVERNMENT FUNCTION.

I am opposed to socialism. That is to say, I am opposed to Government interference where there is natural competition. I am opposed to "community ownership." Such ownership would deprive me of my choice and my initiative in seeking my home and my happiness.

But I do favor a "commonwealth," which word means the holding of certain powers and property in common for the benefit of all the people. I favor the adding of the transportation monopoly of America to the American commonwealth, just as the postal monopoly has already been made an asset of the commonwealth. That is not socialism. That would be but exercising a just and proper function of government, a function which 50 out of the 54 countries of the world are already exercising.

CONGRESS NOT FOR THE PUBLIC.

The people of this country of all political parties are progressive; but Congress does not, according to my view, respond to the country's desire for sweeping progressive laws. In dealing with the question of monopoly Congress has not as yet "scratched the bark on the outside of the tree." I am in favor of Congress going ahead with the strides of a giant in order that the American people shall come into their own now and not 50 or 100 years from now.

The total wealth of the United States at present is approximately $120,000,000,000. The total capitalization of the American railways is $20,000,000,000, or one-sixth of our total wealth. If the railroads be nationalized, an act of Congress will direct the Government to take possession of the railroads on a given date, and the same act will necessarily provide that the stockholders shall be paid for their property at its actual physical value at the date taken over by the Government. In case of disagreement between any railway company and the Government commission having jurisdiction in the premises, a Federal court, with the aid of a jury, would hear the evidence and fix the fair value to be paid by the Government. That is perfectly constitutional. The public may always take private property for a public use upon making just compensation. No owner of railroad stock would be hurt. He would receive in cash the full value of his property.

PURCHASE WOULD BE EASY.

But the cry is also made that "it would bankrupt the Government" to buy the railroads. Let us see about that. Suppose we had to pay for the railroads the full $20,000,000,000 which they are capitalized for. We could borrow that money at 3 per cent annual interest. And last year—1913—according to the figures given the Interstate Commerce Commission by the railroads themselves, they made 5 per cent profit on their $20,000,000,000 capitalization. Therefore the Government would make a profit of 2 per cent per annum from the start, or a profit of $400,000,000 per year. That would be $4 per head profit per year to our people. But all this is upon the supposition that we would pay the railroads all they ask for their property—all they claim themselves it is worth—which, of course, we will not do.

The railroads of this country are capitalized for at least twice their actual value. That is quite generally conceded by all except the railroads themselves. Therefore, when we take over the railroads at their actual cash value, to be ascertained by a proper commission, we shall probably not be required to pay more than $10,000,000,000 for them. As our annual interest charge on that sum at 3 per cent will be only $300,000,000, and as the net operating revenues are now $1,000,000,000 per annum, we shall make an annual profit from the start of approximately $700,000,000, or $7 per head of our population. That will be the saving on rail transportation alone. The saving to each individual who uses a telephone will be about half the amount he now pays. The saving on telegrams and express will be about the same as on telephones or a little more.

ENORMOUS SAVINGS THROUGH GOVERNMENT OWNERSHIP.

The gross revenues of the American railways for 1913, according to their own figures, amounted to $3,057,163,762.78. In other words, each individual in the United States contributes to the railways each year the sum of $30.57. That shows how closely the railroads come to the people. Each family of five contributes to the railroads each year the sum of $152.85. The most of this is paid indirectly in freights. The consumer does not pay the railroad direct, but the merchant does, and the consumer pays the merchant. Seventy per cent of the total income of the railroads is from freights.

The savings to the people that I have thus far shown are incontrovertible. They are based upon cold mathematical calculation. There are other savings to the people which would come from Government ownership, but which are not capable of being reduced to exact amounts at this time. For example, the railroads are now claiming operating expenses of $2,118,585,896.52 per year. This gigantic sum, which the railroads deduct before they begin to count profits, amounts to $21 per head of our population. How much of it goes to actual legitimate expenses of the railroads there is no way of telling. But we do know that much of it goes to "educate the public" and to "create public sentiment" in favor of private ownership of railroads. All of this would be saved under honest, economical Government administration. Besides, the Government would not pay princely salaries to railroad presidents on account of their ability to foist watered stock on the public. At the same time conductors and other trainmen, shopmen, and mechanics would receive better pay and shorter hours.

To show that the railroads of this country are still engaged in wholesale bribery in order to mislead the people and maintain their hold on their present gigantic monopoly I will cite a few recent facts.

On page 609 of the report of the Interstate Commerce Commission of June 20, 1913, the commission says:

> It is worthy of remark that the general counsel of the New Haven Co. testified that, while the Legislature of Connecticut did finally vote unanimously in favor of the New Haven ownership of trolley lines, sentiment was at the outset the other way, and it was only after $100,000 had been expended in "molding" the opinion of the legislature that the final result was attained.

NEWSPAPER SUBSIDIZED TO FOOL THE PUBLIC.

Another instance of the constant endeavor of the railroads to warp public opinion contrary to the truth is that which was recently brought to light in Harvard University. A recent investigation by the Public Utilities Commission of Massachusetts disclosed the fact that the New York, New Haven & Hartford Railroad was secretly carrying on its pay roll Prof. Bruce Wyman, instructor in law at Harvard, paying him the sum of $833 per month, during which time Prof. Wyman lectured over the State on proposed legislation in which the railroad was interested. When the facts were made known, about three months ago, Prof. Wyman resigned. The same investigation by the Massachusetts Public Utilities Commission disclosed that both W. A. Murphy, legislative reporter on the Boston Globe, and H. W. Kendall, legislative reporter for the Springfield Republican, were in the secret pay of the same railroad. These are only a few cases recently made public. We do not know how many more university instructors, editors, and writers are on the secret pay rolls of the railroad companies for the purpose of "molding public opinion."

A very able book was written in 1910 by Hon. Anthony Van Wagenen, of Sioux City, Iowa, favoring Government ownership of railroads. It was published by G. P. Putnam's Sons. Mr. Van Wagenen wrote me recently that within a year after his book was published the libraries of this country were flooded with anti-Government ownership books written by inspired pens.

CONGRESSMEN MADE "ATTORNEYS" FOR RAILROADS.

A few days ago a Member of this House pulled from his pocket in my presence and in the presence of a Senator of the United States an envelope containing an annual pass for 1914 over one of the railroads of this country and a check for a retainer of the Member as attorney for the company for the coming year. So it will be seen that while we have passed a law preventing free passes to Members of Congress the railroads still

issue them to Members as part of the consideration for "services." I will give the name of the Member I have mentioned if anyone desires. In justice to him, however, I will state that he said he was going to return the pass and the check to the railroad company.

Mr. HENSLEY. Mr. Chairman, will the gentleman yield for a question?

Mr. LAFFERTY. Gladly.

Mr. HENSLEY. Does not the gentleman think that it would be a good thing to put a law on the statute books forbidding that kind of thing and making it a felony?

Mr. LAFFERTY. I certainly do. No Member of Congress has any right to draw pay as attorney for a railroad company.

Mr. MANN. Or anybody else, timberman or otherwise.

Mr. LAFFERTY. Yes; or anybody else, timberman or otherwise; and if any man can show where I have accepted a red penny since I have been a Member of this House, I will resign before the sun goes down. I challenge anybody, especially the gentleman from Illinois, if he means me, to show any such thing.

We have no means of knowing, nor does the country have any means of knowing, how many Members of this House are now under the pay of railroads or affiliated special-privilege corporations. We have passed a law requiring that campaign contributions in aid of the election of Members of the House and Senate be made public, and we should now pass a law making it unlawful for any Member of this House or a Senator to accept compensation from any outside source, or at least a law requiring the Members and Senators to make annual reports to the Clerks of the House and Senate, under oath, giving an itemized public statement of all compensation received by them from sources other than their official salaries. I have a bill pending making it unlawful for any Member of Congress or Senator to accept any compensation for personal services from any source other than his salary and allowances from the Government, and another bill which would require the statement I have mentioned to be made annually under oath by each Congressman and Senator, so long as it shall remain lawful for them to receive outside pay, so that the public may know what remuneration they are receiving, if any, in addition to their official salaries.

EUROPEAN STATE-OWNED ROADS A SUCCESS.

Another argument advanced against Government ownership is that rates are higher in those countries where Government ownership now obtains. That statement has been made all over this country, and it is absolutely false. Twice during the past year I have traveled through countries owning their own railroads in Europe, first last June and July and again during the three weeks' Christmas adjournment, and I find rates cheaper than in the United States, the time schedules faster, accidents less, and service better, although the roads are much shorter, owing to the smallness of European countries, and might, therefore, be excused if they did charge higher rates.

Mr. STAFFORD. Mr. Chairman, will the gentleman from Oregon yield for a question?

Mr. LAFFERTY. I shall be glad to yield to the gentleman.

Mr. STAFFORD. Will the gentleman inform the House how the freight rates in Germany compare with the freight rates in the United States?

Mr. LAFFERTY. In Germany, where the Government owns and operates the railways, the freight rates are only about one-half what they are in England, where they are privately owned. If the German railroads were operating in the United States, where they would have the benefit of the "long haul," it is safe to say the rates would not be more than half what we are now paying. The rates in Germany now are much cheaper, on the average, than they are in the United States.

There are certain things which the Government can do better and cheaper than any private corporation can do them, and building and operating railroads is one of those things. Private capital will not invest in expensive and hazardous undertakings unless assured of immense profits.

UNITED STATES NOW OWNS PANAMA RAILROAD.

The Government of the United States does now and for several years last past has owned the Panama Railroad Co. which operates also a line of ships. While that company is owned by the Government, it is operated on the same plan as a private railroad company, having a complete set of officers, a board of directors, and it has capital stock, all owned by the Government. Col. Goethals is president of the company. Its accounting system is the same as that of any private company. This company has from the start paid an annual dividend of over 6 per cent profit to the Government, and before declaring a dividend it charges off all depreciation, the same as any other company. The 1913 dividend of the Panama Railroad was 10.23 per cent. Yet it hauls cement from New York to Colon at $1.25 per ton. The water rate from Seattle or Portland to Alaska, a shorter distance, is from $12 to $20 per ton. This, perhaps, is an extreme illustration but it emphasizes the advantage of Government over private ownership when it comes to the matter of common carriers, either on land or water.

Therefore I favor not only the nationalization of our railways, but I likewise favor the building and operation of ships by the Government. One line of these ships should ply between Alaska and the States. Others should carry our mails to foreign ports, at the same time carrying passengers and freight. We now pay $3,000,000 a year to foreign ships for carrying our mails. That sum would pay the interest on $100,000,000 of bonds with which to build ships of our own. And when built and put into commission the ships would pay for themselves. These ships could also be made auxiliary to our Navy. They could be so built as to be convertible into cruisers in time of war. These auxiliary ships would not be a burden to the public, but would actually pay their way, and, in addition, give a profit to the United States. I want to see the time come when citizens of America can go to any port in the world in an American ship, flying the American flag, and manned by American officers and an American crew.

GOVERNMENT SHIPS ALSO FAVORED.

By water we export annually $2,000,000,000 worth of merchandise, upon which we pay the Ocean-Steamship Trust freights estimated at an average of 10 per cent of the value of the goods transported, or $200,000,000. By water we import annually goods to the value of $1,500,000,000 and pay ocean freights thereon of approximately $150,000,000, making approximately $350,000,000 that we pay each year for transporting merchandise to and from the United States upon the high seas. This Congress could well afford to provide for the building of Government ships to be operated by our Government. A fleet of 200 great ocean liners would be a good beginning. We would get at least half the traffic to and from the United States with such a fleet, and our annual freight revenues alone would be, as has been seen, one-half of $350,000,000, or $175,000,000.

The passenger and mail revenues would by themselves pay the operating expenses of our ships, leaving our cargo revenues net profit, less depreciation and repairs on the ships in commission. The depreciation and repairs annually on 200 ships of the value of $800,000,000 would not be over 10 per cent, or $80,000,000, leaving a clear profit from cargo revenues of $95,000,000 to be applied annually toward reduction of interest and principal of bonded indebtedness incurred in the building of a fleet of 200 ships at a cost of $4,000,000 each. The annual interest on the cost of the ships at 3 per cent would be $24,000,000. Subtracting this sum from the clear profit of $95,000,000 would leave the sum of $71,000,000 to be applied annually to the extinguishment of the bonded indebtedness of $800,000,000, so that in less than 12 years the fleet of 200 steamships would be paid for. An American merchant marine such as this, consisting of a fleet of 200 new ships, would be the proudest possession of any country in the world. Such a fleet would drive the Shipping Trust from the high seas and would be a godsend to the entire world. The United States is yet but a sleeping giant, lying stretched out from the Atlantic to the Pacific, embodying the strength of the richest country in the world. I predict that this giant is soon going to wake up to a full realization of his great powers and opportunities. It will not be many years, in my opinion, till an American citizen can circle the globe in a Government merchant ship, thus viewing at small expense the wonders of the world.

The argument is also made that the Government would not be as prompt and efficient in furnishing transportation service to the public as are private corporations. Experience shows the exact contrary. A few days ago I had a package of express and a parcel-post package of the same size sent me on the same day from Portland, Oreg. The parcel-post package arrived just four days ahead of the express package. The private corporations have so much checking against the supposed dishonesty of the sender and receiver of the package, as well as that of their own employees, that it takes as much time and expense to do this checking as it does to transport the package. The same is true of freight and of long-distance telephone and telegraph messages. I found personally that telegraph rates in Europe are less than half what they are in America, and the service much simpler, quicker, and more satisfactory.

These few remarks give my views touching the subject of transportation by land and water. I regard it as a proper governmental function, and one which, when left to private corporations, results in exorbitant rates, unnecessary dangers to

life and limb, and a strangulation of individual opportunity. If continued in office, I shall work and vote for Government ownership of transportation facilities whenever the opportunity offers itself.

COMMISSIONS FAIL TO "REGULATE."

The utter folly of hoping for results from attempted "regulation" ought to be shown by the fact that in 27 years the Interstate Commerce Commission has accomplished nothing in this regard. This commission has within the last few days announced a probable increase in freight rates, effective July 1, 1914, although the commission's own report for 1913, page 46, shows that the profits of the railroads are on the increase under existing rates. This report of the commission shows that the profits of the railroads for 1913 were nearly $100,000,000 greater than in 1912. What is the occasion for authorizing an increase in rates under such circumstances? The following is the report of the commission for 1913:

Summary of monthly reports of revenues and expenses of steam roads reporting total annual operating revenues in excess of $1,000,000.

Items.	Year ended June 30—		Average per mile of road operated.	
	1913	1912	1913	1912
Average number of miles of road operated	221,748.58	219,666.45		
Operating revenues:-				
Freight	$2,134,583,675.86	$1,902,742,853.03	$9,626.14	$8,661.96
Passenger	678,487,867.25	641,594,147.09	3,059.72	2,920.77
Other transportation	210,804,502.14	195,837,469.81	950.65	891.52
Nontransportation	33,287,717.53	28,789,383.52	150.11	131.06
Total	3,057,163,762.78	2,768,963,853.45	13,786.62	12,605.31
Operating expenses:				
Maintenance of way and structures	407,171,756.34	351,583,429.82	1,836.19	1,600.53
Maintenance of equipment	501,671,011.01	439,997,245.83	2,262.34	2,003.02
Traffic	61,391,495.37	59,203,342.86	276.85	269.52
Transportation	1,074,943,310.41	994,986,281.00	4,847.58	4,529.53
General	73,408,323.39	69,190,051.34	331.04	314.98
Total	2,118,585,896.52	1,914,960,350.85	9,554.00	8,717.58
Net operating revenue:				
Rail operation	938,577,866.26	854,003,502.60	4,232.62	3,887.73
Outside operations	1,379,130.21	475,163.90	6.22	2.16
Total net operating revenue	939,956,996.47	854,478,665.50	4,238.84	3,889.89
Taxes	124,356,024.17	116,419,026.43	560.80	529.98
Operating income	815,600,972.30	738,059,640.07	3,678.04	3,359.91

When first elected to Congress three years ago I did not favor Government ownership. I then favored "Government regulation." But I have investigated the matter carefully, found the facts set forth in these remarks, and have reached the conclusion that Government ownership is the only complete remedy.

MONOPOLY OWNERSHIP PREVENTS INDIVIDUAL OPPORTUNITY.

A child born in America is certainly entitled to have an interest in something besides poorhouses and jails; but at the present time the Commonwealth includes but little more than these. The total wealth of this country, as before stated, is approximately $120,000,000,000. That sum is equal to $1,200 per head of our population. I do not say that each child should be born with that much property to its credit already earned. I think some premium should be placed upon the industry and good management of parents, who are under obligations to provide for their children. But I do say that each child born into this world should have an equal opportunity to earn his proportionate share of the world's wealth, and if one-sixth or one-fourth of it is already in the hands of corporate monopoly, the child has no such chance. With Government ownership of railroads in America each child born in this country will find to its credit an interest in the National Commonwealth of a property value of $200. That common property would serve him all his life. It would aid him and help to give him an equal chance to earn his share of that portion of the national wealth which shall remain private property.

It is merely a question as to whether the one-sixth of our national wealth represented by our railroads shall remain a permanent handicap to private effort or whether these railroads shall in addition to their great value as public carriers be made a strong arm of the Government to extend a helping hand to each one of our citizens who is engaged in private business. As stated, I am opposed to socialism. I am likewise opposed to monopoly. But I favor the happy medium where that portion of the property of the Nation which is monopolistic shall be placed to the credit of the Commonwealth and where the remainder shall be always subject to private ownership.

MUNICIPAL OWNERSHIP ADVOCATED.

I certainly think that municipalities should own and operate their own public monopolies, such as street railways, gas, electric light, and waterworks; but the value of all of those when added to the value of the railroads, telephones, telegraphs, and Government-owned coal mines will not exceed one-fourth of the total national wealth, thus leaving three-fourths of the property of the United States permanently in private ownership as a reward to individual genius, industry, and frugality.

War-Tax Revenue Bill.

EXTENSION OF REMARKS

OF

HON. GEORGE M. YOUNG,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. YOUNG of North Dakota. Mr. Speaker, I desire to call attention to two letters, written by prominent officials of the American Society of Equity; also some editorials, to emphasize the need of economy rather than the imposition of additional taxes, as proposed in H. R. 18891:

LETTER OF MR. TANK.

WAUSAU, WIS., *September 21, 1914.*

Mr. J. WELLER LONG,
Chicago, Ill.

DEAR SIR AND BROTHER: By instruction of the executive committee of our organization, I wish you would use all the influence at your command to work for legislation for the purpose of having the Government loan money to the people under the same condition and on the same security that the banks are securing such money.

You are further authorized to make known the position of this organization on the general appropriation bill, commonly called the "pork barrel," and that is that we are opposed to the reckless squandering of Government funds for apparently unnecessary things, most of such appropriation being asked for by Representatives for the purpose of making themselves solid for political purposes with their constituents at the expense of the people at large.

Fraternally,

H. G. TANK,
National Secretary-Treasurer.

LETTER OF MR. LONG.

NATIONAL UNION AMERICAN SOCIETY OF EQUITY,
Chicago, Ill., September 24, 1914.

Hon. G. M. YOUNG,
Washington, D. C.

DEAR SIR: We have noted with some surprise with what readiness Congress, under war conditions in Europe, has come to the relief of pleasure seekers, the merchant marine in buying vessels and insuring cargoes, the bankers in amending the Aldrich-Vreeland bill—I quote exact words—"that no bank shall be permitted to issue circulating notes to excess 125 per cent of its unimpaired capital and surplus," also in passing the Federal reserve act, providing for the banker without interest.

And with equal surprise we noted the indifference on the part of Congress to the distressed conditions as to the masses at home and the tardiness in coming to the rescue of the farmers and wage workers, while millions of both, the bone and sinew of the land, are going hungry and illy clad, not because they are lazy and trifling but because Congress does not act in their behalf.

Therefore, according to instructions by our national executive committee, as the following letter shows, we join with the Farmers' Educational and Cooperative Union in their demand for the issue of money on farm security to the farmer on equal privileges with the banker. Kindly let me hear from you immediately, as I have to report to this committee.

Yours, truly, J. WELLER LONG.

The Search-Light (Fargo) says:

NO TAX ON BANK CHECKS.

The proposition to again tax bank checks as a part of the war revenue to be raised, is, in the judgment of the Search-Light, unwise, especially at this time when business is so seriously interrupted on account of the general European war. Exchange should be facilitated and not hampered in this country, now that there must be and will be a great building up of internal enterprise, which building up necessarily means laying the foundation for a much greater share of the foreign trade hereafter than this country has enjoyed heretofore. Whatever revenue may be anticipated by a tax on bank checks can be very easily raised in some other manner.

The Courier News (Fargo) says:

THE WAR TAXES NOT NECESSARY.

Why must Congress put the burdensome war taxes upon us in time of peace, and just when business is struggling to recover its equilibrium? Since the Underwood bill was passed in October last the net balance in the general fund at the end of each month has been as follows:

Oct. 31, 1913	$124,963,000
Nov. 30, 1913	119,297,000
Dec. 31, 1913	111,854,000
Jan. 31, 1914	104,761,000
Feb. 26, 1914	92,866,000
Mar. 31, 1914	90,915,000
Apr. 30, 1914	80,237,000
May 31, 1914	74,151,000
June 30, 1914	145,835,000
July 31, 1914	143,776,000
Aug. 31, 1914	121,500,000

There seems to be a headlong rush to get a big lot of cash where Congressmen and Senators can loot it from the Treasury. The Republican Congressmen charge that the need of the Treasury for money is caused, not by the war, but by the extravagant appropriations of the party in power. Apart from the infamous rivers and harbors bill, the appropriations for next year exceed those of a year ago, which broke all previous records by $31,000,000. In addition, the rivers and harbors bill as it now stands will appropriate $20,000,000; the good-roads bill, $25,000,000; the Colombian treaty, $25,000,000; and other pending bills are enough to swell the total to $100,000,000 more.

Meanwhile there is also a decrease of expenses in several ways. The pension list has decreased $11,500,000, and the Panama Canal is finished, making a difference of many millions saved here.

If these reckless expenditures were cut out, there seems no reason why the country might not get along with a very small increase in revenue—possibly with none.

We have sympathy with the principles of the Democratic Party as set forth by President Wilson and Mr. Bryan, but we have no sympathy with financial maladministration. If it continues, the Democratic nominees for Congress will travel a rough road in the ides of November.

The Bismarck Tribune says:

DEMOCRATIC EXTRAVAGANCE.

Seldom has a party ever had the opportunity to redeem one of its party pledges as effectively as the Democratic Party has to-day in face of the European crisis.

The Baltimore platform pledged the party to economy of appropriations. It denounced the "wasteful extravagance" of the former administrations and set its foot firmly on a policy of retrenchment and economy.

Still it proposes to pass an emergency revenue bill without even attempting to curtail the various "pork-barrel" appropriations. The solemn promises of the party are broken in face of a crisis which imposes a double obligation upon the Democratic administration.

The fact that the revenues have fallen off some $11,000,000 is no reason for this haste in slapping on a special tax. The pruning knife administered upon the various appropriation bills would produce the same results.

However, it would be disastrous to Democratic hopes in several congressional contests if certain appropriations were vetoed by President Wilson. His machine in the House and Senate would turn upon him, as their pet appropriations, one by one, felt the weight of the veto power.

It may be possible that a special tax is inevitable, but retrenchment in appropriations would lighten the burden and might abolish the necessity entirely. Few would be injured in trying to meet the emergency through a reduction of the strictly "pork-barrel" appropriations. Also, the action would be strictly in line with the sentiments of the Baltimore platform, which seems to be the primer of the present administration.

The Times Record, Valley City, quotes with approval the following editorial, which appeared in the Minneapolis Journal:

TAXING GASOLINE.

After many trials the Democratic leaders in Congress have settled upon an emergency tax bill that may go through. The stamp taxes will doubtless be borne, despite the vexation they involve, without much objection. Similarly the special taxes laid on bankers, brokers, tobacco dealers, and purveyors of amusement generally will be accepted by their victims with what grace they may be able to assume, though many departments of the amusement business are far from prosperous, and though the brokers have for some time been traveling a rocky road.

The one item of the bill, however, that will be most unpopular is the tax of 2 cents a gallon on gasoline. The theory of this tax is that the consumption of gasoline is a luxury and therefore a proper source of taxation.

It is a singular perversion which leads the Democratic leaders to look on gasoline as a luxury and whisky as a necessity. Whisky has been rigidly guarded from any extra tax all through the eager Democratic search. The distillers have been powerful enough to prevent the placing of any extra burden on their product, and the Ways and Means Committee, of which our own Mr. HAMMOND is a member, has consistently protected whisky.

Gasoline is far more a necessity in these days than a luxury. It is true that much of it is consumed in the pursuit of pleasure, and to that extent it is a luxury. But, on the other hand, it drives innumerable engines that are doing valuable work for us. More and more are motor cars used for light delivery and other business purposes. The motor truck is used everywhere and for all sorts of business. The tractor is doing all manner of farm work. The stationary motor is pumping and churning and chopping and sawing and washing and doing a multitude of other services for manufacturing and farming.

The Democratic proposal to tax every gallon of gasoline will prove no more popular than its other schemes, like the freight tax, which it has been obliged to abandon.

If whisky is sacredly inviolable, why does not the majority in Congress add new economies to that in the river and harbor pork bill to which it was forced by the Republican filibuster in the Senate?

Rivers and Harbors—Revenues and Expenditures—The Underwood Tariff and Democratic Extravagance.

EXTENSION OF REMARKS
OF
HON. FRANK W. MONDELL,
OF WYOMING,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 29, 1914,

On the bill (H. R. 13811) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. MONDELL. Mr. Speaker, during the consideration of the river and harbor bill of last year I took occasion to criticize quite a number of items in the bill which I believed to be unjustified from any viewpoint of public interest. I called attention to the fact that some of the so-called rivers which it was proposed to improve were absolutely devoid of commerce and not likely to bear commerce if improved; that some of them might more appropriately be macadamized than canalized. I called attention to the fact that many of the creeks on which it was proposed to spend large sums of money would, at the very best, serve only a limited and purely local commerce. Some of the gentlemen on the Democratic side saw fit to vent their wrath on me for the criticisms I made, but little attempt was made to defend the projects I had criticized.

During the discussion of this bill in the House important work on the Committee on Appropriations prevented me from following up my criticisms of last year, but the gentleman from Wisconsin [Mr. FREAR] and others on this side vigorously and persistently assailed questionable and indefensible items in the bill, including most of those I criticized last year. The persistent, forceful attacks made by Republican Senators on the bill in the Senate have resulted in completely side-tracking the bill as reported by the Senate committee, carrying fifty-four millions, and resulted in the measure now before us, carrying a lump sum of twenty millions, to be expended in the discretion of the Secretary of War.

I shall support the amendment offered by the gentleman from Washington [Mr. HUMPHREY] to reduce the amount carried in the bill to $5,000,000 for two reasons—first, because there is on hand a considerable surplus for continuing the work on projects under way, and five million will preserve the works and prevent their deterioration; and, second, because, it being claimed by the administration that an extraordinary direct tax is necessary owing to the condition of the Treasury, I prefer to reduce the expenditures of the Government rather than lay heavy and unusual burdens on the people. If the sum carried by this bill be reduced to $5,000,000, the last vestige of excuse for special direct taxation is gone, and there is no reason for the passage by the Senate of the so-called war-revenue tax, which was jammed through the House under a gag rule by a ruthless majority acting, in my opinion, largely contrary to their best judgment, but in cringing obedience to orders from the White House.

CAUSE OF PRESENT CONDITIONS.

Mr. Speaker, while we have under consideration this item of expenditure, it has occurred to me that it would be highly interesting and instructive to call attention to the effect of Democratic tariff legislation; to its failure as a revenue producer and to its disastrous effect upon our international trade. It occurs to me that it would also be illuminating in the present juncture to review the record of this Democratic Congress in the matter of expenditures. I am of the opinion that an examination of the facts and conditions will make at least two things very clear: First, that the Democratic scheme of revenue embodied in the Underwood bill has been as great a failure as a revenue producer as it has been disastrous to our trade and that it is the effect of this legislation, rather than the war in Europe, that has furnished the excuse for the iniquitous taxes that it is proposed to burden the people with; and, second, that even under the handicap of this Democratic tariff legislation and the conditions it has produced there would be little excuse for levying burdensome direct taxes had it not been for the unparalleled extravagance of this Congress.

THE PRESENT SITUATION.

The breaking of the war clouds over Europe in the early days of August created conditions certain to affect the normal flow of our foreign trade and the ordinary current of our domestic business. To what extent and in what measure the disarrangement of the world's business and the operation of the forces of destruction now unleashed all over Europe shall affect our in-

ternational trade and domestic activities no one can at this time accurately forecast. This much, however, can be safely predicted, that a struggle of such tremendous proportion and frightful effectiveness for destruction must, and will if long continued, call for and demand increased quantities of foodstuffs and supplies rapidly consumed or destroyed by millions of men in deadly conflict.

To these supplies needed to fill the void caused by the waste of war must be added the increased demand on us for goods the people of the nations at war are no longer able to make for themselves with so large a proportion of their workers under arms. Many regions of the globe, more particularly, perhaps, the countries of the American Hemisphere and of the Orient, accustomed to buy largely of the manufactured products of the nations now at war, will now turn to us for many of these manufactured products. Finally our mills and factories will find an increased demand at home for classes of goods heretofore imported which Europe can no longer make for us or ship to our shores.

EFFECT OF THE EUROPEAN WAR.

I look forward, therefore, to high prices for all food products, to increased activity in many lines of manufacture, and to a general improvement in many lines of business as a result of the mighty struggle in Europe. In fact, such a result seems to me inevitable. With practically every able-bodied male in all Europe drawn from productive pursuits and engaged in the creation of waste and in the business of destruction, the forces of production must somewhere be engaged overtime to supply even a portion of the demand that waste and destruction will create. We, of all peoples, are in the best position to take advantage of any fair breeze of fortune that the tornado of war sweeping over Europe may waft us. Not only are we blessed with vast resources of supplies and in material and equipment in manufacturing plants, built up under protection, but we are specially fortunate and favored on account of our friendly and neutral attitude toward all of the warring nations.

We are the sincere friends of all the nations and peoples now unhappily engaged in conflict. We regret profoundly the differences that have arisen between them, and we would, if we could, bring peace to them all. We particularly sympathize with the plain people of all these warring nations who both during the awful carnage and wreck of war and in the toilsome rebuilding of the waste places and the painful repayment of its losses will be the principal sufferers.

Situated as we are, feeling as we do, it is scarcely conceivable that any situation could arise that would involve us in this terrible conflict. I feel confident that our Government will endeavor to maintain a proper attitude toward the belligerent powers and will avoid giving cause for misunderstanding of our friendly but neutral attitude toward all the people and nations involved.

Of one thing we are assured, that the Democratic brethren will endeavor to take credit to their party and their administration for any improvement that may occur in the depressed and stagnant conditions which have prevailed over the country and its industries. We may be equally certain that they will charge to the European war any and all unfavorable and unsatisfactory conditions that may continue to plague us. It is the fortune of war, and they may be depended upon to make the most of it, realizing as they must, and do, that the war situation will, during its continuance, tend to relieve them from many an embarrassing situation and condition, brought about by their legislation which they would otherwise have found it difficult to explain.

Under the conditions which I have outlined it is clear that in the discussion of the issues of the congressional campaigns of this fall we must largely use as the basis of our arguments, so far as they relate to the effect of Democratic legislation and policies on the welfare of the country, conditions prior to the outbreak of hostilities in Europe early in August; bearing this in mind, I propose to discuss the issues of the campaign as represented by the acts and omissions of the Democratic Congress and administration now in full and complete possession of all branches of the National Government for 18 months.

CONDITIONS AT CLOSE OF TAFT ADMINISTRATION.

No party ever came into power under such favorable conditions as confronted the Democratic Party March 4, 1913. Whatever one may think as to the Taft administration, however one may view the administration which preceded it, this no well-informed person will gainsay, that never in our history and never in the history of any other country has there ever existed conditions of such general and widely diffused prosperity as existed at the close of the last Republican administration; there were local conditions here and there, it is true, which provided exceptions to the general rule, but they only served to emphasize the generally favorable conditions.

At that time the balance of our foreign trade was largely in our favor, and to supply our foreign and an unfailing domestic demand kept our industries humming and our people steadily employed.

While our national expenditures had increased with the steady widening of national activities our revenues kept the Treasury well filled and supplied funds out of current revenues for all ordinary expenditures as well as for the building of the great waterway uniting the oceans at Panama. On the very crest of this wave of Republican prosperity the Democratic Party came into power.

TEMPORARY DIFFERENCES AMONG REPUBLICANS.

The Progressive movement under the popular leadership of Col. Roosevelt gave the Democratic Party its opportunity. Thus placed in power as a minority the Democratic Party assumed that its victory gave license to proceed to legislate in the matter of the tariff as though it had the mandate of a majority of the American people to throw overboard the protective principles under the operation of which we had grown to be the greatest producing and manufacturing people on the face of the earth.

Never did tariff legislation have so fair and favorable a trial as the Underwood bill has had. First, it had the benefit of the generally favorable conditions of trade and business which existed at the time of its passage; second, the people, weary of tariff agitation and of the constant chatter and reiteration of the free traders and tariff reformers that the tariff was responsible for ills, real or imaginary, which we suffered, even in that good time, had made up their minds to give the new legislation a full and free chance. Even those who had the most reason to fear the effect of the legislation kept their business and industries running as long as possible in hopes that the ill effect of the change of tariff rates, which were quickly apparent, would soon pass away. It may be said, therefore, that the Underwood bill has had a more than fair chance under wonderfully favorable conditions. What has been its effect?

UNDERWOOD TARIFF ACT.

The Underwood tariff bill became effective October 4, 1913, as to the majority of its schedules. Wool, however, did not go on the free list until December 1, and reduced duties on woolen goods until January 1, while the reduction of the duty on sugar did not go into effect until March 1, 1914. The Democratic tariff bill, as to the majority of its schedules, had, therefore, been in effect about nine months at the close of the fiscal year ending June 30, 1914. The effect of the new law on our foreign commerce is indicated by the following table of imports and exports for the fiscal year 1913—all under the Payne Act—and the fiscal year 1914, nine months of which was under the Underwood Act:

Total imports and exports for the years ending June 30, 1913 and 1914.

1913. Imports	$1,812,978,234	
1914. Imports	1,894,169,180	
Increase		$81,190,946
1913. Exports	2,465,884,149	
1914. Exports	2,364,626,555	
Decrease		101,257,594
Total decrease of foreign commerce		182,448,540

It will be noted that in the period named, mostly under the Underwood bill, we had increased our foreign purchases by more than $81,000,000, while our exports to foreign countries had decreased by over $101,000,000. This, let it be remembered, was under the bill which was to give us the "new freedom" and under which we were promised we would "capture the markets of the world."

It may be claimed that this comparison of fiscal years is not fair to the Underwood bill, because only three-quarters of the fiscal year 1914 was under that bill. Further, it will be urged by some that a new tariff necessarily disarranges import and export business for a time, and must be given a few months to get under headway. There is something in these contentions, and the Nation's business is too important a matter to be judged of except by figures that clearly and unquestionably represent the normal and ordinary effect of legislation. The first of August the great European war came on; manifestly it would not be fair to use figures representing the abnormal conditions which that war produced.

I have therefore prepared tables which show imports and exports for the first six months of the calendar year 1914, as compared with the first six months of the calendar year 1913, because I believe these are two periods which can be com-

pared with perfect fairness. The 1913 period was all under the Payne bill, the 1914 period all under the Underwood bill, with practically all of its schedules in full force the entire period. I shall place in the RECORD for the benefit of those who desire to study the matter in detail tables showing our exports and our imports for the first six months of the calendar year 1913 and for the corresponding period of the year 1914 by months and by classes of articles.

IMPORTS.

Our total imports from January to June, inclusive, of 1913 were $879,686,905. Our total imports for the corresponding period in 1914 were $980,589,922. The increase in the amount of our imports for this period of 1914 compared with 1913 was, therefore, $110,903,017. When we take into consideration the fact that these increased imports were almost wholly of articles which we could ourselves have produced, and under Republican legislation would have produced, we may be able to realize what a great loss this was to American producers and wage earners.

When we come to examine into the matter in detail we find a condition more alarming than the figures themselves indicate, for we find that the increased importations were of a character which most directly affected the income of the man on the ranch and the man on the farm and the employment of the wage earner. Of the approximately $110,000,000 of increased importation more than thirty-six millions was of manufactured articles ready for consumption, articles that might have been manufactured at home and given employment to our people, but which instead were manufactured abroad. Over $26,000,000 of this total increase in imports was in raw foodstuffs and food animals, the importation of which tended to reduce the price which the American farmer and ranchman received for his product, while we can all testify to the fact that the cost of these articles was not reduced to the consumer.

EXPORTS.

During the first six months of the year 1913, January to June, inclusive, under the Payne bill, our total exports of domestic goods amounted to the enormous sum of $1,146,327,078. During the corresponding period in 1914, under the Underwood bill, our total domestic exports were $1,047,779,364. This was a decrease in our exports of domestic goods of $98,548,714, a loss in foreign business of over half a million dollars a day for every day of the period. Let us not lose sight of the fact that this loss of foreign trade and foreign market occurred under the bill under which we were promised we were to secure the markets of the world.

Two features of these figures of decreasing foreign sales render the totals particularly alarming and significant. One is the fact that the decrease in exports in many lines is progressive. The amount exported grows smaller month by month. For instance, the total exports for January, 1914, amounted to over $201,000,000, while the exports for June amounted to barely $154,000,000, a difference of about forty-seven million. Not only did we lose in this six months' period nearly a hundred million in export business, as compared with the same period of the year before, but if the progressive loss of export trade were to continue the decrease in foreign trade would not be two hundred millions a year, but approximately twice that much.

DECREASE IN MANUFACTURED EXPORTS.

The other alarming feature of this decrease in exports is the decrease in the export of manufactured articles ready for consumption. Our Democratic friends first started out to blame the decrease in export of foodstuffs for the loss in foreign trade, but the fact is that the larger part of our loss is in manufactured articles ready for consumption. In the period referred to in 1913 we sold the world outside our borders manufactured goods ready to be used to the value of $403,007,989. During the same period in 1914 our sales of manufactured articles ready for use amounted to $347,052,199. The difference between these two amounts is $55,955,799. More than half of our entire loss in exports during this six months of 1914, as compared with 1913, was, therefore, in manufactured articles. Manufactured articles represent labor to a larger degree than any other class of articles. During the period in question we imported approximately $36,000,000 worth of manufactured articles more than for the corresponding period the year before, as I have already stated. We exported, as I have said, a lesser amount of manufactured articles than for the corresponding period of the year before, to the tune of about $55,000,000. Add these two figures together and we have $91,000,000 as the total loss in opportunity for employment on manufactured goods alone during the period named.

I regret I have not the time to analyze these figures more in detail, for they are mightily instructive of the awful havoc which the Underwood bill wrought on the industries of the country. The increase of imports in the period named and the decrease in exports, taken together, amount to $209,451,731. This sum measures the direct calamitous effect of the Underwood tariff bill on the business of the country, at a time when it was in full force and when conditions were normal, as compared with the corresponding period of the year before under a Republican tariff bill. It amounts to nearly one and a quarter millions of dollars a day for every day of the period.

Imports—January to June, inclusive, 1913 and 1914.

Total	1,047,779,364	1,146,327,078

Decrease in domestic exports, $98,548,714.

BALANCE OF TRADE.

A nation, like an individual, to be permanently successful must have an income larger than its outlay; and in the case of a nation its income and outlay in its business with the balance of the world is indicated by its balance of trade. For 20 years under Republican administrations the balance of trade in our favor in our foreign commerce was large, and constantly growing. During this entire period it averaged more than $400,000,000 per annum, and in the fiscal year ended June 30, 1913, the last full fiscal year under Republican tariff legislation, the balance in our favor in our foreign trade reached the enormous sum of $652,875,915. But the Underwood tariff bill had the usual effect of Democratic tariff legislation. Under it we lost our markets abroad and increased our imports from foreign countries. The only question was, How soon would we reach the condition which existed under Cleveland and the Wilson tariff bill? The disastrous conditions came even sooner than we had anticipated. Much as I opposed the Underwood tariff bill, I would not have dared to prophesy that we would lose our enormous favorable trade balance and have an adverse trade balance the first year it was on the statute books; yet such is the astounding and lamentable fact, as is shown by the following table:

Excess of imports over exports four months of 1914:

April	$11,339,544
May	2,476,896
June	653,522
July	8,462,233
Total	22,932,195

These figures alone, showing, as they do, an adverse balance of nearly $23,000,000 in four months, are enough to condemn the Underwood bill if we had no other evidence of its disastrous effects. A favorable balance sheet of nearly $55,000,000 a month turned into an unfavorable balance of over $11,000,000 in a single month, seven months after a change of tariff schedules, is going some, even for the Democratic donkey. These figures of imports and exports and of trade balances are so startling they convey without comment the story of closed mills and factories at home and increased business in mills and factories abroad. In them the intelligent mind can see the increasing numbers of unemployed in all industrial centers, the long lines of empty freight cars, the reduced incomes, the poverty and distress which is inevitable where a nation increases its outlay and at the same time suffers a loss of income.

While it seems scarcely necessary, it may be instructive to refer to a few of the more important direct effects of the Democratic tariff policy. I shall in every case refer to conditions on or before August 1. If I used any later date Democrats would charge it to the war. I take the liberty of presenting some facts and figures as recently compiled by a reliable authority.

SOME ACTUAL FACTS IN PARALLEL COLUMNS.

1912.	1914.
Democrats coming into power found the following record for the first half of 1912:	The Democratic Party has just left behind it the following record for the first six months of 1914:
Excellent business conditions.	Business stagnation.
General prosperity of the people.	Idle freight cars.
Full employment of labor.	More than a million men out of employment.

Here are the actual concrete figures:

COMMERCIAL FAILURES.

January 1 to July 1.

1912 $108,012,223 | 1914 $185,009,773

Increase, $76,997,550, or 71 per cent.

BANKING FAILURES.

January 1 to July 1.

1912 $17,833,235 | 1914 $28,621,312
Number 55 | Number 93

Increase: In number, 28; in amount, $10,788,087, or 60 per cent.

GROSS RAILROAD EARNINGS.

First five months of 1912 $1,087,021,734 | First five months of 1914 $997,558,018

Decrease, $89,513,716, or 8 per cent.

This would have kept employed many thousands of now idle railroad men and would have paid substantial dividends.

IDLE FREIGHT CARS JULY 1.

1912 70,731 | 1914 220,875

Increase of 150,144, or 212 per cent.

IMPORTS FOR FIRST NINE MONTHS OF THE UNDERWOOD LAW AND FOR THE CORRESPONDING PERIOD OF THE OLD LAW, TWO YEARS BEFORE.

1911 and 1912 $1,283,093,701 | 1913 and 1914 $1,446,127,491

Increase, $162,033,790, or 12 per cent.

These additional imports were moved into this country by foreign ships. Had a similar quantity been moved from one part of the country to another they would have called into activity one-half of those idle freight cars.

IDLE LABOR.

1912 Practically none. | 1914 Million men.

Counting one wage earner to each four persons, this would affect 4,000,000 people. So that President Wilson by his "new freedom" has released as many from voluntary service as Abraham Lincoln freed from involuntary servitude by his emancipation proclamation.

BALANCE IN THE GENERAL FUND OF THE TREASURY JULY 1.

1912 $167,152,478.99 | 1914 $145,835,502.10

Decrease, $21,316,976.89, or 12 per cent.

GOLD SHIPPED FROM THIS COUNTRY.

January 1 to July 1 (all this before war influence was apparent).

1912 $27,000,000 | 1914 $65,000,000

Increase, $38,000,000, or 140 per cent.

EFFECT ON WOOL AND SUGAR INDUSTRIES.

I can not better state the illogical and unjustifiable character of Democratic tariff policy or its effect on the wool and sheep industries of the Nation than by quoting from a speech which I made in the House on August 26, as follows:

Democratic editors and politicians in woolgrowing States, not having the courage to denounce the action of their party as now controlled in sacrificing a great industry in their region, would have us think that free trade is a good thing for wool and in line with the general party policy. If free trade in the products of woolgrowing regions is good policy, why is it not good policy in manufacturing sections? The Republican tariff rate on class 1 and class 2 wool amounted on an ad valorem basis to about 34 per cent. The Underwood bill placed wool on the free list, but placed duties averaging 35 per cent on woolen goods and as high as 50 per cent on some. Manufacturing industries need protection, but how can Democrats in woolgrowing States defend high tariff rates on the products of the eastern manufacturer while approving free trade for the products of their own people? Nothing but thick-and-thin partisanship, which places party success above the prosperity and happiness of our own neighbors, can approve such an attitude.

THE EFFECT IN BRIEF.

The Democratic Party, while adhering to a haphazard, hit-or-miss, and wholly illogical protective policy in spots and places and in regard to certain favored products and sections, has declared war on the wool industry and placed all its products on the free list.

The result of this Democratic free-wool agitation since 1909 and its actual consummation in 1913 has been—

To reduce the number of sheep in the United States more than 8,000,000—a value of over $32,000,000;

To reduce the wool clip of the United States more than 130,000,000 pounds, or over $30,000,000;

To reduce the income of growers of "Ohio" wool more than $6,000,000 on the 1914 free-trade clip and prices as compared with the 1909 protection clip and prices;

To reduce the income of Territorial woolgrowers more than $12,000,000 on the 1914 clip and prices under free trade as compared with the 1909 clip and prices under protection;

To reduce the income of the wool producers of the country during this period of agitation and consummation of free trade at least $85,000,000;

To reduce the income of the Nation on loss of revenues on imported wool in seven months nearly $20,000,000; and

To deprive textile workers of at least $5,000,000 of wages on account of increased importations of woolen goods.

Does anyone know of any good which has been accomplished by or through these losses? I will yield to any Democrat who knows of anyone on our side of the Atlantic who has been benefited. I know of no such. I could, however, fill the CONGRESSIONAL RECORD with accounts—all before the present war—of foreign mills and factories running overtime to supply goods for the American market, while 30 to 35 per cent of our wool manufacturing machinery stands idle. How long will the American people tolerate a policy which produces such results? Not for long, in my opinion. [Applause on the Republican side.]

In a speech which I made in the House on August 18 I summed up the ill effects of the Underwood Tariff Act as it affects sugar as follows:

It has practically ruined the Louisiana sugar industry.

It has closed eight great beet-sugar factories.

It has rendered idle $10,000,000 invested in these factories.

It has prevented the starting up of four factories heretofore built.

It has discouraged the erection of new factories which were in contemplation.

It has compelled 15 factories to reduce the price of beets about 50 cents a ton.

It will throw thousands of experts and factory hands out of employment by the closing of factories.

It has deprived American farmers of a market for half a million tons of beets.

It has reduced the farmers' sugar-beet market to the extent of $11,000,000.

It has resulted in loss to railway and other industries of at least a million dollars by reason of reduced demand for service and supplies.

It has reduced the revenues of the Government over $8,640,000.

Over against these disastrous effects it is impossible to set any compensating benefits to the public at large. Sugar is not cheaper; it is higher. No industry has taken or will by operation of the tariff take the place of those destroyed or crippled. No new employment has been or will be furnished under the Underwood bill to those who have lost or will lose their employment in field and factory. Out of this loss and ruin but one interest has benefited—the Sugar Trust. The reduction of the duty has added over $7,000,000 to their profit. They have absorbed practically all that the Federal Government has lost in revenue. All this, let it be remembered, relates to the period antedating August 1, to the effect of Democratic tariff legislation before the outbreak of the war in Europe. I commend these facts to the defenders of and apologists for the Democratic tariff bill. Such gentlemen will, no doubt, ask the farmers and the investors in sugar industries to console themselves with the fact that the trust is doing well.

In one of the 200 speeches which our honored Speaker in a moment of genial exaggeration said I made on the Underwood tariff bill I made the following statement as to the bill and its effects:

The measure is neither protection nor free trade; it is neither tariff for revenue or, as the gentleman from Alabama [Mr. UNDERWOOD] puts it, for competition, but a combination of them all, utterly devoid of real underlying principle and certain to start in motion certain tendencies and establish certain conditions, which, in their effect, will constitute a policy whose disastrous consequences will only be measured by the extent to which it progresses.

Subsequent events more than justify the statement which I then made. More than two months ago I predicted on the floor of the House that as a result of Democratic extravagance and the failure of their revenue measures it would be necessary in the no distant future to resort to some unusual methods to replenish the Treasury. I then said that I thought perhaps the evil day might be warded off until after the election. It is already here. The conditions produced by the European war have simply hastened; they are not primarily responsible, though they are made the excuse for, new taxes. Had proper tariff legislation been upon the statute books the Treasury would have been in condition to have easily tided over the temporary partial loss of import revenues occasioned by the war. I desire to emphasize the fact that all my figures and all statements with regard to the effect of the Underwood bill relate to happenings and conditions prior to the European war. That war and the conditions it has created have, so far as many industries are concerned, had the effect of a very high, in some instances a prohibitive, tariff. The impossibility of securing from Europe many classes of goods we have heretofore imported in large quantities will stimulate home production, just as a high tariff would, and so in certain lines of manufacture and production we shall see the activities which were common under Republican tariff legislation. These potential increases of the Underwood tariff rates by war conditions and the benefits that follow our Democratic friends will attempt to attribute to their tariff bill while charging to the war every condition of which people may complain, most of which will have been created by their legislation and administration.

DEMOCRATIC EXTRAVAGANCE.

The gentleman from Massachusetts [Mr. GILLETT] in his able speech of a few days ago, reviewing the appropriations of the present Congress, said:

It seems to be Democratic nature to be inefficient and unbusinesslike.

The gentleman from Massachusetts is noted for fairness and moderation of speech, and when he made that statement and later charged the Democratic Congress with "faithlessness" in the matter of party pledges, touching economy and the creation of high-salaried offices and unprecedented extravagance in expenditures, he was stating the case as mildly as it could be stated truthfully.

Time out of mind Democrats on the floor of the House, Democrats on the stump, and Democratic platforms have assailed Republican Congresses in the most vehement terms for their alleged extravagances and have made endless promises for their party of economy in expenditure if given an opportunity to conduct the Nation's business. Yet, lo and behold, the first Democratic Congress, with the party in control of all branches of the Government, in 20 years outtops all former Congresses in appropriations.

The last Democratic national platform not only denounced the alleged "profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of the recent Republican Congresses," but they demanded "a return to that simplicity and economy which befits a democratic government, and a reduction in the number of useless offices, the salaries of which drain the substance of the people."

Let us see how these pledges and promises have been kept. The following are the official figures of appropriations for the fiscal year ending June 30, 1911 to 1915. These figures do not include river and harbor appropriations for any of these years, because the river and harbor bill of this year is not yet a law. Determined and persistent Republican opposition to its numerous indefensible items will probably result in cutting it from $54,000,000 to $20,000,000 at the most and probably to $5,000,000. But for this the comparison would be still worse for this Democratic Congress. The figures are as follows:

Total appropriations, excluding river and harbor acts.

1911	$978,521,087.68
1912	995,799,462.72
1913	988,353,340.41
1914	1,057,605,694.40
1915	1,089,408,777.6

I take the liberty of quoting from the speech of the gentleman from Massachusetts [Mr. GILLETT], ranking Republican member of the Committee on Appropriations, with regard to these appropriations, as follows:

Excessive by all comparison as is the sum total of expenditures authorized for this first year of complete control of the Government by a Democratic Executive and a Congress Democratic in both branches, still more startling are some of the details developed by analysis of how the enormous total of nearly $1,100,000,000 has been recklessly piled up.

ARMY AND NAVY APPROPRIATIONS INCREASED.

For instance, the Army appropriation bill carries $101,019,212.50, and exceeds the last law by $6,753,066.99, and it carries the largest appropriations ever made for the support of the American Army in time of peace, with the exception of one year—1910—when it was scarcely $100,000 greater, although in that year nearly $2,500,000 more was appropriated for transportation of the Army than is appropriated by the last Army act. The last appropriations for the support of the Army made by a Republican Congress under a Republican administration were $7,644,456.53 less than the sum of this last Army appropriation act.

The naval appropriation act amounts to $144,868,716.61, exceeding the last act by $4,068,073.08, and it is not only the largest sum of appropriations, without exception, ever made for the support of the Navy, but it exceeds the appropriations made by the last Republican Congress, under recommendations of Mr. Taft's administration, by the sum of $17,590,634.84, an amount exceeding the total annual cost of maintaining our whole Naval Establishment less than a generation ago.

* * * * * * *

PENSION APPROPRIATIONS CUT.

One of the regular annual appropriation acts, the one providing for the payment of pensions, does show a marked reduction of $11,150,000 under the one for the previous year. It would be uncharitable to claim that there is any significance in this large decrease.

The last Congress that was Republican in both branches was the Sixty-first, and that Congress made the appropriations for the fiscal year 1912. The appropriations for that year, as shown by the table, were $93,609,315 less than the appropriations of the present Democratic Congress for the current fiscal year. It was the appropriations for 1912 that the Democratic convention at Baltimore, in the summer of that year, had in mind when they denounced Republican "profligate waste." They boosted the appropriations nearly a hundred million higher the first year they have had complete control of the Government.

The appropriations for the fiscal year 1914 were originated by a Democratic House, and the appropriations were nearly $70,000,000 more than the year before. This year when they are in full control the appropriations are further increased by about $32,000,000. Democratic economy is confined entirely to a reduced appropriation for pensions in the sum of more than $11,000,000. In brief, their record for the current fiscal year is—

The largest appropriations ever made.

The largest expenditures for the Army and Navy in time of peace, with one exception.

Appropriations nearly a hundred million greater than those made by the last Republican Congress.

Appropriations nearly thirty-two millions greater than last year.

Such is Democratic economy, the return to Democratic "simplicity" which the country was promised.

USELESS OFFICES.

How about the Democratic promise of a "reduction in the number of useless offices"? The new banking law creates five new offices with salaries of $12,000 each, and increases the salary of the Comptroller of the Currency $7,000.

The new Trade Commission act creates five commissioners at $10,000 each and a secretary at $5,000.

A board of appeals is created in the Interior Department, consisting of three members at $4,000 each.

One hundred thousand dollars is appropriated for commercial attachés, with such salary as the Secretary of Commerce may fix, and traveling expenses, each with a clerk at the salary paid the clerk of Congressmen.

Five thousand dollars was added to the salary of the solicitor of the Interstate Commerce Commission.

A minister to Uruguay was provided with a salary of $10,000.

The salaries of our diplomatic representatives to Argentina, Chile, and Spain were raised $5,000 each.

Numerous increases were made in the salaries of Assistant Attorneys General, private secretaries to Cabinet ministers, and so forth, of from $1,000 to $2,500 each.

All of these new jobs and increases, with one single exception, go to Democrats, and a number of them to Democrats whose principal recommendation is party service. In the face of such a record as this it is no wonder that the gentleman from New York [Mr. FITZGERALD], Democratic chairman of the Committee on Appropriations, said, "The Democratic Party is becoming the laughingstock of the country." It will not be a laughing matter for the Democratic Party when the people record their opinion of it in November.

DELAY IN PASSING APPROPRIATION BILLS.

In no respect has the apparent inability of a Democratic Congress to do business promptly and with dispatch been illustrated so clearly and so disastrously as in the delay in passing appropriation bills. The fiscal year begins July 1. Long before that time the Government departments ought to know what their appropriations for the year are to be, so they can lay their plans in advance. This is peculiarly true of the departments that must organize and dispatch parties into the field and those engaged in construction work.

Republican Congresses have invariably passed all of the appropriation bills some time before the beginning of the fiscal year. Government departments and bureaus knew in advance what their appropriations were to be, and administration moved smoothly, efficiently, and economically. In this Congress the Democrats are in full control, and four of the great appropriation bills did not become a law until weeks after the beginning of the fiscal year. It became necessary to resort to the extravagant and peculiarly Democratic expedient of extending the old appropriations by resolution.

Not once during the three years the Democrats have controlled the House have they passed all the appropriation bills before the beginning of the fiscal year, although Congress has been almost continuously in session. This failure to transact the Government's business in proper season is abolutely indefensible. It is demoralizing to the public service, exasperating to Government officials, confusing and uneconomical to the last degree, but it is the confirmed habit of Democratic Congresses. They apparently have not changed since the days of Cleveland, when one year they did not pass a single appropriation bill until after the date when it should have gone into effect.

These plain, unvarnished facts require no comment. They can not be ignored nor disputed, and they present a record of broken promises, of extravagance, and of incompetency which the people will take the first opportunity to rebuke.

Democratic Land Legislation Unfair to Entrymen and Unjust to Western States.

EXTENSION OF REMARKS

OF

HON. FRANK W. MONDELL,

OF WYOMING,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 2, 1914.

Mr. MONDELL. Mr. Speaker, as this long session is drawing to a close it is fit and proper that we review briefly the land legislation enacted and proposed, and call attention to its more important features as compared with the land legislation heretofore enacted and proposed by Republican Congresses.

The Republican Party has legislated progressively with a view of inviting to the public domain the home seeker, the stock raiser, the miner, and all others who, in good faith, seek to utilize the public lands for the purpose of building homes, engaging in farming or stock raising, or establishing helpful and useful industries. In all Republican legislation, from the original homestead law to the enlarged-homestead act, from the original desert-land law to the reclamation act, and including the laws helpful to the stockman, the irrigationist, and the miner, the controlling idea has been that a home and land owning population is the only firm and substantial basis for a self-governing citizenship.

In recent years our efforts to furnish and maintain opportunities for home seekers and for development of the natural resources of the country have been peculiarly difficult by reason of the influence of those who would restrict and retard rather than encourage the settlement, use, and development of the public lands and their resources. For a number of years past there has been a persistent effort among a certain class of so-called conservationists to limit the title granted to homesteaders and others, and to increase the permanent control of the National Government over the public lands and their resources. Strong and persistent as these efforts have been, we have under Republican administrations preserved a good title to the homesteader and all others who secure title to the public lands.

LOCAL AND INDIVIDUAL RIGHTS PRESERVED.

In the reclamation law we preserved the control of the people of the States over the use of the water, and the final ownership of the projects to the people who settle upon the lands. In a number of trying and prolonged legislative contests in which I have participated we have preserved a title in fee to those who secure public lands against the attempt to give them a title with limitations, mineral and otherwise. The effort to place a mineral reservation in titles at the time of the passage of the three-year homestead act was long drawn out, and only prevented after a spirited contest. The legislation which I introduced and which was secured after a lively contest, giving those seeking homes upon and an opportunity to utilize the public lands containing coal, which has since been extended to oil, gas, and phosphate lands by a bill introduced by Senator WARREN, was one of the notable acts of the last Republican Congress. In that legislation the entryman secured a title that is in every way safe and secure, and at the same time affords an opportunity for the development of the mineral when needed.

PARTICIPATION IN LEGISLATION.

I consider myself very fortunate that as the representative of the good people of Wyoming I have had an opportunity to perform an active part in securing this legislation. I reported to the House the reclamation law. I presented to Congress the enlarged homestead bill which was the basis of the present law. I was a conferee on the three-year homestead law, when we saved the western landowners a title in fee. As Wyoming has large areas of coal lands withdrawn from settlement, it became my duty to devise some means whereby these lands could be utilized for agricultural purposes and a good title secured. The act for the agricultural entry of coal lands, which has since been followed by the act applying the same principles to oil, gas, and phosphate lands, to which I have referred, was the result. The owner of such a patent owns everything in the land but the body of the excepted mineral, be it coal, oil, gas, or phosphate, and is certain to suffer no loss by reason of the mining or removal of the mineral, as full compensation is amply provided for.

I have referred to a few of the more important land laws of the past few years secured under Republican Congresses, in the enactment of all of which I have actively participated, for the purpose of drawing a comparison with the land legislation passed and proposed by this Democratic Congress. With a few exceptions, the only land legislation thus far secured in this Congress has consisted of measures treating of minor and relatively unimportant features of land legislation. The two notable exceptions are the oil and phosphate land legislation, to which I have referred, and the reclamation extension bill. This latter is really Republican legislation, for it was promised by the last Republican national platform, while the former was introduced by a Republican Senator and followed Republican precedents. These two are the only important bills affecting lands which have been reported by this Congress which were really the product of Members of Congress. The other bills to which I shall refer were largely drawn in the Interior Department.

RECENT BILLS.

The bills of importance affecting the public lands, other than Alaska, which have been considered and reported by the Committee on Public Lands are as follows: The water-power bill, the coal and oil leasing bill, and the stock raising or 640-acre homestead bill. I refer to them in this order because, while the first two have passed the House, the last named still slumbers on the calendar, though the majority could take it up and pass it almost any day if they saw fit to do so.

I so fully expressed my opinion on the water-power bill while under discussion that I am not disposed to further discuss it at length now. It is, taking everything into consideration, the most extraordinary attempt to take from States and communities the control over their local concerns and to deprive them of sources of revenue ever presented to Congress. In this bill the Secretary of the Interior is given complete control over the public lands which may at any time be used for water-power development. The local community may be, and in the majority of cases would be, deprived of control over the rates they are to pay for electric current generated by water power. In many cases the Secretary of the Interior, 2,000 or more miles away, would be given full power and authority over such rates. As though it were not enough that a Federal official should be given power to fix any charge he saw fit on the enterprises of western communities, or any rate of pay for service, it is provided that the States and communities whose sources of revenue are thus dried up and rates fixed shall receive no part of the revenue thus collected, except as the States may secure some of it after perhaps 25 years when, having been paid into the reclamation fund, it has been paid back. I can repeat with emphasis what I have heretofore said in regard to this bill, that it is bureaucratic, centralizing, and federalistic; that it attempts to put the western public-land States in the position of mere Federal provinces.

PRIOR RIGHTS NOT PROTECTED.

Perhaps the most indefensible feature of this bill is that section which relates to the rights of those who, as homestead and desert entrymen, had settled on lands which were afterwards included in power-site withdrawals and those who on invitation of the Interior Department might hereafter settle upon and enter such lands and secure title to them. In addition to motions to amend I made as the provisions of the bill were being considered, I offered at the time the bill came up for final passage a motion to recommit which sought to correct three serious defects in the bill, as follows:

In making the so-called power-site withdrawals the Secretary of the Interior, out of abundance of caution, includes large areas which may or may not be utilized for generations, if ever, for power and flowage purposes; and the bill provides that the Secretary of the Interior, where he believes public interest would not be injuriously affected thereby, can allow the entry of these lands under the homestead and other land laws. The bill provides, however, in substance, that if later a power company should want these lands, they should not be required to pay the settler anything either for the land or for his improvements. This is manifestly most unjust, as it might enable a large corporation to take from the farmer some time in the future all he possessed, without paying him anything whatever for it. Such a payment would not be a burden on a power development company, but the taking of the property would be ruinous to the owner. My amendment provided that in such cases the power company should pay the value of the property other than for power purposes, including the improvements.

In many parts of the West settlers located years ago on lands which have since been included in power-site withdrawals. Section 10 of the bill would practically confiscate such rights; and my amendment provided—as the withdrawal act, through an amendment I secured, does now—that such rights should be protected.

REVENUES LOST TO WESTERN COMMUNITIES.

The bill also provides that the Secretary of the Interior may levy whatever charges per horsepower he deems best on power development. This would necessarily take from the States a large source of revenue and income in the way of taxes. My amendment provided that half of the income from leases should go to the States for school and road purposes. The gentlemen who voted against this motion to recommit the bill for the purpose of amending it will, it seems to me, have a hard time explaining their position to their constituents where the question is understood and discussed. That will be especially true of the men from public-land States. Most of the Republicans voted for my amendment, but the Democratic vote against it was almost unanimous, including a number from the western public-land States affected, who placed their loyalty to the party committee edict above their duty to their constituents.

THE COAL AND OIL LEASING BILL.

The bill known as the general leasing bill, and which provides for leasing by the Secretary of the Interior of public coal, oil, gas, and phosphate lands, is in its provisions characteristic of the plan and trend of land legislation under this administration. Drawn originally in the Interior Department, nursed and maneuvered through the committee under departmental influence, it is the sort of legislation which has the approval of the bureaucratic mind. The bill practically turns over to the Secretary of the Interior all of the public lands containing the minerals referred to, with authority, within a few general limitations, to lease as he sees fit and under such terms, conditions, and charges as may seem wise to him or appeal to his fancy. Nothing in the bill gives any assurance that any applicant may perform any act or show any qualifications that will assure or entitle him to a lease. Whether anyone may secure a lease or not depends entirely on the pleasure of the Secretary of the Interior. The bill contains no grant save the grant of unlimited authority to the Secretary of the Interior. It confers no rights except the right to the Secretary of the Interior to grant or withhold at his pleasure opportunities for mining and development.

The bill is not only based on erroneous theories, but it is faulty in its details, and while establishing some conditions and authorizing the Secretary to establish others which would hamper operations and retard development it does not contain needed and essential safeguards for the maintenance of reasonable prices. In other words, the bill lacks the very provisions for the protection of the consumer which alone warrant the adoption of a system of Federal leasing.

Not only does the bill grant power to the Secretary of the Interior which sooner or later would lead to abuse and scandal, not only does it withhold from the citizen any assurance that he may secure an opportunity to develop the mineral resources of the public lands except as a special favor from the Secretary of the Interior, not only does it fail to safeguard the community and protect consumers against combination, but when it comes to deal with the collective interests of the people where these mineral deposits are to be developed it ignores them as completely as though they did not exist. The bill leaves with the Secretary of the Interior the determination of the amount of the royalty which shall be paid by a lessee, power which should not be vested in the hands of any one man, and then provides that all of the sums realized shall be paid into the reclamation fund.

We are believers in the reclamation fund; we desire to have that fund properly sustained; but coal or oil producing communities in Wyoming can scarcely be expected to forego the

building of schoolhouses or the construction of roads in order that a reclamation project may be built in some other Western State or in a distant part of their own State. Western people have only become reconciled to the idea of Federal leasing on the theory that the people would be fairly dealt with and their communities obtain benefits through the royalties to be collected. If the Federal Government, on the contrary, assesses a considerable royalty on mining operations and takes it out of the State or out of the locality, the communities will find it difficult to secure revenues they need for the maintenance of government and of schools and the building of roads. I proposed that half of the amount received from royalties be paid to the people of the States in which collected for the support of roads and schools, and that one-half should go to the reclamation fund, but this reasonable compromise was rejected.

AMENDMENTS HELPFUL TO CLAIMANTS.

A number of important amendments I offered were, it is true, adopted, and a number which were rejected at the time I proposed them were, after further consideration, later presented and accepted. The most important of these amendments from the standpoint of present oil-land claimants was the one which gives the opportunity or option to surrender the claim to a patent and accept a lease. This provision will be of great benefit to claimants who prefer to take a lease rather than go through the sometimes tedious and uncertain process of trying to make proof and secure a patent.

The fact remains, however, that many of the vital and important amendments offered by myself and others were voted down by the majority, who did not attempt to explain or defend the provisions of the bill. The fact is they are not defendable from any standpoint of western or general public interest. Our hope is that the Senate will remedy the many and grievous faults of the measure.

THE 640-ACRE HOMESTEAD BILL.

I introduced at the beginning of the present Congress, as during my campaign two years ago I said I would, what I called a grazing homestead bill, providing for a homestead of from 640 to 1,280 acres, depending upon the productiveness of the land. Of course, as a Republican, I did not expect a Democratic Congress to report out my bill. I was pleased, however, to find that the general plan and scope of the bill was commended by officials of the Interior Department. In fact, the bill, with certain limitations, was approved by them. The bill which the Interior Department finally approved, however, and which, with some modifications, was introduced by the gentleman from New Mexico [Mr. FERGUSSON], and which, with some amendments, was reported by the committee, is a very different bill. To avoid the name which I gave to my bill, this bill was called "A stock-raising homestead bill." The acreage is limited to 640 acres, and many of the provisions of the bill are neither clear nor entirely satisfactory.

ONLY A SURFACE TITLE.

The crowning objection to this proposed legislation lies in the fact that the title which it grants is a mere surface title with a reservation of all minerals which may ever be found in any of the lands. After the successful contest which we waged only two years ago for a complete fee title in connection with the three-year homestead bill, it is exceedingly disappointing and discouraging to have a committee of the House follow blindly the recommendation of the Secretary of the Interior in this respect. We won the contest for a good title against the influence of a Republican Secretary of the Interior, but this Democratic committee supinely surrenders the rights of western landowners at the mere suggestion of the present Secretary of the Interior.

It is urged as an excuse for these proposed titles reserving all minerals to the Government that there is a reservation to the Government of the coal or oil or phosphate, as the case may be, under the laws allowing agricultural entry of coal or oil or phosphate land to which I have referred. But that is a very different proposition. Those acts apply only to lands which the Government believes and which the Government officials have classified as being valuable for these minerals. Except for that legislation such lands could not be secured by an agricultural claimant at all, and the reservation by the Government is only the body of the mineral, on account of which the land was classified, with full and complete protection for the owner for the value of his land and improvements and against all losses he might sustain by reason of operations carried on for the removal of the mineral.

I take a good deal of satisfaction in having had a responsible part in perfecting the details of the legislation providing for that class of limited titles, and I should be the last to complain did the proposed homestead bill contemplate the same kind of a title under like conditions; but such is not the case. The proposed stock-raising homestead bill would in the main apply to lands that have never been designated as being valuable for mineral lands, the major portion of them would possibly contain no minerals, yet all kinds of minerals are reserved. The term "mineral" is a very broad one. It includes clay, building stone, and many other substances besides metalliferous minerals, and the farmer would never know when his land might be invaded or his title challenged by a prospector or a coal or oil operator, or a seeker after any one of a score or more of minerals, or even a pure mischief-maker.

The bill does contain provisions intended to provide for the reimbursement to the owner of the loss he would sustain to certain of his improvements through prospecting or mining or quarrying on his land. But the owner's title would be a mere surface right, liable to be challenged at any time, and all or any part of the surface could be taken by a mineral claimant or operator without compensation to the owner. The injurious effects of legislation of this character would not for long be confined to those who might secure lands under this law. The principle of surface titles reserving all minerals being once established, it would spread to embrace all classes of land titles, so that no one could secure a complete fee title under any law. Furthermore, if the theory of more than one estate in the same tract of land is established we will soon have land titles divided among several owners of the same tract, an owner of such part of the surface as the mineral operator did not want and owners of various mineral substances. I find it hard to understand how such provisions could have been reported to the House. I had hoped the bill would be brought up for consideration so that we might discuss its faults and possibly secure the votes to remedy them. For some mysterious reason the bill was not made part of the so-called "conservation" program or brought to the consideration of the House in any other way.

THE REASON FOR IT.

One bill which illustrates the change which is coming over our land legislation is a bill which recently became a law providing for second homestead and desert entries in certain cases. The form of this bill originated somewhere in the Interior Department. It provides, among other things, that no one shall have a second entry who abandoned his first entry or lost it in any way through fault of his own or by reason of conditions within his control. Anyone at all familiar with the conditions surrounding the taking of public lands knows that an unfriendly departmental officer could deny, under such a law as this, practically every application made for a second entry, and yet we were unable to get the majority to modify their legislation. During my service in Congress I introduced and succeeded in having passed several second-entry bills. Those bills gave the entryman rights that the Secretary of the Interior could not deny. This new legislation only gives him such rights as the Secretary may see fit to grant. A large part of the difficulty with regard to the legislation I have referred to, its most glaring faults, grow out of the character of its origin. Members and committees have abrogated their functions to the departments, who draw bills and wet-nurse them through committees. They are therefore drawn from the standpoint of Government bureaus, not from the standpoint of the people interested and affected. Several years ago, while chairman of the Committee on Public Lands, a number of bills which were drawn in the Interior Department were sent me with a request that they be introduced. I declined to introduce them unless I were permitted to introduce them with the words "by request" printed on them. Evidently gentlemen do not now take that view of such matters.

In marked contrast to these department-made bills was the manner in which the reclamation law was originally drafted and the present enlarged-homestead law agreed upon. A nonpartisan committee of 17, representing all of the Western States and Territories, of which Senator WARREN, of my State, and myself were members, agreed on the first draft of the reclamation law. After I had introduced my first 320-acre homestead bill I called a conference in my committee room of western Members and Senators, Republicans and Democrats, and there those acquainted with the subject agreed on what they thought the bill ought to contain. Later the appropriate committee examined these bills in detail, and with some amendments they were reported and passed. How different were these to the methods of to-day. Land legislation now ought to carry a marginal note something like this, "Written, revised, and recommended by the Interior Department."

Of course no one objects to receiving the counsel and advice of administrative officers touching legislation. Their experi-

ence in the administration of laws frequently makes their advice timely and valuable touching questions of policy, but the responsibility for legislation rests with Congress. Policies of Government should originate under our form of government with the people or their representatives and not with appointed bureau officers. The sooner we get back to the correct view and practice in this regard the better it will be for the country.

RECLAMATION EXTENSION BILL.

The soundness of this view has a very recent illustration in the law providing for the extension of the period of repayments on reclamation projects to 20 years. It is a workable law and, considering the wide variety of conditions sought to be met and provided for, acceptable and satisfactory to all concerned in an unusual degree. The bill in its general form, plan, and scope is the product of Members of Congress familiar with the situation. The Secretary of the Interior and the officials of the Reclamation Service were in hearty sympathy with the objects and purposes of the legislation and were freely consulted with regard to it, but the legislation as agreed upon is in all its important features and details the work and product of the western members of the committee which reported it and other western Members with whom they conferred and consulted. It is therefore free from the objectionable features of the other legislation to which I have referred. Entrymen under reclamation projects, like homestead entrymen elsewhere, have those who made the contest against limited titles at the time of the passage of the three-year homestead law to thank for the fact that they receive a title in fee.

In criticizing the attitude of the present Democratic Congress and its majority on the Public Lands Committee for their attitude as reflected in legislation they have reported from the committee and supported in the House, I do not desire to detract from the credit due to certain Democratic Members from the West who in Republican Congresses viewed and acted upon these questions in harmony with those of us who have endeavored to furnish favorable opportunities to, and maintain the rights of, those who seek to establish homes upon and seek to develop the resources of the public domain. These men have, however, in a constantly increasing degree since their party assumed control been laboring under the handicap of the methods of bureau control to which I have referred, as well as the constantly increasing arrogance of the Democratic Party unit and caucus rule. I speak within the limitations of parliamentary language and but state a notorious fact when I say that a number of these gentlemen on the other side have in this Congress reflected the departmental views and the mandate of the party as represented in the committees, rather than their individual opinions, in the position they have taken in regard to these matters. We need more Republicans from the West under this administration if the reasonable and proper view of the West is to continue to be expressed and defended.

Bill Dealing with the Cotton and Currency Situation.

EXTENSION OF REMARKS

OF

HON. ROBERT L. HENRY,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, October 3, 1914.

Mr. HENRY. Mr. Speaker, under the unanimous consent granted to me to extend my remarks in the RECORD, I include a copy of the bill introduced yesterday in the United States Senate by Senator SHEPPARD, of Texas, on the cotton and currency situation.

The bill is as follows:

A bill (S. 6565) for the temporary relief of cotton growers in the United States.

Be it enacted, etc., That the Secretary of the Treasury shall deposit in national banking associations and State banks situated in the following States, to wit, Alabama, Arkansas, Florida, Georgia, Kentucky, Louisiana, Mississippi, Missouri, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, and Virginia, $500,000,000, to be advanced to the producer of cotton, or owner of lands upon which the same was produced, at a rate of interest not exceeding 3 per cent per annum. The deposits herein authorized shall be advanced upon the terms prescribed in this act. The deposits herein authorized shall be apportioned among the several States above mentioned in accordance with the number of bales of cotton produced therein during the year 1913, as ascertained by the Department of Agriculture.

SEC. 2. That the Secretary of the Treasury shall immediately cause to be prepared United States notes to the extent of $500,000,000, to be used for the purpose of making the deposits in compliance with this act; and said notes shall have all the legal qualities of the United States notes now outstanding, and shall be of such denominations as the Secretary of the Treasury may prescribe: *Provided*, That all United States notes deposited under this act and not used as prescribed herein shall be returned to the Secretary of the Treasury and shall be canceled.

SEC. 3. That when such deposits shall have been so made as prescribed in section 1 the said banks are hereby authorized and directed to pay out the same as follows: Whenever any producer of cotton or owner of lands upon which the same was produced shall present to the national banking association or State bank within which State the said bank may be situated a bill of sale in writing to cotton in bales grown in 1914, in such form as may be prescribed by the Secretary of the Treasury, said bill of sale to be signed and sworn to by the producer or person upon whose land the same was produced, giving the number, mark, weight, classification, and location of said cotton, it shall be the duty of said banks to advance a part of said deposits on said cotton at the rate of 10 cents per pound for middling cotton and other grades at the prices, off and on, according to the established differences in prices, based on middling cotton at 10 cents per pound.

SEC. 4. That thereupon title to said cotton shall pass to and be vested in the national banking association or State bank making the advances. The said bank receiving such deposits shall pay the same over to the producer, or person upon whose land the same was produced, and shall thenceforward hold said cotton as custodian, with the right and power to appoint as many deputy custodians, with actual possession, as said custodian may deem proper and necessary; and among said deputy custodians may be included the producers of said cotton or owners of the land upon which the same was produced, said custodian to take in all cases from the deputy custodian a forthcoming bond and an acknowledgment in writing of the fact that said deputy custodian holds the same as custodian of public property with the common-law liabilities of warehousemen. The bank acting as custodian shall keep all cotton so held insured against loss by fire, loss, if any, payable to the said national banking association or State bank, and shall keep a correct and itemized account of insurance and storage actually paid; and upon the sale of said cotton, as hereinafter provided, shall have said expenditures refunded, together with interest on the same at the rate of 6 per cent per annum. Payments of insurance and storage are to stand, until paid, in the nature of an obligation of the United States. When said cotton is sold, as hereinafter provided, said bank shall, in addition to the refunding just provided for, be paid for its labor and services as custodian 50 cents per bale; and as custodian shall be responsible only for gross negligence or breach of trust. All cotton upon which advances have been made, as hereinbefore provided, with such deposits, shall be and remain the property of said bank until sold, at the pleasure of the Secretary of the Treasury, when and after middling spot cotton sells in the open market at Savannah, Ga., at 12 cents per pound, or upon request of the person or persons from whom title passed to the national banking association or State bank.

SEC. 5. That whenever the said bank, under the conditions named in the foregoing section, shall sell said cotton, interest shall be calculated on the original sums advanced by the bank at the rate of 3 per cent per annum, and principal and interest shall be remitted to the Secretary of the Treasury. The custodian shall prepare under oath and furnish the Secretary of the Treasury an account showing the amounts actually paid for insurance and storage and interest thereon, as hereinbefore provided, and also showing its compensation as herein allowed. These items the custodian shall retain to pay itself, and the balance of the proceeds arising from the sale of said cotton shall be paid over to the producer or person upon whose land the same was produced, and from whom title passed to the said bank, or to the legal representative of such person receiving such loan.

SEC. 6. That this act shall take effect and be in force upon its passage.

SEC. 7. That this act shall expire by limitation on the 30th day of June, 1916.

Antitrust Legislation.

EXTENSION OF REMARKS

OF

HON. JAMES A. HUGHES,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914.

On the conference report to the bill (H. R. 15657) to supplement existing laws against unlawful restraints and monopolies, and for other purposes.

Mr. HUGHES of West Virginia. Mr. Speaker, of late there has grown up a purpose in the mind of Congress and the State legislatures to take by legislative enactment the property of one man and give it to another. The most deplorable part of this program is that it takes from the industrious, saving, and provident citizen and gives to the loafer, the lazy, and the improvident. This policy of confiscation has found its climax in the present Congress under the name of "The New Freedom." Except some routine legislation and the currency act, almost the entire list of bills passed and seriously proposed have had for their purpose, directly and indirectly, the taking from those who have and giving to those who have not. The whole force and power of this Government has been and is being used to exploit those industries and the frugal citizens who have saved something that the thriftless want. The men who have saved from their wages are victims just the same as the wealthiest people in the country. The policy of the majority seems to be that no man shall be permitted to conduct a successful business and make any money. Under the pretense of regulating business and making it honest, this House has passed some laws intended to amend and supplement the "antitrust" act, which for gro-

tesque absurdities have probably never been equaled by any parliamentary body on earth. This act and the proposals in the Senate expressly require that business men shall enter into competition with each other, and at the same time it is made a felony if one of the competitors offers a purchaser cheaper goods as an inducement to get his trade. The act condemns unfair competition and then defines unfair competition as "all other acts * * * calculated to destroy or prevent another from engaging in business, or to restrain trade, or to create a monopoly."

By the terms of this act it would make no difference how honest or sincere a man may be, if he offered his goods cheaper than his competitor it would be a penitentiary offense. Some concerns can produce their goods much cheaper than others, owing to a superior organization, better plant, more capital, and a larger output. If a manufacturer can make his goods 10 per cent cheaper than his rival, he can sell his wares at a profit and get no more from the consumer than what it costs the rival to make his. This will not only injure the rival, but put him out of business, for which, under the specific terms of this law, the efficient and up-to-date business man must be sent to the penitentiary for providing the consumer with cheaper goods.

"Any act done that will prevent another from engaging in business" is likewise made a criminal offense by this act. There are a great many people that would go into the oil business, the sugar business, the tobacco business, and the milling business if it were not for the fact that the people engaged in these businesses make and sell to the public these commodities at a price so low that small competitors can not enter into competition with them and succeed. The consumer gets these commodities cheaper than it is possible for the small producer to furnish them at the present prices. The large capital and great efficiency and low cost with which these goods can now be produced does now directly, and will continue, to "prevent others from engaging in these enterprises," although there would be no change in the conduct of the business nor in the prices charged. This will be a criminal offense upon the part of men who have been in business many years, and expect to continue without change of any sort, either in conduct or prices. It is the first instance on record among civilized peoples where it is proposed that a perfectly upright and innocent man may be imprisoned for the act, or, rather, aspirations of another, with whom he has no connection or relationship whatever. If I make and sell my goods at a price so low that it will prevent others from engaging in the same business this is a crime, and on complaint I may be convicted and sent to prison under this act.

Every business man in the country, manufacturer and merchant, is subject to this act and bound by its terms; and if they agree about prices and production with their rival, or one who wants to engage in the same business, this would be a violation of law, for it would stifle and restrain competition; and if they did not agree about prices and product, and each one attempt to run his own business and fix his own prices in his own way, this, too, is a crime punishable by imprisonment. Any socialist or agitator can go before a grand jury and testify that he is prevented from engaging in the manufacturing business, as for example, the milling business, because of the fact that other men are engaged in that business and are making and selling their flour and meal cheaper than he can do it, and they are thereby preventing him from engaging in that business, and the grand jury would have to find an indictment and a jury would have to convict. Socialism will rejoice that so potent an instrument has been furnished ready to their hands to renew and strengthen its attack upon all business and all property.

A part of this legislative program is the provision exempting labor organizations from the operation of the antitrust laws. This bill has passed the House and the Senate and is now in conference, and no doubt will become a law. A similar provision in an appropriation bill passed both Houses and was signed reluctantly by President Wilson. His only reason for signing it at all was that being a limitation of an appropriation it could only apply to that appropriation for one year and was not a substantive change of law. But the pending bill is a substantive change of law. What now will be his attitude? President Taft vetoed an appropriation bill because it contained a similar provision. This exemption places a certain class of men outside of and above the law, and makes them immune from prosecution and gives them a license to violate the law, which, if done by another set of men, would send them to the penitentiary.

A certain organization entered into a conspiracy to interfere with and stop business by blowing up bridges and dynamiting buildings and intimidating people engaged in business by assassination, violence, and murder. This statute would set such men free and encourage them to continue their lawlessness against the business of the country. Another organization entered into an agreement with coal operators in Illinois, Indiana, Ohio, and western Pennsylvania to destroy the coal business of West Virginia, in order to keep it from competing with the coal produced in other States. In pursuance of that agreement, this organization sent more than a thousand armed men into the hills overlooking the mining camps to shoot down the people living and working at the mines. A regular state of war existed for more than a year, amid scenes of violence as brutal and inhuman as those practiced by the savage when he burned his victims at the stake. The people making this agreement and directing its execution were indicted by a grand jury duly called and impaneled. These indictments were dismissed by the Washington administration, though the guilt of the defendants was not denied. They took the position that they were above the law; could murder, burn, pillage, and outrage the greatest industry in a State; drive their product out of the markets; close down the mines, and bankrupt the owners by force and violence, and the law would not interfere, because they were not amenable to law. Their position was approved by the present Washington Government, and the present Congress has legalized all such acts for the future.

On the other hand, if two merchants or manufacturers should agree that what they had to sell was worth a certain sum, they would be sent to prison. The very men who are responsible for these laws are the ones that in Congress, on the street corners, and on the hustings proclaim that they stand for and demand as a great principle of social justice, an equality of opportunity for all men. They do not seem to realize that while they are preaching equality among men, they are voting to divide up the people into hostile, warring classes, giving one an immunity to commit crimes against the other, and fastening on the backs of industry and efficiency a great mass of incompetents, a flock of drones who do little but stand on the street corners and make a noise.

THE RAILROADS.

One of the most conspicuous examples of destroying property under the pretense of regulating it by Government officials is to be found in the railroad situation. Nearly all the States have commissions created by the legislatures, which are given power to regulate railway operations within the State. Likewise the Congress has created the Interstate Commerce Commission and given it authority over all railroads operating their trains from one State to another. Within their respective jurisdictions these commissions fix the amounts which the carriers can charge for carrying freight and passengers. They have absolute control—or what is equivalent to it—over the earnings of the railroads. These commissions have the lawful authority to reduce the railway earnings to any point, short of actual confiscation of property. The courts can stop the commissions from lowering the rates to such a point that it would amount to confiscation. The courts are filled with suits to prevent the commissions from reducing the rates to a point of confiscation. The disposition of these commissioners is to compel the railroads to serve the public for nothing. Of course, the most forceful attack that can be made upon the railroads is to take from them their earning power by lowering their rates.

EFFECT OF HOSTILITY TO RAILWAYS.

The necessary and inevitable result of avowed hostility to railways by the State and National commissions is shown by the (1) decreased earnings, (2) the destruction of railway values, (3) the loss to labor, and (4) general business depression.

First. For the fiscal year ending June 30, 1914, 20 of the leading railroads of the United States earned $37,523,000 less than they did the preceding year. Another group of 11 roads earned for the year ending June, 1914, $40,462,000 less than they did in 1913. These figures were compiled by the Times Annalist, August 10 and August 3, 1914. The same measure of loss is characteristic of the railroads generally, as very few of them show increased earnings. The commissions have taken from the railroads in one year about $150,000,000 by squeezing down existing rates and refusing advances.

Second. To reduce the earnings in one year by such enormous sums has had the effect to decrease the value of the railroads to an extent exceeding $3,000,000,000. The people who owned the railroad stocks when Mr. Wilson was inaugurated have lost this vast sum of money as completely as if it had been thrown in the fire and burned. The majority of railway stockholders

are people of small means, comparatively, and this colossal loss falls mainly upon people who are least able to bear it. It is a great mistake to assume that the railroads are owned by the rich. While they are controlled in their management by wealthy men, the actual ownership is in the hands of hundreds of thousands of people in very moderate circumstances.

Third. The destruction of so great a sum from railway earnings has operated to bankrupt many railway companies and to lessen the working force, decreasing their ability to purchase materials and install improvements and extensions, all of which has reduced the demand for labor and caused decreasing employments. Directly and indirectly, the loss to labor, through all its ramifications, is incalculable.

Fourth. Of course, taking this much money out of the industries of the country must have a tendency to increase the business depression that is now so keenly felt in every field of industrial enterprise. Every blow that is aimed at the railroads of the country, that will decrease their power to serve all the public, including their own stockholders, in the most efficient manner, must fall upon the public who use the railroads.

The action of the Interstate Commerce Commission on the application of the various interstate railways to increase their rates 5 per cent was a fit example of the lack of practical knowledge to deal with such important questions. After many months of waiting and inaction they finally granted part and refused part. Every day during this long wait men were being laid off, forces reduced, idle cars increasing, trains abandoned, and earnings falling off at the rate of half million dollars a day. The credit of the roads weakened, bankruptcy and receiverships following, while the commission's action is condemned by all except the crowd that stands on the corner and spends all its time in making a noise.

An excuse is sometimes offered for making the wholesale confiscation of railroad property that has been going on in the last year or two by the statement that at one time the railroads issued watered stock, gave rebates, and practiced discrimination among shippers. Every railroad in the country of any magnitude was constructed originally by issuing bonus stock. The opposition to bonus stock has no better foundation to stand on than the purpose to keep all men from making money. The primal reason for it is envy, pure and simple. All the value that bonus stock can have is derived from the business, freight and passenger, which the owners develop along the line of a new railroad, and which would not have been created except for the building of the road in the first instance. Every property owner along the new line has it quadrupled in value by the building of the road, and such property owner should be willing, in good morals, that the builder should to some extent share in the increased values which his money and enterprise have created.

The practice of rebating and discrimination has ceased entirely, or as nearly so as it is possible to have them stop. They have not been practiced to any extent in the last 10 years, and if these things are evils, as many people maintain, they will not be practiced again, as there is now no reason for such practices. It should be borne in mind that rebates and discriminations were not looked upon as wrong, either legally or morally, when they were practiced, but were deemed as perfectly legitimate by the business conscience.

These excuses for the war that is now being waged against the railroads will not bear analysis, for if they are violating the law in any respect they can be made to stop it, without confiscating their property or impairing their usefulness as common carriers. What then is the real reason for this hostility and organized effort to destroy the railroads? The answer is a very simple one, and it is another manifestation of the purpose of those in power to take one man's property and give it to another without compensation. The system of railroads operated in the United States is the best to be found anywhere. First-class passenger fares are cheaper in this country than anywhere else in the world, and the freight rates are very much cheaper. Even under State ownership, where it is not expected to earn any money by operating the roads—except in Germany—the service by our railroads is not only better, but much cheaper. Any injury to our railway system, whether it be to take the management out of the owner's hands and place it in an irresponsible commission, or lowering rates, and destroying their credit so they can not secure money for improvements and extensions, injures the public and greatly hinders and depresses business of every character. It is a blow at the very heart of all enterprise. The purpose back of the fight against railroads is to prevent anyone from making money and to compel them to serve the public free of cost.

DEMOCRATIC TARIFF.

The present tariff was passed by the Democratic Party and went into effect in October, 1913. It has been in operation for a sufficient length of time to prove conclusively its influence upon the Nation's industries and the everyday life of the people. This act, like any other statute, must be judged by the results obtained under it. Has it operated to help the business of the country or has it been one of the principal causes of the present depression? Up to the present time no Democrat of information and integrity has been satisfied with the results.

COST OF LIVING.

The Democratic leaders attributed the high cost of living to the protective tariff of the Republicans, and based their arguments for a lower tariff on the statements that their measure would greatly reduce the cost of living. Instead of these Democratic promises the actual fact is that the cost of 25 food products, which are all that the average family uses, are much higher for the first seven months of 1914, under a Democratic tariff, than they were for the same period of 1913 under the Republican tariff. This is fully shown in tables of comparison compiled by the Annalist, a magazine owned and issued by the New York Times. The Times is a low-tariff Democratic paper and the ablest supporter of the Wilson administration. This increased cost of living is progressive; it was much higher in July than it was in January, 1914. Of course these Democratic statesmen knew that the principal cause of the high cost of living throughout the country was not a high tariff, but that it was due almost entirely to the continually increasing wages paid to all classes of labor, but they have not the courage to say so. They knew when the wages of farm hands went up that it would necessarily increase the price of farm products to the consumer; they also knew that an increased wage given to the shoemaker must be paid in the end by the wearer of the shoes; still they would not openly admit that wages always fix the cost of living.

IMPORTS AND EXPORTS.

The very best barometer of our business conditions is shown by our trade with foreign nations. If a man buys more than he sells and keeps it up, he will become bankrupt. The same is equally true of nations. If we sell more products to foreign countries than we buy from them, our producers are so much the better off. When American labor and capital is engaged in producing goods to be sold to and paid for by foreign people, we are infinitely better off than if we bought those goods from the capital and labor of other countries.

Compared with the working conditions of the last year of the Republican high tariff, the present Democratic measure has operated to deprive our own workshops and workingmen of tremendous amount of business that has gone to foreign labor and foreign workshops. The following is a summary of a statement compiled by Mr. Brown, of the Philadelphia Chamber of Commerce, from the official records, and published August 1, 1914:

CHANGES AFFECTING LABOR.

The products in this comparison require for their production large numbers of workmen. "A close study of the figures," Mr. Brown says, "must convince both manufacturers and employees that something has happened in the last six months which did not happen in the same period of 1912 and 1913." He adds:

From strictly official records, the imports of manufacturers of aluminum increased $361,635, from $458,587 to $820,240, or 78 per cent; automobiles, parts of, $353,103, from $179,759 to $532,862, or 196 per cent; cotton cloths, $3,407,725, from $4,621,562 to $8,039,287, or 73 per cent; cutlery, $513,607, from $875,803 to $1,389,410, or 58 per cent.

Fruits and nuts may be considered food products, but as their production required the services of many employees, they have been included in this comparison, the increase being $5,787,484, from $19,413,353 to $25,200,837, or 29 per cent. Glassware shows an increase of $1,126,373, from $3,090,769 to $4,217,069, or 36 per cent; knit goods, one of our important articles of manufacture, shows an increase of $2,178,989, from $1,583,843 to $3,762,832, or 137 per cent; lace and lace articles, $1,442,728, from $9,057,639 to $10,500,367, or 15 per cent; leather gloves, $777,486, from $3,844,507 to $4,121,993, or 23 per cent; leather and tanned skins, $4,202,403, from $4,466,663 to $8,669,066, or 94 per cent.

Paper, and manufactures of, increased $3,455,460 from $10,479,525 to $13,934,985, or 32 per cent; silk, manufactures of, $4,991,465, from $13,893,275 to $18,884,740, or 35 per cent; tin plate, $813,314, from $329,707 to $1,143,021, or 246 per cent.

Interesting to the woolgrower is the increase in wool, classes 1, 2, 3, of $21,024,431, from $18,708,786 to $39,733,217, or 112 per cent. Manufactures of wool show an increase of $13,155,999, from $6,702,109 to $19,858,108, or 196 per cent, which must be most pleasing to the foreign manufacturers of woolen fabrics.

Watches, and parts of, show an increase of $463,061, from $1,247,302 to $1,710,363, or 37 per cent. In this connection, it may be said that a large part of imports of watches and parts of are watchcases, which constitute a thriving industry in this country.

Linen yarns increased $172,436, from $377,140 to $549,560, or 45 per cent.

ALARM FOR FUTURE.

The totals covered by this comparison show an increase of $64,227,717, from $98,830,356 to $163,058,073, or 64.9 per cent, and as the total imports for the year ending June 30, 1914, increased over the imports for the year ending June 30, 1913, $81,160,964, it would seem that the increase in the imports of manufactured goods and products employing large numbers of workingmen have been sufficiently heavy to justify alarm for the future.

The months of June, 1913, and June, 1914, are normal months in our foreign trade. The official records show (Annalist, Aug. 10) that in June, 1913, we sent to other countries goods amounting to $163,404,916, and we bought from other countries goods amounting to $131,245,877. We had for the month of June, 1913, coming to us for the goods sold in excess of those bought by us the sum of $32,159,039, or more than a million dollars every day.

For the month of June, 1914, under the operation of the Democratic tariff, we sold to foreigners $157,119,451, and we bought from other countries goods amounting to $157,772,972. In other words, we bought from other peoples $653,521 more goods than we sold them. June being a typical month, we would import $7,842,242 more in the first year of the Democratic tariff than the last year of the Republican tariff, and therefore we would be that much in debt to foreign people; while, on the other hand, under the Republican tariff, foreigners were indebted to us in the sum of $385,908,468, for that much more we sold to them than they sold to us. Stated in terms of work and labor done by Americans, the Democratic tariff took from American labor and capital the power to produce annually goods worth $393,750,710, and gave this work and this business to people across the sea. Of course, this policy resulted in taking from hundreds of thousands of American workingmen their jobs and giving them to the workers of other countries. The necessary consequence of transferring to other countries this vast quantity of industry heretofore done by our own people is in the first place to lessen our production in industries to that extent, and also we are required to take from our other earnings that amount of money and send it abroad. This has resulted in a general business depression throughout the whole country. The falling off of our business is shown by the bank clearings for the years 1912–1914:

Clearings for 1912 were	$107, 693, 751, 245
Clearings for 1913 were	106, 900, 715, 307
Clearings for 1914 were	106, 525, 487, 076

These are the clearings from January 1 to August 1 of each of these years, and show the extent of the business done for each of the three periods.

Whatever theories may be advanced by those who favor free trade, or a low tariff, as against a protective tariff, they do not and never have worked out in practice. The benefits promised under low tariff have never been realized. The fact is, that in the entire history of our country that every time there has been a general lowering of tariff duties it has been followed immediately by business stagnation and depression, resulting in great losses, both to capital and labor; while on the other hand, every time the tariff has been taken from a free-trade or revenue-only basis and put back under a protection basis there has resulted great business activity and increased employment of labor.

The mind of the low-tariff advocate closes all its doors against the most obvious fact, and that is that a protective policy is very largely to the personal interest of every man who produces more than he consumes; while, on the other hand, a low tariff or free trade is to the individual interest of nonproducers and nonworkers. Protection helps the industrious, the thrifty, and provident as against the indolent and the improvident.

ANTITRUST BILLS.

The antitrust bills that have been drawn and passed by both Houses of Congress, carrying out the program of the present administration and the Democratic Party, are based upon sentiments and feelings that heretofore have been absent from the councils of the Nation. These measures, in substance, provide:

First. That a man may not name or fix a price upon the thing he makes and has to sell if his competitor is unable to meet that price. In other words, the man who is up to date and uses all the best methods of production, introducing economies and labor-saving devices and great efficiency in every department, shall be sent to the penitentiary for selling those goods at a lower price than the man whose plant is out of date, and whose methods are wasteful, and the whole enterprise so inefficient that the cost of making his goods is much more than the other can sell for at a fair profit.

Second. That a man who has spent the best part of his life in perfecting a machine may not impose any conditions whatever upon the purchaser of that machine to maintain and keep up its standard of efficiency and reputation for usefulness. In other words, a man is prohibited from making a contract for the preservation and protection of the article he makes and sells; and

Third. It is a crime for the small manufacturer, miner, and producer to introduce savings and economics in his business in connection with other small operators, although it is absolutely necessary in order to save himself from bankruptcy brought on by a perfectly legitimate competition from large operators, who can make, sell, and distribute their products at a much lower cost by reason of the greater quantity produced.

Fourth. These bills are all based upon the feeling and sentiment that it is morally wrong for one man to have more brains than another; that it is highly reprehensible that a man should be more industrious than his neighbor; and that business success based upon superior energy, ability, and saving is grossly unlawful and should be suppressed at all events. All through these bills runs the sentiment that thrift must be penalized, the successful must be outlawed, to do things in a large way is conclusive proof of criminality, and that improvidence, unthrift, and incapacity are virtues which this Government must uphold and encourage, and that incompetence shall be the standard of excellence throughout this Republic.

To justify this assault upon the productive energies of the people the excuse is given that some men have made money by methods of unfair competition; that they have monopolized certain lines of trade, raised prices above what is normal, and have thus imposed upon the public. The fact is, as everybody knows, that there is not one man in a thousand, nor one concern in a thousand, that ever made a pretense of being a monopoly, a trust, or engaging in the business of unreasonably raising prices, although some few may have in times gone by done so. Yet, in order to correct the business honesty and morals of one man, these measures propose to tear down and destroy the business of nine hundred and ninety-nine honest men. The remedy proposed is just about as wise as the man who burned down his barn in order to be rid of rats or the farmer that hamstrung all his horses as a remedy for the roguishness of one of them.

The best lawyers and ablest men in the Congress can not agree as to the meaning and interpretation of these bills. The debates show that the members who vote for their passage openly acknowledge that they are unconstitutional and are subversive of the personal right of contract.

If these acts are permitted to stand and carry with them the force of law, it will require 25 years of litigation to interpret them, and in the meantime the business of the country must remain in a state of doubt and uncertainty. No man will know whether he is doing a legitimate business or whether he is violating the law and committing offenses punishable by imprisonment; nor can his lawyers intelligently advise him.

Farmers and labor unions are exempt from these laws. They can enter into conspiracies to oppress the public by raising prices of food and the wages for manufactured products and holding the public up and compelling it to pay the price demanded. This class of men are above the law and are authorized to enter into all sorts of trusts and combinations, whereby the public is forced to submit to outrageous exactions without any relief or remedy whatever. My town of Huntington gets 90 per cent of its food supplies from the farmers just across the river in the State of Ohio. Under the Sherman antitrust law before these amendments these farmers could have been fined and imprisoned had they entered into a combination or conspiracy to arbitrarily raise the price of their commodities to the people of Huntington. But under the present bills these same farmers may get together and raise the price of the articles of food which they sell and force the people to pay it, and they can not be punished or interfered with.

While, on the other hand, if the managers of the two gristmills, one being in Ohio and the other in Huntington, should agree to sell their flour at not less than $5 a barrel, they will be sent to the penitentiary as oppressors of the public. Asa Wilson, living on the Ohio side of the river, has five sons, three of whom are farmers living in Ohio and selling their products in West Virginia and Kentucky. One of the brothers runs a butcher shop in Huntington and one a butcher shop in the town of Chesapeake, on the opposite side of the river, in Ohio. The three farmer brothers agree among themselves that they will fix the price of their cattle and hogs which they have for market at 12½ cents per pound, which is 25 per cent more than the price should be. This act says that because they are farmers they shall have the right to do this and force the public to pay it, and the law will uphold them, while, on the other hand, if the two brothers in the butcher business agree that they will not sell their steaks for less than 25 cents per pound they will be arrested, fined, and imprisoned; not that they have done anything different from what their farmer brothers have done, for their acts are identical in principle and effect, but they are really sent to prison not for what they have done but because they are in the business of selling meat instead of being in the business of farming. In other words, a man's guilt or innocence in entering into trade agreements with his competitors

depends upon the business he is engaged in and not upon guilty conduct.

In discussing these and other questions pertaining to labor let it be remembered once for all that no fair-minded man can object to laboring men organizing for all legitimate purposes. Such an organization will be approved and encouraged by all persons capable of right thinking. But what are these legitimate purposes for which such organizations may be formed? This question may be answered by saying that workingmen can form an association for the purpose of (1) securing for themselves a just wage, (2) to better the conditions and surroundings under which the work is performed, and (3) to increase the skill and efficiency of the workers. It follows necessarily that if an organization assumes to itself the power to compel the carrying out of any of these legitimate purposes by force and violence, by threats, intimidation, coercion, assaults, murder, and assassination, it ceases to be a lawful organization of peaceable workingmen, but degenerates into an organized criminal conspiracy. It is only when it embarks on a course of violence, destructive of the public peace and private rights, that the law should prevent its activities and preserve the peace and good order of society. To accomplish the purposes for which they may lawfully organize they can not resort to criminal conduct, nor should they be permitted to invade the lawful rights of other workers or their employers. A claim to the exercise of a right which can only be maintained by violence and crime can never be allowed in any forum of justice or conscience.

It should be remembered that a large portion of the men who belong to the union are honest and upright men and good citizens. They resent the lawlessness and violence of the leaders. These men have not asked for nor do they want the Congress to give them a license to violate the law.

The policies of the Democratic Party and the laws they have enacted are now operating against the business and the industry of the country. The tariff law brought relief to no one, as the cost of living has constantly gone higher since the law was enacted. Imports have increased and exports decreased, taking from American workmen the making of goods amounting to over $300,000,000 and giving it to the labor of other countries. Manufactures have decreased, and laborers have been discharged or put on short time all over the country, that business and enterprise everywhere is depressed. No one will pretend that the industrial and material condition of the country is nearly so good as in 1912–13.

But, aside from these, the purpose and disposition of the party in power is to harass the railroads and destroy the value of their securities, divide up the people into classes, giving to some rights and privileges that are made crimes in others, and generally to place shackles upon industry and thrift, take from the saving and the provident and bestow it upon the slothful and the unworthy, and establish in this Republic a new and a strange doctrine which we may call the cult of the incompetent.

That any country can prosper with these policies controlling its councils is impossible, and that it can long endure upon such principles of injustice is not probable.

Conservation of Cotton as a National Asset.

EXTENSION OF REMARKS
OF
HON. FRED L. BLACKMON,
OF ALABAMA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, October 3, 1914.

Mr. BLACKMON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the address of Hon. W. P. G. Harding, member of the Federal Reserve Board, before the National Association of Cotton Manufacturers at their semiannual banquet at Lenox, Mass., September 30, his subject being "The conservation of cotton as a national asset." Mr. Harding's speech in full was as follows:

"The cotton industry is perhaps as seriously affected by the European war as any other, and this statement applies with equal force to all connected with it, the producers of raw cotton, the manufacturers, and the distributers of cotton goods.

"The opportunity for expansion of our textile trade which is anticipated as an aftermath of the war, while undoubtedly a potentiality, does not as yet appear to exist to any appreciable degree. The titanic struggle between the great powers of Europe has disarranged credits and has disturbed the exchange of commodities throughout the world, and while cotton is classed as a staple crop and goods manufactured from it are necessities, they are not as supremely and immediately necessary as foodstuffs.

"Because of this fact the first effect of a great war is to advance the price of grain and to depress that of cotton. Yet the economic law of supply and demand, while apparently suspended at times, is never abrogated, and always in the end reasserts itself. When a dam or other obstruction is thrown across a stream the flow below it is reduced until the water impounded flows over the top, when the normal volume is restored, and if the obstruction be removed the flow becomes abnormally large.

"OBSTRUCTION TO NORMAL CURRENT.

"At the present juncture the war is operating as an obstruction to the normal current of the cotton trade. Sooner or later, however, even should the war continue, the level of the obstruction will be reached and the flow of business, except in some of the countries actually engaged in war, will again become normal. Restoration of peace would act as a removal of obstructions and would release a large volume of business now being held back, so that we are justified, if we look ahead, in taking a more cheerful view of conditions which appear at this time to be depressing.

"Cotton goods are the cheapest of all textiles, and should replace during hard times finer and more expensive fabrics. Cotton can be used in considerable quantities as a substitute for jute and other materials in the manufacture of burlaps and sacks. Mills in England are reported as running double time on khaki for army uniforms, and there is no reason to doubt that the trade will ultimately absorb the world's production. Cotton manufacturers must solve the problems which have grown out of the closing of the cotton exchanges of this country, whereby they have been deprived of a standardized price and of their power to hedge on contracts, and must overcome the further difficulty, occasioned by loss of confidence and curtailment of credits, of financing purchases.

"Compared with the prices that have obtained for the past three or four seasons, present quotations seem very low, but it is doubtful if large stocks of cotton could be secured at prevailing prices, as an active buying movement would undoubtedly enhance values. It is argued that the Southern States have produced a cotton crop, which added to that grown in other countries, is, under present conditions, about 5,000,000 bales greater than is required for the world's needs, and the fear that this is true is causing much apprehension in the South. There have been predictions of general bankruptcy and ruin, and yet regardless of all the pessimistic talk and in spite of increasing receipts, the price has advanced during the last three weeks 1½ cents to 2 cents per pound, and it is well worth while for cotton manufacturers to consider these facts, to analyze them carefully, and to anticipate the probable effects.

"CAUSE NOT HARD TO FIND.

"The cause is not hard to find. For many years the South has been gaining in wealth, and its farmers have been growing more independent, better methods of agriculture have been introduced, marked progress has been made in the diversification of crops, large plantations have been subdivided into small farms, and in many cases the tenant farmer has become his own landlord. There is in every normal year a certain proportion of the crop which comes in early and which seeks the market at any level that it can find, which is commonly called 'distressed cotton.' This is the cotton that is now being sold at 7½ to 8 cents, and it would be well for manufacturers to bear in mind that at these figures much cotton will be withheld from the market for months to come.

"It is true that there is a great amount of indebtedness which can be liquidated only by the sale of cotton, but in view of the increased cost of production in recent years, sales at present prices would be in many cases inadequate for the discharge of these obligations, so that even if the producer, being unable to sell his cotton for enough to pay his indebtedness, should turn it over to his creditor, many of these creditors would be in a position to hold, and much of the cotton will be withheld from the actual market.

"The financing of the present crop began with its planting last March or April. It is the one crop in the South on which loans are always freely made until it is harvested, and investigations recently made by chambers of commerce in Southern States show that advances on cotton in different States, made from the time of the planting of the crop until it left the gins, range from $30 to $44 per bale. The last four crops, including seed, have brought the people of the Southern States a gross average of nearly one thousand million dollars per year, of

which amount about one-half has come from domestic and Canadian mills, and the remainder represents the value of exports to foreign countries.

"ADDITION TO TRADE BALANCE.

"By the sale of this crop the South has been enabled not only to discharge its obligations promptly every fall but has added a half a billion dollars each year to the national trade balance. Cotton production is stimulated by high prices, and conversely, it is curtailed when prices fall below the cost of production. This has been particularly true in those years when prices were low throughout the season and continued low during planting time, in the early spring. Never have the evils of overproduction been so universally appreciated in the South as now, nor ever before has there been such grim determination to hold cotton and to radically curtail acreage. Public sentiment in many Southern States has been so aroused that there is now a general clamor for legislation by the States to regulate the production of cotton, and some farmers have gone so far as to demand that the planting of any cotton whatever in 1915 be prohibited.

"Of course, extreme action of this kind is not anticipated, but it is undoubtedly true that should prices considerably below the average cost of production, which is probably about 10 cents per pound, prevail for the next six months cotton will be parted with only as necessity arises, and most serious curtailment in acreage for the next crop will be the inevitable sequence. Many of those who might be financially able to put their lands in cotton would be attracted by the high prices for grain and would plant food crops, while others less independent might be willing to continue in cotton but would find themselves unable to secure the necessary advances.

"No well-informed man on southern conditions will deny that further diversification in southern farming is desirable, and that more attention should be paid to cattle raising and to the production of foodstuffs. But it would be most unfortunate if by any chance the production of cotton next year should be so small as to make the trade dependent upon the present crop for the greater portion of its two years' supply. Cotton goods can compete with more expensive fabrics only up to a certain price level, and if a year hence the prevailing prices for raw cotton should be as abnormally high as they are now abnormally low, the manufacturers of cotton goods will have their present problems aggravated, and would be fatally handicapped in a movement for trade expansion at the very time when it is probable that conditions would be ripe for efforts in that direction.

"DEMAND FOR COTTON GOODS.

"I shall not undertake in the presence of the foremost experts to hazard any guesses as to the probable consumption of cotton within the next few months, but I will be bold enough to predict that as the season progresses there will be a steadily increasing demand for cotton goods by consumers, with a corresponding demand for raw cotton by the mills, with a marked increase in the demand for export. Of course as long as present conditions continue the demand from Germany, Austria-Hungary, Belgium, and France will be greatly curtailed, but there should be a good demand from Great Britain, Spain, Italy, and from Russia, which can obtain its supplies independently of routings through the Baltic Sea. Ship room is now available, prompt action by Congress has enabled our Government to provide marine insurance, the Bank of England is again discounting bills, and practically all the obstacles in the way of exports to all foreign countries, except Germany and Austria-Hungary, have been removed.

"Foreign exchange conditions have within the last few days been vastly improved by the formation of the gold fund as approved by the Secretary of the Treasury and the Federal Reserve Board, and as our exports of grain and cotton increase in volume, as they must do in the very near future, normal quotations for sterling bills will again prevail. I am violating no confidence when I state that rapid progress is now being made in the organization of the Federal reserve banks, and it is my personal opinion that the system will become effective during the ensuing month. The Secretary of the Treasury has acted with wonderful celerity throughout the crisis, and by his promptness in authorizing and issuing emergency currency under the provisions of the Aldrich-Vreeland Act, as amended, has, in the face of moratoria in practically nearly all other civilized countries, kept the United States not only upon a cash basis but on a gold basis, and he asks only the intelligent and unselfish cooperation of the business community, which he confidently expects, to aid him in the speedy restoration of normal financial and commercial conditions throughout this country. The tremendous waste incident to war will, of course, be felt all over the world, and losses will inevitably ensue, but there is no reason, as far as this country is concerned, why these losses should not be so uniformly distributed that they will not fall with crushing force upon any section, or upon any industry, and I firmly believe that American pluck and American energy are going to reassert themselves and that American farmers, merchants, bankers, and manufacturers will cooperate with their Government and with each other in solving present problems, and that they will put themselves in a position to grasp the opportunities that the future is bound to offer."

The War Tax.

EXTENSION OF REMARKS
OF
HON. JULIUS KAHN,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 24, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. KAHN. Mr. Speaker, recognizing the absurdity of trying to discuss this important measure in the few minutes that could be allowed me under the gag rule that has been adopted by the Democratic majority of this House, I avail myself of the privilege afforded me to extend my remarks, and therefore submit a few desultory observations on this subject in the RECORD. The action of the Democratic majority on this measure is another confirmation of the fact that the House of Representatives has ceased to be a deliberative body. The members of the Democratic Party in the Sixty-first Congress succeeded in stirring up a pronounced sentiment throughout the country against what they were pleased to term "Cannonism." Their principal fight at that time was directed against the rules of the House. They contended that the rules presented by the Committee on Rules shut off debate and therefore gagged the membership of the House. They forcefully argued that there could be no full, fair, and free discussion under such conditions. The American people undoubtedly believed in the sincerity of the Democrats when they made these attacks, and largely in consequence of their outcry against the special rules presented by the Republican majority of the Committee on Rules they were successful at the polls in the election that ensued, and for the first time in 16 years they secured a majority of the membership of the House of Representatives.

But, Mr. Speaker, what have they done? They have "out-Cannoned Cannon." During the 16 years of Republican domination in the House of Representatives there were only 110 special rules brought in and acted upon on legislative matters, or an average of a little less than 7 special rules per annum. During the three and a half years of Democratic domination the majority has brought in 54 or 55 special rules up to the present time, and, according to recent newspaper reports, "the end is not yet." The average number of special rules on legislative questions brought in by the Democratic majority of this House during the period they have had control of the House is over 15 per annum. So much for performance as compared with promise. In fact, the Democratic majority have shown themselves to be long on promises but very short on performances.

Mr. Speaker, this war-tax measure places a tax on wine amounting to 20 cents a wine gallon on sweet wines and 12 cents on other wines, including dry wines. That tax will fall almost entirely upon the wine growers of the State of California. The wine industry is said to be the third largest in my State. Between 85 and 90 per cent of all the wine manufactured in the United States is made in California, so that about $5,250,000 of the estimated revenue of $6,000,000 from this tax will fall upon the shoulders of the wine makers of my State. It is an unfair and unjust discrimination against that State. It must be remembered that claret, or dry wines, constitute the great bulk of the wines produced in California. Much of this dry wine is sold to people who substitute these dry wines for tea or coffee at their meals. The people who purchase these cheaper wines can not afford to pay the hundred per cent or more increase in their cost that must inevitably ensue if this bill is enacted into law, and the very purpose of the law to raise a revenue will be defeated, because the manufacturers of this cheaper grade of wine will refuse to make it.

The farmers who raise grapes for the wineries have hundreds of thousands of acres of land in California cultivated to the grape. They are dependent upon the wineries for the sale of

their product. I am told that even at the present time there are thousands of tons of grapes ready to be converted into wine, for which there is no demand on account of this proposed legislation. The grapes, now ready to be picked, are rotting in the vineyards. It takes seven years for a vineyard to reach maturity. So that the loss to the grape growers by reason of their inability to sell their crop will be an especial hardship at this time.

The Members from the Southern States complain of the loss that will fall upon the cotton growers of the South on account of the loss of their market for cotton; and yet these very Members will vote to put a tax upon one of the principal products of my State that will destroy the market for thousands of farmers in that State for their product. Let them consider that fact when this measure shall come up for final action. "Do unto others as you would be done by" is a good motto to observe in these days.

The Underwood tariff law struck a hard blow at every important industry of the State of California except the wine industry. It would seem to me, judging by the drastic tax on wine contained in the pending bill, that the Democratic majority of this House seem to feel that they made a mistake when they did not put a burden upon the wine growers of California in their tariff law. They seem determined that the one remaining industry of my State that has had to fight for its very existence for some years past shall not be allowed to go unscathed so far as the taxing power of the Government is concerned. Of course you will pass this bill. You have the power to do it; but you will defeat your purpose. You will fail to secure the enormous sum for which you have estimated under this measure. You think you see a golden egg in this wine tax, but you will find you will kill the industry that is supposed, in your judgment, to be able to lay that egg, and you will receive little or no revenue from the wine industry of this country.

Emergency Revenue Legislation.

SPEECH

OF

HON. WM. ELZA WILLIAMS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. WILLIAMS. Mr. Speaker, the opposition to this bill is manufactured for political purposes. The gentlemen who contend so valorously against a measure to provide revenue for the Government, to supply a deficiency arising from the world's greatest calamity, are not sincere in their contention. They come with the sole purpose, if not the avowed intention, of making political capital in the hope of retrieving the lost fortunes of their party. Hypocrisy always carries with it the earmarks and the brand of insincerity, and this is particularly emphasized in this case by the inconsistent arguments advanced by those who oppose this bill.

We are told that the present tariff and internal-revenue laws are yielding an abundant revenue, and that this measure is unnecessary, and, at the same time and in almost the same breath, it is asserted that the Underwood tariff law is a failure, and that the advocacy of this bill is a confession of its infirmities. The one argument refutes the other. If there is no necessity for this bill, it is because our present revenue laws are ample and provide a sufficient revenue for all purposes of the Government; if there is a threatened deficiency, then this bill is necessary, and some provision must be made to provide a sufficient income to supply revenues and maintain the credit of the Nation.

Let me say in the outset, as the basis of my remarks, that both arguments advanced are untenable in the light of the facts. The Democratic tariff measure passed last year, by means of which the revenue for the support of our Government is derived, has proven a marked success. Until the world was overwhelmed in war, and the bloody hand of strife and destruction blighted business and paralyzed the trade of the world, revenues flowed in an abundant stream into the tills of the National Treasury, and an increasing surplus of over $130,000,000 in ready cash was accumulated to the credit of the Government. This, indeed, is fortunate, for had the sudden and unexpected coming of this war found a scant Treasury, the credit of the Nation would have been shaken, its ability to meet its obligations impaired, and widespread business ruin and disaster would have overtaken the country.

And it is furthermore most fortunate that the Underwood tariff law, which provides for reduced tariff duties and supplies a hundred millions revenue from internal sources, was in force in lieu of the Payne-Aldrich law, which relied largely upon tariff taxes as the Government's source of revenue.

The bulk of our imports are cut off by reason of the fact that the commercial nations of the world are engaged in a life-and-death struggle, and custom duties on imports are so materially reduced that if we relied on the tariff as our principal source of revenue, as was the case under the Payne-Aldrich law, our deficit would be doubled, and we would to-day find it necessary to provide revenue from other sources in an amount of two hundred millions, instead of one hundred millions, as proposed by this bill.

It does not require argument to prove that when imports cease, import duties cease, and that just in proportion as the imports of dutiable goods decrease, just in that proportion the revenues derived from custom duties decrease; nor does it take argument to prove that the larger the revenues relied upon and derived from import duties, the greater will be the reduction and loss of revenue when imports are reduced. And this would be true whatever the cause of the reduction in imports, whether in time of peace or in time of war. Seventy-five per cent of all imports received at our customhouses come from the nations now engaged in war. The ports of Germany and Austria and Russia are blockaded, and imports from these countries are almost entirely cut off. The operators and skilled workmen of England and France have been called from the workshops and the factories and sent to the front. Every able-bodied man of military age is enlisted in the army, and those remaining can not supply the manufactures necessary for their own country and the maintenance of their armies in the field, and as an inevitable and necessary result, shipments to this country are greatly reduced, and in consequence, custom duties in the way of tariff taxes paid by the American purchaser on foreign goods is reduced to the minimum, and it is but a question of time when the surplus in the Treasury will be exhausted unless some means is devised to supply the deficiency.

Gentlemen who decry against "additional" revenues play upon the phrase with scant consideration for sincerity and truth. We do not propose an additional tax; we propose a substitute tax in lieu of import duties cut off by the war. The payment of this tax added a hundred millions to the cost price of imported goods, which was in the end paid by the consumer. This tax to the extent that importations are reduced lapses with the reduction of imports, and the Treasury loses to the extent that the consumer is relieved of this burden. This revenue must be supplied from some source. The proposed bill merely shifts the tax, and in lieu of a duty on imports imposes a tax on the business and the particular articles named in the bill.

It is a cardinal principle of the Democratic Party—and this principle is applied and runs through the whole web and woof of the Underwood tariff bill—to tax luxuries most heavily and necessities less, and to compel, in so far as possible, wealth to contribute its just share to the support of the Government. For this reason an income tax was enacted, and for the same reason it is proposed by this bill to raise a considerable portion of the necessary revenue from distilled spirits, wine, and tobacco, neither of which, to any great extent, can be termed a necessity. It is proposed to raise a portion by a tax on the capital stock and surplus of banks, and by a stamp tax on bonds, debentures, and other like securities; a portion from license fees assessed against theaters and circuses, and a considerable part from a tax either on gasoline or on automobiles, regulated at so much per horsepower.

This plan furnishes a ready source of revenue and will supply the Treasury with ample funds to meet Government obligations, to maintain national credit, and to support and sustain the business of the country.

Mr. Speaker, I assume that no patriotic citizen will seriously oppose this bill, and I apprehend that those who seek to make political capital out of it, if thereby they could defeat the bill and destroy the credit of the Government, would not raise their voices against it. Gentlemen on that side of the House know full well that the Democratic majority will pass the bill, and that it will become a law; that we are charged with responsibility, not only for legislation but for the maintenance of national credit, and that no matter what they say or the purpose and motives which actuate their speech and their votes, the Democratic Party will see that the machinery of government is not blocked for the want of necessary revenue, and that the business interests of the country will not be disturbed by reason of an impoverished Treasury.

It is said that this action is premature, that there are still ample funds in the Treasury, and that this bill could be passed next December as well as now. This may be true, but why postpone the inevitable? If the President were actuated by motives of self-interest or party advantage, and concerned less about the peace, happiness, and welfare of the country, he perhaps would have postponed action until after the fall elections. But the President puts his country above his party, and is willing to take no chances that would impair the credit of the Nation and disturb business conditions for the mere sake of party expediency. Moved by the courage that possesses an honest man, and actuated by the highest motives of patriotism, he comes frankly and openly to the country, takes the people into his confidence, and says, "My country first; my party afterwards." When all the world but our own country is engaged in war, when all mankind but ourselves are locked in a death struggle, when waste and destruction and death are upon every hand and in every clime, let us be thankful that Woodrow Wilson is at the helm, steering the ship of state into peaceful harbors, and sustaining the faith and credit of the Nation with a bold and courageous hand.

No longer is his "watchful waiting" derided and scorned; no longer do men criticize his Mexican policy, but with one voice the whole world acclaims him the foremost advocate of peace, the first friend of mankind.

Those who demanded that our armies march to Mexico City and that we engage in a bloody and costly war with Mexico, with its far-reaching consequences, no longer boast, but hide their heads and skulk in silence. Those who insisted that we defy Japan and ignore or resent her claims, now admit that the policy of the administration and the timely efforts to avoid a clash with that country entitle President Wilson to the esteem, the favor, and the commendation of the world. Those who condemned him for urging the repeal of the Panama tolls act and the removal of all cause of friction between Great Britain and the United States now concede the wisdom of his policy in clearing the way for the adjustment of complications of "nearer consequence." Those who carped and criticized, scoffed and derided the peace policies of the administration as weak and truckling and vacillating, now glory in the fact that success has marked every step, and that we are at peace with the world; that hostile armies are not battling at our gates; that foreign navies are not blockading our ports and bombarding our coast cities; that the tread of armies, the clang of steel, the roar of cannon, the moans of the dying and lamentations for the dead are not heard within our borders; that the dove of peace reigns supreme throughout the land.

Nineteen peace treaties have been negotiated by the Department of State with as many nations of the world and ratified by the Senate during Mr. Wilson's brief time in office, providing for the arbitration of international disputes which do not involve national honor, and providing for the postponement of hostilities for one year after the grievance or cause of complaint arises. Seven other like treaties are pending in the Senate, and 10 other Governments have signified their acceptance and manifested their willingness to enter into negotiations to the same effect. These treaties will operate in all ordinary circumstances and under ordinary conditions to delay hostilities and afford an opportunity for the peaceful adjustment of all questions in dispute.

However, under abnormal conditions now existing in Europe, unparalleled in the history of the world, the danger of foreign complications grows with every hour. Questions of the greatest moment arise from day to day, and not until peace is restored in Europe will the people of this country rest in security that we may not in a moment be involved in war. There is but one safe course to pursue; there is but one hope of security, but one anchor of safety, and that is to sustain the President and uphold his hands in his peace policy. So long as Wilson is in the White House, sustained and supported by a Congress in harmony with him, we have reason to hope that peace will remain our heritage. Will the people handicap him by the election of a hostile Congress and tie his hands by returning to power a party which has obstructed every step in the course of the administration's policy? This is not the time to take chances and incur risk. In the homely phrase of Lincoln, "It is no time to swap horses while crossing a turbulent stream." It is a dangerous time to rock the boat in a raging storm. It is the obligation of every Member of this House to vote for this bill, and it is the duty of every patriotic citizen in the land to extend to the President every measure of devotion and support of his splendid efforts to guarantee the peace, the happiness, and the prosperity of our country. Politicians who would hazard country for party gain may prove recreant; but, mark you, the people, the patriotic citizens of the land, will not betray the President in this hour of anxiety and national peril, but will extend to the lonely man in the White House who in his sorrow and bereavement has sacrificed so much for the security and the peace of his country a vote of confidence by the return of a majority in Congress who will sustain and support him in his noble efforts and splendid achievements. I speak confidently, because I know the patriotism of the American people in an emergency like this will not be appealed to in vain.

The War Revenue Tax.

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BORLAND,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. BORLAND. Mr. Speaker, some of our standpat friends who are seeking office under the old banner of the Republican Party are devoting a good deal of time and energy just now to denouncing the Wilson administration and the Democratic Party for levying a tax to sustain the credit of the Government during this period of international stress. It would have been wiser, according to their school of politics, for the Democratic Congress to have delayed the question and deceived the people until after the November elections, instead of boldly and honestly meeting the responsibilities of government and trusting to the good sense and clear vision of the American voter. Or, say they, it would have been more adroit and crafty to have borrowed the money and issued Government bonds to supply the needs of the Federal Treasury, even though the financial market is strained to the uttermost. These bonds would have to be issued at an unusually high rate of interest and the money derived from their sale would be withdrawn from channels of trade at a time when the farmer is trying to move his crops and the merchant is laying in his fall stock of goods and the business world is in need of the financial resources of the country to carry on business. We can not admit either the wisdom or the sincerity of these criticisms. We can not admit that the American people would have justified the Democratic Party in any underhanded, secret, or hidden course. The administration has chosen to meet the situation frankly and take the American voter into its confidence. It prefers to do business in the open, and in this it has my unqualified support.

The world to-day is passing through an international catastrophe which 90 days ago could not have entered into the wildest dreams of the American people. More than half of the civilized world is at war; the commerce and manufactures of great nations are paralyzed and the financial system of the world is strained to the breaking point. The countries directly concerned in the war have been compelled to withdraw millions of men from the industrial pursuits to send them to the battlefield. Their public credit is rapidly being exhausted and private credit has been practically annihilated. In the countries not engaged in the war the indirect effect has been almost as great. The whole of Europe, the whole of Asia, and the whole of South America are suffering from this condition. The one country on the globe which has been able to stand the strain and which will weather the commercial and financial storm is the United States of America. It is the one country to-day whose public credit is at par and the one country where private credit on any terms is possible for the business man. It is the inflexible determination of the Democratic administration to preserve the credit of the Federal Government. If the present administration had failed to do so through incompetence or political cowardice no more relentless critics would have appeared than these same stand-pat office seekers who are now criticizing the emergency tax.

The only honest criticism which can be made of the action of the Democratic Congress in levying this emergency tax at this time is as to whether it was absolutely necessary to do so. On this point I quote for you some extracts from the message of the President of the United States, delivered before the Senate and House of Representatives on September 4, 1914:

I come to you to-day to discharge a duty which I wish with all my heart I might have been spared; but it is a duty which is very clear, and therefore I perform it without hesitation or apology. I come to

ask very earnestly that additional revenue be provided for the Government.

During the month of August there was, as compared with the corresponding month of last year, a falling off of $10,629,538 in the revenues collected from customs. A continuation of this decrease in the same proportion throughout the current fiscal year would probably mean a loss of customs revenues of from sixty to one hundred millions. I need not tell you to what this falling off is due. It is due, in chief part, not to the reductions recently made in the customs duties, but to the great decrease in importations; and that is due to the extraordinary extent of the industrial area affected by the present war in Europe. Conditions have arisen which no man foresaw; they affect the whole world of commerce and economic production; and they must be faced and dealt with.

It would be very dangerous in the present circumstances to create a moment's doubt as to the strength and sufficiency of the Treasury of the United States, its ability to assist, to steady, and sustain the financial operations of the country's business.

In order to meet every demand upon the Treasury without delay or peradventure and in order to keep the Treasury strong, unquestionably strong, and strong throughout the present anxieties, I respectfully urge that an additional revenue of $100,000,000 be raised through internal taxes devised in your wisdom to meet the emergency. The only suggestion I take the liberty of making is that such sources of revenue be chosen as will begin to yield at once and yield with a certain and constant flow.

I can not close without expressing the confidence with which I approach a Congress, with regard to this or any other matter, which has shown so untiring a devotion to public duty, which has responded to the needs of the Nation throughout a long session despite inevitable fatigue and personal sacrifice, and so large a proportion of whose Members have devoted their whole time and energy to the business of the country.

Those who oppose the tax and seek to make political capital out of it must show that they could have sustained the credit of the Government and prevented a panic by some other means. The memory of the Republican panic of 1907 is too fresh in our minds to put much confidence in the promises of the stand-pat politicians.

We can not, however, let our stand-pat friends off quite so easily. We charge them with having left the Government of the United States in a condition of financial weakness, which would inevitably have brought widespread disaster upon the American people if it had been allowed to continue. They left us with a banking and currency system which was outworn, weak, and dangerous. It had brought on three panics, widespread and disastrous—the panic of 1873, that of 1893, and that of 1907. It made the American people the helpless victims of stock gamblers' panics, which they did not cause and which they were powerless to control. It made legitimate business the slave of the stock exchange of Wall Street. The standpatters left us also under the bondage of the protective tariff.

Under that policy most of the expenses of the Government were met by high protective tariffs on imports. It is the failure of the revenue from imports which has caused the expected deficit in the Federal Treasury. The Democratic administration carried out one of its platform pledges more than a year ago in placing upon the statute books a valid income tax. The purpose of this is to place some fair share of the burdens of government upon accumulated wealth. It is in direct contrast to the Republican stand-pat policy of taxing consumption and the necessaries of life. It is fortunate for the country that the income tax was successfully inaugurated before the present crisis. The loss in Federal revenue has been due almost entirely to the sudden reduction in the quantity of imports caused by the paralysis of industry in Europe. If the Federal Government had proceeded on the Republican policy of seeking its revenue largely from the duty on imports the war in Europe would have created widespread and permanent industrial depression in this country. The highest stand-pat tariff would have produced no more revenue than the lowest tariff, because the goods from which the revenue could be collected are not being shipped in from abroad. If the income tax were not in operation, the Federal Government, instead of needing $100,000,000 additional revenue, would have needed $200,000,000. This is shown by the figures of the Treasury Department. During the 10 months of 1913 in which the income tax was in operation a total of a little over $70,000,000 was collected. If the law had been in operation for the full 12 months of the year, including the month of January, when most dividends are paid, the total collections would have run over $90,000,000. This amount would have been lost to the Federal Treasury if the income tax had not been on the statute books. Such loss of revenue would have doubled the inevitable deficit of the Federal Treasury and more than doubled the danger to industrial conditions throughout the country. It would have made it impossible for the Federal Treasury to have left any of its money on deposit with the banks. The banks would then have had to call in all of their loans from the merchants, manufacturers, contractors, and business men. Business enterprises would have been paralyzed and the employment of labor would have ceased. Is it possible that our stand-pat friends are urging this upon the American people as a reason for their return to power? The truth is that, facing a great international catastrophe, which has wrecked the business system of every other nation on the globe, the United States of America, in the firm hands of the Democratic administration, has recovered its balance and is forging to the front toward a period of renewed prosperity. The calamity howlers are almost abashed and silenced by the indications on every side of the strength and solvency of the American business world. Factories are resuming operations all over the country. A tremendous demand for American goods has been created, and the capital and credit to meet this demand will be firmly established by the system of Federal reserve banks. The horizon of foreign trade is widening. The products of the great Southwest are seeking a profitable market, a market which means ready gold. Horses and mules, beef cattle of every grade, wheat and corn are being rushed to market. The clearings of the Kansas City banks for the month of September, 1914, during a period of the greatest financial strain, were only slightly less than the clearings for the same period in 1913, and were higher in proportion than any other city in the world. During one week of September, 1914, the bank clearings of Kansas City passed St. Louis by $70,000, and Kansas City attained the fifth place among the cities of the United States for the first time in our history.

I am frank to say that the war-revenue tax has been intentionally made of a temporary character so that it may be repealed promptly as soon as normal conditions are restored. For my part, I believe that at least one-half of it may be repealed during the coming session of Congress, which begins in December, 1914. But the effect of promptly passing such an emergency measure was to strengthen the credit of the Federal Government and enable it to aid the business world in meeting the sudden collapse of international credit. Reinforcements and reserves are not always needed in every battle, but the fact that they are at hand and can be used if necessary has won many a victory.

But I am not yet through with out standpat friends. I should like to inquire, in all kindness, which of the Democratic policies they would reverse if they were fortunate enough to be returned to power. What Democratic laws would they repeal? Will they answer these questions frankly to the American voter?—

Would they restore the Payne-Aldrich tariff bill?

Would they repeal the income tax, which places a measure of the burden of government upon accumulated wealth?

Would they tax wealth or want?

Would they repeal the Federal reserve act, which has divorced legitimate business from the stock gambling of Wall Street and has prevented the recurrence of industrial panics, and under which Kansas City has become the financial center of the Southwest?

Would they restore the panic-breeding currency laws which made possible the indefensible industrial depression of 1907?

Would they reestablish the bread lines in New York, Philadelphia, Pittsburgh, and Wheeling, which disgraced the dark winter of 1907–8, when people were starving in the East while the West was full of corn and cattle that could not get to market on account of the heavy deposits of Federal money to aid Wall Street?

Would they repeal the Democratic agricultural-extension bill, against which not a single Republican vote in either House of Congress was cast?

Would they repeal the Federal Trade Commission, created to prevent the growth of industrial trusts, against which bill not a Republican voted in the House?

Would they reject the Bryan peace treaties?

Would they reverse the policy of peace, friendship, and firm refusal to enter into entangling foreign alliances, which was taught by Washington, repudiated when we acquired the Philippines, and revived by Woodrow Wilson in his dealings with our neighboring countries?

Do they regret that America is at peace while all of the world is at war, and that no American boys are stretched upon foreign battle fields or in the fever camps of distant lands?

Would they abolish the direct election of United States Senators by the people?

Would they restore corruption of politics by repealing the laws requiring the publication of campaign expenses?

Would they reestablish the power of Federal courts to issue injunctions in labor disputes without notice, and to brand thousands of respectable citizens as criminals, and to send men to jail without a trial by jury?

Would they again play into the hands of the railroads by aiding the filibustering Senators to block the improvement of inland waterways?

Would they abandon the improvement of the Missouri River between Kansas City and St. Louis, down which stream is now moving 3,000 tons of freight every month, more than 65 per cent of which is wheat and flour?

Would they kill the Children's Bureau of the National Government, created at demand of the Christian women of America?

Would they restore the gag rule of postal employees?

Would they repeal the eight-hour legislation?

Would they repeal the laws enlarging and strengthening the Department of Labor?

Would they abolish the inspection of boilers of locomotives?

Would they close the mine-rescue stations or repeal any of the safety-device provisions which have saved the lives and limbs of American toilers and preserved the breadwinners of thousands of American families?

Are they against good roads?

Do they wish to withdraw Government funds from the banks at crop-moving time rather than to lay a tax on beer and automobiles?

Let our stand-pat friends be frank with the voters and point out which of these laws are so dangerous to the peace and safety of the American people that they ought to be repealed. Let them test fully the sentiment of the American voter. The answer they will get from the people will be that more beneficial legislation has been enacted in the 18 months of the Democratic rule than in the previous 18 years of stand-pat domination.

All over this proud land of ours to-day, wherever an American citizen labors and produces, wherever honest toil adds to the wealth of the Nation and makes this old world a better place to live in—on the farm, in the factory, at the forge, in the mines, behind the counter of the village store, on all the countless railroad trains that fly like busy shuttles through the warp and woof of American commerce—wherever labor knows its own rights and demands the just reward of its own efforts, wherever business demands freedom and enlarged opportunities, there is going up a great song of triumph which swells into a note of confidence in the administration of Woodrow Wilson and the work of the Democratic Congress.

Emergency Revenue Legislation.

EXTENSION OF REMARKS
OF
HON. WILLIAM A. CULLOP,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, September 25, 1914,

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. CULLOP. Mr. Speaker, the administration of Woodrow Wilson challenges the consideration of every patriotic and thoughtful American, because of its wise, progressive, and constructive legislation. Since March 4, 1913, the Democratic Party has been in control of the executive and legislative departments of the Government, and has during that short period given the country more beneficial legislation than has been enacted in the last quarter of a century. The Democratic Party pledged the people if intrusted with power it would enact remedial legislation for the improvement of conditions, the enlargement of opportunities for the individual, and curtail the rights of the special interests, and it has fulfilled its promises.

This has been an administration noted for performance, the redemption of its pledges made the people. By its marvelous achievements, its careful and conscientious discharge of duty, its fidelity to the welfare of the people, it has earned and won the confidence of the country more than any other in the history of this great Nation It has shirked no duty, evaded no promise, or shifted no responsibility, but has, with marked ability and great courage, met every responsibility and performed every requirement demanded of it to the complete satisfaction of a great majority of the people. When President Wilson assumed the duties of his great office he was confronted with mighty questions for settlement, upon the solution of which depended the welfare of the people of the Nation, more than any Chief Magistrate since the days of Abraham Lincoln. Ripe in scholarship, wise in statesmanship, and thoroughly versed about conditions he was equipped for the great work devolving upon him and soon demonstrated he was master of the situation and fully competent to handle the great questions to the complete satisfaction of the country, which he has so admirably done. By the able, conservative, and courageous manner in which he has discharged the great duties imposed upon him he has convinced the people of his splendid qualifications for the Chief Magistracy of this great Nation and earned and won the confidence of the people as no other President has ever done. He enjoys the gratitude of the people for the great work he has performed, for the advancement of every legitimate business, and for the uplift of humanity.

Upon assuming the duties of his great office, he dedicated himself to the great work he had been called to perform—work of greater magnitude and more importance to the welfare of the people than had fallen upon any other President in recent years. A large majority of the Congress was in full sympathy with his policies, in hearty cooperation with his efforts to relive the people of the burdens imposed upon them by the misrule of the Republican Party, through the influence of the Toryism which had dominated it for years, during all of which time special privilege had thrived, combinations in restraint of trade had multiplied, and trusts had exploited the public unchallenged. The effort to reform these abuses constituted a stupendous task and met with stubborn resistance, because of their long standing. They had grown defiant and bitterly contested every proposition directed at their control or diminution of power. But this did not prevent the adoption of the reforms the party had been commissioned by the people to carry out for their relief, the improvement of conditions and the enlargement and equalization of opportunities. The work assigned by the people was to be performed, it mattered not what opposition might array itself, or how stubbornly it might resist the effort. It has been done, the duty discharged according to the wishes of the people, and the result highly satisfactory to the country.

It has succeeded in adopting more reforms, enacted more needed legislation, and secured more relief for the people than has been done in the preceding half a century. We take pleasure in calling attention to some of the more important features of this administration and ask consideration for its great and useful work.

It has driven the corrupt lobby which special interest maintained from the National Capitol; abolished the dollar diplomacy established by the Republican Party; enacted a law requiring publicity of campaign contributions before as well as after the election, so the people could know before they voted who, if anyone, was financing the campaign of the candidates; it has enacted a law for the election of United States Senators by a direct vote of the people, so that this year, for the first time in the history of the Republic, 32 United States Senators will be elected by ballot at the coming November election; it has enacted an income-tax law whereby wealth heretofore escaping taxation is compelled to pay its proportion of the burdens of the Government, and thereby relieves the poor of that amount heretofore borne by them; it repealed the odious Payne-Aldrich tariff law and enacted the Underwood tariff, reducing duties which averaged 47 cents on the dollar to duties averaging 28 cents on the dollar, and which provides ample revenues under normal conditions to pay the expenses of the Government, leaving a surplus each year, and without injury to a single legitimate industry or reducing the wages of a single employee or without serious interruption to the business of the country; it passed a banking and currency law, which provides for the issuing of our currency on what we own instead of what we owe—on our assets instead of our liabilities, as was the case under the old law—making it possible to pay off our public debt, which could not have been done under the old system, and which will furnish the country an elastic currency system adjustable to the requirements of business, which can be expanded and contracted as the exigencies of the country make necessary, and broke the grip of Wall Street on the country's finances, destroying its power to create a panic whenever its avarice prompted; it has extended the parcel-post system, destroying the express monopoly and reducing the cost of transportation, bringing convenience and good service to the people; it enacted the Lever extension law, providing better opportunities for the farmers of this country, the improvement of their conditions; it has appropriated $600,000 to provide a remedy for the extermination of hog cholera, which last year entailed a loss on our farmers of $73,000,000 from the ravages of this disease alone, causing a shortage in our meat supply; it adopted a law requiring the physical valuation of the property of railroads, which will necessarily reduce the charges for transportation and eliminate the water from stocks and bonds; it has passed a law requiring the disputes between labor and capital to be submitted to arbitration, preventing a resort to

force and the shutting down of industries; it has enacted a law providing for jury trials for persons charged with indirect contempt of courts, laws to preserve the constitutional right of the citizen to have trial by jury; it has passed laws for the development of Alaska, to preserve its natural resources for our citizens, and to prevent the Guggenheims, Cunninghams, and their confederates from appropriating it, to the detriment of the people of the country; it has enacted conservation legislation which will preserve our great natural resources as a legacy for the people and prevent them from becoming the prey of the exploiter, the buccaneer, and the special interests, in order that they may be developed by the bona fide citizen and prove a heritage to the real settler, whose purpose is to develop and become a home builder in the Republic; it has enacted antitrust laws based on the Golden Rule, "They must do unto others as they would have others do unto them," compelling them to abandon unfair cutthroat competition, cease discrimination between purchasers of their goods, relinquish control of competitors acquired under the "holding company" system, obey court decrees, surrender the enormous power wielded through interlocking directorates, unfold their financial operations to the scrutiny of the people through the medium of the Interstate Trade Commission; it has passed laws fostering the development of commerce at home and abroad and opened the way for this great Nation to capture the commerce of the world.

It has adopted a foreign policy of peace, justice, and friendship, not one of suffering, debt, and war. It did not send the best manhood of America to die in defense of special interests in Mexico and entail an enormous debt as a legacy to future generations. It has preserved peace while all Europe is engaged in the throes of the greatest war of all the ages, entailing a cost of $55,000,000 per day. It has broken up the money trust and transferred the control of the money of the country from the buccaneers of high finance in Wall Street to the Government at Washington, so that financial magnates can not manipulate its control and through greed and avarice contract or inflate its volume as the selfish interests may dictate, and made financial panics impossible. It takes the people's money in the United States Treasury and places it in the banks of the country to assist in moving the crops, operating the industries, and employing labor, while the Republicans took it and placed it in Wall Street to assist stock gamblers and financial brokers to wring from the people in distress usurious interest and inconscionable commissions. It has broken up the partnership existing for years between rotten politics and rotten business and made it possible for the people to control the business of this the greatest Nation in all the world.

Can any other administration in the history of this great Nation point to as many marvelous achievements, to such splendid work in behalf of the people? It truly has been an administration of performances, of the enactment of progressive and constructive legislation, of the adoption of wise, frugal policies, redounding to the betterment of the masses, the increase of the opportunities of the individual. Republicans high in the councils of their party, lashed and scorned by an indignant public opinion because of the failure of their party when in power to enact legislation in the interest of the people, to promote the welfare of the country, were compelled to vote for the enactment of these meritorious measures. Every one of the laws enacted by this administration received the votes of leading Republicans in both branches of Congress on their final passage. Republicans by their conduct are estopped from criticizing them. They either ought to quit voting for Democratic measures or quit criticizing them. Consistency requires them to do one or the other.

If the Republicans were returned to power, what one of these splendid measures do they propose to repeal and what do they propose to adopt in lieu of the same? What changes would they make? Do they propose to repeal the Underwood tariff law, that furnishes ample revenues for the Government, with a surplus of $34,000,000 the first year, and reenact the odious Payne-Aldrich tariff? It was the issue in 1912 and was only indorsed by 2 States—Vermont and Utah—with only four electoral votes each, out of the 48 States composing the great sisterhood of States of the American Union. Is that their proposition? If it is, I would remind them it is the worst discredited legislation of any ever enacted by Congress in its entire history. If not that, then what do they propose? Can they point to a single measure they would repeal and tell us what they would enact in its place? On this proposition they are silent, because they know the people of this country approve these measures, the policies of this administration, and indorse its high-minded, candid, open manner of dealing with the public.

The people will indorse this great work by their ballots at the coming election, as they know full well that the President would be powerless to carry out his progressive and constructive policies without a majority in both branches of Congress in full sympathy to cooperate with him. They know that the great war now raging in Europe is doing for our industrial system what a high protective tariff system has failed to do—that it has practically eliminated all importations from Europe. Their mills, factories, and farms are out of operation; their men are in the field in line of battle; their merchant marine is out of commission; their argosies of commerce no longer plow the billows of the sea; and they know when the war is over it will take time to start their industries, to recapture their once splendid commerce. Their debt, occasioned by the war, will be enormous, provision for its payment must be made, revenues must be provided for this purpose, and this will require the greatest effort and best thought they possess. The people know this is our golden opportunity. It is said "that opportunity knocks but once at a person's door." It is knocking at ours now. Shall we seize the opportunity and make the best of it? We have our own markets without competition and an opportunity to capture those of many other nations. We are able, if we will, to do it. The people know full well at the conclusion of this awful European war that there will have to be a reconstruction of the economic and industrial system of every leading nation in the world. Conditions make it inevitable, and our people who have stood for a protective policy will face about and oppose it; other nations heretofore opposing it will favor it, because emerging from the gigantic struggle now raging within their confines will make it absolutely essential to survive and recover from the severe ordeal through which they are passing. Woodrow Wilson, with his great wisdom, his lofty patriotism, is needed at the head of this great Nation, with a Democratic Congress in sympathy with him, to work out our destiny in this great reconstruction work. He is the man for the task; he above all others is equipped for this great, important duty. The people know their interests are safe in his hands, that the business of this country is safe in charge of a Democratic Congress, and that this administration will lead them safely through the perils of the great crisis and into the haven of peace, prosperity, and industrial grandeur; that it will advance the standard of our country, and that under its wise and efficient guidance the cause of every individual, it matters not how humble, will be protected and promoted.

Rivers and Harbors.

EXTENSION OF REMARKS
OF
HON. FRANK CLARK,
OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, October 12, 1914.

Mr. CLARK of Florida. Mr. Speaker, under the leave granted to me to extend by remarks in the RECORD I include resolutions adopted by the Board of Trade at Ocala with reference to rivers and harbors.

The resolutions are as follows:

MARION COUNTY BOARD OF TRADE,
Ocala, Fla., October 7, 1914.

Whereas many questions of vital importance have arisen and are to be made issues for the future welfare of Florida; and

Whereas our present Representative in Congress, Hon. FRANK CLARK, standing in the forefront watching and guarding the interests of his constituents as well as the whole State; and

Whereas the introduction in the House of Representatives of the Sixty-third Congress, second session, of bill known as H. R. 18780, September 14, 1914, entitled "A bill to equalize transportation rates on vegetables, citrus fruit, and other fruits transported from one State to other States of the United States," is one of the best movements inaugurated at this session: Therefore be it

Resolved, That the Marion County Board of Trade wishes to emphasize its confidence in our Representative, and to indorse him for his action along the line of relief to be given through his bill, which comes at such an opportune time. Just when through the efforts of the board of trade the Vegetable Marketing Bureau of Florida is being organized.

Resolved, Furthermore that we extend our sincere thanks and appreciation for courtesies extended our secretary on his recent visit to Washington in the interest of our sister city, Dunnellon, in securing an 8-foot channel on the Withlacoochee River; also in conference with the Secretary of Agriculture and heads of his bureaus in the interest of the marketing and distribution of the vegetable products of our State and securing a supply of fish for Lake Weir.

Resolved, That the secretary is authorized to certify to the adoption of these resolutions and forward same to Hon. FRANK CLARK and furnish copies for publication.

[SEAL] J. D. ROONEY, *Secretary.*

The Wilson Administration—The Character of Its Leadership—The Record of Its Achievement.

EXTENSION OF REMARKS

OF

HON. MAURICE CONNOLLY,

OF IOWA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 23, 1914.

Mr. CONNOLLY of Iowa. Mr. Speaker, I wish to take up the time allotted to me to present some views upon the Wilson administration, its leadership, and its record.

In the evolution of politics it is the sincerity of the man that counts to-day. It is his sense of honor and integrity toward the people that should impress this generation. Personal ambition and political opportunism have a tendency to blind many public men toward their duties and toward their contract with the electorate.

We sometimes hear that a man is congressional "size" or gubernatorial "size," or has the proportions for whatever office he may aspire to, and this standard has in the past sometimes been measured by superficial ability, by brilliancy, by lingual and oratorical accomplishments, but the great thinking and progressive forces of the American people to-day realize that gifts and talents when directed toward personal ambitions without regard to consistency, comprise not forces for the benefit of the people, but elements that operate against the best interests of the people.

No matter what their talents may be, work of genuine labor is often impeded by men who, in the mirror of self-contemplation, decide that there is a great political future beyond. The men who can serve the people to the best advantage are not those who have a consuming ambition for personal glorification; men who keep constantly before them their political possibilities and shape their actions accordingly, backing and filling, shifting from one foot to the other, bowing at this moment in one direction, and, at the smile of promise, turning again in another direction.

I believe the people of this country want to decide themselves as to the potentiality for good in their public men, and that so-called "size" for office does not depend upon the talents of ambitious men, but rather upon the size of the soul, the conscience, and the heart of men who work sincerely, if quietly, to carry out the program of pledges to the people who gave them office; and herein lies the power and the force for good in that dignified, earnest, modest, and conscientious servant of the people who now occupies the White House.

THE PEERLESS LEADER.

Against the background of Democracy there loom large and illustrious figures. In this present hour and under this administration we see the face and figure of one who for many years has blazed the way through the wilderness of privilege and protected interests toward the promised land of popular rule.

Democracy contemplates with affection the pioneer work of this great protector of popular rights, and no ridicule, no shafts of irony, that come from the bows of privilege can spoil our estimate of his works for mankind. The great moral forces not only of this country, but of the world, get inspiration from the purity in his life, from the virile morality, and Christian character of the great commoner—William Jennings Bryan.

Again in this hour against this background of Democracy we see the figure of a great party leader, a man of splendid judgment, rare diplomacy, self-sacrificing qualities, who, in the preparation of a great tariff bill, set an example for legislation of this character by baring the breast of his own district to the knife of tariff revision. The history of this administration can not overlook the work of OSCAR W. UNDERWOOD.

Once more in this hour of Democratic leadership our eyes turn with affection and pride toward the splendid features of one whose hair has grown gray in the labor of love for his party and its principles; of one who almost touched the presidential chair in the drama of the Baltimore convention; one whose great, rugged honesty, sincerity, and integrity of purpose are known to every Member of the House of Representatives when they see stepping up to the chair of that great body the stalwart oak of the Democratic Congress—CHAMP CLARK, of Missouri.

ACHIEVEMENTS OF WILSON.

These are men who have hewed to principle. In the same atmosphere and in this same frame of great Democratic figures there is silhouetted the form and features of a man who in practice has kept the party faith—who in practice has addressed himself to the redemption of party pledges, who upon trial has thrown his soul and heart and mind unreservedly into the battle for the protection of the people's rights. There is kindness in his smile; there is sympathy in his eye; there is deep concern of the responsibility of his high office. There is firmness in the jaw that has carried the country through the most critical and delicate situations to which the Democratic Party fell heir.

No personal ambition, no spirit of bombast, no self-exploitation, no weakness for publicity or public clamor has affected his earnest, serious purpose to do for the great American people that which God has given him the light to do. And what a trial.

Almost insuperable obstacles placed in his path, ambushed by special interests, waylaid by the representatives of protected monopoly, threatened by the desperadoes of plunder, who felt that under his guidance the agencies of government might be wrested from their control and get back to the people who created them.

Woodrow Wilson, the man of heart and iron. The heart that beats in sympathy with equality of justice to mankind. The iron of resolution that has turned from the easiest way to the stony, stubborn, jagged path of plain duty.

In turning from the principal actors and leaders in the administration let us turn to the policies which they assisted in guiding and promulgating.

REVISION OF THE TARIFF.

Turning to the tariff, our party kept its preelection pledges of a genuine revision downward. The man at the helm of Democracy felt the obligations upon this matter of tariff legislation that were imposed upon the party as a result of the campaign of 1912; but if there had not been that sense of integrity as to our contract with the people on the tariff, from the standpoint of expediency, I question whether any party could gain any headway with the American people by attempting another adjustment of the tariff such as the Payne-Aldrich bill, the net result of which revision and the average of which revision would be up instead of down, and some of the schedules of which have been described by an Iowa Senator as representing a graft "greater than that of all of the graft of all the life insurance companies through all the ages."

It may be that in the new bill containing 4,000 or more items that there should creep in some error and some inequalities, but the Underwood-Simmons bill was written with a view of taking care of the interests of the great masses of the people and giving some relief to the consuming public and taking from privilege and special interests the fortress from which, like the barons of old, they exacted toll and tribute from the wage earner, the farmer, the merchant, and the manufacturer.

The schedules of this bill were not written by any representatives of entrenched privilege or private monopoly, but by the representatives of the people.

If after this tariff law has had a fair trial and a square deal before the American people, and it develops that in some of its provisions it works hardship and does injustice and discriminates against any legitimate industry you will find the Democratic Party willing to correct such a condition, but the bill should be given a fair trial and a square deal.

If Democracy is defeated, the pendulum will swing back to high protection, the benefits of which extremity will accrue even more conspicuously than in the past to a relatively small group of monopolists, the fortunes of whom to-day are so colossal as to be a menace and disturbing influence in American life.

TARIFF AND THE FARMER.

There has been a great cry about the Democratic tariff bill playing havoc with the farmer, but the Iowa farmer can recall years under Republican rule in which the prices of his products were infinitely less than they are at the present time. Great stress has been laid upon the importation of Argentine corn, but compare the present prices with the prices prevailing last year and recall that the entire output of corn in Argentina during the last year is equal to but one-third of the shortage of 1913 in the United States as compared with 1912, so if Argentina had sent us her entire crop it would make no appreciable impression on prices throughout the United States.

And when this bubble was exploded by the actual figures as available in the Department of Agriculture the cry of ruin was raised on account of the importation of Argentine beef. As far as beef is concerned, keep in mind the fact that in the matter of cattle, swine, and sheep, the number of meat animals declined greatly from January 1, 1912, to January 1, 1914, so with this condition of decrease of meat animals, with the rapid increase of population, and the present market prices the farmer has no occasion for alarm on this score.

How strangely these claims of the Republican Party in regard to the farmer and the tariff comport with the bold, bald, and unqualified statement of the present senior Senator from Iowa [Mr. CUMMINS], as shown in the CONGRESSIONAL RECORD:

I know that my friend from North Dakota [Mr. MCCUMBER] does not agree with me in respect to these things, but I do not believe that we in Iowa receive any direct benefit for the 400,000,000 bushels of corn that we raise every year; I do not believe that we receive any direct benefit from duty on 8,000,000 or 10,000,000 hogs that we market every year; I do not believe that of the $700,000,000 of agricultural products that we pour every year into the channels of trade protection advances the price of a tithe of them. We will this year supply the people of the United States and the people of the world with a product that will surpass in value $700,000,000, and it is idle for even any enthusiast to assert that the price of these products is directly affected by the protective tariff.

However, in former years Senator CUMMINS was an ardent advocate of free trade with Canada, his ideas on this subject being expressed in the Columbia Magazine, May, 1911, page 222, as follows:

I shall go much further than to say that when an agreement providing for trade reciprocity with Canada is signed, I shall be glad. I shall express the firm belief that between the United States and Canada there should be absolute free trade in all things. To this I would make no exception.

This idea of Senator CUMMINS under the favored-nation clause would amount to free trade with practically all nations or a breach of its treaty obligations.

PRICES HAVE INCREASED.

Data that are furnished over the signature of the Secretary of Agriculture himself show that corn, oats, buckwheat, butter, eggs, and chickens all indicate increases in prices over a year ago.

In good time the farmers will realize what the Wilson administration has done for them in substantial tariff reductions on all those things that he is obliged to buy. The Democratic administration has shown its interest and desire for the advancement, welfare, and happiness of the American farmer by its substantial appropriation for farm and demonstration work, the encouragement of the corn, potato, and other demonstration clubs; appropriations looking to the elimination of hog cholera and other epidemics that beset the farmer; the spirit and tone of its good-roads legislation, which means from the farm to the market, and the development of a scientific system of markets.

The American farmer is not without gratitude, and he recalls the patriotic action of a Democratic Secretary of the Treasury by the deposit of $50,000,000 that the crops might be moved. This was a concrete instance of Democratic willingness to aid the farmer and his operations. It allayed fear, prevented stringency, and for the first time we were able to show our independence at a critical time toward the banks of Wall Street.

The American farmer also, in his earnest wisdom, appreciates that the Democratic Party is one of performance, and so he looks with confidence and favor upon the present efforts of the Democrats of the House to evolve a rural-credits bill by which the farmer may obtain credit upon long time and at a low rate of interest.

Substantial works like these enumerated should appeal to the Iowa farmer.

I commend to the Iowa farmer an article by George P. Hampton, entitled "The administration fighting for the people's rights," which appears in the Pennsylvania Grain News, July, 1914, and which is backed up by the master of the grange, and shows conclusively why the farmers should earnestly support the Wilson administration. As far as possible I shall endeavor to supply copies of this article to those interested.

NEW INCOME-TAX LAW.

In connection with the tariff, the Wilson administration deserves the approval of progressive people in the enactment of the income-tax law—a law for which the people had been contending for over a quarter of a century; a law that has obtained in many of the most advanced countries of the world.

It places the burden of taxation upon those who can best sustain it, and inordinate wealth is thereby required to bear its just proportion. Civilized nations recognize the income tax as among the fairest and most equitable forms of taxation.

Surely the progressive thought of Iowa will indorse this administration for that great constructive measure, the Federal reserve act, the new bill of rights of our currency system, under which the member banks can rediscount their paper to the extent of the agricultural, manufacturing, and commercial requirements.

The Government controls the issuance of the new currency and the governing board. This bill does away with the old system of centralization of the people's money in Wall Street and makes it possible for those who create the national wealth to reap the benefits.

Then, as to the matter of trust legislation, the character of these Democratic measures is such that the bill creating an Interstate Trade Commission had so little opposition that it was passed without a roll call.

The Democratic act—H. R. 15657—supplementing the existing law against unlawful restraints and monopolies had only 54 votes against it, and the bill to prevent overissuance of stocks and bonds had but 8 Republican votes recorded against it.

SQUARE DEAL FOR LABOR.

Besides these great basic pledges, our Democratic administration has wrought mightily in the interests of the people. It is the real friend of American labor, and has shaped its legislation to give to labor a square deal. Among other measures, it passed the industrial arbitration act by which the great industrial transportation companies and their millions of employees can adjust their differences through mediation, conciliation, and arbitration.

This administration has caused to be signed treaties with more than half the nations of the world providing for arbitration of international disputes, thus advancing the day when peace may settle among the people of the world and the stupendous expenditures of war and its horrors may be minimized.

Although the elements controlling huge concessions and vast interests in Mexico condemn the Wilson policy, events are vindicating the President's course in regard to the sister Republic, and to the peace-loving people of Iowa his effort to avoid the dire results of a long and bloody war should be most gratifying. If by this policy alone war shall be averted, President Wilson is entitled to the support and indorsement of the American people.

It is impossible in the compass of this address to enumerate all of the legislative benefits to the American people that have been enacted under the Wilson administration; but that which I would impress upon fair-minded people is that the Wilson administration is essentially committed to a program "of the people, for the people, and by the people."

When Senator CUMMINS so sharply criticized and ridiculed the President and his policies and spoke of the distress that had accompanied the enactment of Democratic legislation, he attuned his voice and qualified himself as a member of the vested interests.

FOR THE ADMINISTRATION.

In answer to any criticism of my support of the administrations' legislative policies, I will say that that support was cheerfully extended, because I felt that the Wilson administration was distinctly on the side of the people. If the President should pursue a policy against the interests of the people, then, and then only, would my support be withdrawn.

The note of progressiveism at this time seems absent in the voice of the senior Senator from Iowa, and his present praise of the old protection tariff bills does not harmonize with his previous utterances upon these lines, and suggests that he is undergoing a political reincarnation.

His attitude toward the President does not harmonize with the accredited view of the junior Senator and some members of the progressive wing of his party. His allusion to industrial distress can not be borne out by the news items in commercial and industrial centers, and the pretextile, woolen, tin, and steel industries become discredited by the trades journals in these different lines.

I have too much faith in the intelligence and the discernment of the people of America to think that they will be led astray by these assaults upon this administration on the part of the special interests and great combinations of wealth.

NONPARTISAN INTERESTS.

Now, it is not that these interests care more about the name Republican than they do Democrat, because if this Democratic administration had shaped its program so as not to encroach upon their privileged preserve in the matter of tariff, currency, trust, and other legislation our party would not be the subject of hostility and attack.

There would not be this desperate effort to oust the Democrats from control, because the Democratic Party would look all right to them, and I wish to pound home this idea that because the Wilson administration is removing the Government from the zone of privilege back to the people, where it belongs, that this inspired hostility should have the effect of unifying the people of this country regardless of partisanship or party advantage in the patriotic support of an administration that has placed the people in the saddle and earnestly purposes to keep them there. It is, therefore, up to the people to determine that they will not be unhorsed by privilege.

And it is up to the people also to support the President in his foreign policy that has steered us steadily and patiently clear

from any difficulties with Japan, and has also kept us out of war with Mexico, and thus saved our country from a billion or more war tax and a possible death list of hundreds of thousands. Notwithstanding the criticism of some of the Republicans, including that of Senator CUMMINS, of my own State, of the "watchful waiting," I feel sure that the peace-loving people of the United States will approve the President's course. We are showing to the world by this policy our devotion to the principles of peace and our appreciation of the obligations of an advanced civilization and enlightened humanity. May the spirit of the Prince of Peace guide us in our relations with the family of nations. May the Stars and Stripes continue to typify the sentiment and send forth the Christian and potential message of the ages, "Peace on earth, good will toward men."

My sentiments of love of country were inculcated in earliest childhood at the knees of a mother who was born, you might say, within the shadow of Bunker Hill upon soil consecrated by the blood of the forefathers. Her fervid Americanism pointed out to me the sacred liberties and the basic principles of our free governments, and imposed on me as an American the obligation of protection and support of these essential liberties throughout life.

River and Harbor Bill.

EXTENSION OF REMARKS
OF
HON. J. CHARLES LINTHICUM,
OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 29, 1914,

On the bill (H. R. 13811) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

Mr. LINTHICUM. Mr. Speaker, I shall vote to concur in the Senate amendment providing $20,000,000 to be expended under the direction of the Secretary of War and the supervision of the Chief of Engineers for the preservation and maintenance of existing rivers and harbors work, and for the prosecution of such projects heretofore authorized as may be most desirable in the interests of commerce and navigation. I must confess, however, that I deeply regret that the gentlemen of the Senate who so long considered this bill did not indicate those items to which they objected and which they consider "pork." There are many items absolutely necessary to the development of the great water system of our land, which by their action will be seriously delayed if not altogether defeated.

I have given close attention to the comments and criticisms in reference to this bill. A number of gentlemen from inland States apparently fail to realize that the seaboard cities of the land are its gateways to the people of the world. They appear to quite overlook the fact that through these gateways flow annually that vast volume of commerce which we carry on with other nations of the earth, that through these ports come and go the many tourists and the thousands of immigrants who yearly flock to our shores. If these gentlemen will pause for a moment to consider the importance of these gateways, with their ever-increasing traffic, I feel sure that objections which they may entertain relative to their improvement will be subordinated to the desire to do that which is essential to the greatest good of the great majority of our people, for the welfare of the great majority of our people is vitally involved and directly affected by legislation for the improvement of our rivers and harbors.

RIVER AND HARBOR EXPENDITURES.

I realize that many of the expenditures of Congress are the subject of protest or criticism because of the failure of an equitable distribution of benefits thereunder; but if there is one bill which ought to be safe from attack on that score, it is this annual appropriation for the improvement of our rivers and harbors. An appropriation for the erection of a public building here or there at most is but local in its effect and appreciation. That is not true of this rivers and harbors bill, for the improvement of every harbor, the deepening of every river, the opening of every new channel of navigation places at the disposal of commerce another source of trade, and thereby ministers to the wants and comforts of thousands of people the majority of whom may live at a distance remote from the place where the appropriation is expended.

We can not bring the people of the West nearer the people of the East, we can not make less the distance between the people of the North and those of the South, but it is within our power to so improve the facilities of communication that those living distant from one another are conscious of that distance only when they actually travel the same. When we improve the means of communication, when we make more numerous its channels, we do all that is within the power of man to obliterate those distances which separate him from his fellow man. In destroying the realization of the distance which men live apart we also solidify our national unity.

Through the kindness of Providence and the foresight of our ancestors, we find ourselves in possession of a large portion of one of the great continents of the earth. Our Nation extends from the Atlantic coast on the east to the Pacific on the west, from the rolling plains of the Dominion of Canada on the north to the boundary of old Mexico and the Gulf of that name on the south. Within the area embraced by these boundaries we have one of the richest and most splendid sections of the earth. Climate of every variety; altitude from lowest to the highest; soil adaptable to the raising of nearly every fruit and vegetable man requires for his sustenance and comfort, are within our possession. This vast expanse of territory is watered by a network of streams extending from its interior to the St. Lawrence River on the north, to the Atlantic on the east, to the Gulf of Mexico on the south, and to the Pacific on the west. These streams are the drainage channels of the country, and centuries before the foot of a white man trod this ground these channels were the highways of travel.

UTILIZATION OF OUR WATERWAYS.

The Indian, with an eye keen to the utilization of nature's gifts, made these rivers not only the pathways of his travel but the highways of his primitive commerce. Our fathers, taking a page from the red man's book, did likewise, and the rivers were our first channels of communication. But the discovery of steam and the invention of the steam engine diverted us from these natural lines of communication, and the latter half of the last century witnessed the girdling of our country with the steel bands of railroads, which usurped the functions of the water routes and became the chief carriers of our commerce.

Time has taught us that economy in transportation is one of the essentials of profitable commerce. As soon as we understood this we began to awaken to the importance of our water routes, with the result that there was brought home to us with increasing force the necessity of using, as did our fathers, those facilities for communication which nature has so abundantly provided. We began to realize, as we failed to understand many years before, that the cheapest and most effective means of communication is by the network of water routes which nature has provided. With the growth of this knowledge we began the improvement of our rivers and harbors, and we have been steadily building up a splendid means of internal communication that will afford us routes of interior traffic of the most economical character.

MARYLAND'S INTEREST.

The State in which is located the district I have the honor to represent is particularly interested in our waterways, for in the lap of Maryland lies the magnificent Chesapeake and those tributary waters which add to its splendor. With this arm of the sea before us, alive with the ships of all nations, we are not wanting in an object lesson of the extent to which the waterways of our country are the highways of commerce. To us is probably brought home more forcibly than to people situated in the interior of the country the realization that a nation's commerce is one of its great pillars of civilization, increasing and diffusing knowledge as it promotes the exchange of the products of the people of one land for those of another.

The city of Baltimore has spent many millions of dollars since the great fire of 1904 in building docks and piers for the accommodation of vessels entering that port, but in the work so far done it has merely "scratched the surface." There are yet miles of water front adjacent to and opposite the city along the Patapsco River, all of which can and will be improved by docks and piers, which will have abundant railroad facilities. With the utilization of this water front we will be enabled to expand our shipping facilities indefinitely and to accommodate any number of vessels coming into the port.

INCREASING BUSINESS OF OUR COAST PORTS.

Take it within my own lifetime—a space of 46 years—and note our country's development within that brief period. In 1870 our population was 63,750,810, and we had 52,922 miles of railroad track in the country. To-day our railroad mileage has increased (according to the last statistical abstract of the United States) to 244,179 miles, and our population is now approximately 100,000,000. In 1870 the exports of the United

States amounted to $392,771,768, and its imports $435,958,408. In 1912 our exports had increased to $2,204,322,409, and our imports to $1,635,264,934. It will be seen from these figures that coincident with our increase in population came an increase in our trade with foreign nations; that to meet the increasing necessities of this trade we must improve our gateways of commerce and make them capable of the most efficient service. All of that stupendous volume of imports and exports which flow to or from the various sections of our country must pass through the harbors of our seaboard cities. If you will consider the number of seaboard cities with good harbors you will find they are not in excess of what is required when you contemplate the traffic passing through them and the immense population which they serve.

We should bear in mind that the thousands of miles of railroad track over which a substantial portion of our internal commerce is carried, are not alone highways for the transportation of goods of domestic origin, but are the arteries by which goods shipped abroad, or entering our country from abroad, are taken from or distributed to the people of the several States. Every extension of our railroads invariably opens a new field for commerce and increases the amount of foreign goods brought into the country. Every increase in the consumption of imports is followed by increased imports, which result in an added burden upon our gateways of commerce. Unless we improved these gateways to meet the enlarged demands upon them, we should soon find our ports of entry overburdened through lack of facilities. In the face of such a situation the most vigorous opponent of these appropriations for river and harbor improvements can not fail to be impressed with the economic value of this work to facilitate and make better our channels of commerce.

THE PENDING BILL.

Maryland had but a few items in this bill, but the few she had, which will be eliminated by the Senate amendment, are of vast interest to my city and State. The item of $123,000 for the widening and deepening of Curtis Bay Channel at Baltimore is of much importance to us. The shipping from Curtis Bay aggregates a large sum, but the channel is too narrow and shallow for the larger boats to enter and take on full cargoes. To have deepened it to 35 feet would have been a benefit not only to the city and State, but to the Government as well, because the large Government colliers which come for coal for the warships and naval stations are unable to load to their full capacity. Had this channel been deepened, the Baltimore & Ohio Railroad, which has a very large pier in that harbor, would have constructed another pier costing not less than a million dollars. They are in need of the pier, but it would be useless to them without the deeper channel provided in those sections of this bill which have been eliminated.

Other items in which we were particularly interested were those for the survey of Baltimore Harbor and its approaches and for the West Branch of the Patapsco River to Elkridge Landing. At this time, when so much money is being expended by the city of Baltimore upon many improvements, it would have been a splendid thing to have laid down by survey the harbor of the city and the approaches thereto, so that its needs for the years to come might have been definitely determined.

Our city requires a wider and deeper channel, and its commerce will greatly increase when such a channel is secured. To have surveyed and laid out this future work would have been of inestimable benefit to our port and to those sections of our country whose shipping use our port.

In originally passing this bill the House was only living up to the pledges in the platform adopted by the Democratic Party at its Baltimore convention in 1912. In that platform we find the following:

We favor the adoption of a liberal and comprehensive plan for the development and improvement of our inland waterways, with economy and efficiency, so as to permit their navigation by vessels of standard draft.

When the Senate amended this bill they limited the work which the framers of that platform had in mind when they drafted that section. Of course, we must not overlook that when this statement was adopted in 1912 no one dreamed that within two years' time we should be witnessing a titanic European war. The wisdom of economy at this time makes it necessary that we should exercise more than usual care in committing ourselves to expenditures.

For this reason I do not believe that the people of the United States will criticize us for not having brought out a larger appropriation for rivers and harbors.

A FAITH WELL KEPT.

I believe the great majority of the voters in this country have implicit faith in the Democratic majority in this House. This faith is not without its justification, for if ever a party lived true to its pledges it has been the party whose present head is now the illustrious occupant of the White House. If there be truth in the saying that "By their fruits ye shall know them," then Democracy need entertain no fear of its standing before the electorate of this country.

The platform adopted by the Democratic Party assembled in national convention in Baltimore from June 25 to July 3, 1912, contained 20 positive declarations of attitude entailing legislative action. These declarations referred to—

1. Tariff reductions.
2. Antitrust laws.
3. Income tax and popular election of Senators.
4. Campaign contributions.
5. Term of President.
6. Regulation of railroads.
7. Waterways.
8. Post roads.
9. Rights of labor.
10. Conservation.
11. Merchant marine.
12. Pure food and public health.
13. Civil service.
14. Law reform.
15. The Philippines.
16. Alaska.
17. Russian treaty.
18. Parcel post and rural delivery.
19. Panama Exposition.
20. Pensions.

For instance, upon tariff reform the Democratic platform said:

We favor the immediate downward revision of the existing high and in many cases prohibitive tariff duties, insisting that material reductions be speedily made upon the necessaries of life. Articles entering into competition with trust-controlled products and articles of American manufacture which are sold abroad more cheaply than at home should be put upon the free list.

This pledge to the people was carried into immediate effect, for on May 8, 1913, the Underwood Tariff Act passed the House by a vote of 281 to 139, and on September 9, 1913, the same measure passed the Senate by a vote of 44 to 37. So truthfully in accord with our promises did we put them into execution that Senator ROBERT LA FOLLETTE, a Progressive Republican, who voted for the Underwood bill, said in his magazine:

This administration is making a record for specific performance. Whatever faults there may be in the new tariff bill, * * * the tariff has been revised downward.

Upon the subject of trusts our platform declared:

We favor the declaration by law of the conditions upon which corporations shall be permitted to engage in interstate trade, including, among others, the prevention of holding companies, of interlocking directorates, of stock watering, of discrimination in price, and the control by any one corporation of so large a proportion of any industry as to make it a menace to competitive conditions.

On June 5, 1914, the House by a vote of 207 to 54 passed the Clayton antitrust bill, carrying into effect this promise to the people; and on the same day the House put through the Trade Commission bill by acclamation, which measure also passed the Senate the same day.

In the Democratic platform of 1912 we read:

We congratulate the country upon the triumph of two important reforms demanded in the last national platform, namely, the amendment of the Federal Constitution authorizing an income tax and the amendment providing for the popular election of Senators; and we call upon the people of all the States to rally to the support of the pending propositions and secure their ratification.

Since this statement was uttered we have had the pleasure of witnessing the popular election of United States Senators and the imposition of a tax for revenue purposes placed fairly and equitably upon the incomes of those upon whom such a tax will bear with the least hardship.

Upon the subject of banking legislation the Democratic platform affirmed:

We oppose the so-called Aldrich bill or the establishment of a central bank, and we believe the people of the country will be largely freed from panics and consequent unemployment and business depression by such a systematic revision of our banking laws as will render temporary relief in localities where such relief is needed, with protection from control or dominion by what is known as the Money Trust.

On September 18, 1913, by a vote of 287 to 85, the House of Representatives passed the Federal reserve act. This measure the New York Tribune, a Republican paper, speaks of in the following complimentary terms:

(It) * * * is a charter of new freedom for the business world, since it strikes off the ancient shackles of an outgrown and ill-conceived banking system.

Upon the subject of rural credits the Democratic platform stated:

We recommend that an investigation of agricultural credit societies in foreign countries be made, so that it may be ascertained whether a

system of rural credits may be devised suitable to conditions in the United States; and we also favor legislation permitting national banks to loan a reasonable proportion of their funds on real estate security.

That promise has been carried out in full. Not only has a commission proceeded abroad and investigated the subject in European countries, but the House Committee on Banking and Currency has held a number of hearings for the purpose of developing every source of reliable information to be obtained in this country on the subject. That a bill extending to the agricultural resident the same generous treatment in matters of finance now enjoyed by his city brother will be brought before the House for consideration at an early date is not to be doubted.

In the Democratic platform will be found the following statement relative to vocational education and agricultural teaching:

We recognize the value of vocational education and urge Federal appropriations for such training and extension teaching in agriculture in cooperation with the several States.

The bills for vocational education are now pending before the Appropriation Committees of the Senate and the House, where hearings have been in progress on the same.

On January 19, 1914, the House passed the Lever agricultural extension act, and on February 7, 1914, the same measure passed the Senate by acclamation.

I could continue through this entire list and show that of these 20 pledges to the people the Democratic Party has taken conclusive action in the redemption of 16, and action on the other 4, namely, those relating to campaign contributions, the term of the President, law reform, and the Philippines, are now under consideration. For instance, the measure relating to campaign contributions has passed the House and is now before the Senate, while that of law reform, being the codification bill, is under consideration in the House, as is also the bill relating to the Philippines. These four subjects are of less importance to the people of the United States than the 16 upon which positive action has been taken, and I hope you will find before the present Congress finally adjourns that every subject upon which we declared ourselves in the Baltimore convention will have been acted upon in accordance with our pledges.

The best indorsement of our action and evidence that it has merited the approval of the great majority of our people is shown by the vote recorded for these measures. Some passed by acclamation—by the viva voce votes of Members of Congress—without a single objection or protest. Others were supported by Members representing the Bull Moose or Republican Parties, and there is hardly a measure but which has received the support of Members of other parties as well as our own.

This enduring record of achievement, of promises to the people faithfully kept, is one of which every American may be justly proud.

In Defense of the Right to Trial by Jury—Ex Parte Milligan.

EXTENSION OF REMARKS
OF
HON. WILLIAM GORDON,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, October 6, 1914.

Mr. GORDON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a speech of Jeremiah S. Black.

The speech is as follows:

IN DEFENSE OF THE RIGHT TO TRIAL BY JURY—EX PARTE MILLIGAN.

SUPREME COURT OF THE UNITED STATES.

This defense of the right to trial by jury is a marvelous display of Judge Black's extraordinary power and ability as a lawyer, and the enduring importance of the subject will render it interesting as long as the individual liberty of the citizen shall be preserved as part of the framework of human government. It was delivered during a period of great political excitement, before the passions and prejudices stirred up by the greatest civil war in history had been allayed. It affected the destiny of one whose crimes were aimed at the destruction of the Government itself, and the public desire to see the sentence of the commission executed was very general. Since the anger and excitement of the times have passed away, and the great questions involved in this case present themselves in their true aspect and importance, the argument of Judge Black becomes conspicuous as a defense of the dearest rights of the citizen, and stands like a monument to which the eyes of mankind will turn in the hour when their rights are assailed. It will be admired by the student as a comprehensive exposition of the fundamental principles upon which the law of civil liberty depends, and the causes which led to their perfection and adoption under our system. The subject loses the dry, tedious detail of a legal argument, and becomes animated with the spirit and genius of the speaker, while presenting a review of the struggle between freedom and arbitrary power which the world has witnessed for centuries. It will be considered precious by persons in every walk of life, for it defines in a masterly manner the natural rights guaranteed to each individual by the organic law, and its importance in this respect clothes it with the heritage of immortality—Great Speeches by Great Lawyers, Baker, Voorhis & Co.

May it please your honors:

I am not afraid that you will underrate the importance of this case. It concerns the rights of the whole people. Such questions have generally been settled by arms. But since the beginning of the world no battle has ever been lost or won upon which the liberties of a nation were so distinctly staked as they are on the result of this argument. The pen that writes the judgment of the court will be mightier for good or for evil than any sword that ever was wielded by mortal arm.

As might be expected from the nature of the subject, it has been a good deal discussed elsewhere, in legislative bodies, in public assemblies, and in the newspaper press of the country. But there it has been mingled with interests and feelings not very friendly to a correct conclusion. Here we are in a higher atmosphere, where no passion can disturb the judgment or shake the even balance in which the scales of reason are held. Here it is purely a judicial question; and I can speak for my colleagues as well as myself when I say that we have no thought to suggest which we do not suppose to be a fair element in the strictly legal judgment which you are required to make up.

In performing the duty assigned to me in the case, I shall necessarily refer to the mere rudiments of constitutional law, to the most commonplace topics of history, and to those plain rules of justice and right which pervade all our institutions. I beg your honors to believe that this is not done because I think that the court, or any member of it, is less familiar with these things than I am, or less sensible of their value; but simply and only because, according to my view of the subject, there is absolutely no other way of dealing with it. If the fundamental principles of American liberty are attacked, and we are driven behind the inner walls of the Constitution to defend them, we can repel the assault only with those same old weapons which our ancestors used a hundred years ago. You must not think the worse of our armor because it happens to be old-fashioned and looks a little rusty from long disuse.

The case before you presents but a single point, and that an exceedingly plain one. It is not encumbered with any of those vexed questions that might be expected to arise out of a great war. You are not called upon to decide what kind of a rule a military commander may impose upon the inhabitants of a hostile country which he occupies as a conqueror, or what punishment he may inflict upon the soldiers of his own army or the followers of his camp; or yet how he may deal with civilians in a beleaguered city or other place in a state of actual siege, which he is required to defend against a public enemy. This contest covers no such ground as that. The men whose acts we complain of erected themselves into a tribunal for the trial and punishment of citizens who were connected in no way whatever with the Army or Navy. And this they did in the midst of a community whose social and legal organization had never been disturbed by any war or insurrection, where the courts were wide open, where judicial process was executed every day without interruption, and where all the civil authorities, both State and national, were in full exercise of their functions.

My clients were dragged before this strange tribunal, and after a proceeding, which it would be mere mockery to call a trial, they were ordered to be hung. The charge against them was put into writing and is found on this record, but you will not be able to decipher its meaning. The relators were not accused of treason; for no act is imputed to them which, if true, would come within the definition of that crime. It was not conspiracy under the act of 1861, for all concerned in this business must have known that conspiracy was not a capital offense. If the commissioners were able to read English they could not help but see that it was made punishable, even by fine and imprisonment, only upon condition that the parties should first be convicted before a circuit or district court of the United States. The judge advocate must have meant to charge them with some offense unknown to the laws, which he chose to make capital by legislation of his own, and the commissioners were so profoundly ignorant as to think that the legal innocence of the parties made no difference in the case. I do not say, what Sir James Mackintosh said of a similar proceeding, that the trial was a mere conspiracy to commit willful murder upon three innocent men. The commissioners are not on trial; they are absent and undefended; and they are entitled to the benefit of that charity which presumes them to be wholly unacquainted with the first principles of natural justice, and quite unable to comprehend either the law or the facts of a criminal cause.

Keeping the character of the charges in mind, let us come at once to the simple question upon which the court below divided in opinion: Had the commissioners jurisdiction—were they invested with legal authority to try the relators and put them to death for the offense of which they were accused? We answer "No"; and therefore the whole proceeding, from beginning to end, was utterly null and void. On the other hand, it is absolutely necessary for those who oppose us to assert, and they do assert, that the commissioners had complete legal jurisdiction, both of the subject matter and of the parties, so that their judgment upon the law and the facts is absolutely conclusive and binding, not subject to correction, nor open to inquiry in any court whatever. Of these two opposite views you must adopt one or the other, for there is no middle ground on which you can possibly stand.

I need not say (for it is the law of the horn-books) that where a court, whatever may be its power in other respects, presumes to try a man for an offense of which it has no right to take judicial cognizance, all its proceedings in that case are null and void. If the party is acquitted he can not plead the acquittal afterwards in bar of another prosecution; if he is found guilty and sentenced he is entitled to be relieved from the punishment. If a circuit court of the United States should undertake to try a party for an offense clearly within the exclusive jurisdiction of the State courts the judgment could have no effect. If a county court in the interior of a State should arrest an officer of the Federal Navy, try him, and order him to be hung for some offense against the law of nations, committed upon the high seas or in a foreign port, nobody would treat such a judgment otherwise than with mere derision. The Federal courts have jurisdiction to try offenses against the laws of the United States, and the authority of the State courts is confined to the punishment of acts which are made penal by State laws. It follows that where the accusation does not amount to an offense against the law of either the State or Federal Government, no court can have jurisdiction to try it. Suppose, for example, that the judges of this court should organize themselves into a tribunal to try a man for witchcraft, or heresy, or treason against the Confederate States of America, would anybody say that your judgment had the least validity?

I care not, therefore, whether the relators were intended to be charged with treason or conspiracy or with some offense of which the law takes no notice. Either or any way, the men who undertook to try them had no jurisdiction of the subject matter.

Nor had they jurisdiction of the parties. It is not pretended that this was a case of impeachment, or a case arising in the land or naval forces. It is either nothing at all or else it is a simple crime against the United States, committed by private individuals not in the public service, civil or military. Persons standing in that relation to the Government are answerable for the offenses which they may commit only to the civil courts of the country. So says the Constitution, as we read it, and the act of Congress of March 3, 1863, which was passed with express reference to persons precisely in the situation of these men, declare that they shall be delivered up for trial to the proper civil authorities.

There being no jurisdiction of the subject matter or of the parties, you are bound to relieve the petitioners. It is as much the duty of a judge to protect the innocent as it is to punish the guilty. Suppose that the secretary of some department should take it into his head to establish an ecclesiastical tribunal here in the city of Washington, composed of clergymen "organized to convict" everybody who prays after a fashion inconsistent with the supposed safety of the State. If he would select the members with a proper regard to the *odium theologicum*, I think I could insure him a commission that would hang every man and woman who might be brought before it. But would you, the judges of the land, stand by and see their sentences executed? No; you would interpose your writ of prohibition, your habeas corpus, or any other process that might be at your command, between them and their victims. And you would do that for precisely the reason which requires your intervention here: Because religious errors, like political errors, are not crimes which anybody in this country has jurisdiction to punish, and because ecclesiastical commissions, like military commissions, are not among the judicial institutions of this people. Our fathers long ago cast them both aside among the rubbish of the Dark Ages; and they intended that we, their children, should know them only that we might blush and shudder at the shameless injustice and the brutal cruelties which they were allowed to perpetrate in other times and other countries.

But our friends on the other side are not at all impressed with these views. Their brief corresponds exactly with the doctrines propounded by the Attorney General, in a very elaborate official paper which he published last July, upon this same subject. He then avowed it to be his settled and deliberate opinion that the military might "*take and kill, try and execute*"—I use his own words—persons who had no sort of connection with the Army or Navy. And, though this be done in the face of the open courts, the judicial authority, according to him, are utterly powerless to prevent the slaughter which may thus be carried on. That is the thesis which the Attorney General and his assistant counselors are to maintain this day, if they can maintain it, with all the power of their artful eloquence.

We, on the other hand, submit that a person not in the military or naval service can not be punished at all until he has had a fair, open, public trial before an impartial jury, in an ordained and established court, to which the jurisdiction has been given by law to try him for that specific offense. There is our proposition. Between the ground we take and the ground they occupy there is and there can be no compromise. It is one way or the other.

Our proposition ought to be received as true without any argument to support it, because if that, or something precisely equivalent to it, be not a part of our law, this is not, what we have always supposed it to be, a free country. Nevertheless, I take upon myself the burden of showing affirmatively not only that it is true, but that it is immovably fixed in the very framework of the Government, so that it is utterly impossible to detach it without destroying the whole political structure under which we live. By removing it you destroy the life of this Nation as completely as you would destroy the life of an individual by cutting the heart out of his body. I proceed to the proof.

In the first place, the self-evident truth will not be denied that the trial and punishment of an offender against the Government is the exercise of judicial authority. That is a kind of authority which would be lost by being diffused among the masses of the people. A judge would be no judge if everybody else were a judge as well as he. Therefore in every society, however rude or however perfect its organization, the judicial authority is always committed to the hands of particular persons, who are trusted to use it wisely and well; and their authority is exclusive; they can not share it with others to whom it has not been committed. Where, then, is the judicial power in this country? Who are the depositaries of it here? The Federal Constitution answers that question in very plain words, by declaring that "*the judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as Congress may from time to time ordain and establish.*" Congress *has*, from time to time, ordained and established certain inferior courts; and in them, together with the one Supreme Court to which they are subordinate, is vested all the judicial power, properly so called, which the United States can lawfully exercise. That was the compact made with the General Government at the time it was created. The States and the people agreed to bestow upon that Government a certain portion of the judicial power, which otherwise would have remained in their own hands, but gave it on a solemn trust, and coupled the grant of it with this express condition that it should never be used in any way but one; that is, by means of ordained and established courts. Any person, therefore, who undertakes to exercise judicial power in any other way not only violates the law of the land, but he treacherously tramples upon the most important part of that sacred covenant which holds these States together.

May it please your honors, you know, and I know, and everybody else knows, that it was the intention of the men who founded this Republic to put the life, liberty, and property of every person in it under the protection of a regular and permanent judiciary, separate, apart, distinct from all other branches of the Government, whose sole and exclusive business it should be to distribute justice among the people according to the wants of each individual. It was to consist of courts, always open to the complaint of the injured, and always ready to hear criminal accusations when founded upon probable cause; surrounded with all the machinery necessary for the investigation of truth, and clothed with sufficient power to carry their decrees into execution. In these courts it was expected that judges would sit who would be upright, honest, and sober men, learned in the laws of their country, and lovers of justice from the habitual practice of that virtue; independent, because their salaries could not be reduced; and free from party passion, because their tenure of office was for life. Although this would place them above the clamors of the mere mob and beyond the reach of Executive influence, it was not intended that they should be wholly irresponsible. For any willful or corrupt violation of their duty they are liable to be impeached; and they can not escape the control of an enlightened public opinion,

for they must sit with open doors, listen to full discussion, and give satisfactory reasons for the judgments they pronounce. In ordinary tranquil times the citizen might feel himself safe under a judicial system so organized.

But our wise forefathers knew that tranquillity was not to be always anticipated in a republic; the spirit of a free people is often turbulent. They expected that strife would rise between classes and sections, and even civil war might come, and they supposed that in such times judges themselves might not be safely trusted in criminal cases, especially in prosecutions for political offenses, where the whole power of the Executive is arrayed against the accused party. All history proves that public officers of any Government, when they are engaged in a severe struggle to retain their places, become bitter and ferocious, and hate those who oppose them, even in the most legitimate way, with a rancor which they never exhibit toward actual crime. This kind of malignity vents itself in prosecutions for political offenses, sedition, conspiracy, libel, and treason, and the charges are generally founded upon the information of hireling spies and common delators, who make merchandise of their oaths and trade in the blood of their fellow men. During the civil commotions in England, which lasted from the beginning of the reign of Charles I to the revolution of 1688, the best men and the purest patriots that ever lived fell by the hand of the public executioner. Judges were made the instruments for inflicting the most merciless sentences on men the latchet of whose shoes the ministers that prosecuted them were not worthy to stoop down and unloose. Let me say here that nothing has occurred in the history of this country to justify the doubt of judicial integrity which our forefathers seem to have felt. On the contrary, the highest compliment that has ever been paid to the American bench is embodied in this simple fact, that if the executive officers of this Government have ever desired to take away the life or the liberty of a citizen contrary to law they have not come into the courts to get it done; they have gone outside of the courts, and stepped over the Constitution, and created their own tribunals, composed of men whose gross ignorance and supple subservience could always be relied on for those base uses to which no judge would ever lend himself. But the framers of the Constitution could act only upon the experience of that country whose history they knew most about, and there they saw the brutal ferocity of Jeffreys and Scroggs, the timidity of Guilford, and the base venality of such men as Saunders and Wright. It seemed necessary, therefore, not only to make the judiciary as perfect as possible, but to give the citizen yet another shield against the wrath and malice of his Government. To that end they could think of no better provision than a public trial before an impartial jury.

I do not assert that the jury trial is an infallible mode of ascertaining truth. Like everything human, it has its imperfections. I only say that it is the best protection for innocence and the surest mode of punishing guilt that has yet been discovered. It has borne the test of a longer experience, and borne it better, than any other legal institution that ever existed among men. England owes more of her freedom, her grandeur, and her prosperity to that than to all other causes put together. It has had the approbation not only of those who lived under it, but of great thinkers who looked at it calmly from a distance and judged it impartially; Montesquieu and De Tocqueville speak of it with an admiration as rapturous as Coke and Blackstone. Within the present century the most enlightened States of Continental Europe have transplanted it into their countries, and no people ever adopted it once and were afterwards willing to part with it. It was only in 1830 that an interference with it in Belgium provoked a successful insurrection which permanently divided one kingdom into two. In the same year the revolution of the Barricades gave the right of trial by jury to every Frenchman.

Those colonists of this country who came from the British Islands brought this institution with them, and they regarded it as the most precious part of their inheritance. The immigrants from other places, where trial by jury did not exist, became equally attached to it as soon as they understood what it was. There was no subject upon which all the inhabitants of the country were more perfectly unanimous than they were in their determination to maintain this great right unimpaired. An attempt was made to set it aside and substitute military trials in its place by Lord Dunmore, in Virginia, and Gen. Gage, in Massachusetts, accompanied with the excuse, which has been repeated so often in late days, namely, that rebellion had made it necessary; but it excited intense popular anger, and every colony, from New Hampshire to Georgia, made common cause with the two whose rights had been especially invaded. Subsequently the Continental Congress thundered it into the ear of the world as an unendurable outrage, sufficient to justify universal insurrection against the authority of the Government which had allowed it to be done.

If the men who fought out our revolutionary contest, when they came to frame a government for themselves and their posterity, had failed to insert a provision making the trial by jury perpetual and universal, they would have covered themselves all over with infamy as with a garment, for they would have proved themselves basely recreant to the principles of that very liberty of which they professed to be the special champions. But they were guilty of no such treachery. They not only took care of the trial by jury, but they regulated every step to be taken in a criminal trial. They knew very well that no people could be free under a government which had the power to punish without restraint. Hamilton expressed in the Federalist the universal sentiment of his time when he said that the arbitrary power of conviction and punishment for pretended offenses had been the great engine of despotism in all ages and all countries. The existence of such a power is utterly incompatible with freedom. The difference between a master and his slave consists only in this, that the master holds the lash in his hands and he may use it without legal restraint, while the naked back of the slave is bound to take whatever is laid on it.

But our fathers were not absurd enough to put unlimited power in the hands of the ruler and take away the protection of law from the rights of individuals. It was not thus that they meant "to secure the blessings of liberty to themselves and their posterity." They determined that not one drop of the blood which had been shed on the other side of the Atlantic, during seven centuries of contest with arbitrary power, should sink into the ground, but the fruits of every popular victory should be garnered up in this new Government. Of all the great rights already won they threw not an atom away. They went over *Magna Charta*, the *Petition of Rights*, the *Bill of Rights*, and the rules of the *common law*, and whatever was found there to favor individual liberty they carefully inserted in their own system, improved by clearer expression, strengthened by heavier sanctions, and extended by a more universal application. They put all those provisions into the organic law, so that neither tyranny in the Executive nor party rage in the Legislature could change them without destroying the Government itself.

Look for a moment at the particulars and see how carefully everything connected with the administration of punitive justice is guarded:

1. No *ex post facto* law shall be passed. No man shall be answerable criminally for any act which was not defined and made punishable as a crime by some law in force at the time when the act was done.

2. For an act which is criminal he can not be arrested without a judicial warrant founded on proof of probable cause. He shall not be kidnaped and shut up on the mere report of some base spy, who gathers the materials of a false accusation by crawling into his house and listening at the keyhole of his chamber door.

3. He shall not be compelled to testify against himself. He may be examined before he is committed and tell his own story if he pleases, but the rack shall be put out of sight, and even his conscience shall not be tortured, nor shall his unpublished papers be used against him, as was done most wrongfully in the case of Algernon Sidney.

4. He shall be entitled to a speedy trial; not kept in prison for an indefinite time without the opportunity of vindicating his innocence.

5. He shall be informed of the accusation, its nature, and grounds. The public accuser must put the charge into the form of a legal indictment, so that the party can meet it full in the face.

6. Even to the indictment he need not answer unless a grand jury, after hearing the evidence, shall say upon their oaths that they believe it to be true.

7. Then comes the trial, and it must be before a regular court, of competent jurisdiction, ordained and established for the State and district in which the crime was committed; and this shall not be evaded by a legislative change in the district after the crime is alleged to be done.

8. His guilt or innocence shall be determined by an impartial jury. These English words are to be understood in their English sense, and they mean that the jurors shall be fairly selected by a sworn officer from among the peers of the party, residing within the local jurisdiction of the court. When they are called into the box he can purge the panel of all dis-

honesty, prejudice, personal enmity, and ignorance by a certain number of peremptory challenges, and as many more challenges as he can sustain by showing reasonable cause.

9. The trial shall be public and open, that no underhand advantage may be taken. The party shall be confronted with the witnesses against him, have compulsory process for his own witnesses, and be entitled to the assistance of counsel in his defense.

10. After the evidence is heard and discussed, unless the jury shall, upon their oaths, *unanimously* agree to surrender him up into the hands of the court as a guilty man, not a hair of his head can be touched by way of punishment.

11. After a verdict of guilty he is still protected. No cruel or unusual punishment shall be inflicted nor any punishment at all, except what is annexed by the law to his offense. It can not be doubted for a moment that if a person convicted of an offense not capital were to be hung on the order of a judge, such judge would be guilty of murder as plainly as if he should come down from the bench, tuck up the sleeves of his gown, and let out the prisoner's blood with his own hand.

12. After all is over the law continues to spread its guardianship around him. Whether he is acquitted or condemned, he shall never again be molested for that offense. No man shall be twice put in jeopardy of life or limb for the same cause.

These rules apply to all criminal prosecutions. But, in addition to these, certain special regulations were required for *treason*—the one great political charge under which more innocent men have fallen than any other. A tyrannical government calls everybody a traitor who shows the least unwillingness to be a slave. The party in power never fails, when it can, to stretch the law on that subject by construction, so as to cover its honest and conscientious opponents. In the absence of a constitutional provision it was justly feared that statutes might be passed which would put the lives of the most patriotic citizens at the mercy of the basest minions that skulk about under the pay of the Executive. Therefore a definition of treason was given in the fundamental law, and the legislative authority could not enlarge it to serve the purpose of partisan malice. The nature and amount of evidence required to prove the crime was also prescribed, so that prejudice and enmity might have no share in the conviction. And lastly, the punishment was so limited that the property of the party could not be confiscated and used to reward the agents of his persecutors or strip his family of their subsistence.

If these provisions exist in full force, unchangeable and irrepealable, then we are not hereditary bondsmen. Every citizen may safely pursue his lawful calling in the open day, and at night; if he is conscious of innocence, he may lie down in security and sleep the sound sleep of a freeman.

I say they are in force, and they will remain in force. We have not surrendered them, and we never will. If the worst comes to the worst we will look to the living God for His help, and defend our rights and the rights of our children to the last extremity. Those men who think we can be subjected and abjected to the condition of mere slaves are wholly mistaken. The great race to which we belong has not degenerated so fatally.

But how am I to prove the existence of these rights? I do not propose to do it by a long chain of legal argumentation, nor by the production of numerous books with the leaves dog-eared and the pages marked. If it depended upon judicial precedents, I think I could produce as many as might be necessary. If I claimed this freedom, under any kind of prescription, I could prove a good long possession in ourselves and those under whom we claim it. I might begin with Tacitus and show how the contest arose in the forests of Germany more than 2,000 years ago; how the rough virtues and sound common sense of that people established the right of trial by jury, and thus started on a career which has made their posterity the foremost race that ever lived in all the tide of time. The Saxons carried it to England, and were ever ready to defend it with their blood. It was crushed out by the Danish invasion, and all that they suffered of tyranny and oppression during the period of their subjugation resulted from the want of trial by jury. If that had been conceded to them the reaction would not have taken place which drove back the Danes to their frozen homes in the North. But those ruffian sea kings could not understand that, and the reaction came. Alfred, the greatest of revolutionary heroes and the wisest monarch that ever sat on a throne, made the first use of his power, after the Saxons restored it, to reestablish their ancient laws. He had promised them that he would, and he was true to them, because they had been true to him. But it was not easily done; the courts were opposed to it, for it limited their power—a kind of power that everybody covets—the power to punish without regard to law. He was obliged to hang 44 judges in one year for refusing to give his subjects a trial by jury. When the historian says that he hung them, it is not meant that he put them to death without a trial. He had them impeached before the grand council of the nation, the Wittenagemote, the Parliament of that time. During the subsequent period of Saxon domination no man on English soil was powerful enough to refuse a legal trial to the meanest peasant. If any minister or any king, in war or in peace, had dared to punish a freeman by a tribunal of his own appointment he would have roused the wrath of the whole population; all orders of society would have resisted it; lord and vassal, knight and squire, priest and penitent, bocman and socman, master and thrall, copyholder and villein, would have risen in one mass and burned the offender to death in his castle, or followed him in his flight and torn him to atoms. It was again trampled down by the Norman conquerors, but the evils resulting from the want of it united all classes in the effort which compelled King John to restore it by the Great Charter. Everybody is familiar with the struggles which the English people during many generations made for their rights with the Plantagenets, the Tudors, and the Stuarts, and which ended finally in the revolution of 1688, when the liberties of England were placed upon an impregnable basis by the Bill of Rights.

Many times the attempt was made to stretch the royal authority far enough to justify military trials, but it never had more than temporary success. Five hundred years ago Edward II closed up a great rebellion by taking the life of its leader, the Earl of Lancaster, after trying him before a military court. Eight years later that same king, together with his lords and commons in Parliament assembled, acknowledged with shame and sorrow that the execution of Lancaster was a mere murder, because the courts were open and he might have had a legal trial. Queen Elizabeth, for sundry reasons affecting the safety of the State, ordered that certain offenders not of her army should be tried according to the law martial. But she heard the storm of popular vengeance rising, and, haughty, imperious, self-willed as she was, she yielded the point, for she knew that upon that subject the English people would never consent to be trifled with. Strafford, as lord lieutenant of Ireland, tried the Viscount Stormont before a military commission. When impeached for it he pleaded in vain that Ireland was in a state of insurrection, that Stormont was a traitor, and the army would be undone if it could not defend itself without appealing to the civil courts. The Parliament was deaf; the King himself could not save him; he was condemned to suffer death as a traitor and a murderer. Charles I issued commissions to divers officers for the trial of his enemies according to the course of military law. If rebellion ever was an excuse for such an act he could surely have pleaded it, for there was scarcely a spot in his Kingdom, from sea to sea, where the royal authority was not disputed by somebody. Yet the Parliament demanded in their petition of right, and the King was obliged to concede, that all his commissions were illegal. James II claimed the right to suspend the operation of the penal laws, a power which the courts denied, but the experience of his predecessors taught him that he could not suspend any man's right to a trial. He could easily have convicted the seven bishops of any offense he saw fit to charge them with if he could have selected their judges from among the mercenary creatures to whom he had given commands in his army. But this he dared not do. He was obliged to send the bishops to a jury and endure the mortification of seeing them acquitted. He, too, might have had rebellion for an excuse, if rebellion be an excuse. The conspiracy was already ripe which a few months afterwards made him an exile and an outcast; he had reason to believe that the Prince of Orange was making his preparations on the other side of the channel to invade the Kingdom, where thousands burned to join him; nay, he pronounced the bishops guilty of rebellion by the very act for which he arrested them. He had raised an army to meet the rebellion, and he was on Hounslow Heath, reviewing the troops organized for that purpose, when he heard the great shout of joy that went up from Westminster Hall, was echoed back from Templar Bar, spread down the city and over the Thames, and rose from every vessel on the river—the simultaneous shout of 200,000 men for the triumph of justice and law.

If it were worth the time I might detain you by showing how this subject was treated by the French Court of Cassation, in Geoffroy's case, under the constitution of 1830, when a military judgment was unhesitatingly pronounced to be void, though ordered by the King, after a proclamation declaring Paris in a state of siege. *Fas est ab hoste doceri;* we may lawfully learn something from our enemies—at all events, we should blush at the thought of not being equal on such a subject to the courts of Virginia, Georgia, Mississippi, and Texas, whose

decisions my colleague, Gen. Garfield, has read and commented on.

The truth is that no authority exists anywhere in the world for the doctrine of the Attorney General. No judge or jurist, no statesman or parliamentary orator, on this or the other side of the water, sustains him. Every elementary writer from Coke to Wharton is against him. All military authors who profess to know the duties of their profession admit themselves to be under, not above, the laws. No book can be found in any library to justify the assertion that military tribunals may try a citizen at a place where the courts are open. When I say no book I mean, of course, no book of acknowledged authority. I do not deny that hireling clergymen have often been found to disgrace the pulpit by trying to prove the divine right of kings and other rulers to govern as they please. It is true, also, that court sycophants and party hacks have many times written pamphlets, and perhaps large volumes, to show that those whom they serve should be allowed to work out their bloody will upon the people. No abuse of power is too flagrant to find its defenders among such servile creatures. Those butchers' dogs, that feed upon garbage and fatten upon the offal of the shambles, are always ready to bark at whatever interferes with the trade of their master.

But this case does not depend on authority. It is rather a question of fact than of law.

I prove my right to a trial by jury, just as I would prove my title to an estate if I held in my hand a solemn deed conveying it to me, coupled with undeniable evidence of long and undisturbed possession under and according to the deed. There is the charter by which we claim to hold it. It is called the Constitution of the United States. It is signed by the sacred name of George Washington and by 39 other names, only less illustrious than his. They represented every independent State then upon this continent, and each State afterwards ratified their work by a separate convention of its own people. Every State that subsequently came in acknowledged that this was the great standard by which their rights were to be measured. Every man that has ever held office in this country, from that time to this, has taken an oath that he would support and sustain it through good report and through evil. The Attorney General himself became a party to the instrument when he laid his hand upon the Gospel of God and solemnly swore that he would give to me and every other citizen the full benefit of all it contains.

What does it contain? This, among other things:

"The trial of all crimes except in cases of impeachment shall be by jury."

Again: "No person shall be held to answer for a capital or otherwise infamous crime unless on a presentment or indictment of a grand jury, except in cases arising in the land and naval forces, or in the militia when in actual service in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb, nor be compelled in any criminal case to be a witness against himself, nor be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation."

This is not all; another article declares that "in all criminal prosecutions the accused shall enjoy the right to a speedy and public trial, by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law; and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for the witnesses in his favor; and to have the assistance of counsel for his defense."

Is there any ambiguity there? If that does not signify that a jury trial shall be the exclusive and only means of ascertaining guilt in criminal cases, then I demand to know what words or what collocation of words in the English language would have that effect. Does this mean that a fair, open, speedy, public trial by an impartial jury shall be given only to those persons against whom no special grudge is felt by the Attorney General, or the Judge Advocate, or the head of a department? Shall this inestimable privilege be extended only to men whom the administration does not care to convict? Is it confined to vulgar criminals, who commit ordinary crimes against society, and shall it be denied to men who are accused of such offenses as those for which Sidney and Russell were beheaded, and Alice Lisle was hung, and Elizabeth Gaunt was burned alive, and John Bunyan was imprisoned 14 years, and Baxter was whipped at the cart's tail, and Prynn had his ears cut off? No; the words of the Constitution are all-embracing—

As broad and general as the casing air.

The trial of all crimes shall be by jury. All persons accused shall enjoy that privilege—and no person shall be held to answer in any other way.

That would be sufficient without more. But there is another consideration which gives it tenfold power. It is a universal rule of construction, that general words in any instrument, though they may be weakened by enumeration, are always strengthened by exceptions. Here is no attempt to enumerate the particular cases in which men charged with criminal offenses shall be entitled to a jury trial. It is simply declared that all shall have it. But that is coupled with a statement of two specific exceptions—cases of impeachment and cases arising in the land or naval forces. These exceptions strengthen the application of the general rule to all other cases. Where the lawgiver himself has declared when and in what circumstances you may depart from the general rule, you shall not presume to leave that onward path for other reasons and make different exceptions. To exceptions the maxim is always applicable, that "*expressio unius exclusio est alterius.*"

But we are answered that the judgment under consideration was pronounced in time of war, and it is therefore, at least morally, excusable. There may or there may not be something in that. I admit that the merits or demerits of any particular act, whether it involve a violation of the Constitution or not, depend upon the motives that prompted it, the time, the occasion, and all the attending circumstances. When the people of this country come to decide upon the acts of their rulers they will take all these things into consideration. But that presents the political aspect of the case, with which, I trust, we have nothing to do here. I decline to discuss it. I would only say, in order to prevent misapprehension, that I think it is precisely in a time of war and civil commotion that we should double the guards upon the Constitution. If the sanitary regulations which defend the health of a city are ever to be relaxed it ought certainly not to be done when pestilence is abroad. When the Mississippi shrinks within its natural channel and creeps lazily along the bottom the inhabitants of the adjoining shore have no need of a dike to save them from inundation. But when the booming flood comes down from above and swells into a volume which rises high above the plain on either side, then a crevasse in the levee becomes a most serious thing. So in peaceable and quiet times our legal rights are in little danger of being overborne; but when the wave of arbitrary power lashes itself into violence and rage and goes surging up against the barriers which were made to confine it, then we need the whole strength of an unbroken Constitution to save us from destruction. But this is a question which properly belongs to the jurisdiction of the stump and the newspaper.

There is another *quasi*-political argument—necessity. If the law was violated because it could not be obeyed, that might be an excuse. But no absolute compulsion is pretended here. These commissioners acted, at most, under what they regarded as a moral necessity. The choice was left them to obey the law or disobey it. The disobedience was only necessary as means to an end which they thought desirable; and now they assert that though these means are unlawful and wrong, they are made right, because without them the object could not be accomplished; in other words, the end justifies the means. There you have a rule of conduct denounced by all law, human and divine, as being pernicious in policy and false in morals. See how it applies to this case. Here were three men whom it was desirable to remove out of this world, but there was no proof on which any court would take their lives; therefore it was necessary, and being necessary it was right and proper, to create an illegal tribunal which would put them to death without proof. By the same mode of reasoning you can prove it equally right to poison them in their food, or stab them in their sleep.

Nothing that the worst men ever propounded has produced so much oppression, misgovernment, and suffering as this pretense of State necessity. A great authority calls it "the tyrant's devilish plea," and the common honesty of all mankind has branded it with everlasting infamy.

Of course, it is mere absurdity to say that these relators were *necessarily* deprived of their right to a fair and legal trial, for the record shows that a court of competent jurisdiction was sitting at the very time and in the same town, where justice would have been done without sale, denial, or delay. But concede, for the argument's sake, that a trial by jury was wholly impossible; admit that there was an absolute, overwhelming, imperious necessity operating so as literally to compel every act which the commissioners did; would that give their sentence of death the validity and force of a legal

judgment pronounced by an ordained and established court? The question answers itself. This trial was a violation of law, and no necessity could be more than a mere *excuse* for those who committed it. If the commissioners were on trial for murder or conspiracy to murder they might plead necessity if the fact were true, just as they would plead insanity or anything else to show that their guilt was not willful. But we are now considering the legal effect of their decision, and that depends on their legal authority to make it. They had no such authority; they usurped a jurisdiction which the law not only did not give them but expressly forbade them to exercise, and it follows that their act is void, whatever may have been the real or supposed excuse for it.

If these commissioners, instead of aiming at the life and liberty of the relators, had attempted to deprive them of their property by a sentence of confiscation, would any court in Christendom declare that such a sentence divested the title? Or would a person claiming under the sentence make his right any better by showing that the illegal assumption of jurisdiction was accompanied by some excuse which might save the commissioners from a criminal prosecution?

Let me illustrate still further. Suppose you, the judges of this court, to be surrounded in the hall where you are sitting by a body of armed insurgents and compelled by main force to pronounce sentence of death upon the President of the United States for some act of his upon which you have no legal authority to adjudicate. There would be a valid sentence if necessity alone could create jurisdiction. But could the President be legally executed under it? No; the compulsion under which you acted would be a good defense for you against an impeachment or an indictment for murder, but it would add nothing to the validity of a judgment which the law forbade you to give.

That a necessity for violating the law is nothing more than a mere excuse to the perpetrator and does not in any legal sense change the quality of the act itself in its operation upon other parties is a proposition too plain on original principles to need the aid of authority. I do not see how any man of common sense is to stand up and dispute it. But there is decisive authority upon the point. In 1815, at New Orleans, Gen. Jackson took upon himself the command of every person in the city, suspended the functions of all the civil authorities, and made his own will for a time the only rule of conduct. It was believed to be absolutely necessary. Judges, officers of the city corporation, and members of the State legislature insisted on it as the only way to save the "booty and beauty" of the place from the unspeakable outrages committed at Badajos and St. Sebastian by the very same troops then marching to the attack. Jackson used the power thus taken by him moderately, sparingly, benignly, and only for the purpose of preventing mutiny in his camp. A single mutineer was restrained by a short confinement and another was sent four miles up the river. But, after he had saved the city and the danger was all over, he stood before the court to be tried by the law; his conduct was decided to be illegal by the same judge who had declared it to be necessary, and he paid the penalty without a murmur. The Supreme Court of Louisiana, in Johnson against Duncan, decided that everything done during the siege in pursuance of martial rule but in conflict with the law of the land was void and of no effect, without reference to the circumstances which made it necessary. Long afterwards the fine imposed upon Jackson was refunded, because his friends, while they admitted him to have violated the law, insisted that the necessity which drove him to it ought to have saved him from the punishment due only to a willful offender.

The learned counsel on the other side will not assert that there was war at Indianapolis in 1864, for they have read "Coke's Institute," and Judge Grier's opinion in the *prize cases*, and of course they know it to be a settled rule that war can not be said to exist where the civil courts are open. They will not set up the absurd plea of necessity, for they are well aware that it would not be true in point of fact. They will hardly take the ground that any kind of necessity could give legal validity to that which the law forbids.

This, therefore, must be their position: That although there was no war at the place where this commission sat, and no actual necessity for it, yet if there was a war anywhere else to which the United States were a party the technical effect of such war was to take the jurisdiction away from the civil courts and transfer it to Army officers.

Gen. BUTLER. We do not take that position.

Mr. BLACK. Then they can take no ground at all, for nothing else is left. I do not wonder to see them recoil from their own doctrine when its nakedness is held up to their eyes. But they must stand upon that or give up their cause. They may not state their proposition precisely as I state it; that is too plain a way of putting it. But in substance it is their doctrine—has been the doctrine of the Attorney General's Office ever since the advent of the present incumbent—and is the doctrine of their brief, printed and filed in this case. What else can they say? They will admit that the Constitution is not altogether without a meaning; that at a time of universal peace it imposes some kind of obligation upon those who swear to support it. If no war existed they would not deny the exclusive jurisdiction of the civil courts in criminal cases. How, then, did the military get jurisdiction in Indiana?

All men who hold the Attorney General's opinion to be true, answer the question I have put by saying that military jurisdiction comes from the mere existence of war, and it comes in Indiana only as the legal result of a war which is going on in Mississippi, Tennessee, or South Carolina. The Constitution is repealed, or its operation suspended, in one State because there is war in another. The courts are open, the organization of society is intact, the judges are on the bench and their process is not impeded, but their jurisdiction is gone. Why? Because, say our opponents, war exists, and the silent, legal, technical operation of that fact is to deprive all American citizens of their right to a fair trial.

That class of jurists and statesmen, who hold that the trial by jury is lost to the citizen during the existence of war, carry out their doctrine theoretically and practically to its ultimate consequences. The right of trial by jury being gone, all other rights are gone with it; therefore a man may be arrested without an accusation and kept in prison during the pleasure of his captors, his papers may be searched without a warrant, his property may be confiscated behind his back, and he has no earthly means of redress. Nay; an attempt to get a just remedy is construed as a new crime. He dare not even complain, for the right of free speech is gone with the rest of his rights. If you sanction that doctrine, what is to be the consequence? I do not speak of what is past and gone; but in case of a future war what results will follow from your decision indorsing the Attorney General's views? They are very obvious. At the instant when the war begins our whole system of legal government will tumble into ruin, and if we are not all robbed, and kidnaped, and hanged, and drawn, and quartered we will owe our immunity, not to the Constitution and laws, but to the mere mercy or policy of those persons who may then happen to control the organized physical force of the country.

This certainly puts us in a most precarious condition; we must have war about half the time, do what we may to avoid it. The President or Congress can wantonly provoke a war whenever it suits the purpose of either to do so, and they can keep it going as long as they please, even after the actual conflict of arms is over. When Peace woos them they can ignore her existence, and thus they can make war a chronic condition of the country and the slavery of the people perpetual. Nay, we are at the mercy of any foreign potentate who may envy us the possession of those liberties which we boast of so much; he can shatter our Constitution without striking a single blow or bringing a gun to bear upon us. A simple declaration of hostilities is more terrible to us than an army with banners.

To me this seems the wildest delusion that ever took possession of a human brain. If there be one principle of political ethics more universally acknowledged than another it is that war, and especially civil war, can be justified only when it is undertaken to vindicate and uphold the legal and constitutional rights of the people, not to trample them down. He who carries on a system of wholesale slaughter for any other purpose must stand without excuse before God or man. In a time of war more than at any other time public liberty is in the hands of the public officers. And she is there in double trust—first, as they are citizens, and therefore bound to defend her by the common obligation of all citizens; and, next, as they are her special guardians—

> Who should against her murderers shut the door,
> Not bear the knife themselves.

The opposing argument, when turned into plain English, means this, and this only: That when the Constitution is attacked upon one side, its official guardians may assail it upon the other; when rebellion strikes it in the face, they may take advantage of the blindness produced by the blow to sneak behind it and stab it in the back.

The convention when it framed the Constitution, and the people when they adopted it, could have had no thought like that. If they had supposed that it would operate only while perfect peace continued, they certainly would have given us some other rule to go by in time of war; they would not have left us to wander about in a howling wilderness of anarchy,

without a lamp to our feet or a guide to our path. Another thing proves their actual intent still more strikingly. They required that every man in any kind of public employment, State or National, civil or military, should swear, without reserve or qualification, that he would support the Constitution. Surely our ancestors had too much regard for the moral and religious welfare of their posterity to impose upon them an oath like that if they intended and expected it to be broken half the time. The oath of an officer to support the Constitution is as simple as that of a witness to tell the truth in a court of justice. What would you think of a witness who should attempt to justify perjury upon the ground that he had testified when civil war was raging, and he thought that by swearing to a lie he might promote some public or private object connected with the strife?

No, no; the great men who made this country what it is—the heroes who won her independence and the statesmen who settled her institutions—had no such notions in their minds. Washington deserved the lofty praise bestowed upon him by the President of Congress when he resigned his commission—that he had always regarded the rights of the civil authority through all changes and through all disasters. When his duty as President afterwards required him to arm the public force to suppress a rebellion in western Pennsylvania, he never thought that the Constitution was abolished, by virtue of that fact, in New Jersey, or Maryland, or Virginia. It would have been a dangerous experiment for an adviser of his at that time, or at any time, to propose that he should deny a citizen his right to be tried by a jury, and substitute in place of it a trial before a tribunal composed of men elected by himself from among his own creatures and dependents. You can well imagine how that great heart would have swelled with indignation at the bare thought of such an insulting outrage upon the liberty and law of his country.

In the War of 1812, the man emphatically called the Father of the Constitution was the supreme Executive Magistrate. Talk of perilous times! There was the severest trial this Union ever saw. That was no half-organized rebellion on the one side of the conflict, to be crushed by the hostile millions and unbounded resources of the other. The existence of the Nation was threatened by the most formidable military and naval power then upon the face of the earth. Every town upon the northern frontier, upon the Atlantic seaboard, and upon the Gulf coast was in daily and hourly danger. The enemy had penetrated the heart of Ohio. New York, Pennsylvania, and Virginia were all of them threatened from the west as well as the east. This Capitol was taken, and burned, and pillaged, and every member of the Federal administration was a fugitive before the invading army. Meanwhile, party spirit was breaking out into actual treason all over New England. Four of those States refused to furnish a man or a dollar even for their own defense. Their public authorities were plotting the dismemberment of the Union, and individuals among them were burning blue lights upon the coast as a signal to the enemy's ships. But in all this storm of disaster, with foreign war in his front, and domestic treason on his flank, Madison gave out no sign that he would aid Old England and New England to break up this government of laws. On the contrary, he and all his supporters, though compassed round with darkness and with danger, stood faithfully between the Constitution and its enemies—

> To shield it, and save it, or perish there, too.

The framers of the Constitution and all their contemporaries died and were buried; their children succeeded them and continued on the stage of public affairs until they, too—

> Lived out their lease of life, and paid their breath
> To time and mortal custom;

and a third generation was already far on its way to the grave before this monstrous doctrine was conceived or thought of, that public officers all over the country might disregard their oaths whenever a war or a rebellion was commenced.

Our friends on the other side are quite conscious that when they deny the binding obligation of the Constitution they must put some other system of law in its place. Their brief gives notice that, while the Constitution, and the acts of Congress, and Magna Charta, and the common law, and all the rules of natural justice shall remain under foot, they will try American citizens according to the law of nations! But the law of nations takes no notice of the subject. If that system did contain a special provision that a government might hang one of its own citizens without judge or jury, it would still be competent for the American people to say, as they have said, that no such thing should ever be done here. That is my answer to the law of nations.

But then they tell us that the laws of war must be treated as paramount. Here they become mysterious. Do they mean that code of public law which defines the duties of two belligerent parties to one another, and regulates the intercourse of neutrals with both? If yes, then it is simply a recurrence to the law of nations, which has nothing on earth to do with the subject. Do they mean that portion of our municipal code which defines our duties to the Government in war as well as in peace? Then they are speaking of the Constitution and laws, which declare in plain words that the Government owes every citizen a fair legal trial, as much as the citizen owes obedience to the Government. They are in search of an argument under difficulties. When they appeal to international law, it is silent; and when they interrogate the law of the land, the answer is an unequivocal contradiction of their whole theory.

The Attorney General tells us that all persons whom he and his associates choose to denounce for giving aid to the rebellion are to be treated as being themselves a part of the rebellion—they are public enemies, and therefore they may be punished without being found guilty by a competent court or a jury. This convenient rule would outlaw every citizen the moment he is charged with a political offense. But political offenders are precisely the class of persons who most need the protection of a court and jury, for the prosecutions against them are most likely to be unfounded both in fact and in law. Whether innocent or guilty, to accuse is to convict them before the ignorant and bigoted men who generally sit in military courts. But this court decided in the prize cases that all who live in the enemy's territory are public enemies, without regard to their personal sentiments or conduct; and the converse of the proposition is equally true—that all who reside inside of our own territory are to be treated as under the protection of the law. If they help the enemy they are criminals, but they can not be punished without legal conviction.

You have heard much (and you will hear more very soon) concerning the natural and inherent right of the Government to defend itself without regard to law. This is wholly fallacious. In a despotism the autocrat is unrestricted in the means he may use for the defense of his authority against the opposition of his own subjects or others; and that is precisely what makes him a despot. But in a limited monarchy the prince must confine himself to a legal defense of his government. If he goes beyond that and commits aggressions on the rights of the people, he breaks the social compact, releases his subjects from all their obligations to him, renders himself liable to be hurled from his throne, and dragged to the block or driven into exile. This principle was sternly enforced in the cases of Charles I and James II, and we have it announced on the highest official authority here that the Queen of England can not ring a little bell on her table and cause a man by her arbitrary order to be arrested under any pretense whatever. If that be true there, how much more true must it be here, where we have no personal sovereign, and where our only government is the Constitution and laws? A violation of law, on pretense of saving such a Government as ours, is not self-preservation, but suicide.

Salus populi suprema lex. Observe it is not *salus regis;* the safety of the *people*, not the safety of the *ruler*, is the supreme law. When those who hold the authority of the Government in their hands behave in such manner as to put the liberties and rights of the people in jeopardy, the people may rise against them and overthrow them without regard to that law which requires obedience to them. The maxim is revolutionary, and expresses simply the right to resist tyranny without regard to prescribed forms. It can never be used to stretch the powers of government against the people.

If this Government of ours has no power to defend itself without violating its own laws, it carries the seeds of destruction in its own bosom; it is a poor, weak, blind, staggering thing, and the sooner it tumbles over the better. But it has a most efficient legal mode of protecting itself against all possible danger. It is clothed from head to foot in a complete panoply of defensive armor. What are the perils which may threaten its existence? I am not able at this moment to think of more than these which I am about to mention: Foreign invasion, domestic insurrection, mutiny in the Army and Navy, corruption in the civil administration, and last, but not least, criminal violations of its laws committed by individuals among the body of the people. Have we not a legal mode of defense against all these? Yes; military force repels invasion and suppresses insurrection; you preserve discipline in the Army and Navy by means of courts-martial; you preserve the purity of the civil administration by impeaching dishonest magistrates; and crimes are prevented and punished by the regular judicial

authorities. You are not merely compelled to use these weapons against your enemies, because they and they only are justified by the law; you ought to use them because they are more efficient than any other, and less liable to be abused.

There is another view of the subject which settles all controversy about it. No human being in this country can exercise any kind of public authority which is not conferred by law; and under the United States it must be given by the express words of a written statute. Whatever is not so given is withheld, and the exercise of it is positively prohibited. Courts-martial in the Army and Navy are authorized; they are legal institutions; their jurisdiction is limited, and their whole code of procedure is regulated by act of Congress. Upon the civil courts all the jurisdiction they have or can have is bestowed by law; and if one of them goes beyond what is written, its action is ultra vires and void. But a military commission is not a court-martial, and it is not a civil court. It is not governed by the law which is made for either, and has no law of its own. Within the last five years we have seen, for the first time, self-constituted tribunals not only assuming power which the law did not give them, but thrusting aside the regular courts to which the power was exclusively given.

What is the consequence? This terrible authority is wholly undefined, and its exercise is without any legal control. Undelegated power is always unlimited. The field that lies outside of the Constitution and laws has no boundary. Thierry, the French historian of England, says that when the crown and scepter were offered to Cromwell he hesitated for several days, and answered, "Do not make me a king; for then my hands will be tied up by the laws which define the duties of that office; but make me protector of the commonwealth, and I can do what I please; no statute restraining and limiting the royal prerogative will apply to me." So these commissions have no legal origin and no legal name by which they are known among the children of men; no law applies to them; and they exercise all power for the paradoxical reason that none belongs to them rightfully.

Ask the Attorney General what rules apply to military commissions in the exercise of their assumed authority over civilians. Come, Mr. Attorney, "gird up thy loins now like a man; I will demand of thee, and thou shalt declare unto me if thou hast understanding." How is a military commission organized? What shall be the number and rank of its members? What offenses come within its jurisdiction? What is its code of procedure? How shall witnesses be compelled to attend it? Is it perjury for a witness to swear falsely? What is the function of the Judge Advocate? Does he tell the members how they must find, or does he only persuade them to convict? Is he the agent of the Government, to command them what evidence they shall admit and what sentence they shall pronounce; or does he always carry his point, right or wrong, by the mere force of eloquence and ingenuity? What is the nature of their punishment? May they confiscate property and levy fines as well as imprison and kill? In addition to strangling their victim, may they also deny him the last consolations of religion, and refuse his family the melancholy privilege of giving him a decent grave?

To none of these questions can the Attorney General make a reply, for there is no law on the subject. He will not attempt to "darken counsel by words without knowledge," and therefore, like Job, he can only lay his hand upon his mouth and keep silent.

The power exercised through those military commissions is not only unregulated by law, but it is incapable of being so regulated. What is it that you claim, Mr. Attorney? I will give you a definition, the correctness of which you will not attempt to gainsay. You assert the right of the Executive Government, without the intervention of the judiciary, to capture, imprison, and kill any person to whom that Government or its paid dependents may choose to impute an offense. This, in its very essence, is despotic and lawless. It is never claimed or tolerated except by those governments which deny the restraints of all law. It has been exercised by the great and small oppressors of mankind ever since the days of Nimrod. It operates in different ways; the tools it uses are not always the same; it hides its hideous features under many disguises; it assumes every variety of form;

> It can change shapes with Proteus for advantages,
> And set the murderous Machiavel to school.

But in all its mutations of outward appearance it is still identical in principle, object, and origin. It is always the same great engine of despotism which Hamilton described it to be.

Under the old French monarchy the favorite fashion of it was a *lettre de cachet*, signed by the king, and this would consign the party to a loathsome dungeon until he died, forgotten by all the world. An imperial ukase will answer the same purpose in Russia. The most faithful subject of that amiable autocracy may lie down in the evening to dream of his future prosperity, and before daybreak he will find himself between two dragoons on his way to the mines of Siberia. In Turkey the verbal order of the Sultan or any of his powerful favorites will cause a man to be tied up in a sack and cast into the Bosphorus. Nero accused Peter and Paul of spreading a "pestilent superstition," which they called the Gospel. He heard their defense in person, and sent them to the cross. Afterwards he tried the whole Christian church in one body, on a charge of setting fire to the city, and he convicted them, though he knew not only that they were innocent but that he himself had committed the crime. The judgment was followed by instant execution; he let loose the Prætorian guards upon men, women, and children, to drown, butcher, and burn them. Herod saw fit, for good political reasons, closely affecting the permanence of his reign in Judea, to punish certain possible traitors in Bethlehem by anticipation. This required the death of all the children in that city under two years of age. He issued his "general order"; and his provost marshal carried it out with so much alacrity and zeal that in one day the whole land was filled with mourning and lamentation.

Macbeth understood the whole philosophy of the subject. He was an unlimited monarch. His power to punish for any offense or for no offense at all was as broad as that which the Attorney General claims for himself and his brother officers under the United States. But he was more cautious how he used it. He had a dangerous rival, from whom he apprehended the most serious peril to the "life of his government." The necessity to get rid of him was plain enough, but he could not afford to shock the moral sense of the world by pleading political necessity for a murder. He must—

> Mask the business from the common eye.

Accordingly he sent for two enterprising gentlemen, whom he took into his service upon liberal pay—"made love to their assistance"—and got them to deal with the accused party. He acted as his own judge advocate. He made a most elegant and stirring speech to persuade his agents that Banquo was their oppressor, and had "held them so under fortune" that he ought to die for that alone. When they agreed that he was their enemy, then said the king:

> So is he mine, and though I *could*
> With *barefaced power* sweep him from my sight
> And bid my *will* avouch it; yet I *must not*,
> For certain friends, who are both his and mine,
> Whose loves I may not drop.

For these, and "many weighty reasons" besides, he thought it best to commit the execution of his design to a subordinate agency. The commission thus organized in Banquo's case sat upon him that very night, at a convenient place beside the road where it was known he would be traveling; and they did precisely what the Attorney General says the military officers may do in this country—they *took* and *killed* him, because their employer at the head of the government wanted it done, and paid them for doing it out of the public treasury.

But of all the persons that ever wielded this kind of power, the one who went most directly to the purpose and object of it was Lola Montez. She reduced it to the elementary principle. In 1848, when she was minister and mistress to the King of Bavaria, she dictated all the measures of the Government. The times were troublesome. All over Germany the spirit of rebellion was rising; everywhere the people wanted to see a first-class revolution, like that which had just exploded in France. Many persons in Bavaria disliked to be governed so absolutely by a lady of the character which Lola Montez bore, and some of them were rash enough to say so. Of course that was treason, and she went about to punish it in the simplest of all possible ways. She bought herself a pack of English bulldogs, trained to tear the flesh, and mangle the limbs, and lap the lifeblood; and with these dogs at her heels, she marched up and down the streets of Munich with a most majestic tread, and with a sense of power which any Judge Advocate in America might envy. When she saw any person whom she chose to denounce for "thwarting the Government," or "using disloyal language," her obedient followers needed but a sign to make them spring at the throat of their victim. It gives me unspeakable pleasure to tell you the sequel. The people rose in their strength, smashed down the whole machinery of oppression, and drove out into uttermost shame King, strumpet, dogs, and all. From that time to this neither man, woman, or beast, has dared to worry or kill the people of Bavaria.

All these are but so many different ways of using the arbitrary power to punish. The variety is merely in the means which a tyrannical government takes to destroy those whom it

is bound to protect. Everywhere it is but another construction, on the same principle, of that remorseless machine by which despotism wreaks its vengeance on those who offend it. In a civilized country it nearly always uses the military force, because that is the sharpest and surest, as well as the best-looking instrument that can be found for such a purpose. But in none of its forms can it be introduced into this country; we have no room for it; the ground here is all preoccupied by legal and free institutions.

Between the officers who have a power like this, and the people who are liable to become its victims, there can be no relation except that of master and slave. The master may be kind, and the slave may be contented in his bondage; but the man who can take your life, or restrain your liberty, or despoil you of your property at his discretion, either with his own hands or by means of a hired overseer, owns you and he can force you to serve him. All you are and all you have, including your wives and children, are his property.

If my learned and very good friend, the Attorney General, had this right of domination over me, I should not be very much frightened, for I should expect him to use it as moderately as any man in all the world; but still I should feel the necessity of being very discrete. He might change in a short time. The thirst for blood is an appetite which grows by what it feeds upon. We can not know him by present appearances. Robespierre resigned a country judgeship in early life because he was too tender-hearted to pronounce sentence of death upon a convicted criminal. Caligula passed for a most amiable young gentleman before he was clothed with the imperial purple, and for about eight months afterwards. It was Trajan, I think, who said that absolute power would convert any man into a wild beast, whatever was the original benevolence of his nature. If you decide that the Attorney General holds in his own hands, or shares with others, the power of life and death over us all, I mean to be very cautious in my intercourse with him; and I warn you, the judges whom I am now addressing, to do likewise. Trust not to the gentleness and kindness which have always marked his behavior heretofore. Keep your distance; be careful how you approach him; for you know not at what moment or by what a trifle you may rouse the sleeping tiger. Remember the injunction of Scripture: "Go not near to the man who hath power to kill; and if thou come unto him, see that thou make no fault, lest he take away thy life presently; for thou goest among snares and walkest upon the battlements of the city."

The right of the Executive Government to kill and imprison citizens for political offenses has not been practically claimed in this country, except in cases where commissioned officers of the Army were the instruments used. Why should it be confined to them? Why should not naval officers be permitted to share in it? What is the reason that common soldiers and seamen are excluded from all participation in the business? No law has bestowed the right upon Army officers more than upon other persons. If men are to be hung up without that legal trial which the Constitution guarantees to them, why not employ commissions of clergymen, merchants, manufacturers, horse dealers, butchers, or drovers, to do it? It will not be pretended that military men are better qualified to decide questions of fact or law than other classes of people; for it is known, on the contrary, that they are, as a general rule, least of all fitted to perform the duties that belong to a judge.

The Attorney General thinks that a proceeding which takes away the lives of citizens without a constitutional trial is a most merciful dispensation. His idea of humanity as well as law is embodied in the bureau of military justice, with all its dark and bloody machinery. For that strange opinion he gives this curious reason: That the duty of the commander in chief is to kill, and unless he has this bureau and these commissions he must "butcher" indiscriminately, without mercy or justice. I admit that if the commander in chief or any other officer of the Government has the power of an Asiatic king, to butcher the people at pleasure, he ought to have somebody to aid him in selecting his victims, as well as to do the rough work of strangling and shooting. But if my learned friend will only condescend to cast an eye upon the Constitution, he will see at once that all the executive and military officers are completely relieved by the provision that the life of a citizen shall not be taken at all until after legal conviction by a court and jury.

You can not help but see that military commissions, if suffered to go on, will be used for most pernicious purposes. I have criticized none of their past proceedings, nor made any allusion to their history in the last five years. But what can be the meaning of this effort to maintain them among us? Certainly not to punish actual guilt. All the ends of true justice are attained by the prompt, speedy, impartial trial which the courts are bound to give. Is there any danger that crime will be winked upon by the judges? Does anybody pretend that courts and juries have less ability to decide upon facts and law than the men who sit in military tribunals? The counsel in this cause will not insult you by even hinting such an opinion. What righteous or just purpose, then, can they serve? None, whatever.

But while they are utterly powerless to do even a shadow of good, they will be omnipotent to trample upon innocence, to gag the truth, to silence patriotism, and crush the liberties of the country. They will always be organized to convict, and the conviction will follow the accusation as surely as night follows the day. The Government, of course, will accuse none before such a commission except those whom it predetermines to ruin and destroy. The accuser can choose the judges, and will certainly select those who are known to be the most ignorant, the most unprincipled, and the most ready to do whatever may please the power which gives them pay, promotion, and plunder. The willing witness can be found as easily as the superserviceable judge. The treacherous spy, and the base informer—those loathsome wretches who do their lying by the job—will stock such a market with abundant perjury, for the authorities that employ them will be bound to protect as well as reward them. A corrupt and tyrannical government, with such an engine at its command, will shock the world with the enormity of its crimes. Plied as it may be by the arts of a malignant priesthood, and urged on by the madness of a raving crowd, it will be worse than the popish plot, or the French Revolution—it will be a combination of both, with Fouquier-Tinville on the bench, and Titus Oates in the witness's box. You can save us from this horrible fate. You alone can "deliver us from the body of this death." To that fearful extent is the destiny of this Nation in your hands.

Relief to Cotton Planters Should be Given Fully and Promptly.

EXTENSION OF REMARKS

OF

HON. WILLIAM S. HOWARD,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, October 5, 1914.

Mr. HOWARD. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a short editorial from the Washington Post of Monday, October 5, 1914.

The editorial is as follows:

RELIEF TO THE COTTON PLANTERS SHOULD BE GIVEN FULLY AND PROMPTLY.

The failure of foreign countries to buy our cotton crop is the most serious and adverse feature of the financial, commercial, and industrial situation in this country.

The gold usually received each year for exported cotton enabled this country to care for its debts abroad to a very great extent.

The want of the cotton credits this year has placed an enormous strain upon the foreign exchanges of the country, and is forcing an exportation of the yellow metal at the very time that the country meets a most acute demand for it from home and abroad.

This failure to export cotton has deranged the country's finances.

By the inability of the planters to cash the results of their capital, their energies, and their labor of this year, their purchasing power is largely destroyed and every branch of commerce and industry dependent upon the purchases of the southern people bids fair to suffer from the business paralysis which is rapidly spreading throughout the South.

This is a national peril and it should be dealt with in a broad spirit of patriotism by the Congress and every possible assistance should be given the planters of the South to enable them to stand successfully against conditions that by their very nature can be but of brief duration.

Congress should not adjourn until measures of ample relief be passed for the cotton planters of the South.

Better, far better, that antitrust bills be thrust into the waste basket and that war-tax measures be postponed until the revised tariff can be again revised to produce more revenue than that poverty, depression, and financial and commercial extortion be allowed to make the southern cotton planters their victims.

The flag of distress is already flying in the South, and it lies in the power of the Senators and Representatives of the South to secure relief by financial legislation for their people. Surely the administration will not look with approval upon the Congress spending its time upon antitrust bills, which nobody trusts and which everybody doubts, while the fortunes and happiness of the southern people, the prosperity of the Nation, call for instant relief to the producers of cotton.

Let all legislation save appropriation bills wait until this crisis in affairs of the South and the Nation is fully cared for. The influence of the administration in legislation is so well known, has been so frequently displayed, the southern Members of the Congress are in such powerful position in all legislative matters, the other Members of the Congress are so well disposed to aid the agriculturists of the South as well as the business interests of the entire country, that it goes without saying that sound measures for the relief of the cotton planters can be passed speedily.

No measure now before the Congress so important, so far-reaching in beneficial effects, as would be a measure that would grant this relief.

The Philippine Islands.

EXTENSION OF REMARKS

OF

HON. TIMOTHY T. ANSBERRY,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, October 6, 1914,

On the bill (H. R. 18459) to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands and to provide a more autonomous government for those islands.

Mr. ANSBERRY. Mr. Speaker and gentlemen, the debate on this question has, in my opinion, gone far afield, very far from the issue; but that is not to be wondered at when consideration is given to the fact that this question, in the abstract, has been debated throughout the country during three campaigns. Nevertheless we should not permit the issue to be obscured. The issue is the substance of this bill, which provides that the Filipinos shall exercise some additional governmental responsibilities. To the gentlemen on the other side who have objected to every step of progress which this bill provides for the Filipino people I want to say that if your contention is true that the Filipino people are incapable of self-government, then you should join with us in the passage of this bill, to the end that it would be more quickly demonstrated that these people are, as you urge, incapable of self-government, for I take it that the supreme test would be the character of the men whom they would select as their Senators; and this bill provides for the election throughout the island of the upper house of the legislative branch, with the bare exception of two, who are to be appointed by the Governor General to represent the so-called non-Christian tribes, which comprise less than one-twelfth of the total population. In other words, we give nearly 7,000,000 of the Filipino people the privilege of selecting their own Senators; that is, we are extending the privilege heretofore granted by the exercise of which they choose the members of the lower house. Should they fail in selecting proper men, or should these men fail to demonstrate their capacity for government in the legislation which they formulate—and, if your contention is right, failure is inevitable—then you will have demonstrated by actual experience that a portion of your argument, at least, is true.

I can not conceive how, sitting here as Representatives of the American people, who are wedded to the ideals which we have always cherished, ideals that we have always thought to be fundamental and basic; and if they are not, then the Declaration of Independence was but mere foam. I repeat I can not understand how, in the face of the showing already made by the Filipino people, that we can longer refuse to give them this larger measure of the handling of their own affairs. It is axiomatic that all Governments derive their just power from the consent of the governed and the inherent right of every people to establish and maintain the sort of Government which to them seems best. It would seem that the soundness of these two propositions are open to criticism if we are to take seriously the veiws advanced by my colleague from Ohio [Mr. FESS], an educator who doubtless has time and time again laid down the selfsame proposition which I have referred to as being fundamentally basic, and still my colleague [Mr. FESS] tells us here in objecting to this bill that we have done more for the Filipino people than they could have possibly done for themselves; that we have given them schools, colleges, and sent them school-teachers without number; that we have built roads, cleaned and improved their cities, encouraged agriculture, and, in a word, done everything that one people could well do for another. All of these things, of course, are admitted, but I never thought that I would live to see the day that any man would rise in the American Congress and base our right to govern any people, without their consent, on the fact that we have done the things that we have done for the Filipino people. I maintain that that is but a poor exchange for the God-given right of liberty. It is no answer to their cry. My colleague [Mr. FESS] makes mention of the fact that Members on the floor here on his side of the House applauded the answer of the Filipino Commissioner, Hon. MANUEL L. QUEZON, which answer was in response to the question as to whether or not the Filipino Commissioner thought that the Filipino people would have made as much progress as they did along educational lines if the American people had not interfered in 1898. The utterances of Mr. QUEZON were applauded, because they were the utterances of a patriot, because they were the utterances of a man who, talking to an audience composed, as he himself well said, of the judges who were to pass upon his case and the case of his people. Still, representing these people, he refused to bow the knee, but preferred rather to trust to the judgment of his judges and his people's judges rather than the literal answer which he gave, which was to the effect that he had no doubt but that the Filipino people would have made as much progress as has been made under the Government of the United States. He made the point that his people rebelled against Spain because Spain was slow and not progressive, but he insisted his people loved knowledge and sought and had taken advantage of every opportunity afforded them of getting knowledge. Had I been asked that question I would have answered that I thought Mr. QUEZON was mistaken, but that I honored him in his mistake; and hence, as I said in the beginning, his utterances were that of a patriot, that of a man who, even though his answer might prejudice his case, he still would not sacrifice one jot or tittle of the pride of his people to curry favor with the American Congress.

It is not my purpose to enter into an exhaustive argument to prove the proposition which I have laid down, but in passing I am going to insert into my speech an extract from the speech of Mr. QUEZON, Filipino Commissioner, which I think answers every argument which has been advanced against the promulgation of this American doctrine urged at this time. I also desire to express the opinion that Mr. QUEZON has demonstrated on the floor of the American Congress that, if he is a typical representative of his people, they are eminently fitted for self-government, no matter the standard that any man may require. Everyone of us has the highest regard for this young man, who, coming here some four years ago, was barely able to speak the English language, and during this debate we have heard him cross swords in this forum with the ablest men of this Nation who are opposed to the doctrine which he espouses, and he has come off victor in every instance. I am advised that Mr. QUEZON was educated in a little village of 1,000 people, far distant from Manila, at a school that was taught by a Filipino teacher, long before American soldiery ever set foot on that unfortunate shore. The basis of his education was laid in that little village, and speaks volumes for the Filipino teacher who first directed his youthful studies. He afterwards finished his education at a university in the Philippine Islands. I can not withhold this meed of praise from this young man who has doggedly and persistently, and yet in the best of temper, urged the cause of his people. His sole thought, his every aim since he has been among us, has been the promotion of the welfare of his people, and he has been spurred on by the ultimate hope held out by both Democratic and Republican administrations alike for ultimate freedom for his people. His oratorical efforts on the floor in behalf of these people deserve to and doubtless will take high rank among the best efforts of all who have labored in the sacred cause of liberty. As a Member of the American Congress I am glad to acknowledge the splendid capacity and ability shown by this young man, and I trust that his efforts will not have been in vain. I am glad of the opportunity of reproducing some of his argument made in behalf of his people.

Before I close I also desire to express the thought that the Filipino, as well as the American, people are fortunate in the character of the man who now represents as Governor General of the Philippine Islands the American people in that far-off island. I had the honor of serving a number of years in the House with Gov. Harrison, and I think I know something of his political ideals; and, in my opinion, no man, by education, by habit of thought, by ideals, or by inclination, is better fitted than

Francis Burton Harrison to help guide the destinies of the Filipino people while they are in their swaddling clothes, making a determined effort to qualify for a place among the nations of the world.

The following are extracts from Mr. QUEZON's speech:

Our adversaries proceed: The masses of the people in the Philippines are in such a state of dense ignorance that they know nothing and care less about independence. Those people are semicivilized, if not entirely savages. Some of them eat dogs, and for proof we refer you to the St. Louis Exposition, where Igorots were exhibited engaged in that toothsome pastime. As further proof of the deplorable condition of those people, behold the "moving" and "nonmoving" pictures of naked natives armed with bows and arrows and spears. It would be a pity to set this people adrift. The Government of the United States alone can civilize them, and it must, for the sake of humanity, undertake and carry to its successful termination this altruistic work.

Again the Filipinos answer: We know that we are a civilized people and have been civilized for 300 years. We know that there are only 600,000 non-Christians in the Philippines, while there are 7,000,000 Christians, 65 per cent of whom were literate before American occupation, and at least fully 75 per cent of whom now are. We know that we had a university in the Philippines even before Harvard University was established and that now we have two. We know that we had 1,674 public schools before American occupation, distributed among 900 towns, and now we have 4,404. We know that we had colleges in every important capital city and several in Manila, for both men and women, before American occupation, and that now the number has greatly increased. We know that there are Filipinos in the supreme court of the islands—the chief justice being one of them—who are at least equal to their American associates. We know that half of the judges of the courts of first instance are Filipinos. We know that all the justices of the peace are Filipinos. We know that the municipal and Provincial governments are administered by Filipinos elected by Filipino voters. We know that the Philippine Assembly, the lower house of the legislature, is composed entirely of Filipinos, also elected by Filipino voters; and we know that if permitted to elect the upper house of the legislature we would elect senators who would be equal to their task. We know that we could elect a president who would be at least as wise and patriotic as any chief executive the President of the United States could appoint over us.

DIFFERENCES BETWEEN MEXICO AND THE PHILIPPINES.

Finally our opponents end this controversy by exclaiming, "Behold Mexico to-day. If you make the Philippines independent, another Mexican situation, which would perplex the United States with a repetition of the 'watchful waiting' policy, is sure to arise."

This Mexican argument seems effective nowadays. I do not know much about Mexico and the causes that lay at the root of this unfortunate disturbance in that Republic. But there is something I can say in connection with this argument. In the first place, when we judge other people's affairs it is well to remember that paragraph of the Scriptures which tells us, in effect, that we should be fully aware of the beam in our own eye before commenting on the mote in that of our neighbor. What nation on the face of the earth has been free from internal disorders or revolution? What nation can say that it will ever be free from this, the most dreadful calamity that can befall any country?

In the second place, let me give you some points respecting the principal differences between conditions in Mexico and conditions in the Philippines, which may explain why we confidently expect that that which is going on in the distressed Republic of Mexico will not happen in the islands if free from the control of the United States. I am making no invidious comparisons, but merely stating facts. Mexico acquired its independence from Spain by force of arms, and previous to that time the people of Mexico took no part in the government of their country. Despotic foreign absolutism was the kind of government that prevailed in Mexico until then. Once independent, a democratic form of government was established. The change was so radical that the failure of the new government was inevitable. Moreover, the great majority of the people—upon which democratic governments must depend—did not have either education or property, and therefore did not possess those qualifications leading to the maintenance of public order and of law. To this day knowledge and wealth are still the monopoly of the few. In the Philippines, on the contrary, the majority of the people are literate and property owners. Besides, we have been practicing the art of self-government for 15 years under American supervision. During this time we have been electing our provincial and municipal officials, members of our assembly, and, although the political campaigns in the Philippines are heated, we have abided by the results of the elections or have gone to the courts with our protests. We have never resorted to arms to settle any controversy.

The Legislative Achievements of the Democratic Party.

EXTENSION OF REMARKS

OF

HON. CLYDE H. TAVENNER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 30, 1914.

Mr. TAVENNER. Mr. Speaker, since my election to Congress I have devoted considerable time and energy in an effort to bring about the Government manufacture of all munitions of war and to prohibit the use of the stop-watch and other objectionable "speeding-up" features of the so-called Taylor system of "scientific" shop management in the arsenals and other Government establishments.

The Government appropriates in round numbers $100,000,000 annually for the Army and $140,000,000 annually for the Navy, and colossal sums are expended annually with a ring of private manufacturers for war materials. I have produced a mass of evidence before Congress proving beyond successful contradiction that the Army and Navy officers have been permitting this ring to outrageously overcharge the Government.

For instance, I have directed attention to the fact that Army officers have been very generously paying the ammunition ring $3.06 for a 3-inch finished shrapnel case which Uncle Sam can manufacture and is manufacturing in the Government arsenals for $1.75.

The Army officers are paying the ammunition ring $17.50 for a 3.8-inch common shrapnel which they can manufacture and are manufacturing in the Government arsenals for $7.94. When it is considered that the Government is each year procuring millions of dollars worth of such supplies, it will be seen that the saving that can be effected to the taxpayers by a policy of complete Government manufacture of all munitions of war is something enormous.

This policy was entered upon in the Army bill this year, this measure for the first time in the history of the Government carrying a provision specifying that not to exceed 10 per cent of the ammunition therein appropriated for may be purchased from outside private manufacturers. Ninety per cent of the appropriations must hereafter be expended for the manufacture of the supplies in the Government arsenals. As a result of this policy the Government will save on an average 35 per cent, or millions of dollars annually, and the men who do the actual work of making the munitions will receive higher wages and better conditions than if the work was awarded to the three firms comprising the ammunition ring, which are notorious as the most bitter enemies of organized labor in this country.

If all profit is taken out of war and preparation for war, I predict that some of the very millionaire patriots who are now agitating for an ever and ever increased amount of armament, in the certain knowledge they will make huge profits by supplying the same, will be the loudest to protest against the annual expenditure of $250,000,000 for war in time of peace.

I have called the attention of Congress to the fact that at the Rock Island Arsenal the Government has two great $500,000 stone buildings standing idle which could be used for manufacturing purposes, and also absolutely free power as a result of the fact that the Government owns a great power plant in the Mississippi at Rock Island Arsenal and can manufacture these war materials cheaper there than at any other arsenal in the United States.

I am also carrying on a campaign to have the Government locate the proposed $7,000,000 Government armor-plate factory at Rock Island, where the Government owns 896 acres of land ideally located for such a purpose, without having to buy land for a site elsewhere. I am carrying on a campaign to acquaint Members of Congress with the fact that the United States Government has a far greater prize than it realizes in the Rock Island Arsenal property, where it can do its manufacturing cheaper than at any other arsenal in the United States, and I make the prediction that when the Government adopts the policy of manufacturing all its munitions of war, as it is certain to do ultimately, that the Rock Island Arsenal will become one of the largest military manufacturing centers in the world.

OPPOSED TO USE OF STOP WATCH ON WORKMEN.

From the very first day I arrived in Washington following my election I have fought the installation of the Taylor system in the Rock Island Arsenal, just as I promised the workmen I would do if elected to Congress. I appeared before the Committee on Labor in support of the Deitrick bill prohibiting the use of the stop watch and other objectionable "speeding-up" features of the Taylor system in the arsenals and other Government manufacturing establishments. This matter is of vital importance to all workingmen, whether they work in the arsenals or not, because if the United States Government can be tricked into placing its endorsement upon this sweatshop system the great private manufacturers will not be long in following suit and will be in the strategic position of being able to reply to employees protesting against its installation in their plants that it must not be inhumane, that it must be all right or Uncle Sam would not have given it his official O. K. by installing the system in the Government arsenals.

The Committee on Labor has just made its report on the anti-stop watch bill recommending its passage, which practically assures favorable action on the measure by Congress.

The Deitrick bill, which is destined soon to become a law, is as follows:

A bill to regulate the method of directing the work of Government employees.

Whereas certain executive departments are installing in their respective establishments new systems of shop management, known by the generic term of "scientific management," which have for their purpose the attainment of the maximum efficiency from both plant and workmen; and

Whereas a stop watch is used in timing workmen while at work to ascertain the maximum amount of work possible for the most capable man in a given time and making this the "standard time" in which work must be done, and by a system of premiums and bonuses, together with disciplinary measures sufficiently severe to enforce the system, this "standard time" is the speed to which all workmen must eventually attain if they are to retain their employment; and

Whereas experience has shown that the American workman by his exceptional celerity performs about twice the work performed by the manual worker of other countries, with the concomitant condition that the ratio of accidents here is from three to four times as high as in other countries, and the tendency of so-called "scientific management," through the above timing and bonus features, will be to further aggravate the accident disabilities and mortality aforesaid and reduce the workman to a mere mechanical, instead of a social and moral, relation to his work, and, moreover, are unnecessary to secure adequate efficiency of labor: Therefore

Be it enacted, etc., That it shall be unlawful for any officer, manager, superintendent, foreman, or other person having charge of the work of any employee of the United States Government to make or cause to be made, with a stop watch or other time-measuring device, a time study of the movements between the starting and completion of any job of any such employee. No premium or bonus or cash reward shall be paid to any employee, except for suggestions resulting in improvement or economy in the operation of the plant in which he is employed.

SEC. 2. That any violations of the provisions of this act shall be deemed a misdemeanor and shall be punished by a fine of not more than $500 or by imprisonment of not more than six months, at the discretion of the court.

Mr. Speaker, I believe I am justified in taking some pride in the official report of the committee, which condemns the Taylor propaganda, a cruel system based on the scientific grinding down of the spirit, the hopes, and the ambitions, as well as the physical bodies, of those who toil, because this report sustains practically every charge I have made against the Taylor system during the three and a half years I have been opposing it. In this connection I desire to quote the following from the report of the committee:

The Taylor system may be divided under three headings—standardization, systematization, and stimulation. The pending legislation does not seek to interfere in any way with standardization or systematization, but is intended to eliminate the more obnoxious phases of stimulation, in so far as Government workshops are concerned.

The Taylor system regards the workman as a machine to be "speeded up" to its maximum capacity. When this human machine fails to function to the satisfaction of the management it is to be cast aside to make room for a new machine—a fresh workman. The authors of the system do not appear to have concerned themselves about the ultimate fate of the human derelicts who may be compelled to drop out because they can not stand the pace. Mr. Taylor boasts that when he installed his system in the Bethlehem Steel Works he purposely made the tasks so hard that "not more than one out of five laborers (perhaps even a smaller percentage than this) could keep up."

That may be the kind of "efficiency" which produces dividends for the Steel Trust, but it is surely not the system which a beneficent Government should force upon its employees.

The promoters of these various system of "scientific management" are making a determined effort to have them generally adopted by large manufacturing concerns, and labor, both organized and unorganized, is most insistent in its opposition. It can be readily seen that the advocates of the stop-watch system would have won a signal victory if they were in a position to say, "The United States Government has installed this system in its workshops. It can not be inhumane or the Federal authorities would not have adopted it."

The committee does not believe such an indorsement should be given to a system which is so inimical to the best interests of the toilers of the Nation.

The protest against these "systems" originally came from the employees of the arsenals under the War Department, when it was proposed to introduce the Taylor system into these establishments. The protest was unheeded by the officials of the Ordnance Department at that time, and the system was gradually introduced. Practically the entire system is now in operation at the Watertown Arsenal, and the features least objected to by the employees are in operation at some of the other arsenals. From present indications it still appears to be the intention of the officials of the Ordnance Department to extend the Taylor system to the other arsenals at an opportune time.

The opposition to this system by the laboring people in general has made it impractical to apply the system in as drastic a manner as its authors evidently contemplated; but the machinery for oppression is latent in the system, and is regarded by the workmen as an ever-present menace to them and furnishing a reason for their apprehension of what is to come.

The Committee on Labor has concluded that an employer who is satisfied with a normal and reasonable day's work does not need to use a stop-watch time study on his employees to ascertain what should constitute a day's work, and the ordinary incentives in general use are sufficient as a spur to the activities of the workmen without resorting to further high-pressure methods to induce intensive production.

THE "SYSTEM" IS BEING FORCED IN.

The moving spirit behind the plan to install the Taylor system in the Government arsenals appears to be Brig. Gen. William Crozier, Chief of Ordnance of the War Department, who has jurisdiction over all of the Government arsenals. Gen. Crozier appears to be determined to install the stop watch and other objectionable speeding-up features of the Taylor system in the arsenals in spite of the protests of the workmen, and even in spite of the strong denunciation of such methods by the special committee of the House of Representatives which investigated the subject during the preceding Congress.

This officer appeared before the committee and spoke in favor of the use of the stop watch and the Taylor system; and there appears to be every reason to believe that unless Congress passes legislation absolutely prohibiting the use of such methods in the Government establishments that Gen. Crozier will proceed with the extension of the system, not only at Watertown and Rock Island, but in all the manufacturing establishments of the Government within his domain.

Representative CLYDE H. TAVENNER, of Illinois, representing the congressional district in which the Rock Island Arsenal is located, appeared before the committee in opposition to the attitude of Gen. Crozier and contended that, inasmuch as the workmen at the Rock Island Arsenal are now producing war materials 35 per cent below the prices Gen. Crozier is paying outside private manufacturers, thus saving the Government hundreds of thousands of dollars annually by their present efficiency, that Gen. Crozier is not justified in installing the stop watch and other "speeding-up" processes to force the men to work still faster. He declared the same is true of the efficiency of the workmen at the Frankford Arsenal and all the arsenals, and produced figures showing the cost of various articles in the arsenals and showing the prices being paid private manufacturers for the same articles.

GOVERNMENT PRODUCT NOW CHEAPER THAN PRIVATE.

Reading from a table prepared by Col. George Montgomery, commandant of the Frankford Arsenal, Philadelphia, Mr. TAVENNER made the following specific comparisons:

That the workmen at the Frankford Arsenal are producing a 3-inch finished shrapnel case for $1.75 that the Government is paying private manufacturers $3.06 for.

That 3.8-inch common shrapnel are being produced for $7.94 in the Government arsenal, while the Government is paying the private manufacturers $17.50 for the same article. And so on.

On a contract of $1,900,064.05 worth of such work manufactured at the Frankford Arsenal, Mr. TAVENNER showed the Government saved $979,840.94, or approximately, in round figures, $1,000,000 on a $2,000,000 order. He made the point that these figures tended to show that the workmen in the Government arsenals are now efficient, and do not deserve having imposed upon them speeding-up processes compelling them to work still faster than they are now working.

LEGISLATION BENEFICIAL TO LABOR.

In addition to the friendly attitude the Democratic House has taken toward the policy of Government manufacture of munitions of war, and the bill prohibiting the use of the Taylor system in Government arsenals, considerable other legislation beneficial to labor has been passed. A bill of considerable importance to labor is the Clayton antitrust bill, which passed the House by a vote of 297 to 54, and which protects the rights, existence, and operations of fraternal, labor, and farmers' organizations, the famous anti-injunction provision of which is as follows:

SEC. 7. That nothing contained in the antitrust laws shall be construed to forbid the existence and operation of fraternal, labor, consumers', agricultural, or horticultural organizations, orders, or associations instituted for the purpose of mutual help, and not having capital or conducted for profit, or to forbid or restrain individual members of such organizations, orders, or associations from carrying out the legitimate objects thereof, nor shall such organizations, orders, or associations, or the members thereof, be held or construed to be an illegal corporation or a conspiracy in restraint of trade under the antitrust laws.

Mr. Speaker, the House exempted labor and farmers' organizations from the provisions of the trust laws simply because it refused to consider human brawn and brain in the same class with steel rails and coal oil. The bill aims to prevent the restraint of trade in oil, steel, and other commodities. But labor is something different than a steel rail. In a rail there is bound up no man's welfare. But in the labor of the millions there is included the hopes and happiness of the masses who toil and those who depend on the toilers.

Representative LEWIS of Maryland called section 7 the magna charta of labor. He said:

Some honest people are inclined to think that this section may mean a species of class legislation. They commit the error of considering labor as a commodity. But there is this distinction between labor and a barrel of oil, a commodity:

Labor is never in truth a commodity; labor can never under our institutions be property, either before the court or before the legislature. Under our Constitution property in human beings has forever ceased.

While a barrel of oil is not only a commodity in the market, it is a commodity before the courts, it is a commodity before the legislature. The legal attribute of a commodity is property; but the legal attribute of the workingman is citizenship. A different principle of sociology and justice apply to these two subjects when they are before Congress or before the courts. The rules that are rationally applicable to property can seldom be justly applied to the man.

FINLY GRAY'S ELOQUENT APPEAL ON BEHALF OF LABOR.

Congressman FINLY GRAY, of Indiana, also gave an eloquent explanation of the principle of humanity underlying the exemption of labor and farmers' organizations from the provisions of the antitrust bill. FINLY GRAY is one of the clearest thinkers in the American Congress. Physically he is tall and gaunt and old-fashioned, and as he sits among the modern, present-day type of statesmen on the floor of the House he is a character study who will attract the visitor's attention. One can hardly help imagining that he has just stepped out of an American Congress of 100 years ago.

FINLY GRAY is in many respects a strange and unusual man, a genius in every sense of the word. He usually keeps his own counsel, and he has his peculiarities, one of which is that the burdens of the masses of the people lay heavy upon his heart. When he speaks, he speaks as one inspired, and his remarrks in the RECORD the following morning are literature.

I know FINLY GRAY, and I consider him one of the most sincere and gifted friends the plain people have in public life to-day.

When the proposition to make labor unions immune from prosecution under the antitrust law was being debated, FINLY GRAY sat listening to the arguments being advanced by various Members as to why the measure should be enacted into law.

GRAY listened carefully to every explanation offered. Finally he turned to a Member at his side and said:

Labor unions should be exempted, but the real justification for the proposition has not been stated. In justice to myself, I must state the reasons why I intend to support the measure.

GRAY had not intended to speak when he entered the Chamber, but as he sat quietly listening he had been deeply moved. He arose, and his language and philosophy held the close attention of everyone within the hearing of his voice.

Mr. Chairman—

Said GRAY—

there are certain rights which men take along with the right to inhabit the earth. Among these rights is the right to labor and to enjoy the fruits of that labor. This is more than a so-called vested right in property; it is a natural, inherent right of man. It is as sacred to him as the right of habitation itself. It is as vital to his existence as the breath of life. He must have the right to labor in order to live.

And there are certain rights in which man is upheld in a supreme and absolute defense, and in the defense of which he is sustained even to the taking of life—the defense of self, the defense of his person, the defense of his life, the defense of those who by nature are entitled to look to him or protection—and I include the defense of the right to labor in order to live and to support those who are dependent upon him.

Mr. Chairman, there was the time when the laboring man was more independent in the exercise of this right to labor to live than he is to-day. There was a time when every man could say to his employer, "If you do not wish my services, I will go back to the crossroads, to the village workshop, and I will make a plow, a wagon, or a carriage. I will employ myself and I will sell my product for my wages." But this condition of the laboring man has passed and gone. A great industrial revolution has brought a change and a new order of things. The laboring man as an individual has lost his opportunity to employ himself, his power to claim his right to labor to live. He can only work when others choose to employ him. And when he asks for employment the answer comes back and tells him whether or not he can live. The laboring man to-day finds himself confronted with an organization of employers; he finds himself confronted with a combination of capital; he finds himself confronted with a concentration of industry and control of employment—all standing between him and the right to labor to live and to support those dependent upon him.

This is the plight of the individual laboring man to-day. This is his utter helplessness as a single individual.

Under these new and changed industrial conditions union is his only remedy, his only relief, his only defense, his only hope. He must have the right to meet organization with organization. He must have the right to meet combination with combination. He must have the right to meet concentration with concentration.

There is a difference between a labor organization and a trust. There is a difference between a labor organization and a combination in restraint of trade. There is a difference between a labor organization and a monopoly of the resources of human life. There is a difference between an organization for a lawful, natural purpose, and an organization for an unlawful and a criminal purpose. There is a difference between an organization to preserve and safeguard natural inherent rights and an organization to monopolize and prey upon the vital necessities that sustain human life. There is a difference between men organizing for the lawful purpose of securing employment, and to claim the right of all men to labor, to live, and to enjoy the fruits of that labor, and men organizing as a trust, a combination in restraint of trade, a monopoly to control the vital resources of human life, the very inception of which is unlawful, the very existence of which is unlawful, the very continuance and duration of which are unlawful, and the very object and purpose of which is contrary to law and in violation of the natural inherent right of man to live.

LEGISLATION OF IMPORTANCE TO WORKERS.

Other legislation of importance which has been accomplished since the Democrats came into power in the House is as follows:

First. Amendment of the rules of the House by eliminating Cannonism, taking the power of appointing the committees of the House out of the hands of the Speaker and thus preventing him from controlling legislation.

Second. The Department of Labor bill, creating a separate department, with a Secretary, thus giving the wageworkers for the first time a representative in the President's Cabinet, who shall have the power of mediation in trade disputes and the right to appoint conciliators when, in his judgment, it is wise to do so.

Ex-Congressman William B. Wilson, former treasurer and secretary of the United Mine Workers of America, a real friend of the workingman and, indeed, of all the people, has the honor to be the first Secretary of Labor. His biography, as taken from the Congressional Directory, shows that he is a self-made man. It reads:

William Bauchop Wilson, of Blossburg, Pa., Secretary of Labor, was born at Blantyre, Scotland, April 2, 1862; came to this country with his parents in 1870 and settled at Arnot, Tioga County, Pa. In March, 1871, he began working in the coal mines; in November, 1873, became half member of the mine workers' union; has taken an active part in trade-union affairs from early manhood; was international secretary-treasurer of the United Mine Workers of America from 1900 to 1908, having been elected each year without opposition; is engaged in farming at Blossburg; is married and has nine children; was elected to the Sixtieth, Sixty-first, and Sixty-second Congresses from the fifteenth congressional district of Pennsylvania; chairman Committee on Labor, House of Representatives, Sixty-second Congress. Took the oath of office as Secretary of Labor March 5, 1913.

Third. The Bureau of Mines bill, for the purpose of conducting, in behalf of the public welfare, inquiries and investigations with a view to improving health conditions and increasing safety, efficiency, and economy in the mining industry and safeguarding the lives of the miners.

Fourth. A provision in the naval appropriation bill requiring that all coal purchased for the use of the Navy shall be mined in an eight-hour workday.

Fifth. The eight-hour bill, extending the operation of eight-hour law to all work done for the Government as well as work done by the Government.

Sixth. The dredge-workers' eight-hour bill, which remedies a decision of the Supreme Court and brings all mechanics and laborers engaged in river dredging under the provisions of the eight-hour law.

Seventh. The Children's Bureau bill, to promote child welfare and to devise means for the development of the children who are to be the citizens of to-morrow.

Eighth. The Bureau of Safety Devices, a bill to create in the Department of Labor a clearing house for devices that will eliminate, as far as possible, industrial accidents. The creation of this bureau is to supply employers and employees with the best methods of preventing loss of life and limb.

Ninth. The farmers' and laborers' free-list bill, placing on the free list every farming implement, from a garden hoe to a thrashing machine.

Tenth. The parcel-post law, which brings the farmer, merchant, and manufacturer in direct touch with the consumer at a great saving to the people, and which will also help to reduce the cost of living.

Eleventh. The good-roads bill, which appropriates $25,000,000 for the purpose of giving Federal aid in the construction of roads in rural districts.

Twelfth. The Lever agricultural extension bill, appropriating $3,480,000 to promote the welfare of the farmer.

Thirteenth. Rural credits, a provision in the Federal reserve act permitting national banks to make loans on farm lands and to rediscount the notes of farmers based on staple agricultural products. It is estimated that the new currency law makes available $500,000,000 of addditional credit for the benefit of the farmer and the development of agriculture.

Fourteenth. The Bureau of Markets, with an appropriation this year of $200,000, for the purpose of investigating the present system of handling, marketing, and utilizing farm products. It will aid producers, consumers, and manufacturers, and will tend to reduce the cost of living.

Fifteenth. A provision placing sugar on the free list, thus saving more than $100,000,000 annually to the American people.

Sixteenth. The income tax, which places a tax on the incomes of the rich, thus lifting from the backs of the toiling masses of America the heavy burden of taxation forced upon them by the millionaires and tax dodgers of the country. For years the plain people of the United States have been clamoring for an income tax, and the Sixty-third Congress inserted a provision in the tariff bill compelling the rich man to pay his just share of taxation.

Seventeenth. The election of United States Senators by direct vote of the people, which will free the Senate from possible control by special interests.

Eighteenth. A bill providing for the publication of campaign expenses before and after election, also fixing a limit on the amount which Senators and Representatives may expend in elections.

Nineteenth. The phosphorus match bill, to protect the health of those employed in the match industry.

Twentieth. The railway employees' arbitration act, creating a board of mediation and arbitration. This board is independent of any Government department and reports directly to the President of the United States. The first case handled by the board involved 42 eastern railroads, employing 92,000 conductors and trainmen. Their grievances were satisfactorily adjusted and without one cent of loss to the employees.

Twenty-first. The banking and currency bill, which provides a plan for concentrating the reserves of 25,000 banks under one great Federal reserve association. This bill sounds the death knell of the Money Trust and puts an end to trust-made financial panics. It makes it impossible for a few high financiers ever again to concentrate the wealth of the country in Wall Street or elsewhere. Forty-nine Republicans and Progressives voted with the Democrats on the final passage of this bill.

Twenty-second. The Trade Commission bill, which makes unlawful every form of unfair method of competition and creates a commission with the power to destroy monopoly. This bill passed the House without a dissenting vote. Why was it not passed years ago? Because Cannonism blocked its way.

Twenty-third. The railroad securities bill, which prohibits the issuance or sale of so-called watered stocks and bonds by rail-

road companies. This bill passed the House by a vote of 352 to 12, and will prove a great safeguard to the small investor.

Twenty-fourth. The Clayton antitrust bill, protecting the rights, existence, and operations of fraternal, labor, and farmers' organizations, passed the House by a vote of 297 to 54.

Twenty-fifth. The locomotive-boiler inspection bill, to promote the safety of employees and travelers upon railroads, by compelling railroads to equip their locomotives with safe and suitable boilers and appurtenances thereto.

Twenty-sixth. The Key widows' pension bill, granting pensions to the widows and helpless children of soldiers and sailors who served 90 days or more in the Spanish-American War, the Philippine insurrection, or the Boxer War in China. This law will bring comfort to many a home made desolate by the death of the father who in the day of his youth and vigor went forth to defend the flag.

Twenty-seventh. The Sherwood dollar-a-day pension bill, granting a substantial increase to the old soldiers in their declining years.

This bill brings relief to every gray-haired veteran and will insure well-deserved comfort to the men who went to the front a generation ago, suffered hardships, sacrificed their homes and health for the perpetuation of the Union and the preservation of our Government.

THE CAUSE OF LABOR IS THE CAUSE OF MEN, WOMEN, AND CHILDREN. IF THERE IS ANY CAUSE MORE NOBLE, WHAT IS IT?

Mr. Speaker, I am one of the youngest Members of Congress, but there is one matter in which I do not yield to the oldest Member, or to any Member, and that is in my respect for the man who labors and by the sweat of his brow supports the old mother who loves him or the wife and children who are dependent upon him for their bread.

With the single exception of life itself, labor is the most necessary requisite to civilization, for without labor there could be no civilization. Without labor the earth would be so barren it would be uninhabitable.

But, notwithstanding the fact that all the progress of the human race and all the grandeur of civilization have been due to labor, labor in every clime and in every age has been the poorest paid and the least respected.

When the curtain rose on the first dawn of civilization it revealed labor in the chains of slavery. Historians tell us that practically all the ancient Governments practiced slavery in some form, and it was declared that its origin was divine, the classes usurping to themselves the right to exploit labor to the end that the few might live in idleness and luxury at the expense of the toiling masses. For countless years labor was held subjected, without even the rights of marriage and property and without legal and political rights. For centuries the laborer slaves were told they were on a level with the beasts of burden, and should be content to serve their lords and masters without complaint.

Beginning in this condition, labor has been working its way up, up, up, toward the mountain tops of equality, for 5,000 years and more. The cause of labor received its greatest stimulus with the proclamation that man was made in the image of God, which blasted forever the blasphemous teaching of those who were exploiting man—that he was on a level with the beast of the field and had no soul.

Labor has ever made headway on its oppressors, though for centuries its progress was so slow as to be almost impossible of perception. In the last century labor has come faster and made more progress than in any 1,000 years of history. It is going to keep on climbing the mountain until its reaches the very summit.

I will not say, because it simply is not true, that labor has enough friends in the American Congress to-day to obtain for it all the reforms that it deserves and that are some day coming to it. It is absolutely true, however, that the present Congress has more sincere friends of labor enrolled among its membership than any preceding Congress in the history of the Nation has ever had; and the tribe is increasing. Labor has received at the hands of the present Congress legislation which 10 years ago would have been, and was, absolutely impossible. The very atmosphere in the Halls of Congress, with respect to labor legislation, has undergone a most remarkable change, and it is going to change still more. As late as a few years ago a Member of Congress could not approach the dignity of being considered a statesman unless he spoke for capital only; to plead the cause of labor was to relegate himself to the class of only a second or third degree statesman. Indeed, this feeling has not yet completely passed from these national legislative chambers, but it is passing. It is inevitable that the feeling that property rights are superior to human rights must pass, and the passing is merely an incident in the march of human progress.

The curtain is descending on the era of greed, and in arising is revealing the beginning of an era of humanity and the brotherhood of man. The day when a Member of Congress need apologize for espousing the cause of labor is gone, and gone forever. Let it be realized, once and for all, that the men who toil and their families are not slaves, as the ancient slave masters pretended, but that they are all God's children, made in His image, and if one would be blessed in this world let him use his abilities and opportunities, however small they may be, for the uplift of the masses of the people.

Any Representative in Congress who imagines he may degrade his statesmanship by rising in his place to cast a vote in the interest of labor, even though he may stand alone, is woefully mistaken, because the man who sincerely espouses the cause of labor, in however humble a capacity, is serving the noblest cause in which man can invest his energy. The cause of labor is the cause of men, women, and children, and if there is any cause on earth more noble, more worthy, or more divine than that of men, women, and children I pause for those who disagree to tell us what it is.

PERSONAL ATTENTION TO OLD SOLDIERS.

Mr. Speaker, the United States of America is the greatest nation on earth, and the American flag is the most beautiful flag on earth, and we could have had neither had it not been for the Grand Army of the Republic.

I am in favor of a straight dollar a day pension for every survivor of the Union Army who served 90 days or more, and have introduced a bill to that effect, which I hope and believe will soon be considered by Congress. In introducing this bill I have not only followed the dictates of my heart but my action has been in accord with my best judgment. We can never repay in dollars and cents the brave men who went forth to battle that this Nation might endure, and the very least we can do is to see to it that their declining days are made as happy and comfortable as possible.

I have made it one of my principal duties since becoming a Member of Congress to make frequent trips to the Pension Bureau to give personal attention to the pending pension claims of the old soldiers, the soldiers' widows, and the soldiers' orphans residing in the fourteenth district. The volume of pension matters that I am handling is so great that it involves much hard work, but there is nothing that I do here that affords me as much pleasure. Every old soldier or his widow or orphan is invited to write me whenever I can be of service, and while I may not be able to be successful with every claim, I will obtain the desired results in every case where there is a fighting chance of success.

EACH MEMORIAL DAY REVEALS HOW FAST "THE BOYS" ARE GOING.

Mr. Speaker, imagine that it is again Memorial Day. Once more the old blue ranks are joined. With fifes and drums sounding, the remnant of the Grand Army comes down the street.

Again the old "boys" have met at the hall. It is not such a numerous company as met there 10 years ago, or 5, or even last year. But it is still "Bill," and "Tom," and "Comrade" with a heartiness that even age can not take away. There are solicitous inquiries after health. Hands clasp silently in reunion. Many are wondering whose place in the parade will be vacant next year, next Memorial Day. "Jim" is beginning to look feeble. "Sam's" shoulders, always so erect, are beginning to have an involuntary stoop in them.

The Relief Corps has been busy for several days. But now most of the active work of preparation has been done by the grandchildren of the veterans. The grandsons have been out in the woods gathering flowers. The granddaughters have arranged the memorial baskets and bouquets. And grandchildren this year have placed the marker flags in the cemetery. They used more flags this year than ever before.

At last the parade starts. Its military appearance is kept up this year by the presence of Spanish War Veterans and the Boy Scouts. But the chief interest is in the brave little band of Grand Army men. There is a pitiful attempt, but unsuccessful, to appear in uniform. With most the uniform consists merely of the black felt hat with its gold braid. With some it is merely the gold buttons in suits of brown, black, and gray, while a very few still wear the blue suits, brass buttons, felt hat, and all.

Most of them still make a brave attempt to be military in bearing; but for all but a few the exertion is terrific. Some still have their buoyant step, but for most the march is halting and painful; and some who have always marched before this year are riding in carriages and automobiles.

No wonder that in the average small northern town eyes are wet with tears as they watch the old Grand Army march by

again. The faces in the line are mostly known to all, and some are missed. The town knows the story of all of them.

I have a purpose in rehearsing the scenes enacted on Memorial Day. The point I wish to make is that the Grand Army is going, and going rapidly. Each month now at the Pension Office in Washington 4,000 names are struck from the roll with the grim word "Dead" closing each pension account. Four thousand a month! These men who went forth to give their lives for the Union 51 years ago hardly fell on the battle fields and in the fever hospitals at that rate.

The country needs a new sense of the great debt owed to these men. The country owes it to this dwindling band to smooth out their declining years. It ought to be easier for them to get their pensions. They ought not to be subjected to the annoying delays and red tape that they have been subjected to in the past. Their pensions ought to be bigger—a dollar a day is not too much. Moreover, pensions ought to be paid more frequently. There has been introduced in Congress a bill providing for monthly instead of quarterly payment of pensions, and I hope it will pass. Time flies. Whatever is to be done for the boys in blue must and should be done quickly.

WAR WITH MEXICO WAS AVERTED.

Mr. Speaker, the country is to be congratulated upon the success of its great President, Woodrow Wilson, in keeping this Nation from going to war with Mexico. It is well to consider, too, the possibility that had we become embroiled in arms with our sister Republic to the south we might now possibly be engaged in the great war that is to-day shaking the whole world.

The terrible European war, with its accompanying bloodshed, sufferings, and cries of anguish arising from the battle fields, with its ever repeated tales of green fields and fair and bounteous lands transformed overnight into human slaughter pens and scenes of utter desolation, reveal only too vividly what this country escaped in avoiding a war with Mexico.

The people are beginning to realize why Woodrow Wilson was so patient, what he was trying to avoid, and what he succeeded in avoiding.

The wisdom of the President's course toward Mexico is now apparent. An expensive war, and a war without glory to the United States, has been avoided. The mediation caused the flag incident to escape into the background and served to postpone action by the United States against Huerta until the advance of the constitutionalists drove him from Mexico.

As the public is brought to review the recent history it will come to admire the course of Woodrow Wilson more and more. Jingoes and antiadministration newspapers are trying to create the impression that our Government came off second best in a bout involving the honor of both countries. There is also the insinuation that our administration lacked courage to attack Mexico after the seizure of Vera Cruz.

It is very true that the Wilson administration submitted to insults patiently from Huerta, when one-tenth of such insults coming from a nation the size of the United States would have been instantly and firmly resented by the brave man in the White House. It took a braver man to overlook Huerta's insults than to resent them.

But the President's tolerance of Huerta was his greatness. He was dealing not with a nation but with a violent and irresponsible individual. It was the same as dealing with a wayward child. One man might kill another if a point of honor were involved, but the same man as superintendent of an industrial school would submit to the same insult from a bad boy and only seek methods of correcting his charge. That is the way President Wilson dealt with Huerta, and he kept the United States out of war, saving untold bloodshed and misery and millions of dollars.

One great blessing sure to come out of the Mexican revolution will be a modern free public-school system for the Mexican peons. Much cynical criticism of President Wilson's policy toward Mexico has been based on the argument that the Mexicans are too ignorant to support a constitutional government, even if they should have one given to them ready-made.

The answer, of course, is that the rich landowners of Mexico who have controlled previous Mexican Governments have kept these peons in ignorance purposely. They know that with education comes determination to secure better things and greater liberty, and the power to attain them, too. To-day it is practically impossible for the Mexican labor class to get any education at all.

The constitutionalists, confident of their ultimate success, several months ago appointed a commission to study the free-school systems of the United States. The commission, appointed by Gen. Carranza, is headed by Señor Modesto C. Rolland, a former instructor in the Mexican National Military Academy at Chapultepec.

This commission will be ready to report by the time the constitutionalists set up their government in Mexico City.

The program embraces a State system of schools—primary schools, high schools, technical-training schools, and colleges.

Now contrast this prospect with the desolation that would have resulted had we gone into Mexico and reduced that country to ruins.

WOODROW WILSON CAN BE TRUSTED TO KEEP US OUT OF WAR.

The people of the United States are now all anxious that this Nation keep out of any entanglement that might involve us in the European war. President Wilson can be trusted in this crisis. He will never permit us to be drawn into the awful conflict across the Atlantic. It is only right, however, that the people should give him a House and Senate of his own political faith. Some of the more partisan of the opposition party are advising the people to elect to Congress men of a different political faith than the President, in order to throw a monkey wrench in the machinery so that he can not turn a wheel. If there ever was a time when the President should not be harassed by a Congress of a different party than his own, it is now. To "throw a monkey wrench in the machinery so the President can not turn a wheel" might be the means of involving this Nation in the great world-wide war. The advice of President Lincoln "not to trade horses in the middle of a stream" is very obviously applicable at the present moment.

President Wilson's devotion to duty and the path that he has blazed for every Congressman at a time when personal advantage would be best served by campaigning in our respective districts is well illustrated in the correspondence between President Wilson and the chairman of the Democratic national congressional committee. I feel that I can not better conclude these remarks than by quoting that correspondence:

CHAIRMAN DOREMUS'S LETTER TO THE PRESIDENT.

SEPTEMBER 1, 1914.

MY DEAR MR. PRESIDENT: For some time the Democratic national congressional committee has been receiving requests from every State in the Union urging us to enlist your active participation in the important election contest just before us. These requests come from scores of friends of your administration, who view with intense pride and satisfaction the splendid achievements that have resulted through, to use your own phrase, the cooperation of one "human being with other human beings in a common service."

I hazard nothing when I say that you are very near to the hearts of the American people and that your presence among them would be to them a source of much gratification.

I realize how occupied you are in these trying days and how steadfastly you have remained at your post of duty, safeguarding the best interests of all the people in this great crisis, and for that reason I almost hesitate to take up with you the matter of a speaking campaign. However, it is important that we who are responsible for putting before the American people in the coming election contest as best we can the splendid record of achievement of your administration should know as early as possible to what extent, if any, you can give us your valuable time.

Yours, very sincerely, FRANK E. DOREMUS.

THE PRESIDENT'S REPLY.

SEPTEMBER 4, 1914.

MY DEAR MR. DOREMUS: I have read your letter of September 1 with a keen appreciation of its importance. It appeals to me as the leader of the party now in power with peculiar force and persuasiveness. The close of a very extraordinary session of Congress is at hand, which has, I venture to say, been more fruitful in important legislation of permanent usefulness to the country than any session of Congress within the memory of the active public men of our generation. A great constructive program has been carried through, for which the country has long waited, and has been carried through with the approval and support of judicious men of all parties, and we have abundant reason to congratulate ourselves upon the record that has been made during the busy 17 months we have devoted to our great legislative task. Certainly in ordinary circumstances, if we were free to disengage ourselves for the purpose, we would be warranted in now directing our energies to a great campaign in support of an appeal to the country to give us the encouragement of its indorsement at the autumn elections.

We could go to the country with a very sincere appeal in which there need be no pretense or boast of any kind, but a plain statement of things actually accomplished, which ought to be, and I think would be, entirely convincing. It is a record which shows us at peace with all the world; the questions which plagued business with doubt and uncertainty and irresponsible criticism out of the way, thoughtfully settled and disposed of; the apparent antagonism between Government and business cleared away and brought to an end with the plain reckoning accomplished; the path for sure-footed adjustment clear ahead of us, prosperity certain to come by means which all can approve and applaud.

MORE WORK TO BE DONE.

Moreover, there is a program of another kind ahead of us to which it is inspiriting to look forward—a program free from debate, except as to the best means by which to accomplish what all desire. The great questions immediately ahead of us are the building up of our merchant marine with all that that means in the development and diversification of our foreign commerce and the systematic conservation and economic use of our national resources, subjects much talked about but little acted upon. There are other great pieces of constructive legislation waiting to be done to which we could turn without any controversy, except, as I have said, as to the best ways of doing them.

I believe that ways can be found to do these things readily enough if the country will give us its generous support and trust us to do them; and it would have been a genuine pleasure to me to ask to be given again colleagues such as I have had in the two Houses of Congress during the present memorable session. I trust that there will be many occasions upon which I may have the privilege of calling the

attention of my fellow countrymen to the fine and unselfish service which has been rendered them by their present Representatives, ready at all times to respond to any appeal which spoke convincingly of the public welfare.

But in view of the unlooked-for international situation our duty has taken on an unexpected aspect. Every patriotic man ought now to "stay on his job" until the crisis is passed, and ought to stay where his job can best be done. We must do whatever is necessary and forego whatever is necessary to keep us in close and active concert in order to relieve in every possible way the stress and strain put upon our people during the continuance of the present extraordinary conditions. My job, I now know, can be done best only if I devote my whole thought and attention to it, and think of nothing but the duties of the hour. I am not at liberty, and shall not be, so far as I can now see, to turn away from those duties to undertake any kind of political canvass.

A TWOFOLD RESPONSIBILITY.

In the present emergency I am keenly aware of the twofold responsibility I am called upon to discharge—the responsibility which devolves upon me as President of the United States and the responsibility under which I am laid as leader of a great political party. Of course the whole country will expect of me and my own conscience will exact of me that I think first of my duties as President, responsible for exercising so far as I have the ability a constant guidance in the affairs of the country, both domestic and foreign. The labors of Congress have a natural and customary limit; the work of the Houses can be and will be finished; Congress can adjourn. But the President can not, especially in times like these, turn away from his official work even for a little while. Too much depends upon his keeping all the threads of what is occurring in his hands.

I have therefore reached the conclusion that I can not in any ordinary sense take an active part in the approaching campaign; that I must remain here to attend to the serious work sure to fill the months immediately before us—months that will carry with them obligations, no doubt, of the most tremendous sort. I know that you will feel similarly about your own obligations; that Members of Congress, too, without distinction as to party affiliations, will feel that they must remain to do their work of necessary and pressing service and bring it to a successful conclusion.

TO BE JUDGED BY RECORD.

I shall no doubt take occasion as opportunity offers to state, and perhaps restate, to the country, in the clearest and most convincing terms I can command, the things which the Democratic Party has attempted to do in the settlement of great questions which have for many a long year pressed for solution, and I earnestly hope that they will generously open their minds to what I may have to say; but I shall not allow my eagerness to win their approval or my earnest desire to be granted by their suffrages the support of another Congress to interfere with the daily performance of my official duties or distract my mind from them. The record men make speaks for itself. The country can not be deceived concerning it, and will assay it justly. What it chiefly expects and demands and what it will certainly be most surely won by is the performance of duty without fear or favor and without regard to personal consequences.

And certainly this is a time when America expects every man to do his duty without thought of profit or advantage to himself. America is greater than any party. America can not properly be served by any man who for a moment measures his interest against her advantage. The time has come for great things. These are days big with destiny for the United States, as for the other nations of the world. A little wisdom, a little courage, a little self-forgetful devotion may under God turn that destiny this way or that. Great hearts, great natures, will respond. Even little men will rejoice to be stimulated and guided and set an heroic example. Parties will fare well enough without nursing if the men who make them up and the men who lead them forget themselves to serve a cause and set a great people forward on the path of liberty and peace.

Cordially and sincerely, yours,

WOODROW WILSON.

The War Revenue Tax.

EXTENSION OF REMARKS

OF

HON. JAMES C. McLAUGHLIN,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, October 5, 1914.

On the bill (H. R. 18891) to increase the internal revenue, and for other purposes.

Mr. McLAUGHLIN. Mr. Speaker, I am receiving, as I presume other Members are, many letters and telegrams protesting against the so-called war-tax bill which passed the House a few days ago, by which it is proposed to raise additional revenue to bolster up the rapidly diminishing balance in the Federal Treasury by imposing special and unusual taxes upon the people of the country to the extent of $105,000,000.

I believe the country ought to know that the measure now passing through Congress is a secret, partisan affair, and that Republicans have no opportunity whatever to take part in the preparation or consideration of it. I feel I must speak of these matters, if for no other reason than to explain more fully than I am able by correspondence with my constituents the real situation as it exists here, and why, because of the partisan, star-chamber methods of the Democratic majority, I am unable, as a Republican, even to offer assistance.

Up to the time the bill passed the House, September 25 last, it was necessary for me to answer all communications by saying that the bill was being prepared in secret by Democratic members of the Ways and Means Committee, and that later, when the bill was before the House, it was considered under a special rule, which permitted very brief debate and no opportunity whatever for amendment.

When the bill was reported from the strict privacy of the Ways and Means Committee it was considered (?) in the House under a rule which permitted Republican and Progressive Members together only two hours of debate—about one minute to each, if he wished to indulge in unavailing protest—and was rushed through without amendment—because the rule expressly provided that no amendment would be permitted—by almost a solid Democratic vote.

During the Sixtieth and Sixty-first Congresses, when Republicans controlled the House, I joined and took part in a movement to do away with what I considered were arbitrary and unjust special rules which unreasonably limited debate and which gave too little opportunity for amendment of important bills. At that time every Democrat in the House joined in the attempt we were making to correct the system by which oppressive rules, "gag rules," as they were called, were imposed; and every Democrat who then spoke, including those who are now leading the Democratic majority, expressed himself frequently and forcibly, and with some show of sincerity, to the effect that the system of "gag rule" was a Republican system which should have no place in a Democratic House.

But evidently sincerity and consistency are not Democratic virtues. The Democratic majority has frequently resorted to special rules, some of them more drastic and inexcusable than any used while the Republicans were in control. "Gag rules" are now frequently employed to pass party measures, and not infrequently for the consideration of measures which ought to be, and but for the offensive rules would be, considered in a nonpartisan manner. The rule under which the war-tax bill was forced through the House was about as bad as could be, although it was not much, if any, worse than others which have been resorted to during the last four years.

The war-tax bill is now in the hands of the Finance Committee of the Senate, where it is being considered by the same secret and partisan procedure which marked its course at this end of the Capitol. Democratic members of the committee are holding meetings behind closed doors; no Republicans are permitted to enter; no amendments can reach the committee except such as are presented on the floor of the Senate. The committee permits no hearings; no one, regardless of the extent or manner in which his business or his property may be affected, is permitted to appear—even Republican Senators, who wish to present the views or interests of their constituents, find it very difficult, often impossible, to reach the committee.

This bill is presented as a "war measure," and Congress is appealed to to be "patriotic" in its support of the administration in the "emergency" which confronts it. Such appeal is unnecessary; Congress is always patriotic and always ready to support the administration in time of war or when real emergency arises. In 1898, when our country was itself engaged in war, a "war-tax bill" was presented to Congress by Republicans; Congress had appropriated $50,000,000 to be placed in the hands of President McKinley, to be used as his judgment seemed to make necessary; and to meet further and extraordinary expenses of war, a bill providing special internal-revenue taxes was presented. Democrats now accuse Republicans of lack of patriotism and of unjustifiable partisanship. What was the attitude of Democrats in Congress in 1898? The country was prosperous in 1898, but it had lately emerged and had only partially recovered from the panic which afflicted it during four years of Democratic administration, and it was necessary to resort to special taxation to meet the expenses of war. Did the Democrats then show patriotism or partisanship? The bill was considered several days in the House; all who wished had a chance to speak, and every possible chance to offer amendment was given; but every Democrat who spoke at all opposed the bill and almost every Democrat voted against it.

The taxes to be imposed by this bill are called "war taxes," made necessary, it is claimed, by the "emergency" of the war in Europe; but in truth and in fact they are made necessary on account of failing revenues under the Underwood tariff law. It is true that that law has yielded considerable revenue—more than was expected—but the merits and capacity of any law as a revenue producer must be measured by its ability to supply revenue to meet expenditures and to meet ordinary contingencies at least.

The fact that the Underwood law yields large revenue is not creditable to it, inasmuch as the law has caused very large increase of importations, because tariff duties are made so low as to invite foreign manufacturers to flood our markets with their goods, causing mills and factories which make, or ought

to make, these goods in this country to shut down or curtail their output to such an extent as to deprive thousands of men of employment or compel them to work short time or at reduced wages. A tariff law which imposes duties which are not high enough properly to protect American producers may yield large revenue by inviting foreign producers to enter our markets, but, as they absorb our markets, they destroy or seriously embarrass producers of our own country. Under such a law as the Underwood law the greater the revenue the greater the embarrassment of home producers.

Large revenues have been collected under the Underwood law, but appropriations for which they are to be used are more than $93,000,000 more than during the last year of Republican administration; and even if customs duties had not been reduced by war it would have been necessary to meet expenditures either by sale of bonds, as is usual under Democratic administrations, or by special taxes, as is being done now.

As proof of the assertion that appropriations largely exceed the revenues which can possibly be collected, I call attention to the following statement of actual appropriations and estimated receipts for this year:

APPROPRIATIONS.

Agriculture	$19, 865, 832. 00	
Army	101, 019, 212. 50	
Diplomatic and Consular	4, 309, 856. 66	
District of Columbia	12, 172, 539. 49	
Fortifications	6, 627, 700. 00	
Indian affairs	9, 771, 902. 76	
Legislative, executive, and judicial	37, 630, 229. 70	
Military Academy	997, 899. 54	
Navy	144, 868, 716. 61	
Pensions	169, 150, 000. 00	
Post Office	313, 364, 667. 00	
Sundry civil	110, 070, 227. 39	
Urgent deficiency	17, 462, 457. 78	
Deficiency	5, 901, 128. 83	
Miscellaneous	6, 000, 000. 00	
Permanent annual	131, 196, 407. 00	
Rivers and harbors	20, 000, 000. 00	
War risk insurance	5, 100, 000. 00	
For assistance to Americans in Europe	1, 000, 000. 00	
		$1, 120, 508, 777. 26

RECEIPTS (ESTIMATED).

Customs receipts	261, 840, 000. 00	
Ordinary internal revenue	308, 613, 000. 00	
Corporation and income taxes (if business is good)	78, 000, 000. 00	
Postal receipts	308, 000, 000. 00	
Miscellaneous receipts	71, 000, 000. 00	
		1, 027, 453, 000. 00
Deficit		93, 055, 777. 26

The above statement as to receipts is, of course, only an estimate, but it is prepared by reliable, if not official, authority. In a speech in the House September 12, 1914, Hon. JOHN J. FITZGERALD, Democrat, chairman of the Committee on Appropriations, gave the estimated receipts as $1,036,000,000, only $8,547,000 more than the above estimate.

All estimates of receipts for this fiscal year were prepared before the war in Europe began, and therefore may be taken as the normal receipts of the year. The total receipts of last year, as reported by the Secretary of the Treasury July 2, 1914, were—not including postal receipts—$734,343,700.20; but included in this sum was $12,500,000 received on the sale of two of our battleships to Greece and also the sum of $3,800,000 surplus postal receipts turned over by the last Republican Postmaster General. If we deduct these receipts and add the amount of postal receipts estimated by Mr. FITZGERALD—$308,000,000—we have $1,026,043,700, which is $1,410,000 less than the estimate I have given and only $10,000,000 less than is estimated by Mr. FITZGERALD.

Appropriations reach the enormous sum of $1,120,508,777.26, which is $93,825,895.54 more than the sum appropriated by the last Congress while Republicans were in control of the Government; and this excessive appropriation has been made, although only $21,000,000 is appropriated this year for the Panama Canal, whereas under Republican rule it was necessary to appropriate as high as $48,000,000 for this purpose in a single year, and although it is necessary this year to appropriate $11,130,000 less for pensions than last year.

In addition to appropriations actually made, and as indicating the attitude of the entire Democratic administration in making and demanding appropriations regardless of the revenue of the Government, attention is called to the fact that the administration has approved and is demanding early passage of the bill (H. R. 18666) to provide $40,000,000—$10,000,000 in cash and $30,000,000 in bonds—to enable the Federal Government to "purchase, construct, equip, maintain, and operate merchant vessels in the foreign trade of the United States." Only a few days ago the President announced that he would not permit Congress to adjourn until this shipping bill, one of his pet measures, shall be enacted into law. And the State Department has negotiated a treaty with the Republic of Colombia, which the President of the United States has approved and recommended to the Senate, providing for payment of $25,000,000 to that Republic as a balm to its injured feelings growing out of the organizing of the Republic of Panama and the acquisition by the United States of the Canal Zone over or through which the Panama Canal has been constructed. And another treaty has been negotiated with Nicaragua, approved by the President and urged by him for approval by the Senate, providing for payment to that country of $3,000,000. If these measures are passed, the appropriations or obligations of the Government will be increased by the sum of $68,000,000, and if the administration is extravagant enough to use all of the money it has demanded and which has been placed at its disposal by Congress, the deficit for this fiscal year will be $161,055,777.26.

The predicament in which the Democratic Party is placed on account of these immense appropriations would be amusing if it were not so serious, in view of the bitter denunciation of Republican administrations by Democratic platforms and of loud and persistent promises of Democratic economy. In the light of present conditions, it is interesting to read the "economy" paragraphs of Democratic national platforms. The Democratic platform of 1908 said:

> The Republican Congress in the session just ended made appropriations amounting to $1,008,000,000. * * * We denounce the needless waste of the people's money, which has resulted in the appalling increase, as a shameful violation of all prudent considerations of government and as no less than a crime against the millions of working men and women, from whose earnings the great proportion of these colossal sums must be extorted through excessive tariff exactions and other indirect methods. * * * We demand that stop be put to this frightful extravagance, and insist upon the strictest economy in every department compatible with frugal and efficient administration.

The platform of 1912 said:

> We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of the recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a democratic Government and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

In a speech delivered in the House April 10, 1914, Mr. FITZGERALD, Democrat, chairman of the Appropriations Committee, said:

> Whenever I think of the horrible mess I shall be called upon to present to the country on behalf of the Democratic Party, I am tempted to quit my place. I am looking now at Democrats who seem to take amusement in soliciting votes on the floor of this House to overturn the Committee on Appropriations in its efforts to carry out the pledges of the Democratic platform. They seem to take it to be a huge joke not to obey their platform and to make ridiculous the efforts of the members of our party who do try to live up to promises they made to the people. * * * They have unnecessarily piled up the public expenditures until the Democratic Party is becoming the laughingstock of the country. * * * Do not continue to vote for these improper and improvident appropriations. Those who propose to continue to do so should at least have the courage openly to assert upon the floor of this House that they believe the professions of the Democratic Party have not been made in good faith, that they can not be carried out, and that we are not entitled to power because of those professions.

In April, Mr. SISSON, of Mississippi, Democrat, member of the Committee on Appropriations, said:

> This is the most outrageous and criminally extravagant Congress that ever sat on the American Continent. I want to apologize to the Republicans for having called them extravagant when they were in control of the House. They were modest in comparison with the appropriations that we are now making.

These are not Republican professions or promises of economy in the administration of government, nor have these criticisms been passed upon the present Democratic Congress by Republican Members. The promises of economy were a part of the platform on which the candidates of the Democratic Party ran and are, or were supposed to be, the tenets of their faith in the matter of public expenditures. The speeches criticizing the Democratic majority were made by two prominent members of that party, one the chairman and the other a prominent member of the Committee on Appropriations of the House. It is certainly not necessary for me to say anything myself or to offer further testimony in support of the charge that appropriations made at this session of Congress are very large, that they show inexcusable extravagance, especially at a time when the revenues of the Government are threatened and when the Administration is demanding collection of additional revenue by way of special internal-revenue taxes.

But now, notwithstanding the statements I have made as to the revenues for this fiscal year and as to immense appropriations which apparently can not be met without an issue of bonds or special taxes, I wish, in good faith, to submit that there is, and during this fiscal year will be, no good reason for permitting a deficit to arise which can not be met without the passage of this war-tax bill.

It will not be necessary for the departments of Government, for which these immense appropriations have been made, to use all the money provided for them. They can and ought to exercise economy, and by the exercise of economy many, many millions of dollars of the money appropriated will remain in the Treasury. And the Government can recall, as it needs money, the $75,000,000 now on deposit in national banks, placed there by the Secretary of the Treasury ostensibly to "move crops" and to be loaned by the banks for general business purposes. I say "ostensibly" because a very small part of the money has been placed in banks in parts of the country where there is real need of money for moving crops. It is significant that not one dollar of the "crop-moving" money has been deposited in the banks of Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, Pennsylvania, Delaware, Maryland, West Virginia, Ohio, Michigan, Wisconsin, Minnesota, North Dakota, South Dakota, Montana, Utah, Wyoming, Nevada, Idaho, Oregon, California, New Mexico, or Arizona. It might truthfully be said that the Secretary of the Treasury has been unduly liberal to banks in Southern States, but if I were to present all the evidence of favoritism and sectionalism displayed in the placing of this money, more time would be necessary than I am permitted to occupy.

But regardless of the location of the banks in which deposits have been placed and regardless of the purpose for which deposits were made, the money was loaned to the banks at 2 per cent interest, subject to call, and now, in the time of the Government's need, it ought to be returned. The President says the business of the country is in such critical condition—not on account of vicious tariff legislation, which paralyzes industry, but, as he says, "on account of the war"—that it will not be safe to withdraw money from banks; but the Secretary of the Treasury says banks are filled to overflowing; that they are hoarding money, accumulating money far in excess of the requirements of law; that banks, lending the Government's money, are making loans at exorbitant rates of interest—from 6 to 12 per cent—that they are refusing to make loans when good security is offered; that they are doing these things for the purpose of embarrassing the business of the country.

If the Secretary is right, the country will say that the deposits ought to be withdrawn from the banks, and that the Government ought to have its money to be used in meeting the "emergency" which confronts us. If the Secretary is right, the Government, with $75,000,000 of money in banks, subject to call, ought not to think for a moment of imposing special and unusual taxes upon the people. With abundant opportunity to reduce the expenses many millions of dollars, and with $75,000,000 of money in banks, subject to call, a levy of $105,000,000, or any other amount, is absolutely inexcusable.

Abstract of Mr. Bryan's Address Sunday, October 4, 1914, at New York Prayer Day Exercises.

EXTENSION OF REMARKS

OF

HON. JOHN L. BURNETT,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 8, 1914.

Mr. BURNETT. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an abstract of Mr. Bryan's address Sunday, October 4, 1914, at New York prayer-day exercises.

The abstract of Mr. Bryan's address is as follows:

"Responding to petitions from the representatives of all religious faiths the President has, by solemn proclamation, set apart this day as a day of prayer for peace, and we, by assembling on this occasion, indicate approval of his official act, while we in the spirit of worship plead with the Almighty to so make known His sovereign will as to restore peace, complete and enduring, to the nations now at war.

"It is not necessary that we should consider the causes that led up to the conflict or attempt to locate responsibility for the conditions that now exist. It is not only not necessary but contrary to the natural order. If a friend meets with an accident we address ourselves first to his immediate needs, and after we have relieved his sufferings we seek the cause of his misfortune with a view to saving others from a similar fate.

"So to-day, when a number of nations, all our friends, have been drawn into the vortex of war, our first duty is to use such influence as we may have to hasten the return of peace; there will be ample time afterwards to devise ways and means for preventing future appeals to arms.

"Prayer is a recognition of a power higher than ourselves and a confession that we believe in the existence of a force above and beyond man's control; prayer expresses humility—it is an acknowledgment of man's finiteness in the presence of the Infinite. It proclaims reliance upon a wisdom to which our minds can not aspire and a willingness to abide by the will of God, made manifest among men.

"As each individual life is influenced, even often controlled, by events which man does not foresee and which care can not avoid, so the tide of battle is sometimes turned by unexpected incidents which no precaution can prevent and which no preparedness can withstand. The believer, however fixed his opinion and however positive his sympathies, should desire the triumph of that which is right above that which may accord either with his seeming interest or his judgment. If this is our attitude toward those overruling events which indicate the pleasure or displeasure of the Heavenly Father, we can with the more profit to ourselves consider the elements which enter into the establishment of peace—remembering that we ourselves need enlightenment as to the course that will enable us to be helpful both to our own and to other nations.

"In this age our interests are so entwined with the interests of those who reside in other lands that no nation can live or die unto itself alone. If we had no higher reason for encouraging conditions conducive to peace, we should find ample justification in the fact that the burdens of war are no longer borne entirely by those who are direct participants in it. To-day every neutral nation finds itself greatly embarrassed by the disturbance which the European war has wrought in every department of human activity; and we therefore appreciate more fully than ever before how numerous are the ties that bind us together and how far-reaching are the consequences of war.

"We must not be discouraged if this, the greatest of all wars, breaks out just when we were most hopeful of the substitution of reason for force in the settlement of international disputes. It may be that the world needed one more awful object lesson to prove conclusively the fallacy of the doctrine that preparedness for war can give assurance of peace. This assumption is built upon the theory that peace rests upon fear, whereas all history proves the contrary. Love is the only foundation upon which permanent peace can rest; peace is promoted, therefore, by anything which promotes good will. Continuous preparation for war presupposes the existence of an enemy who must be hated until he can be overcome; but hatred begets hatred, and revenge is the heaviest load that man or nation can carry. It is only occasionally that one has an opportunity to do hurt to an enemy, but the desire to harm another is a continuing source of injury to one's self.

"And even if one could be completely avenged by the exercise of physical force, he could not escape the influence which the use of this force and the winning of a triumph by means of it are likely to exert upon himself. When the Creator placed man upon the earth he so arranged the restraints intended for the control of his life that he is impotent to escape from the results of his own wrongdoing. No human court can suspend the decree pronounced in the sentence, 'The wages of sin is death.' As man's happiness was placed in his own keeping when it was made dependent, not upon what the world does for him but upon what he does for the world, so his punishments were committed in part to his own hands when the Maker withheld from him the power to protect himself from the punishment which evil doing inflicts upon the evildoer.

"The commandments that relate to man's conduct toward his fellows were given not merely for the benefit of those who might without these commandments suffer injury at the hands of others but for the benefit, also, of those who without the commandments might, while inflicting injury upon others, bring still greater suffering upon themselves. Likewise the doctrine of forgiveness was not promulgated for the benefit of the forgiven alone, but that man, leaving vengeance to the Lord, might occupy his time to better advantage.

"Most of the errors which man commits in international affairs arise from a failure to understand the fundamental truth, that moral principles are as binding upon nations as upon individuals. The commandment, 'Thou shalt not steal,' covers grand larceny as well as petit larceny; 'Thou shalt not kill,' applies to nations as well as to individuals. A nation is but a group of individuals, and no group, however numerous, can expunge one syllable of the moral law. 'Though hand join in hand, the wicked shall not be unpunished.'

"We shall be aided in our efforts to promote peace if we fix in our minds certain propositions which embody pertinent and

important truths. Some of these propositions are directed against delusions, others express the conclusions drawn from the world's experience.

"First. War is not to be judged by the appearance of soldiers on parade. The regiment marching through the streets with banners flying, keeping time to the strains of inspiring music, is attractive to the eye, but this is not war. War is understood only when one visits the hospital, when disease is ravaging the camp of the battle field, where men meet face to face, grimly determined to sell their lives at the highest possible price, paid in human blood, or when one enters the fatherless home from which the breadwinner has been taken and measures the value of the protection withdrawn from the children and the added cares imposed upon the mother. Weight must also be given to the aftermath of prejudice and ill will, for each war sows the seeds of future wars.

"Second. The good that man's ingenuity may be able to extract from war must not be used to justify recourse to arms. Such advances in civilization as have been credited to war could have been secured in larger measure and at less cost by peaceful means. Man has been rowing upstream, and it is necessary to subtract the speed of the war current before we can estimate the progress which would have been made had he not been compelled to pull against the swift currents of human passion.

"Third. Man does not need to stain his hands with his brother's blood in order to qualify himself for worthy deeds. We could not worship God as we do if we believed that He had so constituted man as to make war necessary to man's elevation. If war were a moral necessity, it would be planned for, not deplored. If it were a recognized human need, men would claim credit for it, not deny responsibility, as they do to-day. One of the encouragements to be drawn from the present European conflict is to be found in the fact that the Governments involved vie with each other in refusing to admit that they began it. We have taken a long step in advance when no civilized nation will either admit a desire for war or confess an intention to inaugurate it.

"Fourth. Man is normal when in calm, not when he is angry; and his plans must, therefore, be perfected and carried out when his conscience and his judgment are free to act. When a man is angry he boasts of what he can do; when he is calm he considers what he ought to do.

"Our Nation not only largely profits by the peace policy which it has pursued, but it has put itself in a position to render a larger service to the world than it otherwise could; and with nations, as with individuals, service is the measure of greatness. By promptly accepting the mediation generously offered by the representatives of three great Republics of South America—Brazil, Argentina, and Chile—President Wilson not only secured a peaceful solution of a situation that threatened war, but he gave a strong impetus to the cause of conciliation. It will be easier than before to preserve peace in the Western Hemisphere and more difficult to excite war.

"In its dealings with other countries our Government has found it wise to discourage the employment of the ultimatum and to substitute a continuation of negotiations, on the theory that nothing is final between friends.

"Our Government, steadily advancing toward the goal of universal peace, has also found it possible to make more remote the possibility of war by the negotiation of treaties which provide for the investigation of all disputes before the employment of force. Twenty-seven of these treaties have already been signed, and the Governments which they represent embrace considerably more than two-thirds of the population of the world. In fact, almost every nation of importance has indorsed the principle, and nearly all have concluded conventions. Those treaties leave nothing which can become a cause of war until after an international tribunal has investigated the matter in dispute. The commission provided for is a permanent one, ready to be invoked at a moment's notice, and the period allowed for examination into the differences is a year—long enough to permit passions to subside and questions of honor to be separated from questions of fact. In order to secure the investigation of all questions, without any exception whatever, it is necessary to reserve to the contracting parties the right to act independently upon the subject matter after the investigation has been made; but this right, while important, is not likely to be exercised, since the investigation is quite certain to result in agreement.

"Fifth. The plane of existence will not be lowered, neither will the field of endeavor be narrowed when, as foretold in prophecy, the swords shall be beaten into plowshares and the spears into pruning hooks; when nation shall not lift up sword against nation, and when people shall learn war no more. Man has spent a considerable portion of his time in the work of destruction. In the day that is dawning he can devote all his efforts to production.

"Already we have learned that it is more advantageous to expand the land we have by doubling its productiveness than it would be to add an equal area by conquest; the sacrifices made in altruistic work prove how limitless is the field of noble effort when men rival each other in doing good. There is as much inspiration in a noble life as in a heroic death.

"Sixth. 'No question is ever settled until it is settled right.' Force is impotent to fasten upon mankind a single falsehood. There is in every righteous cause an inherent power by which it is able to overcome opposition. As the invisible germ of life in the grain of wheat takes from earth and air that which it needs for its growth and perfection, so the invisible germ of life in truth gathers nourishment from the dead things about it and grows until it becomes an irresistible force, bringing victory to those who dare to stand for it. One with God shall chase a thousand and two put ten thousand to flight.

"Seventh. The goal of humanity is universal brotherhood, and each individual is destined to find that the commandment 'Thou shalt love thy neighbor as thyself,' instead of diminishing his share of the proceeds of the general toil of the world, will give the largest assurance of permanent prosperity and advancement. He who impressed upon man His image and who holds in His hands the destinies of nations has ordained that man's welfare shall be dependent upon obedience to the divine law, and mankind is drawn together in the indissoluble bonds of common brotherhood as man sees this law with increasing clearness.

"At the close of the Civil War one of the sad experiences of that great conflict was described in verse. The story runs like this:

"'Two brothers, reared at the same fireside, had enlisted, one in the Union Army and one in the Confederate ranks. During a battle one of these thrust his bayonet into the breast of a soldier in the opposing line. When he stooped to withdraw the weapon he found that he had killed his brother,' and then the poet in touching words described the sorrow that overwhelmed him.

"It is not too much to hope that in the days which are before us we shall feel more and more the binding influence of that tie that links each human being to every other until we shall fully recognize the claim of each upon all. God speed the day!"

On Adoption of Conference Report on Antitrust Bill.

EXTENSION OF REMARKS

OF

HON. JEFFERSON M. LEVY,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 8, 1914.

On the adoption of the conference report on the bill (H. R. 15657) to supplement existing laws against unlawful restraints and monopolies, and for other purposes.

Mr. LEVY. Mr. Speaker, the Sherman law, passed in 1890, was not enforced until about 1906, and after long litigation in the courts the construction of that law was upheld by the United States Supreme Court on May 15, 1911. Since that time the law has become more thoroughly understood by the business interests of this country, and they are endeavoring to comply with it. We now propose to enact this legislation, which will create uncertainty and further litigation. I was the first to oppose combinations and monopolies, and in the Fifty-six Congress, in a speech delivered on the floor of this House, I said:

Publicity and the prevention by State legislation of overcapitalization are the two remedies which would cure all that is bad in combinations of business and capital, and I am in favor of both of these remedies.

If the various States had adopted the system of common law as applied in England, which is the proper method of correcting these evils, we would not have had the financial and business panics which have occurred in this country ever since they have been endeavoring to enforce the Sherman law.

While the enactment of the Sherman law has undoubtedly accomplished some good, nevertheless since the enforcement of this law the disaster and distress that has been brought upon the people of this country overshadows the great benefits that have been derived from it; prices of all the commodities of life have increased, and this is traceable directly to the enactment of this class of legislation. It centralizes the power of the

Government; it destroys and derides business. A great portion of the distress in the business world to-day is charged to the gigantic conflict going on in Continental Europe at the present time, but nevertheless this class of legislation has been more the cause of distress to this country than the European war.

The American people are not so vindictive or anxious to punish their fellow citizens because they are successful in business. They are not desirous of sending people to prisons because of the violation of some uncertain statute that has not been correctly construed, but this measure proposes, in the first instance, to fine or imprison, or both, in the discretion of the court, for any infraction of the proposed law. If this bill was necessary, the punishment on first conviction should be a fine and on second conviction imprisonment.

The passage of this bill will make uncertain the Sherman law and we will be compelled to go through 10 years of litigation to determine what the Sherman law and this law combined together proposes.

If we want prosperity in this country we should give aid and encouragement to the business interests instead of denouncing all men who are successful in their various enterprises.

The State of the Union.

EXTENSION OF REMARKS

OF

HON. SERENO E. PAYNE,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 28, 1914.

Mr. PAYNE. Mr. Speaker, we have had one year and seven months of the Wilson administration, and it is fair to give a review of the results:

When President Wilson was inaugurated the country had enjoyed a period of 16 years of Republican administration and was at the high tide of prosperity. During the Taft administration our foreign trade had increased beyond metes and bounds, and the balance of trade in favor of the United States was beyond all precedent. The fiscal year ending four months after the inauguration of President Wilson showed exports amounting to $2,465,884,149 and imports amounting to $1,812,978,234, a balance of $650,000,000 in favor of the United States.

At the extra session called in the first few weeks of the administration the majority party began to shape its legislation. The first in order was the tariff bill.

They promised to injure no business, to increase our exports by increasing imports, to reduce the high cost of living, to increase the great prosperity already prevalent everywhere, and to keep at work the millions of wage earners, every one of whom was busy at full time under the previous conditions. In addition, it was to be a tariff for revenue, producing sufficient revenue to meet the expenses of the Government. The record up to the first day of August last, during which time there was no war in Europe, shows a lamentable failure in each and every one of these particulars. From the beginning our exports have steadily decreased and our imports have increased; since April the balance of trade has been steadily against the United States. The total loss exceeds a quarter of a billion dollars. Laborers had their income reduced by enforced days, weeks, and even months of idleness, and now manufacturers are seeking to reduce wages in order to keep their establishments open.

The first fiscal year demonstrates that the Underwood law would have caused a deficit if it had stood alone, and it was only saved by the fact that the Republican revenue measure was in full force for three months and in partial force for several months thereafter. Nowhere has the cost of living been reduced, but, on the other hand, it has increased. The first great measure of the Democratic Party has proved to be a dismal failure.

BANKING AND CURRENCY BILL.

The second measure of the dominant party was the banking and currency bill. They wisely availed themselves of the splendid work which had been done by previous Republican Congresses and the Monetary Commission and made up their bill almost completely from provisions taken from the commission bill. They struck out the central bank, which they had excoriated in their campaign, and substituted therefor the Federal reserve system, which supplies the place of the central bank, with branches, and is certainly a dubious improvement upon the original plan. They also availed themselves of the advice of bankers who had gained their knowledge by years of experience, and, though not in the open, they obtained advice even from Wall Street. While the law as finally passed contained some objectionable features, which seemed to have no use other than to give it the appearance of originality, it was on the whole a good law. For its success it depends very largely upon the manner of its administration. It has been on the statute books for over 10 months, and we are now promised that is will be put into operation shortly preceding the next election.

It is quite evident to the most casual and unthinking observer that banking and currency matters should be entirely divorced from any partisan politics. The bill in the House provided for a reserve board of five members, of whom no more than three should be of the same political party. With this clause the bill went to the Senate. At a meeting of bankers in Chicago one of the bankers present suggested that this clause ought to go out because no President would ever be found who would constitute a board without following substantially the terms of this provision, even if it were not in the law. This suggestion was made by a Republican banker and was concurred in by the Democratic members of the committee for the reason that all thought the law ought not to have any provision in reference to partisan politics in it. On the recommendation of these bankers the Senate struck out this provision. It was therefore a genuine suprise to these same men when they heard the announcement that the President had appointed five Democrats as members of the board. This was not a good start.

Prior to this two members of the Cabinet and the Comptroller of the Currency had astonished the country by their selection of reserve cities. Disregarding the spirit if not the mandates of the law, they had sought to turn the course of business upstream in different localities in the country. Northern New Jersey was taken away from New York and given to Philadelphia, compelling the bankers in that section to keep two accounts, one in Philadelphia to meet the requirements of the designation by these officials, and the other to do business and have an account where they must have it, in New York City. Other designations are even worse.

Banks, and people doing business with them, have not been reassured by the action of the Secretary of the Treasury. Banks are required to have a certain amount of reserve which they deposit with central reserve banks. There is a minimum limit, and there is no maximum. Naturally, from the exigencies of the banking business from day to day, this reserve is often temporarily largely increased. Recently the order was given out for the banks to make a statement of their business, and it turned out that a number of banks had considerably more reserve than the law required. Whereupon they were publicly reprimanded by the Secretary of the Treasury, and threatened with the withdrawal of Government deposits on account of keeping a reserve which he thought unnatural and in the nature of hoarding. He followed it up by publishing a list of the banks he had censured. It turns out that many of these banks, if not the most of them, were holding this reserve, temporarily on engagements to loan large amounts, most of which have since been loaned. The whole result has been a tendency to weaken the standing of the banks by this unjust interference on the part of the Treasury Department. Men are beginning to inquire whether the banking system is to be used as a political asset. It is to be hoped that the widespread criticism which has come from these acts will result in a reform in the methods hereafter in dealing with the banking interests.

The majority party was obliged to adopt the Vreeland-Aldrich Emergency Currency Act by extending its time and making it even more liberal in the allowance of emergency currency. This legislation has proved its worth by sustaining the business of the country during the critical times arising out of the distraught and distressed business which existed prior to the outbreak of the war in Europe and intensified by the war itself.

Upon the passage of the tariff bill the Democrats in Congress apologized for the failure of their promised prosperity and claimed that it would come immediately upon the passage of the currency measure. The Speaker of the House made a notable speech, in which he prophesied that upon the enactment of the currency legislation the business of the country would "blossom as the rose." The currency legislation was passed 10 months ago. Still business has continued to grow worse from month to month. In the face of overwhelming evidence this was at first denied, but finally it forced itself upon the President, who stated that the depression was psychological. Business people have struggled ever since. Factories are working without profit almost universally to keep their forces together. The signs of discouragement and business distress multiplied and continued to multiply up to the

beginning of the war in August last. Millions of people out of work or compelled to work on one-half or two-thirds time at the same old wages and the end is not yet in sight.

The war may alleviate some of these conditions, as it probably is doing now, but the end of such conditions can only come by the restoration of another party to power.

THE NEW TAX LAW.

The new tax law is now pending in the Senate, and the people will soon feel its grinding effects. This law is being enacted not alone because of the war in Europe, but mainly because of the diminishing receipts under the Underwood law and the enormous and reckless increase in public expenditures. Judging from the operations of the Underwood law for eight months prior to the 1st of August there would have been a big deficit on account of the expenditures of the Government had peace reigned all over the world. With the deadly blight on business even the income tax would probably have failed to produce as much revenue, as shown by the receipts in June last, based on the business of the calendar year 1913. A deadly blight has settled upon all business during the calendar year 1914.

The tax of $110,000,000 per annum is far in excess of any deficit that will occur during the year on account of the war. The indications are that not more than a third of the amount will be needed, and even that could be avoided by rigid economy. Why this great demand for taxation unless it is for the purpose of keeping Government funds in the banks where they are now deposited in order to carry out the scheme of the Secretary to bolster up and aid the cotton growers of the Southern States?

The proposed law as it passed the House provides for an indefinite continuance of the act except as to stamp duties on legal documents, and it seems to be framed with the idea of meeting deficits hereafter by this system of direct and vexatious taxation. It is a question for the careful attention of the voters next month, and no doubt thousands of them will desire a change in the method of taxation and the party responsible for it.

ECONOMY.

One of the most prominent and explicit planks in the Democratic platform was the promise of economy in expenditures. They criticized in unmeasured terms "extravagance of the Republican Party." But aside from the chairman of the Appropriations Committee of the House and two or three Democratic members of that committee it is difficult to find where any member of the dominant party has made any sincere attempt, and certainly any effective attempt, to check extravagance. We closed the first fiscal year of the Democratic administration on the 30th of June last with an increase of $18,000,000 of expenditures for that year. We have just closed the first three months of the second fiscal year, beginning with the 1st day of July last, with an increase of expenditures for the three months of $10,874,396.76 over the corresponding period last year, or at the rate of $43,397,587.04 per year; and this is in the face of the fact that the expenditures for pensions and for the Panama Canal have decreased at the rate of more than $25,000,000 for the present year.

ANTITRUST LAWS.

For no other reason, apparently, except to fulfill the plank in their platform, the majority party have been endeavoring to amend the Sherman antitrust law. The result is the so-called Clayton bill. Criticized and condemned by friend and foe alike, it seems to have no effective features except to add new questions of uncertainty and doubt, sowing seeds of future litigation for long years in the courts to determine what its framers meant by attempting to define what they confessed no one could define. The antitrust laws were getting along in pretty good shape, with the vigorous prosecution under the Taft administration and continued under this. No new trusts are now formed. Any amendment was of doubtful utility; so much so that the attempt was made not to amend, but to supplement. But the authors of the bill found it was getting beyond their control, as the bill really furnishes substantial amendments to the present Sherman law. Even with a wise law, it is unwise to press it at this time, with the disturbed and distressed condition of business affairs.

THE MEXICAN POLICY.

I have not discussed the Mexican situation, because I have felt it was the proper province of the Executive to take care of it. I would not mention it now were it not for the boasts we hear so constantly of the success of the President's policy in Mexico; and this in view of the fact that conditions there are in the most chaotic state. We read that Villa is making war upon Carranza; and some of Villa's force, consisting of 45,000 well-armed men, are in revolt against him; and that the "patriotic and high-minded" citizen, Zapata, is ready to fight anywhere and everywhere on his own hook. Order has not been restored, and murder has not ceased; life and property are not safe, and the Mexican problem is not yet solved. We ought, at least, not to delude ourselves upon this question.

COTTON.

The war in Europe has temporarily checked the marketing of the cotton crop and there has been some agitation in favor of Government aid to the raisers of cotton. All sorts of notions have been invented.

For the sole purpose of aiding the cotton growers of the South the Secretary of the Treasury recently announced that he would accept from national banks through currency associations notes secured by warehouse receipts for cotton, tobacco, and naval stores at 75 per cent of their face value. This, he says, left the bankers free to lend such amounts as they thought safe on the security of cotton and made it possible to convert 75 per cent of the notes so received into national bank currency. If the Secretary had the discretion to do this the action certainly shocked all good bankers throughout the Union. When it was followed up by the Lever bill, which proposed Government inspectors of warehouses, it looked as though the administration would get back on the old Ocala platform, which authorized the Government to issue greenbacks on warehouse receipts. The letter of the Secretary, dated October 9, to Mr. Henry indicates a dangerous tendency toward an enormous inflation for which the country will have to pay severely in the future.

The first Populist platform, called the Ocala platform, suggested the issuance of Government currency to the farmers secured on the crops. It was largely ridiculed throughout the country and was called "cornstalk currency." Its authors little thought that it would be revived in another form by the Secretary of the Treasury and the Lever bill, applying all the principles of the Ocala platform to cotton. Other schemes are put forward, like the one from Texas, proposing a loan of from three hundred to five hundred millions of dollars by the Government on a bond issue, the money to be used in sustaining the cotton producers of the country. It is rather peculiar that such schemes should come from Texas, in view of the low cost at which cotton can be produced in Texas compared with some of the older States. I am told that cotton farming in Texas is good business with cotton selling at 7 cents. It is selling for more than that to-day. Just why the Texas farmer should not have a savings account to tide over such a crisis, as the northern farmer does, it is difficult to understand. A few years ago it was a slogan of the Democratic Party that the farmers in Kansas were burning corn because of its low price. But those farmers did not ask Government aid. Business in the country is generally demoralized, factories are idle, railroads are stopping payment of dividends, everything is disturbed, yet we have seen no effort to furnish Government assistance to the business men of the country, who need assistance to keep them out of bankruptcy. The truth is that this is a troubled sea upon which we should never embark. Once having done so, there will be no end to the demands, and people will learn to lean upon the Government and take no thought for the future, depending upon the taxes paid by other people to keep them out of trouble.

MARINE LEGISLATION.

The shipping bills, said to have originated at the White House, are utterly without justification. It was found that there were a large number of vessels owned by three corporations—the Standard Oil, the United States Steel, and the United Fruit Co.—engaged in foreign trade, mainly in carrying their own cargoes to foreign ports, or, in the case of the fruit company, in bringing in tropical fruits. They were sailing under a foreign flag to avoid the strictness of the laws applied to American shipping, thereby saving a large percentage of running expenses, and also owning cheaper ships, which are produced in foreign yards with low-priced labor. An effort was made to bring these ships under the American flag by allowing them to come in at once, waiving all restrictions as to their age. In order to do this, the better condition of the American sailor under our law is sacrificed by the provision allowing the law to be suspended by Executive order; this has already been made.

Then a bill was passed providing for marine insurance by the United States Government. Why not let these corporations stand any increase in marine insurance? Why put this burden on the taxpayer?

It was claimed that there was a great emergency; that ships could not be found to transport our exports abroad. It turns out that more ships have been offered than there are cargoes; that ships have sailed with light cargoes or delayed their sailing on this account, and this without regard to any ships that have come ni under the law that has been passed.

But the hysteria does not stop here. It is gravely proposed to buy ships to be owned and sailed by the Government or by a corporation of which the Government is the principal, and in practice will be the only stockholder. Thirty millions of dollars of bonds are to be issued for capital to purchase these ships, to be run by the United States as sailing master. Remonstrance is said to have come from Governments friendly to us, because some of these ships proposed to be purchased are German ships partly owned by the German Government. The claim is made that the sinews of war are to be given to Germany by the United States in the purchase of these ships.

The administration seems willing to take the risk of complications with friendly powers, to get entangled in the war now raging in Europe, for the purpose of carrying out this program. Notwithstanding a large majority of the Democrats are said to be opposed to it, they have been waiting for some time for word from the White House as to whether they would be permitted to adjourn without passing this measure. The latest statement from the papers which seem to have access to the White House tell us the President still insists that this is one of the necessary bills to be passed; he consents that it go over till after election. It would seem that the purchase of these vessels in time of war, not justified by the law of nations, would inevitably get us into trouble with the nations with whom we are now at peace, and might entangle us in this terrible war which is now being waged in Europe. It is to be hoped that the sentiment of the country will kill this bill before it ever becomes a law.

It is amazing to see how little hold Democratic principles have on Democrats when they are enacting legislation. The party which has always protested against paternalism, which has decried subsidies in every shape and form and made the proposition of subsidy a party shibboleth throughout all the years of its history, now forsakes all its professions on this subject and gravely presents the most direct and obnoxious subsidy ever proposed. No one has suggested anything in the way of subsidy in the past, except to put us on even terms with foreign capital and foreign enterprise and to meet the subsidies of foreign Governments. With these shipping bills already law and the other to follow, let no Democrat hereafter shout "Subsidy!" as an argument against any proposition of that nature which might come before Congress.

THE HOUSE OF REPRESENTATIVES.

One of the scandalous results of Democratic ascendency has been the steady degeneration of the House of Representatives. The Constitution gave this body the right to originate all revenue laws, but neither the recent tax bill nor the Underwood tariff law got into the House until they were framed to meet the wishes of the Executive. Two years before Mr. UNDERWOOD had passed bills through the House, one for a 20 per cent duty on wool and the other a duty of 1 cent a pound and upward on sugar. He defended these bills strenuously in the Sixty-second Congress, as chairman of the Ways and Means Committee. But with a Democratic President in power who insisted on free wool and free sugar, wool went on the free list and sugar will come in free after May 1, 1916, a provision for a greater deficit in the revenues of $40,000,000 more commencing with that date.

One of the false promises by which the Democracy got into power was their pledge to abolish "gag rule" in the House of Representatives. During the present session no Committee on Rules has ever been so active and no such drastic rules have been known as have been applied by the Democratic majority. A fair sample is the rule under which the internal-revenue tax bill was recently passed through the House. Here was a majority grinding out more than $100,000,000 of taxes from a people already overburdened by the unwise provisions of the Underwood measure, which had proven so disastrous to business. It would seem as though it ought to have had decent consideration in the House in view of the various questions that were raised among Democrats only who had up to that time considered it. But the gentleman from Alabama proposed a drastic rule, providing that there should be but four hours of general debate on the bill and cutting out all chance for amendment and all chance for debate under the five-minute rule. This time was extended to seven hours' general debate by resolution of the Rules Committee, which passed the House by an overwhelming Democratic vote. People to be taxed had no chance for a hearing through their chosen Representatives and the House was again humiliated by this absurd party action. The Democratic platform has been well described as "a work of fiction." Mr. Wilson was elected by declaring that it meant something real; that it was a pledge to be followed, but there is hardly a promise in it which has not been broken since the party came into power.

When some members of the Democratic Party were not inclined to follow exactly the wishes of the Executive, caucuses were held, and everybody was obligated to uphold the bills as presented, unless amendments were presented by the Ways and Means Committee. The Democrats have made a great show of permitting tax bills to be open to amendment, under the five-minute rule, but this has been a farce. No amendment, however desirable, was adopted unless it was presented by the committee and was in harmony with the wishes of the President.

For some months after the session had commenced there was a disposition to ignore the minority party altogether, and that is the condition at present, so far as the House of Representatives is concerned. The difficulty of getting rid of general debate in the Senate, under their rules, however, has forced the majority there, as well as the administration, to consider the suggestions of the Republican Senators, and several wholesome amendments, especially to the banking and currency bill, were adopted at the suggestion of Republican Senators.

THE SPHERE OF DEMOCRACY.

The state of the Union is in striking contrast with the state of the Union on the 4th of March, 1913. The contrast is so striking that no one can have failed to observe it. No intelligent man living in any city or village or on a farm can fail to note it. Statistics are not needed to show that 26 per cent of the machinery in one industry is idle, or that another industry is running on half time, or that mills are closing, or that people who were able to earn a good living go hungry now or become the objects of public charity. The European war may stimulate industry along certain lines. I believe it will stimulate the exportation of farm products and manufactured goods in certain directions. It may alleviate some of the suffering which Democratic policies have brought on. But the real root of the evil will not be eradicated until the Democratic Party is relegated to its proper sphere—the minority party—to criticize only; never to originate legislation.

The Crowning Capsheaf of Labor Legislation.

EXTENSION OF REMARKS
OF
HON. ROBERT P. HILL,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 8, 1914.

Mr. HILL. Mr. Speaker, there are so many phases of this bill known as the Clayton anti-injunction bill that it would be impossible for me to make a comprehensive discussion of all of the bill in these brief remarks. For that reason I will confine my discussion to just one subject included in this bill, and that is that part which relates to labor organizations.

There have been many enactments in this and the Sixty-second Congress which deals out in a large measure justice to those who are termed and properly known as workers. But of all the measures that have so far been enacted into law none are of so much vital importance to the rights and protection of laboring people as the section of this bill that gives right of trial by jury in cases of indirect contempt.

In the closing days of the Sixty-second Congress, when the discussion of the sundry civil bill was being had in this House, that bill provided for an appropriation for the investigation of trusts, but exempted labor unions as not combinations in restraint of trade, which were themselves lawful. I remember the distinguished gentleman of Illinois, Joseph G. Cannon, in speaking upon the bill, said in pointing out objections, among other things, that if he were President he would veto the bill, because it so exempted labor unions. His claim being that such exemption was not warranted by law. President Taft vetoed the bill and assigned substantially the reasons mentioned by Mr. Cannon.

Now, Mr. Speaker, if this bill does nothing more than to correct the evil upheld by the last administration and now contended for by the leaders on that side of the House, it is worth passing.

Since the veto of that bill by the President of the party of the gentlemen on the other side of this House it has become amusing to see the leaders over there hunt for an excuse to oppose any anti-injunction bill that in any manner contravenes the Sherman antitrust law, that works so admirably for what they regard as justice to the capitalist and the laboring man.

I am glad, however, that we will note that many Members on that side will vote with us to-day on the passage of this bill. The opposers will be the leaders who advance the doctrine of their party. The argument they have given why this conference

report should not be adopted and why instead we should still rely upon the tenets of the Sherman antitrust law has been a weak and pitiable plea.

In preparing legislation it is our duty to prepare it with a view to give legal right to the people or grant relief, as the case may be. This section that relates to right of trial by jury in all cases of contempt not committed in the presence of the court grants both a right and relief that people of this country have long contended for. This is especially true with the laborers.

When this provision of this bill is made the law of the land there will be no more long-drawn-out cases in court, such as the one against Samuel Gompers, John Mitchell, and Frank Morrison, unless there is first obtained a verdict of a jury of their countrymen.

This is one of the most salutary and remedial pieces of legislation in the interest of the common man and his cause that has ever been enacted into law.

The day this bill is signed by President Wilson will mark one of the most glittering milestones in all the history of labor progress in this country. The mentioning of this date should be a signal for applause by all United Mine Workers and all trade-unionists in this Nation.

It will be one of the last acts passed by this long and arduous session of Congress and is a most fitting capsheath for all the important labor legislation of this and all other Congresses.

Labor is not a commodity to be dealt in like corn and wheat or dry goods and groceries. It is a human right and necessity. We can perform no greater good than to legislate for humanity and its rights. To my mind no cause is greater than the cause of men, women, and children. I am glad that I am here and have the privilege of giving this measure my hearty support.

A Review of the Democratic Record in Congress—A Record of Achievement.

EXTENSION OF REMARKS

OF

HON. WILLIAM L. IGOE,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 8, 1914.

Mr. IGOE. Mr. Speaker, the Republican leaders in Congress, being hard pressed for a political issue, have seized upon the necessity for raising additional revenue as affording the last and only possible chance for an appeal for sufficient votes to return the Republican Party to power in the coming election.

The President of the United States, who is honored, respected, and admired by the American people, regardless of party, made an appeal to this Congress on September 4, 1914, for the immediate enactment of legislation that would provide for the raising of additional revenue to make up for the reduction of customs receipts caused by the disturbed conditions resulting from the war in Europe.

The President's message is as follows:

Gentlemen of the Congress, I come to you to-day to discharge a duty which I wish with all my heart I might have been spared; but it is a duty which is very clear, and, therefore, I perform it without hesitation or apology. I come to ask very earnestly that additional revenue be provided for the Government.

During the month of August there was, as compared with the corresponding month of last year, a falling off of $10,629,538 in the revenues collected from customs. A continuation of this decrease in the same proportion throughout the current fiscal year would probably mean a loss of customs revenues of from sixty to one hundred millions. I need not tell you to what this falling off is due. It is due in chief part not to the reductions recently made in the customs duties, but to the great decrease in importations, and that is due to the extraordinary extent of the industrial area affected by the present war in Europe. Conditions have arisen which no man foresaw; they affect the whole world of commerce and economic production, and they must be faced and dealt with.

It would be very unwise to postpone dealing with them. Delay in such a matter and in the particular circumstances in which we now find ourselves as a nation might involve consequences of the most embarrassing and deplorable sort, for which I, for one, would not care to be responsible. It would be very dangerous in the present circumstances to create a moment's doubt as to the strength and sufficiency of the Treasury of the United States, its ability to assist, to steady, and sustain the financial operations of the country's business. If the Treasury is known, or even thought, to be weak, where will be our peace of mind? The whole industrial activity of the country would be chilled and demoralized. Just now the peculiarly difficult financial problems of the moment are being successfully dealt with, with great self-possession and good sense and very sound judgment, but they are only in process of being worked out. If the process of solution is to be completed, no one must be given reason to doubt the solidity and adequacy of the Treasury of the Government which stands behind the whole method by which our difficulties are being met and handled.

The Treasury itself could get along for a considerable period, no doubt, without immediate resort to new sources of taxation. But at what cost to the business of the community? Approximately $75,000,000, a large part of the present Treasury balance, is now on deposit with national banks distributed throughout the country. It is deposited, of course, on call. I need not point out to you what the probable consequences of inconvenience and distress and confusion would be if the diminishing income of the Treasury should make it necessary rapidly to withdraw these deposits. And yet without additional revenue that plainly might become necessary, and the time when it became necessary could not be controlled or determined by the convenience of the business of the country. It would have to be determined by the operations and necessities of the Treasury itself. Such risks are not necessary and ought not to be run. We can not too scrupulously or carefully safeguard a financial situation which is at best, while war continues in Europe, difficult and abnormal. Hesitation and delay are the worst forms of bad policy under such conditions.

And we ought not to borrow. We ought to resort to taxation, however we may regret the necessity of putting additional temporary burdens on our people. To sell bonds would be to make a most untimely and unjustifiable demand on the money market; untimely, because this is manifestly not the time to withdraw working capital from other uses to pay the Government's bills; unjustifiable, because unnecessary. The country is able to pay any just and reasonable taxes without distress. And to every other form of borrowing, whether for long periods or for short, there is the same objection. These are not the circumstances, this is at this particular moment and in this particular exigency not the market, to borrow large sums of money. What we are seeking is to ease and assist every financial transaction, not to add a single additional embarrrassment to the situation. The people of this country are both intelligent and profoundly patriotic. They are ready to meet the present conditions in the right way and to support the Government with generous self-denial. They know and understand, and will be intolerant only of those who dodge responsibility or are not frank with them.

The occasion is not of our own making. We had no part in making it. But it is here. It affects us as directly and palpably almost as if we were participants in the circumstances which gave rise to it. We must accept the inevitable with calm judgment and unruffled spirits, like men accustomed to deal with the unexpected, habituated to take care of themselves, masters of their own affairs and their own fortunes. We shall pay the bill, though we did not deliberately incur it.

In order to meet every demand upon the Treasury without delay or peradventure, and in order to keep the Treasury strong, unquestionably strong, and strong throughout the present anxieties, I respectfully urge that an additional revenue of $100,000,000 be raised through internal taxes devised in your wisdom to meet the emergency. The only suggestion I take the liberty of making is that such sources of revenue be chosen as will begin to yield at once and yield with a certain and constant flow.

I can not close without expressing the confidence with which I approach a Congress, with regard to this or any other matter, which has shown so untiring a devotion to public duty, which has responded to the needs of the Nation throughout a long season despite inevitable fatigue and personal sacrifice, and so large a proportion of whose Members have devoted their whole time and energy to the business of the country.

Shortly after the President made this appeal the Republican Members of this House, in conference, declared against any revenue bill, and, according to newspaper accounts, every Member present announced that he would oppose such a bill. In debate the Republican leaders have sought to make the measure a vehicle for a political discussion, hoping thereby to distract the attention of the people from the great work of the administration, and to pass over the great work of this and the preceding Democratic House. They have not discussed and considered the bill as statesmen, but as politicians anxious for a return to power and eager to elect a sufficient number of Members of Congress in order to hamper and embarrass the President and his administration during the next two years. They hope the people will forget the iniquities of the Payne-Aldrich tariff; they hope the people will not realize that if the Republican Party has a majority in the next House that a host of stand-pat Republicans, who were voted out of office, will return to hamper a great, progressive administration. During the debate upon the bill the orators upon the Republican side paid a high tribute to the Payne-Aldrich bill, which but four years and two years ago was so overwhelmingly repudiated by the American people. The Republican Members seem to have forgotten that rebuke. The gentleman from New York [Mr. PAYNE], who led the fight against this legislation asked by the President, was vigorously applauded on the Republican side, and seems to be regarded by them as the man who will lead them out of the political wilderness. They are hard pressed indeed for a political issue when they find themselves compelled to rally around the standard held aloft by the same standpatters whose policies were not only overwhelmingly repudiated by the voters of the country but whose course for the last few years their party was in power was such as to disgust a majority of the Republican Party and to cause a political revolution in their own ranks.

Notwithstanding that an election is at hand, the Democrats in this Congress will place patriotism and duty above mere political expediency and will pass the revenue bill which the President says is so necessary for the industrial and financial stability of the Nation. We will submit our record against the record of the Republican Party and await with confidence the judgment of the voters.

THE TARIFF.

The Democratic Party had shown the country, through the legislation passed by the Democratic House elected in 1910, that

we were mindful of promises made and had endeavored in every way to carry out those promises. As a result of the election of 1912 the Democratic Party was intrusted with full control of the Government, and the repudiation of the Republican Party was complete. Immediately after his inauguration President Wilson called Congress in special session, and since April 7, 1913, we have been in continuous session. During that time we have striven earnestly to carry out pledges, and the record that has been made is one that shows fidelity to the interests of the people through the enactment of progressive legislation. As soon as the special session was called Congress began the consideration of a bill revising the tariff. The Underwood bill, repealing the Payne-Aldrich bill, was passed, and thus the first promise of the Democratic Party to revise the tariff downward was kept. This great measure was framed in the open and none of its provisions was dictated by those who were financially interested in the high tariffs.

The Underwood bill has reduced the duties on necessaries and increased the duties on luxuries. Raw wool has been placed on the free list, sugar duties are reduced, and after 1916 will be entirely abolished. The duty on woolen goods has been reduced two-thirds, on cotton goods one-third, and has been entirely abolished on meats, flour, potatoes, dairy products, and numerous other necessaries. At the end of the fiscal year, during which this law had been in operation for nine months, the revenues of the Government exceeded expenditures by over $30,000,000. The Underwood bill not only revised the tariff downward but also provided for an income tax. This latter provision was made possible through the adoption of a constitutional amendment initiated by a Democratic House in the preceding Congress. Under this provision $31,000,000 was collected for 1913 from individuals and $46,000,000 from corporations. This tax falls on those best able to pay and who previously have not borne their fair share of the tax burdens. In the next fiscal year the returns from this source will be largely increased.

BANKING AND CURRENCY.

The next great measure enacted by this Congress was the Federal reserve act. The Republican Party during all the years of its control of the Government had either been unwilling or incapable of providing for an adequate banking and currency system. Under the provisions of this splendid law it will never again be possible for a few banks in Wall Street to control the finances of the country, as was done in 1907 and on other occasions. It means the end of the Money Trust and the opening of a new era of industrial and financial independence and progress. Under its provisions the reserve money of the country is transferred to 12 regional banks, in which both State and National banks may become stockholders. It will provide a sound and elastic currency based upon commercial assets, and in such a way as to respond to the needs of the commercial world. The whole system, including the issue of the currency, will be under the control of the Federal Reserve Board, consisting of seven men appointed by the President of the United States. This law has been universally accepted as providing a safe, sound, and scientific banking and currency system, affording protection to depositors and providing for the constantly increasing needs of the business of the country. Under its provision we will have no more financial panics, such as have periodically occurred in the past, and will enter upon a period of industrial and commercial expansion unsurpassed in the history of the United States.

TRUST LEGISLATION.

In the Clayton antitrust bill, the Trade Commission bill, and Rayburn bill for the regulation of railroad stocks and bonds the House has considered and passed three of the most important bills that have been considered by the Congress in recent years.

The Clayton bill, which will soon be a law, passed the House by a vote of 297 to 54, receiving the votes of many Republicans and Progressives. In conjunction with the Trade Commission law, it will supplement the Sherman law and enable the Government to prevent the formation of new trusts by preventing certain practices which in the past have led to monopoly and restraint of trade. It reaches the evils of the interlocking directorates, holding companies, tying contracts, and other practices and schemes that have been resorted to in order to prevent or destroy competition.

The Trade Commission bill passed the House without a dissenting vote. Under its provisions a nonpartisan board of five will have supervision of the activities of corporations engaged in interstate commerce, except banks and railroads. The commission will have the power, among others, to investigate whether final decrees entered against the trusts in dissolution suits are being carried out, and also to investigate facts as to alleged violations of the antitrust acts. The commission is also given power to prevent unfair methods in commerce. The bill declares "that unfair methods of competition in commerce are hereby declared unlawful." Authority is given to investigate complaints and, if the party is found guilty of using unfair methods, to issue an order to desist, which, if not obeyed, may be enforced through the court of appeals.

By preventing unfair methods of competition the commission will not only put an end to methods usually resorted to by trust builders, but the activities of existing trusts in stifling competition by unfair methods will be effectively dealt with.

The Rayburn bill passed the House by an almost unanimous vote. The recent exposure of the reckless management of the great railroad systems, like the New Haven, the Rock Island, and the Frisco, has made legislation of this kind necessary, not only for the protection of investors in railroad securities, but for the promotion of the prosperity of the country, which has suffered greatly through the unwise and reckless management of these great corporations.

LABOR LEGISLATION.

For many years labor has sought the passage of measures that would help the working classes of the Nation, but it is only since the Democrats have had control of affairs that the pleas of the workers have been heeded. During that short period there has been more legislation in the interest of labor than during the preceding 16 years of Republican control. Speaking of the record of the Democratic Party, the chairman of the Labor Committee said in a recent speech:

> I say it is something more than a coincidence that these measures have passed a Democratic Congress and were not even considered by the Cannon rule. What is the cause? What is the difference? The difference, sir, I submit is this: The party of Joseph G. Cannon represented only a part of the people. The party of Wilson and CLARK represents them all. One is the tory, who thinks all law-made changes are dangerous and, as Wendell Phillips said, is afraid to brush down the cobwebs lest the ceiling may fall. The other is the liberal and progressive, who knows that as social and economic conditions change, so must change the rules of the State which regulate the relations of human beings.

In the Sixty-second Congress a Democratic House originated the law which created the Department of Labor, giving it a place in the Cabinet of the President. President Wilson had the selection of the first Secretary of Labor and chose for the position Hon. William B. Wilson, a former mine worker and an actual representative of organized labor, who as chairman of the Labor Committee of the House in the last Congress rendered conspicuous service to his party and to his country.

In the Sixty-second and Sixty-third Congresses the following labor measures, among others, have been passed by the House of Representatives:

Various laws extending the operation of the eight-hour law on work done for the Government, as well as work done by the Government, including a provision making effective the eight-hour law for post-office clerks and carriers.

The Children's Bureau bill to promote the welfare of children.

The Industrial Commission, to investigate the entire subject of industrial relations with a view to ascertaining the best method of dealing with industrial disputes so as to protect the rights of all persons directly or indirectly interested.

A law providing for an eight-hour day for all female employees in the District of Columbia. This law is in successful operation.

The phosphorus-match bill, to protect the health of the workers in the match industry.

Resolutions investigating industrial conditions in the mining districts of Colorado and Michigan.

The Board of Mediation and Conciliation was created by the railway employees act of July 15, 1913. During the year, from July 15, 1913, to July, 1914, this board has handled successfully 26 cases concerning wages, hours of labor, and conditions of employment among the employees of 58 railroads; 19 of these cases have been settled by mediation and the remaining 7 by arbitration. In one case alone over 90,000 men were involved.

The Booher bill makes convict-made goods subject to the laws of the State into which they are shipped. This will enable each State to protect its own free labor by passing a law prohibiting the sale within the State of convict-made goods. The Hensley bill forbids the importation into this country of goods made in whole or in part in other countries by convict, pauper, or detained labor. The purpose of this law is to protect American workingmen from competition with foreign-made goods in the handling or manufacture of which convict or pauper labor has been used in any degree.

The Clayton antitrust bill expressly recognizes that labor is not a commodity and defines the relation of labor organizations to the antitrust laws. It regulates the issuance of injunctions

by Federal courts and provides for a jury trial in certain contempt cases.

Speaking of these provisions, Mr. LEWIS of Maryland, the chairman of the Labor Committee of the House, said:

It is no exaggeration to say that the above law is the greatest single piece of legislation ever passed at the instance of laboring people on the American Continent. At a single stroke it adjusts all the perversions of ex parte court procedure that have arisen by the confessed misuse of the injunction so frequently occurring, grants the constitutional right of trial before an open-minded jury, and corrects the juridical mistake as to the intent of Congress in passing the Sherman law. It is not too much to say, I repeat, that by this single stroke of the legislative hand more is being done in our country to rectify the judicial status of the great toiling masses than has ever been accomplished in our history before. Nor does this mean violent or radical treatment of the relations of labor and capital.

Thus section 7 of the Clayton bill, taken with its complementary sections, places the American workman where the British workman was placed by Parliament in 1906. Their experience shows that property will be as safe, the rights of employers will be as secure, with this measure enacted into a law, which I predict will become known as the Magna Charta of American workmen.

A CONSTRUCTIVE PROGRAM.

Mr. Speaker, this administration has proceeded with the work in hand in a statesmanlike and patriotic manner. Perplexing problems, the solution of which Republican administrations had deliberately avoided or were incapable of solving, have now been disposed of wisely and in the interest of the people. The country at large will certainly approve of its work and continue to support those who have shown such capacity, earnestness, and zeal in the performance of public duty.

I feel that I could not better conclude my remarks than by inserting a part of the letter written by President Wilson to Representative DOREMUS. The President, speaking of the work of Congress, said:

The close of a very extraordinary session of Congress is at hand, which has, I venture to say, been more fruitful in important legislation of permanent usefulness to the country than any session of Congress within the memory of the active public men of our generation. A great constructive program has been carried through, for which the country has long waited, and has been carried through with the approval and support of judicious men of all parties, and we have abundant reason to congratulate ourselves upon the record that has been made during the busy 17 months we have devoted to our great legislative task. Certainly in ordinary circumstances, if we were free to disengage ourselves for the purpose, we would be warranted in now directing our energies to a great campaign in support of an appeal to the country to give us the encouragement of its indorsement at the autumn elections.

We could go to the country with a very sincere appeal in which there need be no pretense or boast of any kind, but a plain statement of things actually accomplished which ought to be and, I think, would be entirely convincing. It is a record which shows us at peace with all the world; the questions which plagued business with doubt and uncertainty and irresponsible criticism out of the way, thoughtfully settled and disposed of; the apparent antagonism between Government and business cleared away and brought to an end with the plain reckoning accomplished; the path for sure-footed adjustment clear ahead of us, prosperity certain to come by means which all can approve and applaud.

Chinook Indians Are Paid After 68 Years—All of One Tribe Dead.

"Lo, the poor Indian! Whose untutored mind
Sees God in clouds, or hears him in wind."

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 8, 1914.

Mr. JOHNSON of Washington. Mr. Speaker, I report, with much satisfaction, that at last the several tribes of Indians known generally as the Lower Chinooks and living on both sides of the Columbia River near its mouth are to receive the money long due to them from the United States. This week $64,500 was sent to Tacoma, Wash., to be disbursed by the Indian agent there to the survivors or heirs of seven tribes—the Tillamooks and the Clatsops, on the Oregon side, and the Cathlamets, the Wahkiakums, the Willapas, and the Lower Band of Chinooks, on the Washington side. The sum as originally made ready for the West was $66,000, but, Mr. Speaker, time has made the Government the gainer, for the last member of the Nuc-quee-clah-we-muck Tribe is dead. Not one heir can be found, and $1,500 must be turned back to the Federal Treasury.

Mr. Speaker, these tribes receive this money as a result of treaties entered into with them by Gov. Isaac I. Stevens in 1851, by which they were to receive lands where they resided. That was 63 years ago. In lieu of lands they agreed to accept money in full satisfaction of all claims and demands. The old chiefs are gone, their children nearly all are dead, and in most cases the money goes in small amounts to grandchildren.

The official correspondence with regard to these claims makes a stack of manuscript 4 feet high. If the time of all the Indian Office employees who have devoted time to these cases could be computed as the time of one clerk, at $1,000 a year, I have not a doubt that that clerk would have been employed every day every year since 1851, which would make a total of $63,000 clerk hire to settle a debt of $66,000. Oh, what an arraignment of the law's delay! What an exhibition of red tape!

Nearly every Senator from Oregon and Washington and nearly every Representative since the beginning of Territorial days has tried to bring about a settlement. Bills innumerable have been introduced. My predecessor, the lamented Francis W. Cushman, who knew the Chinook Indians, their traits and their traditions, worked long and hard for this settlement. Senator JONES, during his long years in House and Senate, has done much. Representative HAWLEY, too, has worked hard at the tangle.

Two years ago in the Senate an amendment was added to the Indian appropriation bill setting aside $66,000 for these Indians. Then came an Indian Office problem of how to pay, followed by a Treasury problem. It looked as if another long delay was to be expected. Dr. McChesney, the scholarly and efficient agent at Tacoma, interested himself most strenuously. State Senator H. A. Espy, of Pacific County, took a hand. I did what I could, and last Saturday I received the following letter:

OCTOBER 3, 1914.

Hon. ALBERT JOHNSON,
House of Representatives.

MY DEAR MR. JOHNSON: The receipt is acknowledged of your last letter, in regard to the payment to the so-called Lower Chinook Indians.

The act of August 24, 1912 (37 Stat. L., 535), appropriated $66,000 for payment to certain bands of Chinook and other Indians in Oregon and Washington. The roll for this payment was duly approved, but further action has been held up pending a decision by the Comptroller of the Treasury in regard to certain matters affecting this payment.

This decision has just been received, and final instructions will go forward at the earliest practicable moment, with the view of consummating this payment in the very near future.

Very truly, yours,

E. B. MERITT,
Assistant Commissioner.

The money has gone forward and will be divided at once among individuals of the tribes, as follows:

Tillamooks of Oregon	$10,500
Clatsops of Oregon	15,000
Nuc-quee-clah-we-mucks of Oregon	1,500
Cathlamets of Washington	7,000
Wahkiakums of Washington	7,000
Willapas of Washington	5,000
Lower Chinooks of Washington	20,000
Total	66,000

Of this sum, $1,500 to which the Nuc-quee-clah-we-mucks were entitled, will be returned. Also the sum of $12,900 will be taken from the total sum and apportioned among four attorneys, or their heirs, for three of the lawyers are dead. The attorneys are to be paid as follows:

Herbert E. Smith, formerly of Portland	$3,720
H. Allen, Portland, administrator of Silas B. Smith	1,040
Ella M. Young, administrator of Archibald Young	4,300
Esther Nielson, administrator of John T. De Weese	3,840
Total	12,900

Some of these lawyers began their labors before there was a telegraph line to the Oregon country and many years before the typewriter. Many of the signatures of the old Indians are in broad thumb marks, of indelible red ink, made years before the Bertillon system of thumb identification was thought of.

Mr. Speaker, I am glad beyond measure that the Government has at last kept its bargain. I am proud to have had even a small part in the final settlement. Every now and then it is said—and once on this floor, Mr. Speaker—that "my heart aches when I think of the Quiniault Reservation without a Weyerhaeuser fence around it."

Mr. Speaker, there are not likely ever to be any Weyerhaeuser fences around any Quiniault lands. I think I can with propriety say that as long as I remain in Congress I shall work on for the rights of these Quiniault Indians until each one receives his just allotment, and, I hope, his citizenship. But I opine, Mr. Speaker, another 4-foot stack of correspondence will have accumulated and that this generation of Quiniaults and myself as well will have long been dead before these rights are granted.

The Work of the Sixty-Third Congress.

EXTENSION OF REMARKS

OF

HON. SAMUEL W. BEAKES,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 9, 1914.

Mr. BEAKES. Mr. Speaker, while we are "watchfully waiting" for the end of an extraordinarily long session of Congress, waiting for the Senate to send back to us some of the emergency legislation caused by the European war, it may perhaps be permitted me to review the work which has kept us here continuously for the long weary months and prevented those of us who have felt it our duty to stay on the job from looking after our own political interests at home. While we have been here continuously, it has, after all, been well worth while. This has been the greatest constructive Congress since the war. There has not been an extraordinary amount of petty private legislation. Our time and attention has largely been taken up in devising methods for the future prosperity of the country. In the past 20 or 30 years there has been an immense change in society, in our manners of life, in methods of business. But during this time the Government had not kept pace with the evolution of the times. The Republican Party, which had claimed that it embodied all the wisdom of the ages, had apparently been afraid to break away from the precedents of the past and to enact legislation which should correspond with the evolution of the times, and so, while here and there a voice was raised in an effort to have the Government keep pace with the best political thought of the day, the Republican Party was afraid. It was in power on its past record and not on its present record. Its motto was "Stand pat." And when a Democratic orator pointed out its sins of omission, the reply was "It is easy to criticize—the Democratic Party is a party of destruction, not of construction." We have had a Democratic administration for about 19 months now, and the old charge of the Republicans against us has fallen to the ground, for there has been more constructive legislation in the past 19 months than there was in 19 years of Republican administration. And if the construction was not good, why is it that every one of our great constructive measures has commanded in this Congress Republican and Progressive votes?

It has been extremely fortunate for the country at this time that we have as President Woodrow Wilson, a man who has made a life study of the problems of government, a man of vast powers of mind, who has kept pace with the growth of political thought, a man also of extraordinary clearness of expression, so that everyone can easily grasp his ideas and can not misunderstand his utterances, a man who has great faith in the common people, who takes his duties as President seriously, a man of peace, who has by his wise policy of watchful waiting saved his country from the horrors of war.

It is fortunate also that President Wilson has had back of him during this time the support of the country—not alone the support of his party, but of the thoughtful men of the Progressive and the Republican Parties—so that the country has granted a fair hearing to the great measures he has advocated. We have sometimes been taunted by gentlemen on the other side of this House with taking orders from President Wilson. That is not true in the ordinary meaning of those words. It is from the common people that we on this side of the House are taking our orders, and those of us who have sounded public sentiment know that the views expressed by President Wilson are the views of the people, and the great weight given his messages on this side of the House is due to the knowledge that he is the best living exponent of the views of the common people. I doubt if there is a single one among us who has not been admonished by letters from our constituents to "follow Wilson," and these letters have come from Republicans as well as Democrats. And it is this knowledge that the people are with the President that accounts for the fact that so many of the constructive laws this Congress has passed have had the support of members of all three parties. It is not alone in this country that the President has the esteem of the people. Returning travelers from Europe, forced home by the great and devastating European war, all bring back the same story—that the European people believe President Wilson one of the greatest and wisest rulers of the world. And that universal belief in his wisdom and justice will give him a greater opportunity to bring about a world's peace when the warring countries have deluged themselves with sufficient blood to force them to their sober second thought.

It was fortunate, too, for the country that the majority in both Houses of Congress was composed of men who thoroughly believed in the constructive policies of the President, and that many of them were willing to forgo personal comfort and devote themselves untiringly and unceasingly to perfecting the details of the great constructive measures which have been passed. It would have been unfortunate indeed had the President been confronted with a hostile Congress in either branch.

What has this Congress done? Its first act was the Underwood tariff bill, which reduced the duties downward as had been promised by all parties, and it did this without injury to the farmers or to business. There is always some uneasiness when a tariff act is passed, some disturbance of business incident to a lack of knowledge on the part of the people as to what the effect will be, while the adjustment to new conditions is being made. There was less of this uneasiness or disturbance after the Underwood tariff bill than after any other tariff bill that was ever passed. And the bill in every particular fulfilled the expectation of those who framed it. It is the only tariff bill in many years not framed in large part by the protected interests. While it was framed by a Democratic committee and completed in a Democratic caucus after a full discussion of each detail, so that it was railed at as a strictly partisan measure, it was so good that it commanded in the House the votes of three Republicans, three Progressives, and one independent, and in the Senate the vote of one Republican, the great LA FOLLETTE, and one Progressive, the only one who belongs to the third party in that body. Do our opponents now advocate the passage of a new tariff bill at this time with all the attendant disturbance of business which always follows?

In this bill was the first constitutional income-tax law which puts in force the most equitable of all forms of taxation, the taxation of men in proportion to their incomes, incomes the enjoyment of which is made possible by the Government which imposes the taxation. Will the American people stand for the repeal of the income-tax law?

This Congress passed the law which put in force the election of United States Senators by the people. Surely this is beneficent legislation.

Then came the great fight over the currency bill, weeks of hard, earnest work in the Democratic caucus, and the presentation of a bill so good that it commanded the votes of 35 Republicans and 14 Progressives in the House, and 3 Republicans and the lone Progressive in the Senate. But it did not pass until every phase of the bill had been thoroughly discussed and weighed. If this bill had been the only constructive measure of the present Congress it would have been well worth while. For 30 years currency reform had been advocated and its need had been universally felt. It remained for this Congress to act and to so fix it that there will be no more money panics in this country such as we suffered from in 1907. Who is there would repeal the currency bill? Why, even the New York Tribune said:

> Mr. Wilson's currency bill is a charter of new freedom for the business world, since it strikes off the ancient shackles of an outgrown and ill-conceived banking system.

Surely this was legislation well worth while.

Then there was the Covington Federal Trade Commission bill, a Democratic measure so good that it passed the House unanimously and had 14 Republican votes in the Senate, being opposed only in the Senate by the extreme Republican reactionaries. This commission has powers to stamp out unfair competition in business. It is the first of the great antitrust acts to become a law. It puts big interstate business in the same governmental control that the interstate commerce acts had given the Interstate Commerce Commission. This measure, it has been hinted, is a favorite one with the President, and it is believed that the commission to be appointed by him in December will become a great and popular agency of the Government. Will those gentlemen who are seeking to occupy the seats we fill in this House advocate the repeal of this law?

Second of the three antitrust laws is the Clayton antitrust bill, against which the Republican leader in this House could array only 54 of his followers, while 41 Republicans and 15 Progressives voted for it, and in the Senate it was supported by 6 Republicans and 1 Progressive, and this after the bill had been bitterly fought. Do those who are advocating the defeat of Members on this side of the House want to go on record as advocating the repeal of this bill? This bill defines more clearly the Sherman law, strikes out the evil of interlocking directorates, prohibits price discrimination and destructive price cutting, and ends the long controversy over injunctions in labor disputes.

The third of the great triumvirate of antitrust bills, which passed the House by the enormous vote of 352 to 12, was the Rayburn railway-securities bill, which extends the jurisdiction of the Interstate Commerce Commission to railway stock and bond issues and will put a stop to such high finance as wrecked the New Haven Railroad. Surely the country is not opposed to this bill.

Nor did Congress confine its attention to tariff, income tax, currency, and antitrust legislation. It backed the President in the legislation needed to end the Mexican difficulty without war; it authorized the emergency note issue, and prevented the country being involved in the almost world-wide panic growing out of the European war, this act being needed to tide over the interim until the Federal Reserve Board comes into full operation, and was made possible by the near approach of that time.

It took prompt action to provide for the relief of Americans stranded in the war zone. It started in the great work of building up the American merchant marine, so that by October 1 the American merchant marine had been increased by 54 big ships.

Of recent years there has been much talk of conservation. But it remained for this Congress to start the work of passing constructive conservation bills which should not only conserve the public interests in the public domains for the future generations but should develop those resources for the benefit of the present generation. The Adamson general dam bill, which conserves the water power on navigable streams, passed the House with the support of the Democrats, 35 Republicans, and 4 Progressives, only 47 votes being cast against it. The Ferris-Kent bill for the conservation of water power on the public domain passed by acclamation after a thorough debate. A bill providing a system for leasing coal, mineral, and oil lands on the public domains under proper governmental regulations has also passed the House. These bills are all designed to conserve the public interests while developing these natural resources. Who of the people are opposed to them? Then there has been much legislation to develop the natural resources of Alaska and to checkmate the schemes of big interests to exploit this Territory for themselves. These conservation bills are still before the Senate, but if the people back the President in them, as I believe they will in November, there will be no doubt of their passage by that body.

Nor has this Congress neglected the interests of the farmers. In years to come the Lever agricultural extension act will be praised as having had much to do with increasing the prosperity of the agriculturist. It is even claimed for it that it will double the agricultural productiveness of the country. It provides a large appropriation for experimentation and the presenting to the farmers in concrete practical form the improved methods of farming developed by such experimentation, and the sending of experts into the rural districts to demonstrate improved methods of soil treatment, cultivation, fertilization, crop rotation, and marketing.

Congress has also appropriated half a million dollars to fight hog cholera, a scourge which in 1913 cost the farmers $65,000,000. It has passed a law regulating speculation in cotton futures. It appropriated $200,000 for the new Bureau of Markets to make a close study of the subject of handling, marketing, and utilizing farm products. And the Currency Committee of this House, after much study, is preparing to present to Congress in December a rural-credit bill for facilitating the credits needed by the farmers of the country. Will our opponents in the November elections oppose these measures?

Nor has Congress neglected the child in whom the future of the country rests. A Children's Bureau has been provided, with enlarged means "to promote the welfare of children and to devise means whereby the necessities of the parents can not be used to retard the development of the children." Who opposes this?

Nor have the problems of capital and labor been neglected. The industrial employees' arbitration act made it possible for the President to settle the threatened eastern railway strike in 1913 and the western railway strike in 1914, either of which would have been disasterous to the prosperity of the country. An eight-hour day has been established for all female employees in the District of Columbia, which is as far as Congress has complete power to act. A bill to create a bureau of safety devices has passed the House, designed to supply the best methods for safety of life and limb.

This House has sent to the Senate a bill for the aiding in the construction and maintenance of good roads.

Nor has this finished the list of constructive legislation, but I have not time to speak of the seamen bill, which passed both Houses unanimously after a bitter fight extending over other Congresses, nor of the many other measures which have received our attention.

With our constructive measures so good that our Republican and Progressive brethren in Congress have had to vote for them, the cry has been raised that this has been an extravagant Congress. But the figures do not bear out this contention. Happily there is no dispute over the figures; the Democratic chairman of the Appropriations Committee and the ranking Republican member of the same committee have agreed on the exact figures in their speeches. The seeming contention of our political opponents is made possible by treating the cost of the greatly increased business of the Post Office Department caused by parcel post and a general increase of the mails as an extravagance. The Post Office Department pays for itself. A great increase in receipts, which means a great increase in business, calls for a corresponding increase in the expense of doing that business. The carrying of the mails is the one business that the Government is engaged in that stands by itself, and as this administration has made it a paying business, there are no apologies to offer for an increase in the total expense of the department, because the increased receipts have more than cared for it. Outside of the Post Office Department the annual appropriations for the first year of appropriations by this Congress have been $664,847,703.26, while the annual appropriations for the last year of the last Congress were $685,776,853.28. This shows a reduction in appropriations by this Congress of $20,929,150.02, and this decrease in appropriations has come in spite of the extra appropriations amounting to $8,650,679.98 caused by the Mexican trouble and in spite of the expense of many added agencies of Government which have been taken on to aid in promoting the general welfare of the people.

It is on this record that the Members of this House go before the people for reelection. The question for the people to decide is, Do they think this bad legislation; are they disappointed in President Wilson and President Wilson's Congress; will they, to adopt a phrase of Abraham Lincoln's, "swap horses while crossing a stream," or will they return a Congress that will work in harmony with the President and go on in the great work of building up an American merchant marine to increase our exports and bring greater prosperity to our people and that will take up the many important questions being considered by the various committees? I can not believe that the people will desire the President to have on his hands a hostile Congress while he is engaged in keeping the United States free from the horrors of a world war the like of which no generation has hitherto seen. I take it that the Wilson policies will be given a fair trial in the next two years with a Congress pledged to aid in carrying them out.

In speaking of the necessity of every patriotic man to "stay on his job" and the duty "to stay where his job can best be done" President Wilson has so felicitously written that I can not forbear quoting it:

> The record men make speaks for itself. The country can not be deceived concerning it and will assess it justly.
>
> What it chiefly expects and demands and what it will certainly be most surely won by is the performance of duty without fear or favor and without regard to personal consequences.
>
> And certainly this is a time when America expects every man to do his duty without thought of profit or advantage to himself. America is greater than any party. America can not properly be served by any man who for a moment measures his interest against her advantage. The time has come for great things. These are days big with destiny for the United States, as for the other nations of the world. A little wisdom, a little courage, a little self-forgetful devotion may under God turn that destiny this way or that.
>
> Great hearts, great natures, will respond. Even little men will rejoice to be stimulated and guided and set an heroic example. Parties will fare well enough without nursing if the men who make them up and the men who lead them forget themselves to serve a cause and set a great people forward on the path of liberty and peace.

Review of the Work of the Democratic Party, Sixty-third Congress, First and Second Sessions.

STATEMENT

OF

HON. OSCAR W. UNDERWOOD,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 9, 1914.

Mr. UNDERWOOD. Mr. Speaker, in the national election of November, 1912, the people were thoroughly aroused against the Republican Party, and the Democrats swept the country overwhelmingly, securing full control of the executive and legislative departments of the National Government. On March 4, 1913, the Democratic Party, with Woodrow Wilson in the executive chair, and with a Democratic majority of 6 in the Senate and of 145 in the House, set to work to fulfill its promises to the people.

IMPORTANT LEGISLATION.

When the President called the special session of Congress on April 7, 1913, it was with the intention of giving the people the promised reforms, and with the special plan of securing before adjournment the promised tariff legislation, banking and currency legislation, and supplemental antitrust legislation in the interest of the people rather than the privileged few.

Since the calling of the special session on April 7, 1913, Congress has been continually in session, and the Democratic Party has already given to the country the most remarkable record of constructive legislation known in the history of our Government. It has enacted the following important measures into law:

THE SPECIAL PROGRAM.

First. It has placed a tariff law upon the statute books revising the tariff downward to a revenue basis, establishing a competitive tariff system and levying an income tax to shift a large portion of the burden of taxation from those least able to pay to those most able to pay.

Second. It has enacted a banking and currency law which will prevent panics and which will prevent the country's resources from being held for speculation by Wall Street at the very time money is most needed to conduct legitimate business in the sections from which it is drawn.

Third. It has created an Interstate Trade Commission to have a similar jurisdiction over corporations doing an interstate business to that of the Interstate Commerce Commission over common carriers.

Fourth. It has enacted an antitrust law to supplement the Sherman antitrust law and to prevent monopoly.

LEGISLATION IN THE INTEREST OF LABOR.

Fifth. It has passed an employees' arbitration act, providing for mediation, conciliation, and arbitration in controversies between common carriers and their employees.

Sixth. It has passed a bill to prevent the employment of women in the District of Columbia in manufacturing, mechanical, or mercantile establishments, laundries, hotels, restaurants, telegraph or telephone offices or establishments, or by express or transportation companies more than 8 hours per day or more than 48 hours per week or more than 6 days per week.

Seventh. The antitrust law provides that labor unions shall not be considered in violation of the Sherman antitrust law, and therefore protects the workingman during the period of trade disputes and, besides, guarantees to him the right of trial by jury for alleged contempts of court committed out of the presence of the court.

LEGISLATION IN THE INTEREST OF EDUCATION.

Eighth. It has authorized the appointment of a commission to consider the subject of national aid for vocational education.

Ninth. It has passed a bill providing for cooperative agricultural-extension work between the State agricultural colleges receiving the benefits of the act of July 2, 1862, and the United States Department of Agriculture.

LEGISLATION TENDING TOWARD MORAL UPLIFT.

Tenth. It has enacted into law two opium bills to assist the international convention, so far as the United States has power, to prohibit the use of opium the world over.

Eleventh. It has enacted a law to eliminate houses of ill fame in the District of Columbia.

INVESTIGATIONS.

Twelfth. It has authorized and directed investigations of the conditions in the coal fields of West Virginia and Colorado and in the copper mines of Michigan. It has authorized and directed an investigation of the Shipping Trust and of the maintenance of a lobby in Washington to influence legislation.

EMERGENCY MEASURES BECAUSE OF THE WAR IN EUROPE.

Thirteenth. It has passed an act permitting the admission of foreign-built ships to American registry for the foreign trade.

Fourteenth. It has passed a law creating a Bureau of War Risk Insurance in the Treasury Department.

OTHER LEGISLATION.

Fifteenth. It has made the following liberal special appropriations: Thirty thousand dollars for the relief of destitute natives and residents of Alaska suffering from the action of the storm of October 6 and 7, 1913; $200,000 for the relief of the sufferers from the recent conflagration in Salem, Mass.; $600,000 for the eradication of hog cholera; $480,000 for aid to agricultural colleges; $500,000 for relief and transportation of American citizens in Mexico; $2,750,000 for relief of American citizens abroad, who have been compelled to rely upon the resources of our Government to extricate them from the perils of the war now afflicting the great nations of Europe; and $1,000,000 for the construction of railroads in Alaska.

Sixteenth. It has authorized the construction of a Government-controlled railroad in Alaska.

Seventeenth. It has passed an act providing for the raising of the volunteer forces of the United States in time of actual or threatened war.

Eighteenth. It has enacted a law repealing the provision of the Panama Canal act exempting vessels engaged in the coastwise trade of the United States from the payment of tolls.

Nineteenth. It has enacted into law a bill providing a temporary method of conducting the nomination and election of United States Senators.

Twentieth. A Roads Committee of 21 members, with jurisdiction over matters relating to the construction or maintenance of post roads, has been created in the House.

Twenty-first. It has passed an act prohibiting gambling in cotton futures and providing for the standardization of cotton according to the Government standard grades.

Twenty-second. It has enacted into law an act providing for second homestead and desert-land entries.

Twenty-third. It has passed a law for the benefit of farmers and water users under national reclamation projects by extending from 10 to 20 years the period within which construction charges shall be returned to the Government; by preventing speculation in reclamation lands; and by providing that no increase in construction charges, when once fixed, shall be made without the consent of a majority of the water users to be affected by such increase.

The Reclamation Service has been reorganized in such a way as to eliminate all friction between the service and the water users, establish more cordial relations between them, and give the water users larger voice and more consideration in the management and operation of the projects.

CONSTRUCTIVE MEASURES UNDER WAY.

The Congress now has under way many other constructive measures of general and local importance, including those providing for the following:

MEASURES IN THE INTEREST OF LABOR.

First. The regulation of the immigration of aliens to, and the residence of aliens in, the United States.

Second. The creation of a Bureau of Labor Safety in the Department of Labor.

Third. The prohibition of the importation of articles made by convict, pauper, or detained labor.

MEASURES FOR THE BENEFIT OF AGRICULTURAL DISTRICTS.

Fourth. Government aid for the assistance of the States in building public highways and post roads.

Fifth. A sound system of easier rural credits.

Sixth. The irrigation of western lands.

Seventh. The extension of the time for payment on irrigation lands under reclamation projects.

MEASURES IN THE INTEREST OF THE MINERS.

Eighth. The leasing of coal land in the Territory of Alaska.

Ninth. A commission to codify and suggest amendments to the general mining laws.

Tenth. The encouragement of prospecting, mining, and treating radium-bearing ores in lands belonging to the United States for the purpose of securing an adequate supply of radium for governmental and other hospitals in the United States.

MEASURES IN THE INTEREST OF CONSERVATION AND THE DEVELOPMENT OF COMMERCE.

Eleventh. The betterment of the facilities of commerce through provisions for bridges and dams.

Twelfth. The development of water powers and the promotion of navigation.

OTHER MEASURES.

Thirteenth. The registration of all persons manufacturing or selling opium.

Fourteenth. Stricter regulations to promote the safety of passengers and crews at sea.

Fifteenth. The giving to the Filipinos their independence as soon as a stable government can be established.

Sixteenth. The revision of the laws relating to the judiciary.

Seventeenth. Government supervision over railway capitalization.

THE TARIFF LAW.

On April 22, 1913, the Ways and Means Committee reported to the House the tariff bill. This bill carried the lowest duties of any tariff bill since the famous Walker tariff of 1846. This bill passed the House by a vote of 281 to 139, or with a majority of 142, only 3 less than the entire Democratic majority. It passed the Senate by a vote of 44 to 37, or with a majority of 7 votes. This bill was enacted into law October 3, 1913, and marked the fulfillment of the first step in the administration's

program. This law establishes a competitive tariff system in lieu of the Republican protective tariff system, and represents for the first time in the history of tariff making during the last 50 years a revenue measure drafted by the representatives of the people rather than by the representatives of privilege, in the interest of the consumers rather than in the interest of the protected few.

This measure eliminates the inequalities and abuses of the past systems of tariff taxation, reduces the customs rates to a sound revenue basis, places maximum rates on luxuries and minimum rates, or none at all, on the necessaries of life, and levies an income tax to equalize the tax burden and to give elasticity and productiveness to our revenue system and to make up the loss in revenue caused by the reduction in tariff duties.

CLAIMS FOR REVENUE PRODUCING SUSTAINED.

When the tariff law was written the committee estimated that the customs receipts for the first fiscal year under the new law would amount to $270,000,000. This estimate was reached on June 2, and the return for the remainder of the month brought the customs receipts for the fiscal year up to $292,000,000, or $22,000,000 in excess of the estimates. The last year the Payne law was in operation the customs receipts amounted to $318,000,000. The falling off in customs duties under the present law amounts to the difference between $318,000,000 and $292,000,000, or $26,000,000. Of course, we expected a falling off in the receipts from customs dues, for if we had not we would not have proposed the income tax.

The Treasury Department estimated that the corporation and income tax would yield $95,000,000 during the fiscal year ending June 30, 1914. The returns from the corporation and income tax only amounted to $71,386,156.13. Of this amount the corporation tax returns amounted to $43,079,819.44 and the return from the tax on individuals amounted to $28,306,336.69. Owing to the provision in the income-tax law permitting payment within 10 days after the close of the fiscal year before penalties attach, there was a failure to pay $5,240,108.83 of taxes which had been assessed against corporations and individuals, and which should have been paid before the close of the fiscal year 1914. Had this amount been paid, the income tax on corporations and individuals would have yielded $76,626,264.96.

The income-tax returns for the fiscal year were $71,000,000, which was $24,000,000 under the estimate of the Treasury Department. This amount was more than made up by the excess of customs receipts over estimates of $22,000,000 and by the excess of miscellaneous receipts over estimates of $3,000,000. The income tax in its operation applied to the last 10 months of the calendar year 1913, but it must be borne in mind that a large proportion of incomes upon which no collection of tax could be made accrued and were payable in the months of January and February of 1913. The income-tax assessment upon semiannual incomes payable in January and July only applied in 1913 to a period of four months. The law applied only seven months in 1913 to all quarterly incomes payable in January, July, and October. So it is fair to say that the entire income-tax rates really applied to these large classes of income during one-half of the year available in which to collect the tax.

THE REVENUE.

The Government receipts from all sources, not including the postal receipts, for the fiscal year just closed amounted to $734,000,000, as compared with $724,000,000 for the previous year. From customs we received $292,000,000; ordinary internal revenue, which includes the receipts from the taxes on spirits, tobacco, fermented liquors, oleomargarine, adulterated and renovated butter, filled cheese, mixed flour, and playing cards, yielded $309,000,000; the corporation and income tax, $71,000,000; and all other receipts, $62,000,000.

THE GOVERNMENT EXPENDITURES.

The ordinary disbursements for the fiscal year 1914 amounted to $701,000,000, as compared with $683,000,000 for the preceding year, or an increase of $18,000,000. This increase in expenditures is due to the gradual expansion of the Government and, naturally, of its various departments—the increased appropriations for the improvements of rivers and harbors and the increased expense of the Navy and War Departments incident to intervention in Mexico. The increase in expenditures of the departments over last year is as follows:

Legislative establishment	$165,000
Executive Office	73,000
State Department	245,000
Treasury Department (excluding public buildings)	1,305,000
War Department:	
Military and civilian	5,801,000
Rivers and harbors	7,722,000
Department of Justice	40,000
Navy Department	6,662,000
Department of Agriculture	$1,642,000
Interior Department (excluding pensions and Indians)	906,000
Department of Labor	148,000
Independent offices and commissions	381,000
District of Columbia	149,000
Total	25,239,000

The following departments were able to reduce expenditures for the fiscal year 1914 below their expenditures for the preceding year:

Treasury Department, expenditures on public buildings	$3,180,000
Post Office Department	227,000
Besides reducing expenditures the Post Office Department wiped out a deficit of	1,027,000
Interior Department:	
Pensions	1,993,000
Indians	57,000
Department of Commerce	163,000
Interest on the public debt	35,000
Total	6,682,000

The Panama Canal payments during the fiscal year just closed amounted to $34,827,000. These payments were made from the current revenues, so that the surplus for the year over ordinary expenditures of $33,784,000 was absorbed, leaving the sum of $1,010,000 as a charge against the general fund of the Treasury. The following table shows the ordinary receipts and disbursements, including Panama Canal expenditures, for the fiscal years 1912, 1913, and 1914:

Table showing the ordinary receipts and disbursements, including Panama Canal expenditures, for the fiscal years 1912, 1913, and 1914.

Year.	Receipts.	Disbursements.	Surplus.	Panama Canal.	Surplus or deficit.
1912	$691,778,465	$654,353,963	$37,224,501	$35,327,370	[1] $1,897,131
1913	724,111,229	682,770,705	41,340,524	41,741,258	[2] 400,733
1914	734,343,700	700,559,248	33,784,452	34,826,941	[2] 1,010,068

[1] Surplus. [2] Deficit.

OUR EXPORTS.

Our exports for the fiscal year just closed were $2,364,579,148, and placed the fiscal year 1914 in second place as showing the greatest exports for any year in the Nation's history with the exception of 1913, when the exports were $2,465,884,149. Thus the exports for 1914 show a falling off of $101,305,001. The falling off in exports is largely accounted for by the decreased exportation of breadstuffs, amounting to $45,795,954. Over 45 per cent of the decline in exports is due to the decrease in the exports of breadstuffs, and for this decrease in breadstuffs lessened exports of barley, corn, and oats account for a decline of $41,399,926. There was in addition to the decrease in breadstuffs a decrease in the exports of cottonseed oil of $6,893,793, making a total decrease for these articles of $52,689,747. Thus the short yield of the barley, corn, and oat crops in 1913 was one of the chief factors in placing the exports of 1914 in second place in the Nation's export history.

Much has been said about there being some excess of imports over exports since April. One has only to turn back to the first year the Payne law was in operation to find that the same condition existed. These temporary fluctuations signify nothing with respect to the operations of a tariff law.

The following table shows the exports of domestic and foreign merchandise for the fiscal years 1898 and 1914:

Exports of merchandise, fiscal years 1898 to 1914.

[Compiled from the reports of the Bureau of Foreign and Domestic Commerce, Department of Commerce.]

Year.	Exports of merchandise.		
	Domestic.	Foreign.	Total.
1898	$1,210,291,913	$21,190,417	$1,231,482,330
1899	1,203,931,222	23,092,080	1,227,023,302
1900	1,370,763,571	23,719,511	1,394,483,082
1901	1,460,462,806	27,302,185	1,487,764,991
1902	1,355,481,861	26,237,540	1,381,719,401
1903	1,392,231,302	27,910,377	1,420,141,679
1904	1,435,179,017	25,648,254	1,460,827,271
1905	1,491,744,641	26,817,025	1,518,561,666
1906	1,717,953,382	25,911,118	1,743,864,500
1907	1,853,718,034	27,133,044	1,880,851,078
1908	1,834,786,357	25,986,989	1,860,773,346
1909	1,638,355,593	24,655,511	1,663,011,104
1910	1,710,083,998	34,900,722	1,744,984,720
1911	2,013,549,025	35,771,174	2,049,320,199
1912	2,170,319,828	34,002,581	2,204,322,409
1913	2,428,506,358	37,377,791	2,465,884,149
1914	2,329,684,025	34,895,123	2,364,579,148

The increase in imports during the fiscal year 1914.

The imports of both dutiable and free merchandise during the fiscal year 1914 amounted to $1,893,925,657 as compared with $1,813,008,234 during the fiscal year 1913, or an increase of $80,917,423. This increase represents an increase of importations of 4.46 per cent over the importations of last year, which is not as great an increase in importations as the increase in importation during the first year the Payne law was in operation, when the imports increased 18.68 per cent over the preceding year. We must also remember that our consumption is continually increasing, due to the increase in population. The per capita consumption of imports during the fiscal year 1914 was $19.17, as compared with $18.69 for the last year the Payne law was in operation, or a per capita increase in importations of 48 cents. The following table shows the imports of merchandise, the per cent of free imports, the percentage of yearly increase in imports, the United States population, and the imports per capita from 1895 to 1914:

Table showing the imports of merchandise, the per cent of free imports, the United States population, and the imports per capita, 1895 to 1914.

[Compiled from the reports of the Bureau of Foreign and Domestic Commerce and of the Bureau of the Census, Department of Commerce.]

Year.	Free.	Dutiable.	Total.	Per cent of free.	Percentage yearly increase.	Population June 1.	Per capita.
WILSON TARIFF.[1]							
1895	$363,233,795	$368,736,170	$731,969,965	49.62	11.75	68,934,000	$10.62
1896	369,757,470	409,967,204	779,724,674	47.42	6.52	70,254,000	11.10

THE FEDERAL RESERVE ACT.

The banking and currency act was enacted into law December 22, 1913, thus completing "the second step toward setting the business of this country free." This bill passed the House by a vote of 287 to 85, being voted for by 26 Republicans and 12 Progressives. It passed the Senate by a vote of 54 to 34. This bill provides that each national bank shall keep a portion of its funds in one of the 12 regional reserve banks. A national bank may in stress borrow at interest from its own reserve and that of the other member banks on the security of its holdings of prime commercial paper and acceptances. This will make possible, without lessening safety, the unlocking for circulation of about half the immense total of bank reserves whenever needed in time of a crisis or to move crops. The act also provides a further means of elastic currency by permitting a regional bank to issue new notes as money, the retirement of the same being insured when extra money is no longer needed by the requirement of a gold reserve of 40 per cent of the note and a commercial paper reserve of 100 per cent. This measure also permits national banks to lend on five-year farm mortgages up to one-fourth of its capital and surplus.

The bankers of moderate capital throughout the country are going to be greatly benefited by the new currency law. In 1893, and again in 1907, many of the largest banks in the country practically suspended payment because they could not get the bank-note currency to meet their depositors' demands. During these panics the New York banks adopted the practice of only paying a limited amount in bank notes to any customer, no matter what the customer's credit or assets might be. These banks were obliged to adopt this practice because they could not get the currency. Under the new law such conditions will be impossible. A merchant having tangible assets and good credit can go to his local bank and borrow money on his personal note properly indorsed. Should his home bankers not have the currency to give him, he may take the merchant's note to the Federal reserve bank in his district and get bank notes for him. Should the Federal reserve bank not have the necessary bank notes, it can secure them from the United States Treasury.

This law will prevent the country's resources from being held by Wall Street for speculation at the very time money is most needed to conduct legitimate business in the sections from which it is drawn. It will provide the necessary accommodations for the moving of crops; it will prevent panics such as those of 1893 and 1907 and will give a new impetus to business.

RURAL CREDIT LEGISLATION.

The Federal reserve act gives the rural districts of the country the benefit of $350,000,000, which was denied them under the previous banking laws. The rediscount provisions of the Federal reserve act furnish unlimited facilities for farming operations of all kinds. As soon as the new system is in full operation no bank will have any excuse for refusing loans to farmers who can give well-secured notes of six months' maturity based on agricultural transactions already consummated or in contemplation. For the exportation of farm products the Federal reserve act furnishes extended credit facilities, making it possible for the farmer to get his money immediately for his products exported instead of having to wait until the return is made from abroad, as was the custom under the old law. The Federal reserve act will have a decided effect in reducing the rate of interest to the farmer and the rediscount provisions will make it possible for the banks to extend credits to a greater extent than they were able to do under the old law.

INTERSTATE TRADE COMMISSION.

The Interstate Trade Commission law abolishes the Bureau of Corporations and turns over the functions and general machinery of that office to the new commission. It gives this commission broad powers of investigation into the affairs of corporations doing an interstate business. All corporations having a capital of $5,000,000 or more must report regularly to the commission. This will enable the Government to keep in close touch with the financial workings of the big business establishments at all times. The President, Attorney General, or either branch of Congress can authorize the commission to investigate any alleged violation of the antitrust law, be the corporation big or small. The commission is authorized to make public all infor-

mation it gathers in the course of its investigations and is to make an annual report to Congress suggesting recommendations for future legislation.

TRUST LEGISLATION.

Big business, foreseeing the trend of public opinion, began to adjust itself to meet the new conditions and to obey the law. In December the American Telegraph & Telephone Co., to escape prosecution, agreed with Attorney General McReynolds (1) to dispose of its Western Union Telegraph stock, so that the telegraph company will be entirely separate from the former and of any other company in the Bell system; (2) that no one of these telephone companies will hereafter acquire control of a competing line; and (3) that all independent telephone companies may obtain toll service over the Bell lines.

Mr. McReynolds also secured settlement with the New Haven Railroad combination, which agreed to give up its control of the Boston & Maine roads, of its trolley lines, of its three vessel lines outside of the Sound, and to cancel its agreement with the Boston & Albany. The administration desired only practicable and beneficial competition by separation of parallel lines.

The Money Trust began to prepare for the necessary adjustment to meet the demands of the administration and the trend of public opinion before the delivery by President Wilson of his trust message. Members of the J. P. Morgan banking firm resigned from 30 of the 63 directorships in 39 corporations, having a total capital of $10,000,000,000. The Pujo report of 1912 showed that the Morgan firm, with its closely allied banks, had 341 directorships in 112 corporations having a total capital of $22,245,000,000. This gives an idea of the stupendous structure held together by interlocking directorates now being unlocked before the new antitrust law is enacted.

E. H. Gary, chairman of the United States Steel Corporation, realizing the growing sentiment against interlocking directorates has already resigned his directorship from all the corporations with which he is identified, with the exception of the United States Steel Corporation and its subsidiaries.

The antitrust measure forbids unfair discrimination in prices whereby certain corporations seek to secure monopoly in trade by destroying competition by selling their goods at a less price in communities where their competitors are engaged in business than at other places throughout the country.

The law prohibits such interlocking directorates as those of—

> Great corporations, in banks and railroads, industrial, commercial, and public-service bodies, which result in making those who borrow and those who lend practically one and the same, those who sell and those who buy, but the same persons trading with one another under different names and in different combinations, and those who affect to compete in fact partners and masters of business.

This law will be a great help to business and the country and will remove the menace of monopoly with little disturbance to business.

THE EMPLOYEES' ARBITRATION ACT.

The employees' arbitration act provides for mediation, conciliation, and arbitration in controversies between employers and their employees. This law provides a means of bringing together the representatives of capital and labor. It has already resulted in averting the greatest railroad strike in the history of our country, which involved every railroad west of the Mississippi and north of the Potomac Rivers, and thousands of railroad employees. This legislation marks a new era in the settlement of industrial disputes, and its application thus far goes a great way toward demonstrating to the country and to industrial workers the wisdom of settling differences without resorting to warfare by an actual strike. Its application has also served to teach that it is better to have a peaceful settlement through mediation, conciliation, and arbitration rather than a great industrial warfare.

AGRICULTURAL-EXTENSION DEPARTMENTS.

The object of this legislation is to establish agricultural-extension departments under the direction of the land-grant colleges of the several States to aid in carrying to the people useful and practical information relating to agriculture and home economics through field instruction, demonstrations, and publications. When one stops to think of the very small per cent of the people enjoying the direct benefits of agricultural colleges it is quite apparent that the system of Federal aid to agriculture is far from complete. The college deals with ideas; the agricultural stations with facts. The colleges teach theories of agriculture; the stations ascertain whether or not the theories are good or bad. The stations gather facts of a practical and scientific nature; the colleges disseminate these facts, but only to a limited extent. This legislation is the next logical and necessary step, and gives this country the most comprehensive system of governmental aid to agriculture in the world. It is believed that this legislation will be instrumental in greatly increasing the productiveness of American farms, and thereby greatly add to the Nation's wealth.

LOBBY INVESTIGATION.

During this Congress a searching investigation has been made into the maintenance of a lobby in Washington for the purpose of influencing legislation, the result of which was to eliminate the lobby from the Halls of Congress and the seat of government.

ALASKAN RAILWAY.

Another act of great importance recently enacted into law was the Alaskan railway bill. This law provides for the construction and ownership by the Government of a railroad in the Territory of Alaska. This law will make possible the development of the resources of Alaska, the establishment of industries, and the utilization of the coal deposits which are to remain under the control of the Government. The law unlocks Alaska's great resources and represents a great step toward the development of Alaska.

EMERGENCY LEGISLATION BECAUSE OF THE WAR IN EUROPE.

The law providing for the admission of foreign-built ships to American registry for the foreign trade.

This measure provides for the admission of foreign-built vessels to American registry, without restriction as to the age of the vessel, "to engage only in trade with foreign countries or with the Philippine Islands and the islands of Guam and Tutuila." Section 5 of the Panama Canal act of August 24, 1912, contained this provision, but with the limitation that such foreign-built vessels, to be entitled to registry, must not be more than 5 years old at the time they apply for registry.

While this measure was approved by the President on August 18, 1914, it really did not go into effect until after the President's order, and during the first month that the law was really in operation 62 vessels which were previously under British, Belgian and German registry and flags were added to the American merchant marine, with a total tonnage of 235,420 tons and a value of upward of $15,000,000.

WAR RISK INSURANCE ACT.

This measure creates a bureau of war risk insurance in the Treasury Department for the purpose of insuring American ships and cargoes shipped therein against loss or damage. This undertaking is merely of a temporary nature and purely to meet the present emergency, and is to be conducted upon a business basis. The Government is to receive premiums for the insurance issued. Great Britain, France, and Belgium are insuring the vessels and cargoes flying their respective flags against war risks.

This measure became necessary because our ships and our cargoes could not get insurance except from a few American companies, who had not the necessary capital and who had not the commercial standing on which they could safely take the risks. American ships laden with American cargoes were in our ports, flying the American flag, prepared to carry the commerce of this country beyond the seas, and were unable to sail because they could not get the insurance which the men who own the cargoes or who finance the cargoes demanded before the ships left our ports. By this act we rise to the necessities of this emergency, and by risking a few million dollars of the people's money make it possible for our crops, our cotton, corn, and wheat to go abroad and bring back gold to the people of the United States.

This act was approved by the President on September 2, 1914, and was in full operation on September 4. Since the law has been in operation the bureau has written war risk insurance amounting to $4,434,241. Applications are now pending amounting to $6,161,000, and the receipts from the insurance issued paid into the Treasury to date have been $43,421.67.

THE EMERGENCY WAR REVENUE MEASURE.

This measure has already passed the House and is now before the Senate. It proposes to raise $105,000,000 by internal-revenue taxes to meet the falling off in customs revenue during the next 12 months because of the probable cessation of importations from the countries at war.

The following table shows the value of dutiable imports into the United States from the European countries at war during the fiscal year ending June 30, 1914, together with the estimated falling off in customs revenue during the next 12 months, computed on the basis of the tariff act of October 3, 1913:

Estimated falling off in customs revenue during the next 12 months because of the European war.

Country.	Dutiable imports, value 1914.	Estimated falling off in revenues during next 12 months.
Austria-Hungary	$15,232,645	$5,267,000
Belgium	21,324,417	5,398,000
France	95,445,062	35,566,000
Germany	119,383,978	38,683,000
Russia in Europe	2,420,602	242,000
Servia and Montenegro	9,627	2,000
United Kingdom	132,173,220	40,653,000
Total	385,989,551	125,811,000

NOTE.—This estimate is made on the assumption that all imports from the European countries at war will cease during the next 12 months. The import values shown represent the dutiable articles imported during the fiscal year ending June 30, 1914. The estimated falling off in revenue is computed by applying the rates of the act of 1913 to the imports for the fiscal year ending June 30, 1914.

THE NECESSITY FOR THIS LEGISLATION CAN NOT BE TRACED TO THE TARIFF ACT OF 1913.

Many have contended that this legislation becomes necessary because of the failure of the new tariff law to provide the necessary revenue, but the facts will not bear out the statement. During the fiscal year 1914 the customs revenue collected amounted to $292,000,000. Of this amount, $85,500,000 was collected before the present law went into effect. The customs revenue collected during the first nine months the new law was in effect amounted to $206,500,000, or $22,900,000 per month. The customs revenue collected during the fiscal year 1913 (the last year the Payne law was in operation) amounted to $318,891,395.86, or $26,600,000 per month. The new tariff law provides an income tax to make up for the reduction in customs revenue because of the lowering of the tariff taxes.

For the last 10 months of the calendar year 1913 there accrued from the income tax on individuals $31,344,539. The amount of corporation, excise, and income tax accruing for the entire calendar year of 1913 was $45,851,028. The total amount of the excise tax on corporations derived by the Treasury for the calendar year 1912 was $35,006,299. The new income-tax law eliminated the corporation exemption of $5,000, added to the tax list many corporations not subject to the excise tax, and also imposed a graduated rate upon corporations holding stock in others. These provisions account for the entire difference between the receipts from corporations for the calendar year 1912 and the calendar year 1913, which difference is $10,844,729. This sum added to the amount of income tax accruing from individuals for the year 1913, namely, $31,344,539, would aggregate $42,189,268, or $4,000,000 per month. Adding the average monthly customs receipts to the average monthly income-tax receipts under the new law gives $26,900,000, as compared with $26,600,000 under the act of 1909. This average monthly comparison only extends to the close of the fiscal year 1914.

For the present fiscal year 1915 the comparison is much more favorable to the new tariff and income-tax law, for the reason that the individual income-tax law only covered 10 months of the year 1913, and in reality only reaching all semiannual incomes payable in January and July for 4 months of that year and all like quarterly income payable in January, July, and October for but 7 months of that year. Considering the unsettled business conditions during the year 1914, largely on account of disturbed international commercial and other conditions, the best obtainable figures as to the estimated amount that will accrue from the corporation tax for 1914 is $42,500,000, while the same estimates from individual income tax is $42,500,000, making a total of $85,000,000. Deducting from this amount $35,000,000 that would otherwise have accrued from corporation excise tax under the act of 1909 leaves $50,000,000, or $4,166,000 per month that would accrue to the Treasury from the income tax for the fiscal year 1915. Adding this average monthly yield to the average monthly yield of the present tariff law gives $27,066,000, as compared with $26,600,000 under the act of 1909. These estimates of the income tax are exceedingly conservative.

The customs revenue collected during the fiscal year 1913 amounted to $318,891,395, as compared with $292,128,527 for the fiscal year 1914. The customs revenue, therefore, fell off $26,762,868, which amount was more than made up by the $31,344,539 accruing from individual incomes, and the $10,844,729 additional tax accruing from corporations, as heretofore explained.

OUR REFORM LEGISLATION SUPPORTED BY REPUBLICANS AND PROGRESSIVES.

There are now 285 Democrats in the House of Representatives, 123 Republicans, 2 Progressive Republicans, 18 Progressives, 1 independent, and 6 vacancies. The Democratic majority, therefore, is 141. In the Senate there are 53 Democrats, 42 Republicans, and 1 Progressive. As shown by the record of the passage votes on the great reform measures, every measure received not only the support of the Democrats, but enlisted the votes of many Republicans and Progressives. The Democratic majority now in the House is 141 and 10 in the Senate. The tariff bill passed the House with a majority of 142 and the Senate with a majority of 7; the Federal reserve act passed the House with a majority of 202 and the Senate with a majority of 20; and the antitrust bill passed the House with a majority of 223 and the Senate with a majority of 30.

The votes.

Measure and party.	Passage vote in—

DEMOCRATS HAVE EARNED THE CONFIDENCE OF THE PEOPLE.

The Democratic Party is entitled to the confidence of the people because it has kept its pledges with them. It has revised the tariff downward to a revenue basis and through the enactment of the income-tax law has shifted a large portion of the tax burden of the American people from the shoulders of the people least able to pay to the shoulders of those most able to bear the burden of taxation. It has reformed our banking and currency laws, taking the control of the money and the credits of the country out of the hands of the money lenders and speculators of the great cities and placing it in the hands of the Government where it belongs.

It has furnished the necessary supplemental legislation to strengthen and make effective the provision of the Sherman antitrust law to prohibit monopoly with the least disturbance possible to business, and it has further demonstrated that it can efficiently administer the affairs of the National Government.

On Adoption of Conference Report on Antitrust Bill.

EXTENSION OF REMARKS

OF

HON. SILAS R. BARTON,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 8, 1914.

Mr. BARTON. Mr. Speaker, I shall vote to reject this conference report, hoping that we may have an opportunity of sending it back to conference with instructions to the conferees requiring them to insert the penalties in sections 2 and 4 as they were originally in the House bill. I voted for the bill when it passed the House. Now it comes before us shorn of its power, its teeth extracted, a poor, pitiful attempt to please the powers it was intended to punish. The people have demanded trust legislation; they have asked for bread and we

have given them a stone. Do not think they will dwell in ignorance, for they can understand this bill in its final workings, and when they know that it not only gives the rich offender of law a title of security but weakens the Sherman antitrust law, then they will call to account men who have written a trust bill and taken out the penalties.

I have eminent authority for saying criminal action should be visited on the men who rob the people through their monopolies and holding companies and that guilt should be made personal; also that fines meant nothing to these offenders, for they immediately raise the price of their commodity and require the people to pay it when purchasing the things they have illegally monopolized. That statement is true, and when in your conference report you struck out the criminal penalties you not only took the life out of this bill but you weakened the Sherman law.

I do not believe in hypocrisy; and to place a caption of antitrust over this bill is, in my judgment, pure hypocrisy.

Under our law we visit the most dire punishment on the little thief. We send him to our jails and penitentiaries. But this bill says to the big thief, "Stop, or I will have you investigated." And if he does not stop, you will look on with calm complacency and say it is too bad.

One law for the rich, another for the poor! How long will this continue?

I had great faith that when this bill left the House we were going to have written into our laws real trust legislation; that interlocking directorates would be forbidden in banks, railroads, and all other corporations where such conditions jeopardize the interests of the great body of our people was conceded. But now the Pujo committee work, after all the expense incident thereto has been paid, their time and talent given for our guide and benefit, is thrown into the wastebasket. We are now running up the white flag to the potent influence that surrounds these plunderers of public wealth. The Democrats who voted against this conference report in another body deserve our commendation; and I hope there will be Democratic votes enough to order this bill back to conference, so that we may have real trust legislation.

This bill, like most bills, contains some good features. If we could now insert the penalty provisions, I feel quite sure that we would receive almost a unanimous vote of the House, for I know that this body wants a real antitrust bill, and not an immunity bath for these invaders of the people's rights.

Monument on the Wyoming Battle Grounds in the State of Pennsylvania.

EXTENSION OF REMARKS

OF

HON. JOHN J. CASEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 9, 1914,

On the bill (H. R. 19115) to appropriate $50,000 to erect a suitable monument on the Wyoming battle grounds, on the Susquehanna River, in the State of Pennsylvania.

Mr. CASEY. Mr. Speaker, for years, quietly, though forcibly, the people of the historic and beautiful valley of Wyoming espoused a movement to have Congress erect a monument to commemorate the spot where the Wyoming massacre occurred.

It is true that a small one, erected by patriotic men and women, the majority of whom are descendants of these real heroes whose gallantry, bravery, and devotion to country remain unequaled in the annals of American history, marks the battle ground. It is true that the names of these brave men, who gave up their lives that their families might live, are regularly inscribed, not only on the stone tablet but in the heart of every patriotic man.

But I believe that it is time that the Federal Government should properly mark the battle ground so that generations which are to come after us will know that we lived in an appreciative age, accorded merit to those who deserved reward, and gave recognition to the men who did not falter, deviate, or postpone, but went out, knowing that the enemy outnumbered them almost five to one, and fought what they knew was sure to be a losing fight in order that their mothers, wives, and children might escape to the mountains and thus be free from perfidy of barbarous enemies.

THE AWFUL SLAUGHTER.

No one can read the story of that awful slaughter without shuddering with horror; no one can tell the story without desiring to bestow upon the brave troop every honor that can be bestowed, and surely it is not much, a memorial that is asked, similar to the ones that had been given to others, and surely Congress will not refuse such a request.

THE WYOMING VALLEY.

The Wyoming Valley has given much to the country, and it will give more. Never was there one moment's hesitation when duty called. And why should it be otherwise? Ever before the mind is the picture of that battle, which resulted in a massacre; ever before the mind is the patriotic impulses which inspired these heroic pioneers, who loved life—yes, but loved their country and families more. Before the mind is the picture of that little fort, where they retired, the mere few of the original 400, to learn if the women and children had escaped, and when informed that all were safe in the mountains they marched out and were again mowed down without quarter. They offered to surrender, asking only that the women and children be spared, if found, fearing possibly that some might yet be overtaken and captured. Their request temporarily was granted, but when they had capitulated the awful devastation continued.

Why should not the Wyoming Valley be a holy spot, for its soil ran red with patriotic blood of martyrs? Why should it not be essentially fitting to record that spot, hallowed with deeds of men and women, who bled and suffered aiding in example and sacrifice to make this the greatest Nation?

BEAUTIFUL WYOMING VALLEY.

It was in this valley that the Indians ran back and forth; it was in the surrounding mountains they danced and played. It was then a wilderness, a wild scene, beautiful here, picturesque there, adorned in its pristine garb; a fresh and fair gift from the Creator. Tribe after tribe came and were evidently inspired by the beauty all about, for they stayed and apparently were content. For did they not go to Philadelphia and tell the illustrious Penn, who was despairing of his grant, of the Skehan-to-na-na, signifying the great field or plain. He did not believe; and delegations from the Minquas, Gandastogues, Andastes, and the Susquehannocks confided the very same story.

This was in 1680, the year that Penn decided to sell Pennsylvania for £12,000. Luckily for him he could not at that moment obtain a purchaser. The story of the Indians impressed him, and with several of his followers he visited the Wyoming Valley, and never after that did anyone ever hear him talk of selling the vast estate deeded to him. It was related of him that he endeavored to establish peace among the Indians, declaring that such a valley was no place for warfare; that God gave it to them and the American people that was to follow them, to enjoy the peace and comfort of life in the beauty of the valley.

THE YANKEE INVASION.

While the followers of Penn were discussing the advisability of settling in that section others heard of its greatness, and the Susquehanna Co., comprised of residents of the unfertile counties of New London and Windham, Conn., was organized.

In the articles of incorporation this company stated that the purpose was to enlarge the English settlement in North America belonging to His Majesty the King of Great Britain, to spread christianity, and to promote the temporal interests of the incorporators by securing possession of a large track of land lying along the Susquehanna River at or near a place called "Chiwau-muck" (Wyoming), an island in the said river.

It was the belief of these men—and they retained the conviction for a generation—that this valley was a part of Connecticut. They arrived in 1762, were moderately welcomed by the Indians, erected huts, built forts, and tilled the soil. During the winter of that year they returned to their former homes, and during the early spring started with their families for the purpose of making their future homes on this chosen spot.

THE INDIAN WAR.

Less than a month after their arrival the war between the Indians and the whites started. They knew nothing of it. They had no means of communication with the outside world; they knew nothing of the hostile tribe of Delawares hovering along the borders of Pennsylvania, destroying life and property as they moved from place to place.

But they did know that the Indians had left the valley. The reason for their departure did not interest them. They were interested in development of the lands and looked forward to a period of prosperity and happiness.

The Indians were greviously hostile. They did not want the white man in that section of the country and, without the slight-

est warning, on October 15, 1763, this tribe swooped down on this unsuspecting band of pioneers, and women and children were killed, scalped, and otherwise mutilated.

The men were laboring in the fields at the time. The screams of the womenfolk were the first signs of a massacre. They had no weapons, but clubs; but with them they went to battle in defense of their homes.

The Indians, with their overwhelming numbers, soon overpowered them, and those that were able escaped—fled over the mountains to a place of safety. As they proceeded some of them turned back and stole a glance at the beautiful valley; the darkness of night had already fallen, and they beheld their homes in flames, and all about they could see the dancing red men celebrating their victory. Thus ended the first massacre of Wyoming.

THE PENN-YANKEE WAR.

It is not my intention, Mr. Speaker, to enumerate the other difficulties and hardships endured by these sturdy men; nor am I going to relate the incessant war between the "Penns," residents of Pennsylvania south of Wilkes-Barre, and the Yankees, so called because they hailed from Connecticut, except to say that for years there was a dispute between them as to whether the Wyoming Valley belonged to Connecticut or Pennsylvania. Both factions claimed title to it—the Yankees by right of purchase and precedent, the Penns by purchase and by grant. This great struggle for ownership was marked by many stirring battles, in which all the horrors of warfare were experienced. It involved the lives of hundreds, was the ruin of thousands, wore out an entire generation, and cost Pennsylvania many millions of dollars.

We know that our Pilgrim fathers were wronged; we know that they fought, bled, and suffered; we know that they led the way—the pioneers and invaders of a new and unknown country. We know that the obstacles they encountered were almost insurmountable. But their pluck, energy, and fidelity prevailed, because they saw, even in that period, a country such as this, big, strong, and great, with thousands of big, strong, and great men presiding over the destinies of a great nation, which is a haven to the poor, the downtrodden, and the persecuted. They realized that they were opening the gates of a land whose resources are unlimited. With these thoughts dominant, they worked on, sacrificing and suffering; but nowhere did our fathers suffer more than in the Wyoming Valley.

Harassed by the Indians, constantly troubled by the French, and sorely tried by their own internal troubles, nevertheless they persisted, hoping eventually that peace would prevail.

UNITED FOR INDEPENDENCE.

Notwithstanding the hatred that existed between the Penns and the Yankees, notwithstanding the land dispute was far from being settled when the Revolutionary War was declared, these sturdy sons united forces and went out and battled for independence. How well they fought history records.

After the war was over, after freedom had been attained, and all realizing that the first great step in the country's advancement had been taken, they returned home only to find, after a short month's sojourn, the same internal war confronting them. It might be said that they were unruly—yes; but they were honest.

While they fought among themselves little did they know that Sir Guy Carleton, the Governor of Canada and commander in chief of His Majesty's forces, was conspiring against them. If they had known that he enlisted the aid of Sayenqueraghts, a leading and noted chief, with 1,000 of his warriors, to accompany the English expedition, they would have been prepared to battle with the invaders, but they did not know.

The arrival of the English and the Indians came as a complete surprise. Still they gathered all of the available men and boys together, armed them the best they could, sent the women and children into the mountains, and went forth to battle. This was on June 30, 1778. It was an unequal struggle; but history records that not a single man hesitated, not one of the heroic band faltered, notwithstanding the fact that each and every one of them realized that an awful death awaited them.

THE WYOMING MASSACRE.

It was a battle—yes—for the perpetuation of our country; it was a battle—yes—for the sacredness of the home. It was a battle in which men gave up their lives in order that their women and children might live—yes—live among their own kind and not die the unwilling slaves of unscrupulous savages. They won the battle that day, even if nearly all felt the sting of the poisoned bullet or the sharp edge of the tomahawk, because those whom they battled for were safe—far in the mountains, beyond the reach of the perfidious and treacherous enemy. When assured of this the survivors repaired to the little fort, then known as Fort Wyoming, and it was decided to surrender, and under the terms of capitulation it was agreed that only the various garrisons and forts would be destroyed. The invaders promised that nothing else would be exacted. Hardly had they handed over their guns when the Indians swept through their depleted ranks, scalping those that they could reach, and very few were able to escape. Nevertheless the desires of these invaders were not satisfied. They went from town to town, village to village, ruthlessly plundering personal belongings, destroying the crops; and when night came, in order to celebrate their victory, they set fire to every house and laid the place in ruins.

PROSTRATED AND DEPOPULATED.

Some days afterwards a few of the survivors returned and found Wyoming Valley prostrated, desolate, and depopulated. What must have been their thoughts, God alone knows. The story of the massacre was told to Washington. He sent a part of his army there; drove out the English and the Indians with them.

The presence of several companies of the Continental Army gave security to the settlers. Others came from Connecticut, and some from southern Pennsylvania, and soon the valley took on a lease of life. But other bands of Indians came, raided the farms, taking cattle and crops, and escaped before punishment could be inflicted.

During this period one of the most dramatic incidents, tragic in its consequences, occurrred. Frances Slocum, 5 years of age, was found by a band of Indians playing in the fields in front of her home. Her parents were working some distance away. She was taken into captivity and was not found again until she was 64 years of age. She had married Miami, an Indian chief, and had two married daughters.

THE HISTORIC WYOMING VALLEY.

Thus it will be readily observed that Wyoming Valley, the heart of the anthracite region, besides being noted for its historic importance, is a place for song and story; famed for its beauty and picturesqueness, its wealth, and the prosperity of its people—people who realize and people who appreciate the valiant acts and heroic deeds of their forefathers; people who believe that the acts of pioneers, be they Penns or Yankees, should be properly commemorated; people who believe that the time is opportune to recognize the worth of the men who overcame every obstacle and made the discovery of anthracite coal possible; people who love their city, their valley, and their country; and people who are asking you, my fellow Congressmen, to place the wreath of Federal recognition upon the brows of these departed heroes, who endured every hardship, made every sacrifice, yes, gave up their lives so that we who are following them should profit by their example; gave up their lives so that we might enjoy the beauty and wealth of that valley. Surely such a request can not be denied.

Philippine Legislation.

EXTENSION OF REMARKS
OF
HON. PATRICK H. KELLEY,
OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 9, 1914.

Mr. KELLEY of Michigan. Mr. Speaker, this bill clearly illustrates the sobering influence of responsibility. It illustrates again that it is one thing to proclaim and an entirely different matter to do the thing proclaimed. For 14 years the Democratic Party has insisted on immediate Philippine independence. In party platform and from the stump you on that side of the aisle have insisted that we should get out of the Philippines. For 14 years you have declared that our policy in the Philippines does violence to both the Declaration of Independence and the Federal Constitution.

Now for the first time since we acquired the Philippine Islands your party is in control of the lawmaking branches of the Government. Now for the first time since we went into the Philippines you are in position to give them immediate independence. You now have the power to call home our soldiers, our civil officials, our doctors, and our teachers. You now have full power to do all those things which you have declared should have been done as far back as 14 years ago.

Now that you have the power, surely there will be no halting in the matter of Philippine independence. Surely you must have been sincere in your oft-repeated assertion that the Phil-

ippine people are fully able to take care of themselves and that immediate independence should be granted. Unless you are convinced that you have been mistaken, and are ready to admit your mistake, surely you will not defer the matter of Philippine independence until you are again out of power. Permit me to remind you in this connection that the fortunes of politics are uncertain and that you may not long continue in control of all the branches of the Government necessary for the enactment of legislation. If a thing should be done, and you have the power to do it, why put it off? Why leave for the future an action which you have insisted should have been taken 14 years ago?

It is said that this bill now under consideration has been reported to the House as a fulfillment of your party promises relative to the independence of the Philippine Islands. Does this bill grant Philippine independence? Oh, no; it simply declares in the preamble that the United States has always intended that the Philippines should ultimately be given their independence. Does this bill fix the time when independence is to be granted? Oh, no; it is a promissory note without any date of maturity. What has become of the Jones bill, which fixed the time of independence for 1913? What has become of the Jones bill of a later draft, fixing the time of independence for 1920? In this bill you have abandoned all idea of immediate independence or independence at a fixed date, and have simply provided for a little larger participation by the people in their local affairs. By this bill you are merely continuing the policy pursued by the United States from the beginning. You have evidently decided that the Philippine people should be continued longer on trial. You have evidently decided that it will be wiser to see how they handle increased power and responsibility before granting them independence. Although you have repeatedly declared that they have been ready for independence for 14 years, this bill continues them indefinitely as wards of this Government. This bill, in fact, amounts to a complete indorsement of the existing policy in the Philippines. I congratulate you upon the wisdom you have shown in this respect, but in view of your changed attitude I would suggest that the title of this bill should read, "A bill making an apology to the Republican Party for 14 years of Democratic criticism of the policy pursued by the United States in the Philippine Islands."

But while this bill does nothing in the way of granting independence, yet when taken in connection with the oft-repeated declarations of the party in power it has in it possibilities of great mischief and misunderstanding. While Congress makes no declaration in this bill as to when independence shall be granted the people of the Philippine Islands will naturally interpret it in the light of former pledges of the party in power and insist that it is a promise of independence at an early date. The Resident Commissioner evidently holds this view as to the meaning of the bill. When he goes back to the Philippine Islands he will in all probability tell the people that early independence has been promised by this bill. And if independence is not speedily forthcoming, and it will not be, I fear that there may grow up in the minds of the Philippine people a feeling of suspicion and distrust of the good faith of the United States.

The Philippine people may very naturally be suspicious anyhow of the disinterested intentions of an alien Government. It could hardly be expected that they would be otherwise when it is remembered that their Spanish masters governed them with an iron hand for more than three centuries and that their whole history up to the time of the American occupation was a history of promises made only to be broken and of reforms granted in the letter only to be denied in the spirit. It is hardly to be expected that 14 years of altruism on the part of the United States could wipe out a suspicion which is the outgrowth of 300 years of Spanish oppression.

By all means let us deal frankly with the Filipino people. Let us make our declarations so clear that no misunderstanding may grow out of them in the future. Let us make no promises, even by implication, which we do not intend to keep within the time naturally expected by the people to whom the promise is made. When we make a declaration, it should be made without mental reservation. A promise of independence to the Filipino people which we will not be able to keep to the present generation, if made at all, should be made in such a way as will not raise an expectation in them which we do not fully and unreservedly share. We have had one serious rebellion in the Philippines growing out of an alleged promise of the United States to grant independence. This experience should make us careful about not being misunderstood in the future. For this reason I have offered an amendment to the preamble of this bill, making it clear that nothing therein contained, even by implication, shall be interpreted as a promise as to the time when independence is to be granted. If this amendment is adopted, the Filipino people can never charge us with bad faith and point to this bill as a promise of independence at an early date.

If this bill is passed as it stands, in view of former declarations of the party in power, it should be accompanied by legislation looking toward immediate independence or independence at a fixed date. Such legislation, in my judgment, would not pass this House, or if it passed here would not pass the Senate. And if by any chance it passed both branches of Congress, in all probability it would be vetoed by the President. I say this because, as I understand the situation, it was the influence of the President that brought about this marked change in the attitude of the Democratic Party toward Filipino independence. The adoption of my amendment will make our intentions perfectly clear and may prevent serious misunderstanding in the future.

I desire now to say a few words relative to the future relation of the United States to the Philippines whether independence be granted or not. This debate, I think, has disclosed the fact that the attitude of many people toward the Philippine Islands is largely determined by a desire to get rid of them, and thus end all responsibility in connection with them. It has been repeatedly urged here that our responsibilities in the Philippines Islands is largely determined by a desire to get rid of them, and thus end all responsibility in connection with them. It has been repeatedly urged here that our responsibilities in the Philippines are too burdensome, and that, come what may, we should speedily withdraw. Those who hold this view favor Philippine independence, because it offers a method of escape, as they think, from further responsibility. For myself, I do not see how Philippine independence could possibly end our responsibility. On the contrary, I can readily see how it might largely increase our burdens there. Fourteen years ago we started out to make the Philippine Islands a self-sustaining and self-governing community. Our moral responsibilities will not terminate until this object is fully realized. If we decide that this can best be done by giving them independence, we assume the burden of making such an experiment a success. The American people will never accept a failure of self-government in the Philippines. Philippine independence, if given, must be made to succeed. The American people will never consent to an abandonment of the Philippine Islands to either conquest or revolution. These islands would be a rich prize for some ambitious nation greedy for more land. Philippine independence would obviously not lessen our responsibilities, because if we raise the flag of a new republic over the Philippine Archipelago the American people could never permit any other nation to haul down the flag that we put up.

Further, I am not one of those who believe that it is a good thing for any nation to run away from responsibility. If a nation is called upon to enter a difficult situation, it should not retire until its work has been accomplished. The fact that the benefits that are to follow will inure largely to others is no reason why we should scuttle and run away. I am not one of those who believe that we have no obligations to perform in the community of nations, or that we have done our whole duty when we have applied ourselves to the solution of our own problems. In the development of national character, as in individual character, altruistic purposes are needed. Selfishness is so preponderant in human nature that there is but slight danger of indulging in an excess of altruism. It is a good thing for a nation to be engaged in some great purpose where the benefits flow largely to others. Just as every person in a community should contribute something toward the well-being of that community, so every nation should contribute something toward the welfare of the human race.

We, of all people, should be willing to do our share in all great world work having for its purpose the betterment of mankind. Blessed as no other people in all the tide of time, we can well afford to be generous in our contributions to the happiness, the health, and the liberty of our fellow men the world over. Every nation should contribute that with which it has been most richly endowed. Some will contribute art and literature. Some will contribute science. Some will contribute religious philosophy. Some will contribute industrial and social order.

What contribution is America particularly fitted to make to the civilization of the world? I am persuaded that it is the destiny of this mighty Republic to bear to the people throughout the world the evangel of civil and religious liberty as we have developed it here through the instrumentality of republican institutions. To promote the cause of popular government in the world is, in my judgment, the special mission of the

American people. In this connection a great opportunity awaits us in the Orient. The Orient is the darkest corner of the earth. Human life is less sacred there and human liberty is less secure there than elsewhere in the world. If we can make republican institutions in the Philippines mean what they mean here, if we can put into the hearts of the yellow and brown races in the Philippines our conception of human rights, we will have lighted the torch of liberty for hundreds of millions of people in the Orient who are now groping in the dark. It is an opportunity to serve mankind that seldom falls to the lot of any people. Is American character going to measure up to its opportunities to contribute something worth while to the cause of human liberty, or shall we miserably fail through our desire to avoid responsibility? I do not believe that the American people will turn their backs upon this great humanitarian project upon which we have entered in the Philippines, whether independence be granted or not, until we have established popular government as an example and an inspiration to all the Orient on a stable and enduring foundation.

Our success thus far is of such a character as to give us high hope for the future. Under our direction the Filipino people have shown a capacity for improvement unparalleled in our day. Free from the ravages of cholera, free from bubonic plague, free from smallpox and malaria, free from Spanish oppression, the people of these islands are rapidly finding themselves. They are beginning to understand their vast resources of agriculture, of forest, and of mine. They are beginning to catch a glimpse of their possibilities for the future and look forward to the day when these beautiful islands will support a population of 50,000,000 happy and prosperous people. In view of the progress they have made during the last 14 years, it is no wonder to me that they are beginning to dream of the time when there may be a Philippine nation, with her people animated by common hopes, common purposes, common notions of civilization, common ideals of popular rights, common views as to the meaning of liberty, with a common religion, and all bound together by the ties of a common language.

Such an outcome would indeed be a glorious consummation of all that the American people have done, and will yet do, for the Filipino people since the entrance of Dewey into Manila Bay. When order is fully established, when personal rights and property rights are understood and secure, when the power of the ballot is understood, when education is universal, when property holdings become substantial and general, when a larger percentage of the adult population has advanced to a point where it can safely be permitted to participate in the government, when a score of independent tribal groups have been molded into one homogeneous citizenship, capable, hopeful, confident, and self-sustaining, then, indeed, if independence is desired, I can conceive of no more glorious culmination of our work than to raise over the Philippine Archipelago the flag of a new republic, a republic in fact as well as in name, and destined throughout the centuries to come to hold aloft the light of liberty to the brown and yellow races of the earth.

Article by James Gray, of the Minneapolis Journal, reviewing the Democratic Textbook.

EXTENSION OF REMARKS
OF
HON. HALVOR STEENERSON,
OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, October 10, 1914.

Mr. STEENERSON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article by the correspondent, James Gray, of the Minneapolis Journal, reviewing the Democratic campaign textbook.

The article is as follows:

WOODROW WILSON 98 PER CENT HERO IN BOOK OF THRILLS—CONGRESSIONAL TEXTBOOK DEALS IN MIRACLES OF RESCUES OF MISS F. GOVERNMENT—LITTLE HEROINE HAS A BAD HABIT OF NOT STAYING SAVED AND KEEPS HERO ON JUMP.

[By James Gray.]

WASHINGTON, *September 26.*

The most popular book of the year? What is it?

It differs in different parts of the country, but undoubtedly in Washington it is the Democratic campaign textbook recently issued by the Democratic congressional committee and the Democratic national committee, price 25 cents. The hero of this book is one Woodrow Wilson, who fills 98 per cent of the pages. Two subheroes, Champ Clark and Thomas Riley Marshall, get a page apiece.

BOOK FULL OF THRILLS.

The plot is the rescue of the Government. It is rescued in every chapter and every time by Woodrow Wilson, who appears on the scene in nick of time. The fair young heroine, Federal Government, is often in a bad way. Her hairbreadth escapes remind one of the adventures of Pauline, queen of the movies.

Boom, bang, biff,
They throw her off the cliff;
Now she's floating out to sea;
Now they tie her to a tree—
We wonder what the end will be.

HERO BUSY AS RESCUER.

Woodrow Wilson had no sooner been appointed hero of the piece than he began his rescue work. First, he snatched the heroine from the clutches of the Payne-Aldrich tariff.

He set her free, but she would not stay free.

SAVED BY RESERVE BANK DOPE.

Within a week he discovered that she had fallen into the tentacles of the Money Trust, and had to rescue her with the Federal reserve dope, which he threw full in the face of Relentless Rudolph.

The business trusts got her next, and Woodrow had one awful time untying the thousand knots that bound her to do the will of barons of big business.

KIDNAPPING IS THWARTED.

Besides these major rescues happy escapes from a plot to kidnap the heroine and take her to Mexico are recorded. Then the European war bobbed up, and wise Woodrow had all he could do to keep the girl from taking sides in this affair. He had at last to bribe her with a promise of $100,000,000 more pocket money if she would be neutral and go about her fall shopping as if nothing had happened.

FULL OF "NEW" EPIGRAMS.

The book fairly bristles with epigrams such as have never been seen in a handbook before, such as "party perfidy," "Schdeule K," "record of achievement," "crisp truths culled from speeches," "death knell of Money Trust," "helping hand to the farmer," "recognition of labor," "remedial legislation," "downward revision," "to the end that——."

The volume is not what one would call profusely illustrated.

NOT A PICTURE OF HEROINE.

There is one picture of the hero and one of each of the subheroes, not one of the heroine.

The book is not handsomely bound, nor is it a model of the printers' art. Jeffersonian simplicity has been sought in the mechanical aspect. It luxuriates only in language. It is idolatrous only in praise. It is extravagant only in claims. It is a book of broad purpose, ignoring inconsistencies, which Gladstone happily said were the bugbear of the small minds.

ASSUMES TARIFF LAW SUCCESS.

The volume, judged by this standard, is the product of very great intellect.

It assumes the entire success of the Underwood tariff and ignores the complaint of SERENO E. PAYNE that it is an economic failure, whose lapses from sound maxims have caused it to be supplemented by a $100,000,000 fine on the American people. Nor does it reply in any way to the objection to Underwood law that it gave more imports and less revenue than any predecessor and supports more foreign workers than it does American.

CALLS ITSELF GENIUS.

The Federal reserve act is cackled over as though it was a discovery of Democratic genius. Indeed, it is described in terms as a "miracle of legislation." The Republicans who since 1912 have ceased to believe in miracles reply that before this miraculous legislation was old enough to see the Democrats had revived an old piece of Republican legislation, the Aldrich-Vreeland Act, which they had formerly denounced bitterly.

IGNORES TRUST LAW WEAKNESS.

The trust acts which have been passed—the Clayton and trades commission bills—are believed by many to be mutually destructive, inasmuch as the first gives the commission power to smell out unfair practices and the second declares that it shall not smell in certain directions.

The textbook ignores this fact and also the fact that neither bill has yet shown its usefulness and asserts that the trust question is settled and the business of the country "set free."

KINK IN WATCHFUL WAITING.

The watchful-waiting policy in Mexico, which has had many ups and downs, had assumed such a shape that when the textbook went to press it was deemed safe to assume its entire success. But the assumption once more enforced the wisdom of the adage "Never phophesy unless you know," for the ink was hardly dry on the prophecy before Villa declared war on Carranza. The watchful-waiting policy, however, is so elastic that it can be applied to the new situation as easily as to the old. The administration will stand by the textbook "Watchful Waiting Wins," whether Carranza or Villa comes out on top.

VILLA "LOOKS GOOD" NOW.

Indeed, it is all but openly admitted at the White House that we are sick and tired of Carranza and have hopes that Villa will eliminate him.

The textbook is, however, sound on this proposition that the administration policy has kept us out of war with Mexico and stands a good chance to keep us out. Carranza and Villa, after a few fitful flashes of hostilities, may compose their differences and all yet go well.

REPUBLICANS GLOAT OVER IT.

A curious thing about this textbook is that while it is popular with Democratic Congressmen, Republican Congressmen fairly gloat over it. They have not money to issue a book of their own, but they say they are so well satisfied with the Democratic book that they are going to borrow copies and send them to their constituents. This confidence in the book is based on the fact that one chapter is dedicated to the honor of the Republican Congressmen who voted for Democratic bills. They are so numerous as to create the impression that they were not partisan bills after all, and that neither party has a monopoly of their merits.

TRUE OF MANY ACTS.

This is true of the trust bills, the Trade Commission bill, the seamen's bill, agricultural extension act, the industrial employees' arbitration act, the revived Aldrich-Vreeland Act, conservation of water-powers bill, the Mexican war resolution, and the ship-registry bill.

The record of the Northwest Congressmen on these measures is almost nonpartisan. From the States of Minnesota, North and South Dakota, with 16 House Members, the following number of Republicans voting for Democratic measures is impressive:

For the Federal reserve act: Nine in the House.
For the Rayburn bill: Four in the Senate, nine in the House.
For the Clayton bill: Five in the House.
For tolls-exemption repeal: Three in the Senate, seven in the House.
Trade Commission bill: Passed unanimously in the House and few votes cast against it in the Senate.

ABANDONED BY ADMINISTRATION.

Out of this mass of legislation claimed to have been achieved in the textbook, it is significant that the Rayburn railroad-securities bill was abandoned by the administration after it had passed the House by a huge vote. The Clayton bill still hangs fire in conference.

The ship-purchase bill can not muster enough Democratic friends to get a rule for its consideration, though the President insists it is still on the program of legislation.

The net situation, from a study of these claims and counterclaims, is that the administration has strengthened its position by always keeping something going. The people like to see things done, and the President is with the people in this respect.

There never was a man in the White House who could keep so many strings of legislation in his hands as Woodrow Wilson, nor a man who could keep one-half of the details of bills in his head that he can.

In his semiweekly talks with the press correspondents, he is always keenly questioned about every measure of any importance, and he never is caught napping.

KNOWS HISTORY OF ALL BILLS.

He knows the history of each measure, the changes that have been made in it, the purported effect of amendments, and the desirability of the bill itself. How he does it nobody knows, but the fact that he can do it gives him an obvious advantage in legislation. He knows every piece on the board, its value, and can figure all around Congressmen who know merely a part.

Congressmen always come away from the White House convinced that the President must be something superhuman and that it will be well not to cross him. This impression is created not by a tryannical domination but by a superior analysis of the Congressmen's own pet ideas. They give way to him because they are intellectually overridden. This is why the President manages to have so many bills going all the time and gets so many of them through. The merits of the bills are rather subsidiary.

USES MILITARY TACTICS.

The most peaceable person in the world; he uses military tactics in legislation. His method is to attack, seize new positions, and intrench. He has been marvelously successful in it when you consider that his army of legislators is composed of the disaffected, the unbelieving, and the lazy, as well as the loyal, the zealous, and the brave.

There is no reason why the Democratic textbook should not be 98 per cent Woodrow Wilson. He is 98 per cent of the present moral and intellectual force in the Federal establishment.

Resolutions Adopted at Gettysburg by an Organization of Union and Confederate Veterans, and Remarks Thereon.

EXTENSION OF REMARKS

OF

HON. CHARLES F. BOOHER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 9, 1914.

Mr. BOOHER. Mr. Speaker, under leave to extend my remarks in the RECORD I avail myself of the opportunity to insert in the RECORD the speech of Col. Thomas S. Hopkins, president of the board of management of the Soldiers' and Sailors' Temporary Home, at the annual inspection of the home by the commander of the Department of the Potomac, Grand Army of the Republic, December 13, 1913; also remarks of Hon. H. ROBERT FOWLER and resolutions adopted on the battle field of Gettysburg July 3, 1913, by the Union and Confederate veterans of the Civil War residing in the District of Columbia.

The matter referred to is as follows:

Remarks of Col. Thomas S. Hopkins, president of the board of management of the Soldiers' and Sailors' Temporary Home, at the dinner following the annual inspection of the home by the commander of the Department of the Potomac, Grand Army of the Republic, on December 13, 1913. Mr. Hopkins was presiding, and among the distinguished guests was the Hon. H. ROBERT FOWLER, Member of Congress from the twenty-fourth district of Illinois.

Among the many duties which devolve upon us in life there are always some that are pleasant and sometimes those that are unpleasant. Occasionally one is permitted to discharge a duty which gives him infinite pleasure, and he glories in the opportunity. Such an opportunity presents itself to me here to-night, and my heart is very glad that this duty has been imposed upon me.

You know, my friends and comrades, of that wonderful gathering that took place upon the battle field of Gettysburg during the first week in July, where men 50 years before had sought to grip each other by the throat, to wound and to kill; where the fierce passions of the human heart, born of relentless war, were given their full play. And how 50 years afterwards on that same battle field there came together more than 50,000 of the men who had worn the blue and the men who had worn the gray, and a reconciliation took place the like of which, I verily believe, the world has never seen. All bitterness, all hatred, all unkindness seemed to have been dismissed from the hearts of those who gathered there, and if ever the Divine Presence hovered over a great assembly it was at Gettysburg. [Applause.]

I had the honor to be the personal representative of the Commissioners of the District of Columbia at the meetings held by the Pennsylvania commission, and I know how earnestly that commission labored with the legislatures of the several States to induce them to provide for the transportation of the soldiers from each State to and from the battle field. Nearly all the Northern and Western States did so. The financial condition of many of the Southern States was such that they could not lend this helping hand, but they did the best they could.

Congress seemed to have no idea of providing transportation for the veterans of the blue and gray residing in the District of Columbia, and no man in Congress seemed to be specially interested in the subject.

An abortive attempt was made by one Member, but there were good and sufficient reasons why his action was ignored by Congress. Only a few days before the 1st of July Representative H. ROBERT FOWLER, of Illinois, introduced a joint resolution providing that all veterans of the Union and Confederate Armies then residing in the District of Columbia should be reimbursed by the Government for any moneys paid out by them for transportation to and from the reunion at Gettysburg. It required unanimous consent. A Member of the House from Texas arose in his seat and persistently objected to the consideration of the resolution of Representative FOWLER. Under the rules of the House that made it absolutely impossible for the resolution to be put upon its passage. Promptly the next morning, when the Speaker's gavel fell and the House was called to order, Representative FOWLER was in his seat, one eye on the Speaker and one on the entrance to the Chamber. The moment the Speaker declared the House in session Mr. FOWLER rose and asked unanimous consent for the passage of his resolution. There was no objection, and in the twinkling of an eye it was passed. Just as its passage had been declared by the Speaker the Representative from Texas came hurrying into the House and down the aisle with his watch in hand. He had failed, and Representative FOWLER had won. [Prolonged applause.]

I was named as one of the three commissioners to reimburse the veterans, and every single one of them received the amount which he had paid out on his Gettysburg trip. I never saw men more grateful, because many of them were of humble means and could not possibly have attended if they had had to pay their own way. [Applause.]

At the reunion Mr. FOWLER's name was on the lip of every veteran from this District, and on the evening of the 3d of July, the anniversary of that great charge of Pickett and its repulse by the Union lines, the veterans from this District held a meeting in the midst of their camp and after many delightful words of commendation of his patriotic course resolutions expressing their feeling on the subject were unanimously adopted and ordered to be engrossed in the most beautiful manner and presented to Mr. FOWLER.

[Turning to Mr. FOWLER:]

I wish, Mr. FOWLER, that you could have been present that evening and witnessed the scene when these resolutions were adopted. It was on the very spot over which Pickett's troops charged across that storm-swept field. Gathered there were these aged veterans, participants in that mighty struggle. Their faces were full of pleasure and beaming with happiness, and when the resolutions had been read and adopted they gave such a cheer as might have been heard on that same spot 50 years ago.

Mr. FOWLER, in presenting these engrossed resolutions, I want to say that they are the genuine expression of the men who adopted them, and that they carry with them the love and affection and the best wishes of all the veterans from this District.

And, if you will permit me, I will express for myself my deep appreciation of that masterly movement, so unexpected by the gentleman from Texas, which resulted in the passage of your resolution. May God bless and keep you; may your ambitions be gratified, and may you long serve your country in the Halls of Congress.

And now I beg of you, my comrades, to rise and join with me in a toast to the prosperity of our good friend and confusion to his enemies. [Prolonged applause.]

RESPONSE BY MR. FOWLER.

Mr. Chairman, Col. Hopkins, and the honored soldiers of the Civil War residing in the District of Columbia, the expression of your feelings toward me, as expressed in these resolutions, fills my heart so full that I scarcely know how to express my deep gratitude to you. Fifty years ago you left your firesides of love and plenty and separated yourselves from your wives and children, fathers and mothers, brothers and sisters, and offered your lives as a sacrifice in the defense of the honor of this Republic. The Nation owes to you a debt it can never pay in dollars and cents. Your bravery, your courage, your patriotism gave to the Union Army a triumphant victory, which resulted in a reunited country, prosperous and great, over which the Stars and Stripes float to gladden the heart of every American freeman. [Applause.]

On the 3d day of July last I had the pleasure of visiting the reunion of the blue and the gray on the battle field of Gettysburg. A more magnificent gathering I have never witnessed. The blue and the gray slept in the same tent, ate at the same table, and walked arm in arm about the historic field discussing what took place there 50 years ago. When I observed this manifestation of brotherhood it seemed to me to be impossible that such men should have engaged in that mighty struggle of blood and death which makes Gettysburg one of the most historic places in the world. Whatever bitterness may have existed during the war certainly has been forgotten now, and to-day the men of the North and the men of the South vie with each other in love and patriotism for the welfare of America. During the Spanish-American War they stood shoulder to shoulder in the cause of liberty and rejoiced together at the birth of a new Republic. [Applause.]

The Battle of Gettysburg was the turning point of the Civil War, but your victory there cost the lives of many brave soldiers. I stood on Seminary Ridge in company with two gentlemen who took part in the memorable conflict. One wore the blue and the other the gray. Both pointed out the various movements of the Union and Confederate forces, describing in detail the maneuvers of the armies under Gen. Lee and Gen. Meade for advantages, one of the most important of which was Gen. Pickett's historic charge across the open field against the breastworks of the Union soldiers; and I wondered how it was possible that men, knowing in advance that death would be certain, could be induced to march voluntarily into the jaws of death, and I asked my companion in gray for an explanation. His reply was that the Confederates hoped such an unprecedented display of their ability to win and their courage to meet death in the open would strike consternation to the ranks of the Union Army. Ordinarily such deeds of heroism might have prevailed, but on this occasion it was a clash of steel with steel, bravery with bravery, Caucasian with Caucasian, and Pickett's charge will go down in history as an exhibition of one of the most daring deeds of warfare, a failure because the generalship and coolness of the Union forces defied defeat at the hands of mortal men.

My comrades, I assure you that my efforts in Congress to provide traveling expenses for you to that wonderful gathering of brave men was one of the greatest pleasures of my life. I saw States making appropriations for the expenses of their soldiers, and I was inspired with the thought that the soldiers of the District of Columbia ought to have a like consideration given them. I did meet with opposition to my resolution, and at times it looked like I should be unsuccessful because of the opposition of the gentleman from Texas, but my determination was only increased with each turning point in the game, and when I caught him away, then I sought the Speaker's eye, which I promptly caught. His kindly face was radiant with the glow of approval, and in his big-hearted, fatherly way he soon announced, "The ayes have it," and my heart was filled with joy. But once since has it been filled to such overflowing, and that is on this occasion.

[Turning to Col. Hopkins.]

Col. Hopkins, permit me to assure you, for yourself and the soldiers of the District of Columbia, that this token of your friendship and approval of my public services will strengthen me in the future to do even more for the soldiers than I have done heretofore. It has always been my greatest pleasure to give my services, voluntarily and without hope of reward, to assist in every way possible in bringing about their comfort and happiness. I have always stood for liberal pensions and verily believe that this country can do itself no greater honor than to provide liberally for the support of the men whose patriotic services have made this country truly great.

My dear Colonel, I beg of you to accept my deep gratitude for these resolutions and for the kind expressions of approval of my efforts in behalf of the soldiers. I assure you that I shall never betray the confidence or trust which is reposed in me as a public servant, and my duty to the soldiers shall always be uppermost in my mind. I also beg of you that you convey to those soldiers who are not present my high appreciation of this mark of their confidence.

I shall preserve these beautiful resolutions and hand them down to my posterity as an heirloom, and explain to them the circumstances under which they were drawn.

Col. Hopkins, your valuable services in handling and disbursing the funds for the benefit of your comrades is in keeping with your distinguished services in the Civil War. I had the honor of selecting the commissioners for the disbursement of the fund, and I urged you, over your protest, to accept the place because of my confidence in your ability to give all of the old soldiers an opportunity to share in its benefits, and to give prompt notice to all of them, so that they might have an opportunity to go to Gettysburg. You have done your duty well, and I congratulate you in securing the attendance of such a large number, and I also congratulate you on the fact that so few were overcome by heat. It looks as though the blessings of Heaven hovered over this reunion of peace and brotherhood as they did 50 years ago over the destinies of the Union Army.

Again let me thank you from the depths of my heart for this mark of kindness, and I assure you that I shall long remember this occasion and the dear friends who surround this festal board. And in parting I desire to wish you many years of peacefulness and happiness, and to express the hope that never again shall the dark shadow of war bring sorrow and desolation to this now glorious Union of States. [Applause.]

RESOLUTION.

At a meeting held on the battle field of Gettysburg, on the evening of July 3, 1913, by the Union and Confederate veterans of the Civil War residing in the District of Columbia, Thomas S. Hopkins presiding, the following resolution was unanimously and enthusiastically adopted:

"Resolved by the veterans of the blue and the gray, assembled for the purpose of commemorating the fiftieth anniversary of the Battle of Gettysburg, That our earnest and hearty thanks are due, and are hereby tendered, to the Hon. H. ROBERT FOWLER, Representative in Congress from Illinois, for his splendid and successful efforts in securing in the face of great difficulties the passage of a joint resolution providing for transportation of all Union and Confederate veterans residing in the District of Columbia to and from Gettysburg during the celebration of the fiftieth anniversary of the battle.

"*Committee.*"

Opinion of Daniel Davenport Relative to the Labor Union, Injunction, and Contempt Sections of the Clayton Antitrust Bill.

EXTENSION OF REMARKS
OF
HON. ANDREW J. VOLSTEAD,
OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, October 10, 1914.

Mr. VOLSTEAD. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the opinion of Daniel Davenport relative to the labor union, injunction, and contempt sections of the Clayton antitrust bill.

The opinion is as follows:

"To the Members of the American Anti-Boycott Association:

"Congress has passed the Clayton antitrust bill, so called, the President will sign it, and it will become a law. In the shape in which it finally passed it makes few changes in existing laws relating to labor unions, injunctions, and contempts of court, and those are of slight practical importance.

"First, it does not change in any respect the Sherman Antitrust Act as it has been construed by the Supreme Court relative to those matters. Both the Senate and House Judiciary Committees, which reported the bill, so stated, and its provisions bear them out. The Senate committee in its report said:

"It is well, at the outset, to state the theory of the bill, both as it passed the House of Representatives and as it is proposed to be amended, for the general scope of the House measure is unchanged. It is not proposed by the bill or amendments to alter, amend, or change in any

respect the original Sherman Antitrust Act of July 2, 1890. The purpose is only to supplement that act and the other antitrust acts referred to in section 1 of the bill.

"The Senate committee also quoted from the report of the House committee to the same effect, as follows:

"The bill does not interfere with the Sherman Antitrust Act at all; it leaves the law of conspiracy untouched, and it is not open to effective criticism on any constitutional ground.

"Moreover, the bill in section 4 reenacts, word for word, section 7 of the Sherman Antitrust Act, under which the Loewe case was brought to and decided by the Supreme Court, without excepting that or any other case from its provisions, which action, upon established principles of construction, is an adoption by Congress of the doctrines of that case. In addition section 16 gives every person, without exception, the right to injunctive relief against threatened loss from conduct of anyone in violation of that act, without excepting any case whatever. Read in the light of the foregoing, section 6 of the bill is nothing more than a legislative declaration of the law as it had been laid down by the Supreme Court in the case of Adair *v.* United States (208 U. S., 178), which was under consideration by the court along with the Loewe case and was decided just one week before it, to the effect that Congress under its power to regulate commerce had not prohibited and could not prohibit the existence of labor organizations as such. The court there said:

"Manifestly any rule prescribed for the conduct of interstate commerce, in order to be within the competency of Congress under its power to regulate commerce among the States, must have some real or substantial relation to or connection with the commerce regulated. But what possible legal or logical connection is there between an employee's membership in a labor organization and the carrying on of interstate commerce? Such relation to a labor organization can not have, in itself and in the eye of the law, any bearing upon the commerce with which the employee is connected by his labor and services. Labor associations, we assume, are organized for the general purpose of improving or bettering the conditions and conserving the interests of their members as wage earners—an object entirely legitimate and to be commended rather than condemned. But surely those associations as labor organizations have nothing to do with interstate commerce as such. One who engages in the services of an interstate carrier will, it must be assumed, faithfully perform his duty, whether he be a member or not a member of a labor organization. His fitness for the position in which he labors and his diligence in the discharge of his duties can not in law or sound reason depend in any degree upon his being or not being a member of a labor organization. It can not be assumed that his fitness is assured or his diligence increased by such membership or that he is less fit or less diligent because of his not being a member of such an organization. It is the employee as a man and not as a member of a labor organization who labors in the service of an interstate carrier.

"The right of labor unions as such to exist, and the limitations on their lawful activities, are well defined in the case of Gompers *v.* Bucks Stove & Range Co. (221 U. S., 439), and section 6 of the Clayton bill is but a declaration by Congress to the same effect and is almost a paraphrase of it. The court in that case said:

"Society itself is an organization and does not object to organizations for social, religious, business, and all legal purposes. The law therefore recognizes the right of workingmen to unite and to invite others to join their ranks, thereby making available the strength, influence, and power that comes from such association. By virtue of this right powerful labor unions have been organized. But the very fact that it is lawful to form these bodies with multitudes of members means that they have thereby acquired a vast power in the presence of which the individual may be helpless. This power when unlawfully used against one can not be met except by his purchasing peace at the cost of submitting to terms which involve the sacrifice of rights protected by the Constitution or by standing on such rights and appealing to the preventive powers of a court of equity. When such appeal is made it is the duty of government to protect the one against the many as well as the many against the one.

"In the case of an unlawful conspiracy the agreement to act in concert when the signal is published gives the words 'unfair,' 'we don't patronize,' or similar expressions a force not inhering in themselves, and therefore exceeding any possible right of speech which a single individual might have. Under such circumstances they become what have been called 'verbal acts' and as much subject to injunction as the use of any other force whereby property is unlawfully damaged. When the facts in such a case warrant it, a court having jurisdiction of the parties and subject matter has power to grant an injunction.

"I insert here for comparison with the foregoing declarations of the law by the Supreme Court the words of section 6 of the Clayton bill, that it may be seen that they work no change in the existing law.

"The labor of a human being is not a commodity or an article of commerce. Nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor, agricultural, or horticultural organizations instituted for the purposes of mutual help and not having capital stock or conducted for profit or to forbid or restrain individual members of such organizations from lawfully carrying out the legitimate objects thereof, nor shall such organizations or the members thereof be held or construed to be illegal combinations or conspiracies in restraint of trade under the antitrust laws.

"In this connection it is proper to refer to the legislative history of this section for its better understanding. For 24 years the labor unions had sought specific exemption from the provisions of the Sherman Antitrust Act by an amendment of it stating it should 'not apply to' them, but had never succeeded. When the Clayton bill was before the House several attempts were made to amend this section by inserting in lieu of the words 'shall be construed to forbid the existence, etc., of labor unions, etc.' the words 'shall apply to,' but they were all defeated. This was but a repetition of what was thus described by the Supreme Court in the Loewe case: 'The records of Congress show that several efforts were made to exempt by legislation organizations of farmers and laborers from the operation of the act, but that all these efforts failed, so that the act remained as we have it before us.'

"This section further declares that nothing in the antitrust laws shall be construed to forbid or restrain the individual members of labor unions from lawfully carrying out the legitimate objects thereof. The legitimate objects of the labor unions, of course, are the same as those of other people, the advancement of their own interest by lawful means. This section, therefore, does not affect in the least the restraints of the Sherman Antitrust Act upon the members of such unions from carrying out unlawfully either the legitimate or illegitimate objects thereof.

"When does a labor union become an unlawful combination under the Sherman Act, and what are the means which it and its members are prohibited thereby from using? The answer is to be found in Eastern States R. L. D. Association *v.* United States (234 U. S., 600).

"It broadly condemns all combinations and conspiracies which restrain the free and natural flow of trade in the channels of interstate commerce. * * * In Loewe *v.* Lawler (208 U. S., 274) this court held that a combination to boycott the hats of a manufacturer and deter dealers from buying them in order to coerce the manufacturer to a particular course of action with reference to labor organizations, the effect of the combination being to compel third parties and strangers not to engage in a course of trade except upon conditions which the combination imposed, was within the Sherman Act. In Gompers *v.* Bucks Stove & Range Co. (221 U. S., 418), after citing Loewe *v.* Lawler, this court said (p. 438): 'But the principle announced by the court was general. It (the Sherman Act) covered any illegal means by which interstate commerce is restrained, whether by unlawful combinations of capital or unlawful combinations of labor; and we think also whether the restraint be occasioned by unlawful contracts, trusts, pooling arrangements, blacklists, boycotts, coercion, threats, intimidation, and whether these be made effective, in whole or in part, by acts, words, or printed matter.'

"These principles are applicable to this situation. Here are wholesale dealers in large numbers engaged in interstate trade upon whom it is proposed to impose as a condition of carrying on that trade that they shall not sell in such manner that a local retail dealer may regard such sale as an infringement of his exclusive right to trade, upon pain of being reported as an unfair dealer to a large number of other retail dealers associated with the offended dealer, the purpose being to keep the wholesaler from dealing not only with the particular dealer who reports him, but with all others of the class who may be informed of his delinquencies. 'Section 1 of the act is not confined to voluntary restraint, as where persons engaged in interstate trade or commerce agree to suppress competition among themselves, but includes as well involuntary restraint, as where persons not so engaged conspire to compel action by others, or to create artificial conditions, which necessarily impede or burden the due course of such trade or commerce, or restrict the common liberty to engage therein.' (United States *v.* Patten, 226 U. S., 541.) * * *

"A retail dealer has the unquestioned right to stop dealing with a wholesaler for reasons sufficient to himself, and may do so because he thinks such dealer is acting unfairly in trying to undermine his trade. 'But,' as was said by Mr. Justice Lurton, speaking for the court in Granada Lumber Co. *v.* Mississippi (217, U. S., 433), 'when the plaintiffs in error combine and agree that no one of them will trade with any producer or wholesaler who shall sell to a consumer within the trade range of any of them, quite another case is presented. An act harmless when done by one may become a public wrong when done by many acting in concert, for it then takes on the form of a conspiracy, and may be prohibited or punished if the result is hurtful to the public or to the individual against whom the concerted action is directed.'

"When the retailer goes beyond his personal right and, conspiring and combining with others of like purposes seeks to obstruct the free course of interstate trade and commerce and to unduly suppress competition by placing obnoxious wholesale dealers under the coercive influence of a condemnatory report circulated among others, actual or possible customers of the offenders, he exceeds his lawful rights, and such action brings him and those acting with him within the condemnation of the act of Congress.

"It is to be observed that the foregoing case demonstrates that the distinction between the primary and secondary boycotts has no place under the Sherman Act, for it was a case of what would be termed a primary boycott by those who claim to see something in that distinction at common law.

"This section does not affect in any respect the liability of the members of such unions for the unlawful acts of their officers and agents, when within the scope of their authority, as the same has been established in the Loewe case. Nor does it change in any way the rules of evidence by which the unlawful nature of such combinations is established. The same remain as laid down as follows by the Supreme Court in the Retail Lumber Dealers' case above cited:

"But it is said that in order to show a combination or conspiracy within the Sherman Act some agreement must be shown under which the concerted action is taken. It is elementary, however, that conspiracies are seldom capable of proof by direct testimony and may be inferred from the things actually done; and when, in this case, by concerted action the names of wholesalers who are reported as having

made sales to consumers were periodically reported to the other members of the association the conspiracy to accomplish that which was the natural consequence of such action may be readily inferred.

"Nor does this section sanction the existence of, or remove from the condemnation of the civil and criminal provisions of the Sherman Act, or justify or excuse a conscientious Department of Justice in neglecting to proceed against, such a combination as the American Federation of Labor, whose constitution provides for the declaration of boycotts and establishes a vast machine for their prosecution in interstate commerce, and directs its executive council to secure the unification of all labor organizations so far as to assist each other in making the same effective, and whose principles and methods are thus accurately described in the following report unanimously adopted by its convention of 1905:

"We must recognize the fact that a boycott means war, and to successfully carry on a war we must adopt the tactics that history has shown are most successful in war. The greatest master of war has said that war was the trade of a barbarian, and the secret of success was to concentrate all your forces upon one point of the enemy, the weakest if possible. In view of these facts, the committee recommends that the State federations and central bodies lay aside minor grievances and concentrate their efforts and energies upon the least number of 'unfair' parties or places in their jurisdiction. One would be preferable. If every available means at the command of the State federations and central bodies were concentrated upon one such, and kept up until successful, the next on the list would be more readily brought to terms, and within a reasonable time none opposed to 'fair' wages, conditions, or hours but would be brought to see the error of their ways and submit to the inevitable.

"The Sherman Antitrust Act, having been enacted under the constitutional power of Congress to regulate commerce among the States, is of course the supreme law of the land in all cases within its purview in every State, Territory, and District, and judges of every court, Federal and State, are bound thereby, anything in the constitution and laws of any State to the contrary notwithstanding. Since there is nothing in the Clayton bill which limits in any way the restraints of that act upon the unlawful acts of labor unions or their members, and since it goes still further and specifically grants to any person threatened with irreparable injury from acts forbidden by that act injunctive relief, the protection of the individual, whether employer or employee, instead of being impaired, is greatly increased by it.

"Second. Let us turn next to sections 17, 18, 19, and 20 of the bill, which deal with the subject of the issuance of restraining orders and injunctions by Federal courts.

"There is nothing in the first three of those sections which would justify any extended comment here. They make no material changes in existing law and practice. Such small changes as are made are in provisions which are merely directory, not mandatory, and which the courts will construe as having been intended by Congress to promote the administration of justice, not to impede it, and to secure the rights of all parties.

"There is, however, one thing about these sections which is most noticeable, and that is the total repudiation therein by Congress of the contention made before its committees for the last 20 years in behalf of the labor unions that the Federal courts have no power to enjoin the commission of acts which are crimes, and their equally persistent contention that the issuance of injunctions by the Federal courts to protect any right except property or a property right, defined by them, so as to exclude from its meaning the right to do business, the right to work, to buy and sell labor, or to seek and obtain employment, is a usurpation by those courts which they called upon Congress to forbid. The whole scheme of the trades-commission bill and of the Clayton bill is framed in complete negation of the doctrine that courts of equity can not issue injunctions except to protect property or property rights, so defined, or that they can not enjoin the commission of acts which are also crimes. Indeed, what has been so long denounced as 'government by injunction' has been enormously extended by these two bills. And sections 21 and 22 of the Clayton bill (to be hereafter discussed) specially provide for the enforcement of injunctions issued to forbid acts which are crimes by penalties of unexampled severity. It has made me, who for 10 years have been combating before congressional committees the claims of Mr. Gompers and others, that such injunctions are in violation of the constitutional rights of the citizen and a flat usurpation of power by the Federal courts of equity, stare with amazement to find him, at this session of Congress, clamoring loudly for the passage of this bill, which sanctions and rigorously enforces such injunctions, and threatening with his political disfavor those who should oppose it.

"But section 20 of the Clayton bill calls for special remark, for it is said to be that section which constitutes 'labor's bill of rights.' It singles out for special treatment from the vast field of cases over which, by the Constitution and laws of the United States, the Federal courts have jurisdiction those only which are between employers and employees, or between employees, or between persons employed and persons seeking employment where such relations actually exist at the time suit is brought and an injunction is applied for, which suits involve or grow out of disputes concerning terms and conditions of employment.

"Suits between parties who previously sustained those relations but have ended them, and suits between either of said parties and outsiders are not covered by this section. Suits between an employer and his ex-employees who have struck and boycott cases generally are excluded from this section. Apparently also the class of cases to which the section relates is still further limited by being confined to suits between the specified parties brought to prevent irreparable injury to tangible property or property rights, because the application for an injunction in the specified cases must describe 'with particularity' the property or property right to be protected by the injunction. But whether this last limitation on the class is intended or not, it is clear that suits to protect other rights between such specified parties, and suits between either of such parties and outsiders to protect property or other rights, and suits between parties who have previously sustained the relations specified but have terminated them, are not included in the prohibition against the issuance of injunctions addressed to the Federal courts in this section. The legislative history of this section shows that these exemptions were intentionally made.

"And in the very limited class of cases to which the prohibitions of the section are confined by its terms, what are the acts which the Federal courts are prohibited by this section from enjoining? They are any act or acts which might lawfully be done in the absence of such dispute, including the lawful termination of the relation of employment, the lawful recommending, advising, or persuading others by peaceful means to terminate employment, the lawful attending at any place where it is lawful to be for the purpose of peacefully obtaining or communicating information, the lawful peaceful persuasion of any person to work or to abstain from working, the lawful ceasing to patronize or employ any party to such dispute, and the lawful recommending, advising, or persuading others by peaceful and lawful means so to do, the lawful paying or giving to or withholding from any person engaged in such dispute any strike benefits or other moneys or things of value, and the lawful assembling in a peaceable and lawful manner. It is these acts which the Federal courts are forbidden to enjoin in the limited classes of cases specified in this section, and which 'shall not be considered or held to be violations of any law of the United States.'

"Since the injunctive power of the Federal courts of equity has always been limited to the prevention of irreparable injury from unlawful acts, it will be at once seen that this section does not change in the least the existing law, that it is merely a legislative construction of the law as already declared by the courts, and that 'labor's rights,' like those of everybody else, are secured to it not by this section, but by the Federal and State constitutions and laws of long standing passed in pursuance of both. The section merely provides that in the specified suits between the parties named acts which would be lawful when no 'dispute concerning terms and conditions of employment' existed between them shall not be enjoined or considered or held to be violations of any law of the United States.

"That this is what the section means is shown by the history of the times, to which the courts will look in construing it. It was passed by a Democratic Congress in literal performance of the following platform pledge of the Democratic Party in 1908 and repeated verbatim in 1912.

"Questions of judicial practice have arisen, especially in connection with industrial disputes. We believe that the parties to all judicial proceedings should be treated with rigid impartiality, and that injunctions should not issue in any cases in which injunctions would not issue if no industrial dispute were involved.

"This declaration, it is well known, was inspired and, perhaps, was drawn by Mr. Gompers, who has never ceased for the past 10 years to assert before committees of Congress and in public addresses everywhere and in the magazine of which he is the editor that precisely that discrimination by the Federal courts existed, and that what he demanded was that it should be legislated against, until he had caused multitudes to believe it was true, and perhaps had come to believe it himself.

"That this is the meaning of the section is also shown by its legislative history. The reports of the committees and even the debates in Congress show that there was no intention of legalizing anything which was then illegal, but only to legislatively declare what was then legal. That the several acts specified in this section might be unlawful under certain

circumstances was not denied, and the principles laid down by the Supreme Court in Aiken *v.* Wisconsin (195 U. S., 194) were recognized.

"No conduct has such an absolute privilege as to justify all possible schemes of which it may be a part. The most innocent and constitutionally protected of acts or omissions may be made a step in a criminal plot, and if a step in a criminal plot, neither its innocence nor the Constitution is sufficient to prevent the punishment of the plot by law.

"That this is the meaning of the section is also shown by the fact that if it had been the intention of Congress thereby to amend the existing statutes of the United States it would have repealed thereby the civil-service laws prohibiting the discharge, without cause, of the 200,000 employees in the various departments of the Government, the most vital provisions of the interstate-commerce act, both as to the carriers and their employees in doing the work imposed upon them by it, under severe penalties, and the Sherman Antitrust Act, both as to employers and employees, which act the committees declared that they had left unchanged by the Clayton bill.

"That this is the meaning of the section is further shown by the fact that any other construction of it would render it plainly unconstitutional, and the courts in construing it will not assume that it was the intention of Congress to pass laws that are invalid. The laws creating the courts of the United States give them general jurisdiction, concurrent with the courts of the several States, of all cases, at law or in equity, where the matter in demand exceeds $5,000 in amount, arising under the laws of the United States, and of controversies between citizens of different States of like amount. And the fifth amendment of the Federal Constitution expressly declares that no person shall be deprived of his property without due process of law. Under the Constitution and laws of the United States the citizens who are parties to the several suits mentioned in this section have the inalienable right to resort to the Federal courts of equity for protection of their property when assailed by any or all of the acts specifically enumerated therein, since by such acts such courts have heretofore uniformly held that property and property rights may be unlawfully injured and destroyed. Congress could not by a legislative fiat declaring that the injurious acts destructive of property were not unlawful deprive them of their property. It would violate the fifth amendment of the Federal Constitution. Such a construction would also render the section invalid, because it would invade the judicial power of the Federal courts of equity, which the Constitution declares shall extend to all cases and controversies over which, by the statutes of their creation, they are given jurisdiction. For a statute to say that a court shall have equitable jurisdiction over a certain case or controversy, and then for another statute to deny it, the power to judicially construe previously existing statutes, and also the fundamental essential power to issue and enforce the usual and necessary process required by its jurisdiction, would be a direct invasion by Congress of the judicial department of the Government and totally void.

"It would require a treatise to fully elucidate all this, but I have already extended this communication too long and must hurry to its conclusion.

"Third and lastly, let us take up sections 21, 22, 23, 24, and 25, which contain the regulations of the bill relating to contempts of the Federal courts. These are confined within such a narrow compass that it is difficult to conceive of a case to which they will apply. They are in terms expressly limited to instances of disobedience by a person, not in the presence of the court, or so near thereto as to obstruct the administration of justice, of some lawful writ, process, order, rule, decree, or command of a Federal district court or of any court of the District of Columbia, not entered in a suit brought or prosecuted by or in behalf of the United States, which order, etc., forbids him to do any act or thing which is of such a character, if done by him, as would constitute also a criminal offense under any statute of the United States, or under the laws of the State where committed. Every other act of contempt than this one, so specified, is expressly, specifically, and in terms excepted from the regulations prescribed. Since the Supreme Court has held that every act of disobedience of an order, wherever committed, which obstructs the administration of justice in a court is committed 'so near thereto as to obstruct the administration of justice,' that it is the disobedience which obstructs, and that the place where it occurs is unimportant, whether near by or 1,500 miles away, and legally cuts no figure, it would seem that the very exceptions made cut out from the regulations prescribed every case of contempt which their terms cover.

"But assuming that there may hereafter arise some act of disobedience which does fall within the regulations of these sections, what changes, if any, do they make in the existing law and practice relating to the trial and punishment of it as a contempt? None whatever when such contempt occurs in any suit, not 'within the purview of this act,' which, by the other provisions of the bill, confines the regulations of these sections to those cases only which are brought under the antitrust laws, and possibly the limited class of labor cases mentioned in section 20.

"As to the cases within the purview of this act, section 22 provides that such trial may be by the court or, upon demand of the accused, by a jury, in which latter event the court may impanel a jury from the jurors then in attendance, or the court or the judge thereof in chambers may cause a sufficient number of jurors to be selected and summoned, as provided by law, to attend at the time and place, at which time a jury shall be selected and impaneled as upon a trial for a misdemeanor; and such trial shall conform, as near as may be, to the practice in criminal cases prosecuted by indictment or upon information.

"An attentive consideration of these various provisions will show that the decision whether the trial is to be by the court or jury is left within the discretion of the court, as it always has been, and that the proceedings at the trial, if a jury trial is had, will not differ from those heretofore pursued, and which are well shown in the case of In re Steiner (195 Fed., 303), in which Judge Lacombe made the following order:

"The cause will be taken up for a hearing on Monday, 27th, at 10.30 a. m. As there may be conflicting testimony which will present a question of fact as to what was or was not done, there will be a jury in attendance to whom may be submitted such concrete questions of fact as may at the time seem desirable. This does not mean that the whole case will be tried by the jury. The trial is one for the court, but the court is willing to have a jury decide which of two or more opposing witnesses is truthfully stating the fact.

"That the provisions of these sections in regard to a jury trial are permissive and not mandatory is shown by the history of the times. They were passed by a Democratic Congress in pursuance of a party pledge made in 1908 and repeated in 1912, as follows:

"We reiterate the pledge of our national platforms of 1896 and 1904 in favor of the measure which passed the United States Senate in 1896, but which a Republican Congress has ever since refused to pass, relating to contempts in Federal courts and providing for trial by jury in cases of indirect contempt.

"'The measure' here referred to was the bill unanimously reported on May 4, 1896, by the Senate Judiciary Committee, through Senator David B. Hill, which contained the following provision as to the trial of all cases of indirect contempt:

"But such trial shall be by the court, or, in its discretion, upon application of the accused, a trial by jury may be had as in any criminal case.

"This measure, as thus reported, passed the Senate on June 10, 1896, in the closing hours of the session, when there were only a few Senators present and in the midst of the hurry and confusion usual at such a time, but with an amendment thereto forced into it by two Senators, not members of the committee and not Democrats, striking out the words 'in its discretion' and the word 'may' and inserting in place of it the word 'shall.' This amendment was not considered to be a part of 'the measure' which the Democratic convention approved of. For the provision as reported by the Senate committee the Democratic Party has since always stood, and on May 28, 1900, when the Alaska Civil Code was pending before the House of Representatives, the Democratic Party in Congress offered 'the measure' as a whole as an amendment with this provision in it, as reported by the Senate Judiciary Committee, as covering the whole subject of the trial of all cases of contempt, and, failing in this, actually forced the above-quoted provision that the trial 'shall be by the court, or, in its discretion, upon application of the accused, a trial by jury may be had as in any criminal case,' into section 612 of the code.

"On that occasion Congressman CHARLES L. BARTLETT, of Georgia, himself an enragé against the Federal courts, but thoroughly versed in Democratic doctrines, said:

"The amendment I have offered to this section, Mr. Chairman, is the Senate bill passed by that body June 10, 1896. It was reported from the Senate committee over which at that time presided the senior Senator from Massachusetts, Mr. Hoar. It was reported by the then Senator from New York, Mr. Hill, upon investigation, after a resolution had been offered in the Senate and referred to the Judiciary Committee of the Senate, instructing them to inquire and report such bill as they might deem suitable to meet the difficulties and oppression and wrong that existed in the United States courts when men were arraigned charged with contempt, in having violated injunctions of the courts, to give to such accused persons the right of trial by jury.

"This bill was reported early in May, 1896. It was discussed before the Senate of the United States on various occasions by Senator Hill and other Senators; and no one in that body ever raised his voice against it except the Senator from Connecticut, Mr. Platt, and the Senator from Oregon, Mr. Mitchell. Finally, on the 10th day of June, 1896, this bill which I have offered as an amendment to the proposition now pending was adopted by the Senate of the United States without division. So far as the record of the Senate is concerned, no one appears to have voted against it; and no one ever opposed it upon the

floor of the Senate except, as I have said, the Senator from Oregon and the Senator from Connecticut.

"When the Democratic convention met at Chicago, in 1896, it declared in favor of the bill to which I have called attention in this language:

"'We denounce the arbitrary interference by Federal authority in local affairs as a violation of the Constitution of the United States and a crime against free institutions, and we especially object to government by injunction as a new and highly dangerous form of oppression, by which Federal judges, in contempt of the laws of the United States and rights of the citizens, become legislators, judges, and executioners, and we approve of the bill passed at the last session of the United States Senate and now pending in the House of Representatives, relative to contempts of court, providing for trials by jury in certain cases of contempt.'

"That action of the Democratic Party was heralded from the stump in the subsequent campaign by many Republicans and others who opposed the Democratic nominee as being a plank for 'free riot' and 'an assault upon the courts.' And yet the very bill which the Senate Judiciary Committee reported and indorsed and the passage of which it asked had, on the 10th of June, 1896, passed the Senate of the United States without a division, and had received the approval of every Democratic Senator there, and had been opposed by only two Republican Senators. It was reported from the committee presided over by the distinguished Senator from Massachusetts, Mr. Hoar, advocated by the Senator from New York, Mr. Hill, time and time again upon the floor of the Senate, and but two Senators, Republican or otherwise, raised their voices against it.

"It is this bill, thus passed by the Senate of the United States, thus advocated almost unanimously by the Senate of the United States, thus approved by the Democratic convention of Chicago in 1896, which I have presented as an amendment to this bill and asked that it be adopted. It does not meet the demands of justice in every particular, but is far better than the present law.

"The aforesaid planks in the Democratic platforms are to be interpreted, also, in the light of the other declarations in the platforms of 1908 and 1912, regarding the purposes of the party toward the courts, which were as follows:

"The courts of justice are the bulwark of our liberties, and we yield to none in our purpose to uphold their dignity. Our party has given to the bench a long line of distinguished justices who have added to the respect in which this department must be zealously maintained. We resent the attempt of the Republican Party to raise a false issue respecting the judiciary. It is an unjust reflection upon a great body of our citizens to assume that they lack respect for the courts.

"It is the function of the courts to interpret the laws which the people create, and if the laws appear to work economic, social, or political injustice, it is our duty to change them. The only basis upon which the integrity of our courts can stand is that of unswerving justice and protection of life, personal liberty, and property. If judicial processes may be abused, we should guard them against abuse.

"When the Democratic Party finally got control of the lower House of Congress in 1911, the majority prepared and passed a bill regulating contempt proceedings which failed in the Senate. The Judiciary Committee, which had charge of the matter, had before it 11 bills relating to that matter, every one of which contained the positive requirement that in all cases of indirect contempt 'a trial by jury shall be had as in criminal cases.' One of these bills was introduced by Mr Clayton himself at the instance of the labor unions, whose counsel had prepared it. Moreover, during this entire period innumerable bills to secure trials by jury in cases of indirect contempt had been introduced, at the instance of the labor unions, in the legislatures of nearly all the States, some of which were actually put upon the statute books in a few States, and every one of these bills use the imperative word 'shall' instead of the word 'may' in the provision for the trial by jury in such cases. All of this was well known to the Senate and House committees, it having been brought to their attention by the opponents of such legislation.

"When the Democratic majority prepared and reported its bill in 1912 it deliberately rejected the word 'shall' contained in the bills which had been before it, and in all other bills which had ever been drawn to make a trial by jury compulsory, and inserted in lieu of it the permissive word 'may.'

"Moreover, during this entire period the Supreme Court of the United States and the supreme courts of many States were rendering decision after decision to the effect that the requirement of a trial by jury in such cases would not only be destructive of the independence of the judiciary and of its power to protect itself from insults and to secure obedience to its orders, but also that, to say the least, it would be of very doubtful constitutionality, because invasive of the independence of the judiciary.

"The Supreme Court in construing these sections will assume that Congress intelligently made this change, and particularly that it heeded its suggestions, in this respect, so often made in its decisions, for the purpose of avoiding such doubts as to their constitutionality and a conflict with that court.

"This principle of construction was adopted by the Supreme Court in Lincoln *v.* U. S. (202 U. S., 498), in which it said:

"Moreover, the act of July, 1902, was passed with full knowledge and after careful consideration of the decisions of this court, and Congress was aware that grave doubts, at least, had been thrown upon its power to ratify a tax under circumstances like the present. De Lima *v.* Bidwell (182 U. S., 199, 200). This affords a special reason for believing that if it had intended to encounter the limitations of that case it would have done so in clear words from which there was no escape.

"Now, as early as May, 1895, just one year before Senator Hill reported from the Judiciary Committee the bill which it had so carefully considered, the Supreme Court, in the Debs case, One hundred and fifty-eighth United States, page 594, which decision was before the committee, had said this:

"The power of the court to make an order carries with it the equal power to punish for a disobedience of that order, and inquiry as to the question of disobedience has been, from time immemorial, the special function of the court. And this is no technical rule. In order that a court may compel obedience to its orders it must have the right to inquire whether there has been any disobedience thereof. To submit the question of disobedience to another tribunal, be it a jury or another court, would operate to deprive the proceeding of half its efficiency.

"This decision was followed at intervals by the numerous decisions of that court to the same effect, until in May, 1911, it decided the case of Gompers *v.* Bucks Stove & Range Co. (221 U. S., 450), in which it specifically laid down the law as follows:

"The power of the courts to punish for contempt is a necessary and integral part of the independence of the judiciary and is absolutely essential to the performance of the duties imposed upon them by law. Without it they are mere boards of arbitration, whose judgments and decrees would be only advisory. If a party can make himself a judge of the validity of orders which have been issued and by his own act of disobedience set them aside, then are the courts impotent, and what the Constitution now fittingly calls the 'judicial power of the United States' would be a mere mockery. This power 'has been uniformly held to be necessary to the protection of the court from insults and oppressions, while in the ordinary exercise of its duties, and to enable it to enforce its judgments and orders necessary to the due administration of law and the protection of the rights of suitors.' Bessette *v.* Conkey (194 U. S., 324, 337). There has been general recognition of the fact that the courts are clothed with this power and must be authorized to exercise it without referring the issues of fact or law to another tribunal or to a jury in the same tribunal. For if there was no such authority in the first instance, there would be no power to enforce its orders if they were disregarded in such independent investigation. Without authority to act promptly and independently, the courts could not administer public justice or enforce the rights of private litigants. Bessette *v.* Conkey (194 U. S., 337). Congress, in recognition of the necessity of the case, has also declared (Rev. Stat., 725) that the courts of the United States 'shall have power to punish by fine or imprisonment contempts of their authority, including disobedience to any lawful order of the said courts.'

"It is not probable that the authors of these sections, with all this before them, used the word 'may' as equivalent of the word 'shall,' or that they intended to make trial by jury in contempt cases compulsory in any instance. Moreover, that they gave full heed to the suggestions of the court and appreciated the folly of disregarding them is shown by the provisions of section 24, by which they limited even the provisions which permitted such trials by jury to such narrow compass that it is difficult to find a case within them. Indeed, this section evinces a profound distrust of jury trials in such cases, and I here quote it, as follows:

"SEC. 24. That nothing herein contained shall be construed to relate to contempts committed in the presence of the court, or so near thereto as to obstruct the administration of justice, nor to contempts committed in disobedience of any lawful writ, process, order, rule, decree, or command entered in any suit or action brought or prosecuted in the name of, or in behalf of, the United States; but the same, and all other cases of contempt not specifically embraced within section 21 of this act, may be punished in conformity to the usages at law and in equity now prevailing.

"Many other considerations could be adduced, drawn from the interpretation of such language by the Supreme Court and by other courts in contempt and other cases, and from the use of other expressions in these sections, such as this, 'such trials shall conform as near as may be to the practice in criminal cases,' which the Supreme Court has held to mean that the matter to which they apply is left within the discretion of the court. But enough has been said, I think, to satisfy anyone that the existing law as to the mode of trial is unchanged by these sections of the bill.

"There is, however, in these sections, a provision which does change the existing law and greatly increases the severity of the punishment which may be inflicted upon those who violate the injunctions of the courts in the cases to which these sections are supposed to apply. Under section 22 the court is at liberty to imprison the accused for a period of six months, and also to fine him $1,000, payable to the United States, and to further fine him in amounts equal to the damage which his contempt has caused to the complainant or any other party, and to order that he stand committed until such fines are paid. This is an enormous extension of the power of the Federal courts in contempt cases of this character, for heretofore their power to punish for contempt has been limited to a simple fine or imprisonment of the offender.

"In conclusion, in order to emphasize by contrast the harmlessness of the results embodied in the various sections of the Clayton bill herein discussed, by comparison with the provisions of the other bills for which it is a substitute, and to show the importance of opposing it, I append hereto the short but com-

prehensive and drastic Pearre bill, which the unions have all along wanted and intend yet to get enacted into law:

"SEC. 1. That no restraining order or injunction shall be granted by any court of the United States, or a judge, or the judges thereof, in any case between an employer and an employee, or between employers and employees, or between employees, or between persons employed to labor and persons seeking employment as laborers, or involving or growing out of a dispute concerning terms or conditions of employment unless necessary to prevent irreparable injury to property, or to a property right of the party making the application, for which injury there is no adequate remedy at law; and such property or property right must be particularly described in the application, which must be in writing and sworn to by the applicant or by his, her, or its agent or attorney. And for the purposes of this act no right to continue the relation of employer and employee or to assume or create such relation with any particular person or persons, or at all, or to carry on business of any particular kind, or in any particular place, or at all, shall be construed, held, considered, or treated as property or as constituting a property right.

"SEC. 2. That in cases arising in the courts of the United States or coming before said courts, or before any judge, or the judges thereof, no agreement between two or more persons concerning the terms or conditions of employment of labor, or the assumption or creation or termination of any relation between employer and employee, or concerning any act or thing to be done or not to be done with reference to or involving or growing out of a labor dispute shall constitute a conspiracy or other criminal offense or be punished or prosecuted as such unless the act or thing agreed to be done or not to be done would be unlawful if done by a single individual, nor shall the entering into or the carrying out of any such agreement be restrained or enjoined unless such act or thing agreed to be done would be subject to be restrained or enjoined under the provisions, limitations, and definition contained in the first section of this act.

"SEC. 3. That all acts and parts of acts in conflict with the provisions of this act are hereby repealed.

"DANIEL DAVENPORT, *General Counsel.*"

Ship Registry Act.

SPEECH

OF

HON. CHARLES F. CURRY,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 9, 1914.

Mr. CURRY. Mr. Speaker, the so-called ship-registry act, approved August 18 of this year, which act provides for the admission of foreign-built ships to American registry for the foreign trade, and the issuing by the President under the authority of said act of an Executive order on September 4, 1914, suspending for two years the provisions of the law requiring survey inspection and measurement by United States officers of foreign-built ships admitted to American registry under said act and suspending for a period of seven years on such ships so admitted the provisions of the law requiring watch officers to be citizens of the United States, were, in my opinion, unnecessary and ill advised.

The enactment of the law and the issuing of the Executive order may have been dictated by patriotic motives, but in the putting of the law and the Executive order into practical operation by the owners of foreign ships taking advantage of the law, patriotism plays a very subordinate part to and is, in fact, completely dominated by commercialism, as I shall attempt to show in my remarks.

Intrusting the protection and the honor of the American flag that is permitted to float over such a ship so admitted to American registry into the custody of her master who is a citizen or a subject of a foreign country certainly can not be called patriotic. But that is not the worst of it; none of the officers and none of the crew are required to be American citizens. The foreign officers and foreign crews of such a ship may retain their positions on the ship without being required to swear allegiance to our country and our flag. In the event of war could this country depend on their allegiance and loyalty? And yet official notice has been given that no American citizen need apply for a position on the newly created uninspected foreign-built American merchant marine engaged in the foreign trade, in pursuance of the exercise of authority conferred upon the President of the United States by the act of Congress approved August 18, 1914, entitled "An act to provide for the admission of foreign-built ships to American registry for the foreign trade, and for other purposes," which act reads as follows:

Be it enacted, etc., That the words "not more than 5 years old at the time they apply for registry" in section 5 of the act entitled "An act to provide for the opening, maintenance, protection, and operation of the Panama Canal, and the sanitation and government of the Canal Zone," are hereby repealed.

SEC. 2. That the President of the United States is hereby authorized, whenever in his discretion the needs of foreign commerce may require, to suspend by order, so far and for such length of time as he may deem desirable, the provisions of law prescribing that all the watch officers of vessels of the United States registered for foreign trade shall be citizens of the United States.

Under like conditions, in like manner, and to like extent the President of the United States is also hereby authorized to suspend the provisions of the law requiring survey, inspection, and measurement by officers of the United States of foreign-built vessels admitted to American registry under this act.

SEC. 3. This act shall take effect immediately.

Approved, August 18, 1914.

Upon being vested with the legal power to do so, the President lost no time, but proceeded forthwith and issued the following—

EXECUTIVE ORDER.

SEPTEMBER 4, 1914.

In pursuance of the authority conferred upon the President of the United States by section 2 of the act approved August 18, 1914, entitled "An act to provide for the admission of foreign-built ships to American registry for the foreign trade, and for other purposes," it is hereby ordered:

1. That the provisions of the law prescribing that the watch officers of vessels of the United States registered for foreign trade shall be citizens of the United States, are hereby suspended, so far and for such length of time as is herein provided, namely, all foreign-built ships which shall be admitted to the United States registry under said act may retain the watch officers employed thereon, without regard to citizenship, for seven years from this date, and such watch officers shall be eligible for promotion. Any vacancy occurring among such watch officers within two years from this date may be filled without regard to citizenship, but any vacancies which may occur thereafter shall be filled by a watch officer who is a citizen of the United States.

2. That the provisions of law requiring survey, inspection, and measurement, by officers of the United States, of foreign-built ships admitted to United States registry under said act are hereby suspended for two years from this date.

WOODROW WILSON.

By the actions of the President of the United States in suspending the inspection laws for the term of two years the following sections of the United States Revised Statutes become null and void for that period on all vessels admitted to American registry under the provisions of the act approved August 18, 1914. Section 5 of the Panama Canal act is not suspended in so far that the local inspectors of steam vessels shall, upon application before the issue of a register, inspect the vessels so far as may be necessary to determine if the vessel's hull is in such a condition that she can carry dry and perishable cargo with safety.

The following sections are suspended:

Section 4417 of the Revised Statutes reads in part as follows:

SEC. 4417. The local inspectors shall, once in every year at least, carefully inspect the hull of every steam vessel within their respective districts and shall satisfy themselves that every such vessel so submitted to their inspection is of a structure suitable for service in which she is to be employed, has suitable accommodations for passengers and the crew, and is in a condition to warrant the belief that she may be used in navigation as a steamer with safety to life, and that all the requirements of law in regard to fires, boats, pumps, hose, life preservers, floats, anchors, cables, and other things are faithfully complied with; and if they deem it expedient they may direct the vessel to be put in motion, and may adopt any other suitable means to test her sufficiency and that of her equipment. Whenever any inspector or assistant inspector shall, in the performance of his duty, find on board any vessel subject to the provisions of this title, as part of the required equipment thereof, any equipment, machinery, apparatus, or appliances not conforming to the requirements of law he shall require the same to be placed in proper condition by the owner or master of the said vessel, if possible; and if said inspector or assistant inspector shall find on board any such vessel any life preservers or fire hose so defective as to be incapable of repair he shall require that the same be destroyed in his presence by such owner or master. And in any of the foregoing cases local inspectors by whom or under whose supervision said vessel is then being inspected shall have power to enforce the foregoing requirements by revoking the certificate of the said vessel and by refusing to issue a new certificate to the said vessel until the said requirements shall have been fully complied with or until such action of the local inspectors shall have been reversed—

And so forth.

Section 4418 of the Revised Statutes reads in part as follows:

SEC. 4418. The local inspectors shall also inspect the boilers and their appurtenances in all steam vessels before the same shall be used, and once, at least, in every year thereafter, and shall subject all boilers to the hydrostatic pressure. All such vessels shall comply with the following requirements, namely: That the boilers are well made, of good and suitable material; that the openings for the passage of water and steam, respectively, and all pipes and tubes exposed to heat are of proper dimensions and free from obstructions; that the spaces between and around the flues are sufficient; that flues, boilers, furnaces, safety valves, fusible plugs, low-water indicators, feed-water apparatus, gauge cocks, steam gauges, water and steam pipes connecting boilers, means of prevention of sparks and flames from fire doors, low-water gauges, means of removing mud and sediment from boilers, and all other such machinery and appurtenances thereof are of such construction, shape, condition, arrangement, and material that the same may be safely employed in the service proposed without peril to life; and the local inspectors shall satisfy themselves by thorough examination that said requirements of law and regulations in regard thereto have been fully complied with. No boiler or flue pipe, nor any of the connections therewith, shall be approved which is made in whole or in part of bad material or is unsafe in its form or dangerous from defective workmanship, age, use, or other cause—

And so forth.

In order for an American-built, American-officered, and American-manned vessel to obtain a certificate of inspection she must

first be inspected by the United States Steamboat-Inspection Service and comply with all the requirements of law, as set forth in the two preceding sections of the Revised Statutes. But the foreign-built, foreign-officered, and foreign-manned vessels admitted to American registry under the act approved August 18, 1914, and by Executive order are made immune from inspection for two years and all the provisions contained in the preceding sections. Section 5 of the Panama Canal act provides that the hulls of vessels admitted under the act are required to be inspected in order to determine if the vessel is in such a condition that she can carry dry and perishable cargo with safety. That section is not suspended.

Many of the vessels and their equipments that are being admitted under the act are of such an age that great precaution should be taken in the matter of inspection; but no inspection is required of their boilers, boats, pumps, hose, life preservers, floats, anchors, cables, and other life-saving appliances and equipments, or to determine whether or not they have suitable accommodations for passengers and crew or that they are in a condition to warrant the belief that they may be navigated with safety.

The two preceding sections most vitally affect the safety of life at sea. The lives of the crew, according to the ethics of the sea, are a secondary consideration, but the lives of passengers, and more particularly of women and innocent children, who may take passage on vessels admitted to American registry under the act are paramount and should be considered before property, no matter how valuable the cargo.

It is evident that neither Congress nor the people realize the seriousness of the suspension of the United States steamboat-inspection laws on foreign-built vessels admitted to American registry. It seems to have escaped attention that such suspension endangers the lives of the traveling public as well as those of the crew.

At the time the steamers *Titanic, Monroe, Empress of Ireland*, and many others were lost the public and press demanded, in the interest of safety of life at sea, that Congress enact laws that would tend to prevent and would at least minimize the dangers of a repetition of such horrible disasters in the future. The answer to the public demand was the enactment of the law giving the President of the United States discretionary power to suspend by order the provisions of the law requiring survey, inspection, and measurement by officers of the United States of foreign-built vessels admitted to American registry. Exercising the power conferred, the President of the United States, on the 4th day of September, 1914, suspended the law for a term of two years from the date of such order on all vessels admitted to American registry under the act, thereby increasing, in place of decreasing, the dangers to life at sea.

The passenger vessels that are being admitted to American registry under the act were, while sailing under a foreign flag, out of the ports of the United States, subject to inspection, and were inspected by the officials of the United States Steamboat Inspection Service, but when admitted to American registry they are not required to undergo inspection for the period of two years, being exempted by executive order of the President, in accordance with the discretionary authority vested in him by law. Is this right, is it just, is it humane? It is possible the President may have acted under misinformation, that he may have been deceived.

Section 4421 of the Revised Statutes reads in part as follows:

SEC. 4421. When the inspection of steam vessels is completed and the inspectors approve the vessel and her equipment throughout they shall make and subscribe a certificate to the collector or other chief officer of the customs of the district in which such inspection has been made, in accordance with the form and regulations prescribed by the board of supervising inspectors. Such certificate shall be verified by oaths of inspectors signing it before the chief officer of the customs of the district or any other person competent by law to administer oaths. If the inspectors refuse to grant a certificate of approval, they shall make a statement in writing and sign the same, giving the reason for their disapproval. Upon such inspection and approval the inspector shall also make and subscribe a temporary certificate, which shall set forth substantially the fact of such inspection and approval, and shall deliver the same to the master or owner of the vessel, and shall keep a copy thereof on file in their office. No vessel required to be inspected under the provisions of this title shall be navigated without having on board an unexpired regular certificate of inspection or such temporary certificate, etc.

Section 4423 of the Revised Statutes reads in part as follows:

SEC. 4423. Every collector or other chief officer of the customs shall retain on file all original certificates of the inspectors required to be delivered to him, and shall give to the master or owner of the vessel therein named three certified copies thereof, two of which shall be placed by such master or owner in conspicuous places in the vessel where they will be most likely to be observed by passengers and others, and there kept at all times, framed under glass, and the other shall be retained by such master or owner as evidence of the authority thereby conferred, etc.

Section 4424 of the Revised Statutes provides:

SEC. 4424. Whenever any passenger is received on board any steam vessel not having the certified copies of the certificate of approval placed and kept as required by this title, or whenever any passenger steam vessel receives or carries any gunpowder on board, not having a certificate authorizing the same, and a certified copy thereof placed and kept as required, or shall carry any gunpowder at a place or in a manner not authorized by such certificate, such steam vessel shall be liable to a penalty of $100 for each offense.

Section 4463 of the Revised Statutes reads in part as follows:

SEC. 4463. Any vessel of the United States subject to the provisions of this title, or to the inspection laws of the United States, shall not be navigated unless she shall have in her service and on board such complement of licensed officers and crew as may, in the judgment of the local inspectors who inspect the vessel, be necessary for her safe navigation. The local inspectors shall make in the certificate of inspection of the vessel an entry of such complement of officers and crew, which may be changed from time to time by indorsement on such certificate by local inspectors by reason of change of conditions or employment. Such entry or indorsement shall be subject to a right of appeal, under regulations to be made by the Secretary of Commerce, to the supervising inspector, and from him to the Supervising Inspector General, who shall have the power to revise, set aside, or affirm the said determination of the local inspectors.

If any such vessel is deprived of the services of any number of the crew without the consent, fault, or collusion of the master, owner, or any person interested in the vessel, the vessel may proceed on her voyage if, in the judgment of the master, she is sufficiently manned for such voyage: *Provided*, That the master shall ship, if obtainable, a number equal to the number of those whose services he has been deprived of by desertion or casualty, who must be of the same grade or of a higher rating with those whose places they fill. If the master shall fail to explain, in writing, the cause of such deficiency in the crew to the local inspectors within 12 hours of the time of the arrival of the vessel at her destination, he shall be liable to a penalty of $50. If the vessel shall not be manned as provided in this act, the owner shall be liable to a penalty of $100 or, in case of an insufficient number of licensed officers, to a penalty of $500. * * *

Section 4464 of the Revised Statutes reads as follows:

SEC. 4464. The inspectors shall state in every certificate of inspection granted to steamers carrying passengers, other than ferryboats, the number of passengers of each class that any such steamer has accommodations for and can carry with prudence and safety.

Section 4465 of the Revised Statutes reads as follows:

SEC. 4465. It shall not be lawful to take on board of any steamer a greater number of passengers than is stated in the certificate of inspection, and for every violation of this provision the master or owner shall be liable, to any person suing for the same, to forfeit the amount of passage money and $10 for each passenger beyond the number allowed.

Vessels admitted under the act are not subject to the foregoing inspection laws of the United States, therefore they are not required to have a certificate of inspection and they can carry an unlimited number of passengers without being liable to any penalty, as there would be no violation of law as provided in the two preceding sections.

Section 4488 of the Revised Statutes reads, in part, as follows:

SEC. 4488. Every steamer navigating the ocean or any lake, bay, or sound of the United States shall be provided with such numbers of lifeboats, floats, rafts, life preservers, line-carrying projectiles and the means of propelling them, and drags as will best secure the safety of all persons on board such vessel in case of disaster; and every seagoing vessel carrying passengers, and every such vessel navigating any of the northern or northwestern lakes, shall have the lifeboats required by law, provided with suitable boat-disengaging apparatus, so arranged as to allow such boats to be safely launched while such vessels are under speed or otherwise, and so as to allow such disengaging apparatus to be operated by one person, disengaging both ends of the boat simultaneously from the tackles by which it may be lowered to the water. And the board of supervising inspectors shall fix and determine, by their rules and regulations, the character of lifeboats, floats, rafts, life preservers, line-carrying projectiles and the means of propelling them, and drags that shall be used on such vessels, and also the character and capacity of pumps or other appliances for freeing the steamer from water in case of heavy leakage, the capacity of such pumps or appliances being suited to the navigation in which the steamer is being employed. Every vessel subject to the provisions of this title shall, while in operation, carry one life preserver for each and every person allowed to be carried on said vessel by the certificate of inspection, including each member of the crew—

And so forth.

Section 4489 of the Revised Statutes reads as follows:

SEC. 4489. The owner of any such steamer who neglects or refuses to provide such lifeboats, floats, rafts, life preservers, line-carrying projectiles and the means of propelling them, drags, pumps, or appliances as are under the provision of the preceding section required by the board of supervising inspectors, and approved by the Secretary of Commerce, shall be fined $1,000.

There being no certificate of inspection designating the number of persons allowed to be carried on board any vessel admitted under the act, or the number of lifeboats, floats, rafts, life preservers, line-carrying projectiles and the means of propelling them, drags, pumps, or appliances as are under the provision of section 4488 required by the board of supervising inspectors and approved by the Secretary of Commerce, therefore the penalty as prescribed in the preceding section, 4489, becomes null and void for the term of two years on any vessel admitted under the act.

The vessels that are admitted under the act, not being subject to the inspection laws of the United States for the term of two years from the date of the Executive order, are allowed to be navigated with such complement and kind of a crew as may in the judgment of the owner or agent of the vessel be necessary for her navigation, without regards to safety, as provided for

in section 4463, and in case such vessels are navigated with an insufficient number of officers and crew, the owners are not liable to any of the penalties as prescribed in the aforesaid section.

The vessels that are built in the American shipyards by American mechanics, manned by American officers and crews, must be inspected annually by the United States local inspectors of steam vessels, and they must have on board and in their service such complement of licensed officers and crew as may in the judgment of the local inspectors who inspect the vessel be necessary for her safe navigation. They must also comply with all laws and the rules and regulations as laid down by the Steamboat-Inspection Service, when approved by the Secretary of Commerce, as regards to life-saving appliances and all of the other provisions as prescribed in sections 4417, 4418, 4421, 4423, 4424, 4463, 4464, 4465, 4488, and 4489 of the Revised Statutes. It is very essential in the interest of safety that they should be required to comply with all of the provisions contained in those sections, and also the rules and regulations as laid down by the Steamboat-Inspection Service, in order to protect the lives of the traveling public, saying nothing about the lives of the crew.

It only shows the inconsistency on the part of our Government in making fish of one and flesh of the other. There is no justice or cause which warrants such proceedings in the admitting of foreign-built vessels to American registry without being inspected, thereby endangering the lives of the public as well as those of the crew.

The next subject I will discuss is one that directly interests the idle masters, mates, and engineers of our sea-going mercantile marine service, and also their families; it also concerns every citizen of this country. I want to know, and what the public has a right to know, is what the emergency consisted of that made it necessary for the President to issue an Executive order, on the 4th day of September of this year, suspending the law that prescribes "that all the watch officers of vessels of the United States registered for foreign trade shall be citizens of the United States"; and the reason for the suspension at the same time of the law requiring survey, inspection, and measurement by officers of the United States of foreign-built vessels admitted to American registry under the act approved August 18, 1914.

I will first take up the question of the suspending of the law by Executive order as regards to citizenship of watch officers, and in doing so would call the Members' attention to page 14352, of the RECORD of August 3, during the debate on the so-called ship registry bill in reference to the following questions and answers:

Mr. MCKENZIE. Will the gentleman yield?
Mr. ALEXANDER. With pleasure.
Mr. MCKENZIE. Suppose that a vessel is owned by American citizens with a British captain and a Chinese crew. Under this proposed law could the President of the United States suspend the rule and permit that vessel to be registered and continue in the service with the British captain and the Chinese crew in competition with other American vessels that are now handicapped by the laws we have?
Mr. ALEXANDER. If we passed this act, we could.
Mr. STEVENS of Minnesota. Is there any limit to it?
Mr. ALEXANDER. It is a temporary measure—the provision for watch officers—and I hope the President will have no occasion to invoke the power vested in him under this act to suspend the provisions of section 4131, Revised Statutes, as amended by section 1 of the act of May 28, 1898, because, as I have said, I have started the inquiries which I hope will develop the fact that it will not be necessary to suspend the provisions of existing law in that regard.

Knowing Mr. ALEXANDER as I think I do, I doubt if he would have been so anxious for the passage of the bill if he could have foreseen that the President would, immediately he was given the power to do so, suspend the provisions of the law requiring inspection of those ships and requiring that their officers should be American citizens.

I want to state, in all sincerity, that the question propounded by the gentleman from Illinois [Mr. MCKENZIE] was well put and timely. The Executive order suspending the law for seven years opens our doors to such an extent that it would be possible for a so-called American corporation to be organized with a dummy board of directors and purchase a lot of old hulks, and then put them temporarily under the Japanese or Chinese flag in order to officer and man them with Asiatics, then transfer them with their officers and crew to the American flag, and sail them for seven years on the seven seas as floating monuments to the principles of Wilsonian Democracy as applied to the upbuilding of the American merchant marine.

Until the promulgation of the Executive order by the President dated September 4, 1914, and subsequent to December 31, 1792, or for a period of 122 years, no American ship had cleared from an American port whose master was not a citizen of the United States. It remained for President Wilson's administration to intrust the honor of the American flag flying over an American ship into the custody of an alien master and a citizen of a foreign country. Under this order not one of the officers or crew is required to be an American citizen.

The bill was enacted as a temporary and emergency measure, and provided that the President could, when in his discretion the needs of foreign commerce required, suspend the navigation laws that prohibit the employment of foreigners as watch officers on American ships and permit of their employment on foreign-built ships admitted to American registry under the provisions of this act. It seems strange that the President has not taken into consideration the supply of American officers who are ready and prepared and qualified to fill these places and strictly observed the spirit of the act as a temporary and emergency measure.

In looking over the RECORD of August 3, page 14353, I find in the statement made by the gentleman from Missouri [Mr. ALEXANDER] the following quotation from the report of the Commissioner of Navigation (p. 14366 of the RECORD) and from press reports:

Our mariners have had few opportunities to qualify themselves for the command of trans-Atlantic steamships, and it is not surprising, therefore, that there are relatively few men qualified by experience to take command as master or first or second officer—mates of the large steamers which carry our cotton and wheat to Europe. This situation would be serious at any time. It is doubly serious in a time of pending general European conflict, as at present. You have probably noted in the newspapers that even on the British coast the lights on the lightships and lighthouses have been extinguished and buoys and other aids to navigation removed. The press reports may not be correct to-day, but these precautions will undoubtedly be taken very soon if the war is general. Under these conditions ships ought to be trusted only with captains and officers familiar by experience with European coasts and ports, and, of course, shipowners will not risk their vessels with others in command.

In looking over the New York Nautical Gazette of September 16, 1914, under the heading of "Neptune Association of Licensed Masters and Mates of Ocean and Coastwise Steam Vessels," I find the following:

The American-built, commanded, and officered steamship *Creole* arrived home at the port of New York Friday, September 11, after making a voyage across the Atlantic to England and return. Quoting from the New York Herald, Saturday, September 12: "Capt. Benjamin F. Jacobs was very enthusiastic yesterday over the way the ship acted in the two crossings."

WAS VACATION FOR CAPTAIN.

"Though built for the coastwise trade exclusively," said he, "my little ship behaved splendidly. Why, after making coastwise voyages for 21 years, and working in and out of the treacherous coast currents, the Atlantic trip has been a perfect vacation to me."

I ask the House to compare the statement made by Capt. Jacobs with the opinion expressed by the Commissioner of Navigation, that the situation would be serious at any time, and doubly serious at a time of pending general European conflict, for the United States to be compelled to depend on there being a sufficient number of American citizens possessing the necessary experience and ability to act as commanders or officers of the large trans-Atlantic steamships that carry our cotton and wheat to Europe.

I also find under the same heading and on the same date—September 16, 1914—a copy of a letter which was sent to "the Hon. Dudley Field Malone, United States collector of customs, Customhouse, New York," and signed "Robert H. Cowan, secretary-counsel Neptune Association." As it is a very lengthy letter, I will quote only a part of three different paragraphs, which read as follows:

SIR: I respectfully refer to the announcement made from your office on Friday, August 7, about 5 p. m., in which you requested at once the names of all licensed officers, masters, and engineers available for service at once on vessels of the United States engaged in foreign trade, men who are competent to navigate their ships to Asia, Australia, and other foreign countries.

I respectfully call your attention to the fact that I actually obtained the names of 105 masters and officers, giving plainly with each officer's name his age, address, grade of license, also the entire sea experience, as well as the entire experience in the various capacities in which he had had service. These separate and individual records I deposited with Mr. Stuart, of your office.

I respectfully call your attention to the fact that among the 105 separate records, as above, were the names of 57 men who not only hold masters' licenses for ocean steam vessels but had actually had service and had acted in the capacity of master in foreign-going steamships engaged in voyages to any and all ports of the world.

The following telegram was received by Capt. William A. Wescott and given to the gentleman from Missouri [Mr. ALEXANDER] on the 3d day of August, 1914:

SAN FRANCISCO, CAL., *August 1, 1914.*

Capt. W. A. WESCOTT,
National Hotel, Washington, D. C.:

Fifty-three vessels laid up; can furnish 250 licensed deck officers at 2 hours' notice from here; from information received, 100 more from Puget Sound; about 50 from San Pedro.

Capt. W. T. DUERRBECK,
Secretary Masters, Mates, and Pilots of the Pacific.

I desire to state that the above telegram was inserted in the RECORD on August 3 by the gentleman from Missouri [Mr. ALEXANDER], and appears on page 14354 of the RECORD.

In reply to an inquiry made by Hon. E. F. Sweet, Acting Secretary of Commerce, on the 7th of August, Collector of the Port Davis, of San Francisco, reported that there are 500 unemployed licensed masters, mates, chief engineers, and assistant engineers in San Francisco who are immediately available for service on ocean steamers.

There are 250 idle masters and mates in San Francisco anxious to accept positions. Below deck the available men are as follows: One hundred and twenty-five chief engineers, 100 first assistant engineers, 20 second assistant engineers, and 20 third assistant engineers. In addition to this number there are known to be available 100 unemployed deck officers at Puget Sound and 50 unemployed deck officers at San Pedro.

Of the chief mates at present actively employed on American ships in the various trades at least 200 hold unlimited masters' license for any and all oceans.

The following is a copy of a letter which was written by Capt. Wescott to the President of the United States:

NATIONAL HOTEL,
Washington, D. C., August 22, 1914.

Hon. WOODROW WILSON,
President of the United States,
Washington, D. C.

HONORABLE SIR: On behalf of the Ocean Masters, Mates, and Pilots of the Pacific, and also the Neptune Association of New York, whom I have the honor of representing, do most earnestly and respectfully request that there be no suspension of the provision of law prescribing that all the watch officers of vessels of the United States registered for foreign trade shall be citizens of the United States.

Mr. President, there are at present available no less than 600 idle ocean masters, mates, and second mates holding an unlimited any-ocean United States certificate of license who are citizens of the United States.

We therefore most earnestly and respectfully request that the idle licensed officers in the United States who are citizens of this great country be given a chance to make an honest living for themselves and families. I am, honored sir,

Yours, faithfully,

WILLIAM A. WESCOTT,
President Masters, Mates, and Pilots of the Pacific,
and representing the Neptune Association.

I will now quote a very short paragraph from a personal letter which Capt. Wescott received from Mr. Bruce Gibson, business manager of the Marine Engineers' Beneficial Association, No. 35, of San Francisco, Cal., dated August 25, 1914, which reads as follows:

Shipping is paralyzed here—steamers laid up in numbers—and it looks bad for this winter. We have a large number of men out of work, and I do not know what some of them are going to do.

BRUCE GIBSON.

The Department of Commerce had on file on the 22d day of August, 1914, reports received from collectors of customs from the principal ports on the Atlantic and the Pacific, and those reports show that there are over 2,000 idle masters, mates, and engineers that are and were available for service on vessels engaged in the foreign trade at the same time the so-called ship-registry bill was passed by the House. And I want to say to you, and I believe that you will agree with me, that there was no shortage of certificated masters, mates, and engineers, and that the law that prescribes that all of the watch officers on vessels of the United States engaged in foreign trade shall be citizens of the United States should not have been suspended.

By the statement of the Chief of the Bureau of Navigation, quoted on the floor of the House during the debate on the bill, that the certificated masters, mates, and second mates of our merchant service were probably not qualified to command and officer vessels that are engaged in the foreign trade, and by the action of Congress and the President of the United States admission has been made to the world that the certificate of license issued by the United States Government to masters, chief mates, and second mates are not worth their face value. I do not believe it. The certificate of license that is issued to an applicant by the United States local inspectors of steam vessels after they have passed their examination states very plainly on what waters the holder is qualified to serve, the size of the vessel he is qualified to officer, and the position he is qualified to hold.

I have prepared a list of 109 American ocean steamships that range in size from 4,033 to 20,718 gross tons register which are officered by American masters, mates, and engineers.

I prepared the list for the purpose of comparison with the list of foreign steamships that was inserted in the RECORD by the gentleman from Alabama [Mr. UNDERWOOD] as ships that would more than likely take advantage of the act and obtain American registry for their vessels, for they have qualified officers on deck and in the engine room, in the opinion of the administration, to navigate them, so that our cotton and wheat can be carried to Europe with safety; and also to bring bananas from the Central and South American ports to the ports of the United States.

I note in the list of the 56 vessels that the gentleman from Alabama submitted that 41 of them belong to the United Fruit Co.—British—and they range in size from 2,294 to 7,783 gross tons register, and are of an age from 1 to 10 years, excepting 2 of them which are 21 and 34 years old, respectively. I also note that 5 of the 56 vessels submitted by the gentleman from Alabama belong to the Red Star Line—Belgium—and they range in size from 7,660 to 18,694 gross tons register, and they are from 6 to 21 years old. The other 11 ships of the 56 submitted belong to the New York & Pacific Steamship Co. (Ltd.)—British—and their tonnage ranges from 3,040 to 7,040 gross tons register, and they are from 1 to 21 years old.

In the following list of American steamships which I am submitting, 6 of them are engaged in the Pacific and the oriental trade, 6 of them are engaged in the trans-Atlantic trade, 2 in the San Francisco-Australian trade, and approximately 30 to 40 in the coast-to-coast and Honolulu trade, and the balance in the coastwise trade on the Pacific and on the Atlantic, and also in the Cuban, Porto Rican, and at times in the Central and South American trade.

List of foreign steamships of over 4,000 gross tons register that was submitted by the gentleman from Alabama [Mr. UNDERWOOD]—their ages are from 1 to 14 years, excepting the *Gothland*, which is 21 years:

[1] Indicates passenger vessels. [2] Indicates freight vessels. [3] Burned at Watling Island, Bahamas, September 23, 1914.

The foregoing list comprises 12 sailing vessels of from 291 to 2,577 gross tons, 2 barges of from 1,934 to 1,994 gross tons, 19 passenger steamers of from 4,937 to 7,796 gross tons, 25 freight steamers of from 2,450 to 6,350 gross tons, 4 steamers not classified of from 2,293 to 3,284 gross tons, a total of 62. Many of them are old vessels, and all of them, including the passenger ships, are exempt from inspection, and all are officered and manned by foreigners. I apprehend that no one will have the temerity to contend that there are not a sufficient number of idle American officers competent and experienced enough to safely navigate those small and medium sized ships. The transfer of the registry of a ship from a belligerent to that of a neutral nation is always looked on with suspicion and regarded as a subterfuge and is in conflict with international law. The ship-registry law of August 18, 1914, and the Executive order of September 4, 1914, makes it possible for a speedy old hulk of belligerent registry to retain her full complement of foreign officers and crew and be admitted to American registry and be used under the protection of the American flag as a blockade runner carrying contraband of war. Under the war-risk insurance act of September 2, 1914, the United States might be made responsible to her owners for the value of the ship and cargo should she be seized by a belligerent power. The acts of such foreign-officered ships sailing under American registry might be construed as prima facie evidence of our violation of neutrality. The following news item published in the Washington Post of October 7, 1914, is an admission that foreign vessels seek American registry in the hope of avoiding the danger of capture by the European powers engaged in war.

SIXTY SHIPS TAKE REGISTRY—UNITED STATES FLAG GAINS SO FAR UNDER NEW LAW 233,781 GROSS TONNAGE.

Sixty foreign-built vessels, with an aggregate of 233,781 gross tons, have been removed from the danger of capture by the European powers involved in the present war by admission to American registry according to an announcement last night by the Department of Commerce. Fifty-four of the vessels previously sailed under the British flag. Four German vessels and two Belgians complete the list.

An analysis of the list shows that 57 of the vessels are in Atlantic waters, the remaining three being Pacific liners. Nineteen are passenger steamers.

The steamship *Oceana*, with a displacement of 7,796 gross tons, is the largest of the vessels transferred to American registry.

I believe that it is due the public that the people should be told what the emergency was, if any, that made it necessary to suspend by Executive order the United States steamboat-inspection laws for the term of two years from the date of such order on foreign-built ships admitted to American registry and thereby endangering human life. So far as I have been able to ascertain, no such emergency existed and no such emergency exists.

Is it possible that the United States local inspectors of the Steamboat-Inspection Service are also incompetent for the same reasons as the masters and mates, by their lack of opportunity

to qualify themselves in order to inspect such leviathans as those submitted by the gentleman from Alabama [Mr. UNDERWOOD]? I know a great many officers in the Steamboat-Inspection Service, and I have always had the highest regard for their ability and their integrity. To my mind it is almost inconceivable that the United States laws in regard to inspection of ships and citizenship of the watch officers should be suspended. Was it for the purpose of temporarily giving the protection of the flag to the ships of a few American citizens who own foreign vessels, like, for instance, the one who made the statement to a Member of the House of Representatives that if the ship-registry bill passed he would put his vessels under the American flag during the war and then put them back under a foreign flag when the war is over?

Predicating my conclusions on such a statement, it is but fair to assume that that will be the attitude of nearly all owners of foreign vessels, regardless of their citizenship, who are now availing themselves of the benefits accruing from the suspension, by Executive order, of the inspection and watch officers citizenship laws. The fact should also be borne in mind that such suspension will bring untold hardships on those of our citizens of whom there are many capable, competent, and patriotic who ply the seas for a livelihood.

From the days of John Paul Jones American sailors, officers and men, have led the world in ability in the Navy and in the merchant marine. Man for man they are to-day the superiors as navigators of any other seamen in the world, whether it be abaft the mast, in the engine room, or in the forecastle. Man for man and ship for ship our Navy and our merchant marine are unexcelled.

There is no reason why we should not continue to officer our ships with American citizens.

The War Tax and the Farmers.

SPEECH

OF

HON. JAMES C. McLAUGHLIN,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, October 10, 1914.

Mr. McLAUGHLIN. Mr. Speaker, one can not help wondering what the farmers of the United States will say in answer to the demand of the President and this Democratic Congress that the people of the United States shall pay $105,000,000 additional taxes. The farmers are patriotic and public spirited; they are willing to meet every public duty and pay their full share of every tax necessarily laid upon the people of this country. But what will they say and what should they say when they know and appreciate that the immense deficit which they are asked to meet has been caused by Democratic tariff legislation and by immense appropriations?

This burdensome tax of $105,000,000 is being imposed upon the country when business is depressed and while the people in almost every line of industry are threatened with restricted markets and smaller profits and with reduced wages or shorter hours or by loss of employment altogether. Prices of some farm products are higher now than they were before the war in Europe began, but the agricultural schedule of the Underwood law was framed for the purpose of reducing prices of farm products, and if no war had occurred the law would have been effective in that respect; the prices received by farmers for all or nearly all of their products would have been reduced.

The Underwood law was aimed at the farmer. The framers of that law held the farmer responsible for the "high cost of living," about which Democrats talked so much, and in the opinion of Democrats the only way to reduce the cost of living was to put farm products on the free list or greatly to reduce the duties, and permit the crops and products of foreign farms to be brought into this country, to be sold in competition with the crops and products of our farmers.

The report (No. 5) accompanying the Underwood bill (H. R. 3321) says:

> Probably the most striking economic change since 1897 has been the tremendous increase in the cost of living, a situation which has attracted the anxious attention of economists the world over.

And at page 23 says:

> In the effort to relieve the consumer and to mitigate the high and rising cost of living Schedule G, which deals with agricultural products, has been thoroughly revised and important reductions have been made.

The revision and "important reductions" of which the report speaks will be seen by a glance at the following table, which shows changes of the agricultural schedule made by the Underwood law, and shows that farm products are now admitted free of duty or enter at greatly reduced rates:

Article.	Republican law, 1909.	Democratic law, 1913.
Animals:		
Domestic, for human food	20 per cent	Free.
Horses and mules—		
Valued $150 each or less	$30 per head	10 per cent.
Valued over $150 each	25 per cent	Do.
Sheep—		
Domestic, for human food—		
Less than 1 year old	75 cents per head	Free.
One year old or over	$1.50 per head	Do.

Buckwheat	15 cents bushel	Free.
Corn	15 cents bushel	Do.
Corn meal	40 cents 100 pounds.	Do.
Dairy products:		
Butter	6 cents pound	2½ cents pound.
Milk	2 cents gallon	Free.
Cream	5 cents gallon	Do.
Flax, not hackled or dressed	$22.40 ton	Do.
Straw	$5 ton	Do.
Flour:		
Buckwheat	25 per cent	Do.
Rye	½ cent pound	Do.
Cattle:		
Domestic, for human food—		
Less than 1 year old	$2 per head	Do.
One year old or over—		
Valued not over $14 each	$3.75 per head	Do.
Valued over $14 each	27½ per cent	Do.
Eggs of fowls	5 cents dozen	Do.
Hay	$4 ton	$2 ton.
Hemp, raw	$22.50 ton	Free.
Lard	1½ cents pound	Do.
Meats:		
Bacon and hams	4 cents pound	Do.
Fresh beef, lamb, mutton, pork, and veal.	1½ cents pound	Do.
Oats	15 cents bushel	6 cents bushel.
Peas	25 cents bushel	10 cents bushel.
Potatoes, from countries—		
Not imposing duty on United States	do	Free.
Imposing duty on United States	do	10 per cent.
Poultry, live	3 cents pound	1 cent pound.
Poultry, dead	5 cents pound	2 cents pound.
Rye	10 cents bushel	Free.
Straw	$1.50 ton	50 cents ton.
Straw, flax	$5 ton	Free.
Tallow	½ cent pound	Do.
Wheat, from countries—		
Not imposing duty on United States	25 cents bushel	Do.
Imposing duty on United States	do	10 cents bushel.
Wheat flour, from countries—		
Not imposing duty on United States	25 per cent	Free.
Imposing duty on United States product.	do	45 cents barrel (196 pounds.)
Wools, hair of the camel, goat, alpaca, or other like animals:		
Class 1—		
Unwashed wool—		
On the skin	21 cents pound	Free.
Not on the skin	11 cents pound	Do.

The following table shows immense increase of importations of a few of our farm products during 10 months from October 3, 1913, the date the Underwood law went into effect, to June 31, 1914. This invasion of our markets can not be laid to the war in Europe, to which all evils which now beset the Democratic Party and the country are commonly laid.

Products.	Oct. 1, 1912, to July 31, 1913.	Oct. 1, 1913, to July 31, 1914.
Animals	$8,649,917	$23,085,695
Breadstuffs	$13,413,772	$34,926,562
Meat and dairy products	$12,460,501	$40,546,512
Oats	[1] 80,521	[1] 22,522,096
Corn	[1] 285,740	[1] 13,607,768
Potatoes	[1] 450,584	[1] 2,932,782
Wool (8 months)	[2] 112,598,337	[2] 227,928,757

[1] Bushels. [2] Pounds.

Importation of potatoes was not as large as was expected, because a quarantine was declared against Canada and some other countries—from which we might expect large quantities of potatoes—on account of dangerous pests and diseases. During these 10 months importation of potatoes, however, increased from 450,584 bushels to 2,932,782 bushels; but the duty was removed with the expectation and intention of permitting free importation of potatoes from Canada and other potato-growing

countries to the very limit of their capacity; and such importation was prevented only by the quarantine. The Underwood law intended that the American potato market should be supplied by foreign producers. The "potato wart" and the "powdery scab," which attack potatoes of Canada, Newfoundland, Great Britain, and Ireland, and some of the countries of continental Europe saved the farmers of the United States from the loss which the framers of the Democratic tariff law intended should be imposed upon them.

It is true that prices of some agricultural products during the last year have not been much, if any, lower than before tariff duties were removed or reduced, but unusual conditions have operated to uphold prices of such products. For example, the quarantine imposed upon Canada and certain other countries has prevented importation of potatoes from those countries, and the shortage of the world's supply of wool has influenced the price of wool in the United States. And it is also true that many farmers of the United States, remembering the destructive effect of the Democratic free-trade law of 1894, sold their sheep as soon as the Underwood law was passed.

Will anyone say that the importation of potatoes—2,482,191 bushels more than last year—did not keep down the price of potatoes, or that the importation of wool—115,330,400 pounds more than were brought in during the same time under the old law—did not keep down the price of wool? Will anyone try to make farmers believe that prices of their potatoes and wool would not have been higher than they are if these immensely increased importations had not reached our markets to be sold in competition with or to the exclusion of the products of their own farms?

It may be difficult to appreciate the full meaning and effect of importations from foreign countries of 3,000,000 bushels of potatoes, or of 22,500,000 bushels of oats, or of 13,600,000 bushels of corn, or of the other large importations, but no one can fail to grasp their significance if he knows that the corn imported would fill 13,607 freight cars and would make a freight train 103 miles long; that the oats imported would fill 15,015 cars and would make a train 114 miles long; that imported potatoes would fill 4,887 cars and require a train 37 miles long; that imported wool would require 14,254 cars and a train 108 miles long; that is, the amount or quantity of only four of the principal products of the farms of the United States would load 47,763 cars and make a train 362 miles in length.

A glance at these facts and figures will enable farmers of the United States to understand the workings of the Democratic tariff law and the manner and extent of the invasion of their markets by foreign producers.

The demand that the "high cost of living" should be reduced was very strong, and the Democratic Party promised to meet the demand. In framing its tariff bill it evidently believed that prices of farm products were too high and that the profits of the farmers were too large, and that the cost of living should be reduced by placing farm products on the free list or by greatly reducing the duties, thereby opening wide our markets and placing our farmers in competition with farmers of foreign countries. This action was taken in face of the fact that profits of farmers of the United States were, and always had been, small, and in face of the fact that prices received by producers of farm products were but a small part of prices paid by consumers.

The Yearbook of the Department of Agriculture for 1910, page 20, has this paragraph:

> From the details that have been presented with regard to the increase of the prices of farm products between farmer and consumer the conclusion is inevitable that the consumer has no well-grounded complaint against the farmer for the prices that he pays. The farmer supplies the capital for production and takes the risk of his losses; his crops are at the mercy of drought and flood and heat and frost, to say nothing of noxious insects and blighting diseases. He supplies hard, exacting, unremitting labor. A degree and range of information and intelligence are demanded by agriculture which are hardly equaled in any other occupation. Then there is the risk of overproduction and disastrously low prices. From beginning to end the farmer must steer dexterously to escape perils to his profits, and, indeed, to his capital, on every hand. At last the products are started on their way to the consumer. The railroad, generally speaking, adds a percentage of increase to the farmer's prices that is not large. After delivery by the railroad the products are stored a short time, are measured into the various retail quantities, more or less small, and the dealers are rid of them as soon as possible. The dealers have risks that are practically small, except credit sales and such risks as grow out of their trying to do an amount of business which is small as compared with their number.

The above quotation from the Yearbook is brief, but contains much truth, and offers explanation of conditions under which farm products are produced and of manifold difficulties under which they pass from the farm to the retail dealer and ultimately to the consumer.

I wish also to insert a table prepared by the Department of Agriculture showing the proportion of selling prices actually received by the farmer at the time the investigation by the department was made:

Commodity.	Unit of sale.	Producer's share.
		Per cent.
Milk	Quart	50
Butter	Pound	87
Poultry	do	50
Eggs	Dozen	69
Cabbage	Head	48
Do	Pound	65
Celery	Bunch	60
Apples	Bushel	50
Do	Barrel	66
Strawberries	Quart	49
Do	Crate	76
Onions	Peck	28
Do	Barrel	58
Oranges	Dozen	20
Do	Box	59
Oats	Bushel	74
Melons	Pound	50
Parsnips	Bunch	60
Potatoes	Bushel	59
String beans	Barrel	80
Sweet potatoes	do	61
Turnips	Bunch	60
Watermelons	Each	34

The above table, which is correct, I believe, shows clearly the truthfulness of the claim made by farmers that the high cost of living is not to be attributed to them or to excess of profits received by them. The cost of living can not be reduced by exposing the business of farming to such competition as the Underwood law permits.

Taxpayers of the United States have reason for their objection to the "war tax," as it is improperly called, because the tax is unnecessary, or would be unnecessary if reasonable economy were exercised. Appropriations for this fiscal year, already made by Congress, are largely in excess of revenues which can possibly be collected, and, if all money appropriated is used, it will be necessary to meet expenditures either by sale of bonds, as is usual under Democratic administrations, or by special taxes, as is being done now.

As proof of the assertion that appropriations largely exceed the revenues which can possibly be collected, I call attention to the following statement of actual appropriations and estimated receipts for this year:

APPROPRIATIONS.

Agriculture	$19,865,832.00	
Army	101,019,212.50	
Diplomatic and Consular	4,309,856.66	
District of Columbia	12,172,539.49	
Fortifications	6,627,700.00	
Indian affairs	9,771,902.76	
Legislative, executive, and judicial	37,630,229.70	
Military Academy	997,899.54	
Navy	144,868,716.61	
Pensions	169,150,000.00	
Post Office	313,364,667.00	
Sundry civil	110,070,227.39	
Urgent deficiency	17,462,457.78	
Deficiency	5,901,128.83	
Miscellaneous	6,000,000.00	
Permanent annual	131,196,407.00	
Rivers and harbors	20,000,000.00	
War risk insurance	5,100,000.00	
For assistance to Americans in Europe	1,000,000.00	
		$1,120,508,777.26

RECEIPTS.

Customs receipts	261,840,000.00	
Ordinary internal revenue	308,613,000.00	
Corporation and income taxes (if business is good)	78,000,000.00	
Postal receipts	308,000,000.00	
Miscellaneous receipts	71,000,000.00	
		1,027,453,000.00
Deficit		93,055,777.26

The above statement as to receipts is, of course, only an estimate, but it is prepared by reliable, if not official, authority. In a speech in the House September 12, 1914, Hon. JOHN J. FITZGERALD, Democratic chairman of the Committee on Appropriations, gave the estimated receipts as $1,036,000,000, only $8,547,000 more than the above estimate.

While speaking in the House a few days ago, I said the serious predicament in which the Democratic Party is placed on account of these immense appropriations would be amusing if the situation were not so serious.

Appropriations this year reach the enormous sum of $1,120,508,777.26, which is $93,825,895.54 more than the sum appropriated during the last year Republicans were in control of the Government; and this excessive appropriation has been made although only $21,000,000 is appropriated this year for the

Panama Canal, whereas under Republican rule it was necessary to appropriate as high as $48,000,000 for this purpose in a single year, and although it is necessary this year to appropriate $11,150,000 less for pensions than last year.

In the light of present conditions, it is interesting to read the "economy" paragraphs of Democratic national platforms. The Democratic platform of 1908 said:

The Republican Congress in the session just ended made appropriations amounting to $1,008,000,000. * * * We denounce the needless waste of the people's money, which has resulted in the appalling increase, as a shameful violation of all prudent considerations of government and as no less than a crime against the millions of working men and women, from whose earnings the great proportion of these colossal sums must be extorted through excessive tariff exactions and other indirect methods. * * * We demand that stop be put to this frightful extravagance, and insist upon the strictest economy in every department compatible with frugal and efficient administration.

The platform of 1912 said:

We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of the recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a democratic Government and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

In a speech delivered in the House April 10, 1914, Mr. FITZGERALD, Democrat, chairman of the Appropriations Committee, said:

Whenever I think of the horrible mess I shall be called upon to present to the country on behalf of the Democratic Party, I am tempted to quit my place. I am looking now at Democrats who seem to take amusement in soliciting votes on the floor of this House to overturn the Committee on Appropriations in its efforts to carry out the pledges of the Democratic platform. They seem to take it to be a huge joke not to obey their platform and to make ridiculous the efforts of the members of our party who do try to live up to promises they made to the people. * * * They have unnecessarily piled up the public expenditures until the Democratic Party is becoming the laughingstock of the country. * * * Do not continue to vote for these improper and improvident appropriations. Those who propose to continue to do so should at least have the courage openly to assert upon the floor of this House that they believe the professions of the Democratic Party have not been made in good faith, that they can not be carried out, and that we are not entitled to power because of those professions.

In April, Mr. SISSON, of Mississippi, Democrat, member of the Committee on Appropriations, said:

This is the most outrageous and criminally extravagant Congress that ever sat on the American Continent. I want to apologize to the Republicans for having called them extravagant when they were in control of the House. They were modest in comparison with the appropriations that we are now making.

These are not Republican professions or promises of economy in the administration of government, nor have these criticisms been passed upon the present Democratic Congress by Republican Members. The promises of economy were a part of the platform on which the candidates of the Democratic Party ran and are, or were supposed to be, the tenets of their faith in the matter of public expenditures. The speeches criticizing the Democratic majority were made by two prominent members of that party, one the chairman and the other a prominent member of the Committee on Appropriations of the House. It is certainly not necessary for me to say anything myself or to offer further testimony in support of the charge that appropriations made at this session of Congress are very large, that they show inexcusable extravagance, especially at a time when the revenues of the Government are threatened and when the administration is demanding collection of additional revenue by way of special internal-revenue taxes.

I wish to repeat and emphasize what I have heretofore said, that, notwithstanding immense appropriations and failing revenues, there is no good reason for permitting a deficit to arise which will make necessary the passage of this war-tax bill.

It will not be necessary for the departments of Government, for which these immense appropriations have been made, to use all the money provided for them. They can and ought to exercise economy, and by the exercise of economy many, many millions of dollars of the money appropriated will remain in the Treasury. And the Government can recall, as it needs money, the $75,000,000 now on deposit in national banks, placed there by the Secretary of the Treasury ostensibly to "move crops" and to be loaned by the banks for general business purposes. I say "ostensibly" because a very small part of the money has been placed in banks in parts of the country where there is real need of money for moving crops. It is significant that not one dollar of the "crop-moving" money has been deposited in the banks of Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, Pennsylvania, Delaware, Maryland, West Virginia, Ohio, Michigan, Wisconsin, Minnesota, North Dakota, South Dakota, Montana, Utah, Wyoming, Nevada, Idaho, Oregon, California, New Mexico, or Arizona. It might truthfully be said that the Secretary of the Treasury has been unduly liberal to banks in Southern States, but if I were to present all the evidence of favoritism and sectionalism displayed in the placing of this money, more time would be necessary than I am permitted to occupy.

But regardless of the location of the banks in which deposits have been placed and regardless of the purpose for which deposits were made, the money was loaned to the banks at 2 per cent interest, subject to call, and now, in the time of the Government's need, it ought to be returned. The President says the business of the country is in such critical condition—not on account of vicious tariff legislation, which paralyzes industry, but, as he says, "on account of the war"—that it will not be safe to withdraw money from banks; but the Secretary of the Treasury says banks are filled to overflowing; that they are hoarding money, accumulating money far in excess of the requirements of law; that banks, lending the Government's money, are making loans at exorbitant rates of interest—from 6 to 12 per cent—that they are refusing to make loans when good security is offered; that they are doing these things for the purpose of embarrassing the business of the country.

If the Secretary is right, the country will say that the deposits ought to be withdrawn from the banks, and that the Government ought to have its money to be used in meeting the "emergency" which confronts us. If the Secretary is right, the Government, with $75,000,000 of money in banks, subject to call, ought not to think for a moment of imposing special and unusual taxes upon the people. With abundant opportunity to reduce the expenses many millions of dollars, and with $75,000,000 of money in banks, subject to call, a levy of $105,000,000, or any other amount, is absolutely inexcusable.

Democratic Condemnations of Democratic Failures to Keep Democratic Promises—A Democratic Symposium of Democratic Senators and Congressmen on "How Not to Do It," or "If You See It in the Democratic Platform, It Isn't True"—Humiliating Confessions of Democratic Incompetency, "Party Perfidy, and Party Dishonor."

EXTENSION OF REMARKS

OF

HON. ERNEST W. ROBERTS,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, October 10, 1914.

Mr. ROBERTS of Massachusetts. Mr. Speaker, I insert in the RECORD excerpts from remarks made in the Senate and in the House of Representatives by prominent and leading Democratic Senators and Members, fearlessly and honestly condemning the Democratic Party for the failure of that party to keep its solemn promises made to the people in the Democratic platform of 1912.

This Democratic symposium reveals to the country humiliating confessions of Democratic incompetency in general, and of "party perfidy and party dishonor" in particular.

The Democratic Party, for this self-confessed record of abject failure and deception, will receive the just condemnation of an indignant people at the elections to be held on the 3d day of November next.

OUR PLATFORM IS NOT MOLASSES TO CATCH FLIES—WILSON.

Our platform is not molasses to catch flies. It means business. It means what it says. It is the utterance of earnest and honest men, who intend to do business along those lines and who are not waiting to see whether they can catch votes with those promises before they determine whether they are going to act upon them or not.

They know the American people are now taking notice in a way in which they never took notice before, and gentlemen who talk one way and vote another are going to be retired to very quiet and private retreat. (President Wilson, at Washington Park, N. J., Aug. 15, 1912.)

TO REPUDIATE A PLATFORM PROMISE IS WORSE THAN DEFEAT—CLARK.

There are many things worse than being defeated for Congress or defeated for the Speakership or even worse than to be defeated for the Presidency, and one of them is to repudiate the platform on which you are elected. (Speaker CLARK, CONGRESSIONAL RECORD, Mar. 31, 1914.)

BRYAN ON PLATFORM PROMISES.

The representative who secures office on a platform and then betrays the people who elected him is a criminal worse than he who embezzles money.

* * * * * * *

I believe that no man should violate his conscience; but that doesn't mean that he should violate his platform.

* * * * * * *

If a man finds his platform is against his conscience—resign. (Bryan at Harrisburg, May 14, 1913.)

THE BROKEN PROMISE NOT TO INJURE OR DESTROY LEGITIMATE INDUSTRY.

* * * We favor the ultimate attainment of the principles we advocate by legislation that will not injure or destroy legitimate industry. (Democratic platform, 1912.)

SENATOR THORNTON (DEMOCRAT), OF LOUISIANA, ON THE DESTRUCTION OF A GREAT AND LEGITIMATE INDUSTRY BY THE DEMOCRATIC TARIFF LAW.

It has been admitted on the floor of the House of Representatives both by Mr. HARDWICK, chairman of the Subcommittee on Ways and Means that took the first testimony on the subject, and by Mr. UNDERWOOD, the chairman of the full committee that took the last, that free sugar would destroy the Louisiana sugar industry, though both feel justified in their course on sugar because they think the general welfare will be subserved by it.

Aside from these special reasons which would prevent me as a Representative of the State of Louisiana from favoring this new-fangled Democratic doctrine of free sugar, I can say with perfect sincerity that I would feel most hostile to the abolition of the sugar duty, not only because of my well-known and often-expressed views in favor of legislation that would advance the agricultural interests of any part of my country, but because of the tariff policy of the Democratic Party, with which I have been identified since I was old enough to cast my first vote.

An effort has been made, however, on this floor to prove that the Baltimore platform of the Democratic Party calls for free sugar, and to justify this legislation on that ground. This is a very far-fetched conclusion, but some justification must be sought for this sudden departure from "the time-honored and time-justified precedents" of the Democratic Party, and this is a case of "any port in a storm."

If the Louisiana cane and western beet-sugar industry of this country that has been built up under "our system of tariff taxation," and which represents over $100,000,000 of capital invested in factories alone, to say nothing of land, teams, and implements, and which in cultivation and harvesting alone gives employment to more than 200,000 laborers, and directly or indirectly contributes to the support of 2,000,000 people of the United States, is not a legitimate industry, I should like to know what is. (Senator THORNTON, CONGRESSIONAL RECORD, July 31, 1913.)

SENATOR RANSDELL (DEMOCRAT), OF LOUISIANA, PREDICTS THAT THE DEMOCRATIC PARTY WILL HEAR FROM THE PEOPLE IN NO UNCERTAIN TONES FOR DESTROYING LEGITIMATE INDUSTRY.

In conclusion, Mr. President, without claiming the gift of prohpecy, I say unhesitatingly that, in my judgment, before the three years have rolled around which will place sugar upon the free list, dismantle the factories of Louisiana, condemn thousands of people there who are now in easy circumstances to poverty and distress, and bring ruin upon a great many engaged in sugar production in our Western States, Hawaii, and Porto Rico, the Democratic Party will hear from the people of this Nation in no uncertain tones. (Hon. JOSEPH E. RANSDELL, CONGRESSIONAL RECORD, 63d Cong., 1st sess., Sept. 8, 1913.)

THE BROKEN PROMISE TO CRUSH PRIVATE MONOPOLY.

A private monopoly is indefensible and intolerable. We therefore favor the vigorous enforcement of the criminal as well as the civil law against trusts and trust officials and demand the enactment of such additional legislation as may be necessary to make it impossible for a private monopoly to exist in the United States.

We regret that the Sherman antitrust law has received a judicial construction depriving it of much of its efficacy, and we favor the enactment of legislation which will restore to the statute the strength of which it has been deprived by such interpretation. (Democratic platform, 1912.)

SENATOR O'GORMAN (DEMOCRAT), OF NEW YORK, IS NOT INSPIRED BY DEMOCRATS EMPLOYING REPUBLICAN TARIFF ARGUMENTS, AND INQUIRES IF CONGRESS IS NOT DEVOTING ALL OF ITS ENERGILS TO THE PROTECTION OF "SPECIAL INTERESTS."

Mr. O'GORMAN. Mr. President, the character of the discussion in the Senate to-day might very well suggest the inquiry as to whether the Congress of the United States is not devoting all of its energies to the protection of special interests rather than to the promotion of the general welfare. That question must suggest itself to every citizen in the country who takes note of what we are doing.

* * * I could scarcely believe my ears and my eyes to-day on hearing Senators professing allegiance to the Democratic creed paraphrasing every stock argument that has been made by Republicans for 20 years back in support of the protective tariff. It is not an inspiring sight to see Democrats employ the arguments which have been used during all these years by Republicans in support of the repudiated, discredited, and un-American system of protection.

* * * But I beg to remind the Senators that when they were really orthodox in their Democracy a year ago in passing the tariff law they found no hesitation in putting sugar on the free list, even though it inflicted a loss upon the industries of the State of Louisiana of $40,000,000. It all depends upon whose ox is gored. Sometimes principle is thrown to the winds and men abandon high purpose and find refuge in expediency. (Hon. JAMES A. O'GORMAN, CONGRESSIONAL RECORD, Aug. 17, 1914.)

SENATOR REED (DEMOCRAT), OF MISSOURI, LIKENS THE SPIRIT OF REPUBLICANS WHO PASSED THE ANTITRUST LAW TO THAT OF THE EAGLE, AND THE SPIRIT OF HIS DEMOCRATIC COLLEAGUES TO THAT OF THE BARNYARD FOWL.

Well, old John Sherman and the Republicans of that day did pass that law. Their "little fingers were bigger than our loins." Theirs was the spirit of the eagle, ours that of the barnyard fowl. "Be careful, do not let it be proven in evidence that a man has plead guilty to violating the Sherman law." So says the worthy conferees. (Senator JAMES A. REED, Sept. 28, 1914, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 17294.)

SENATOR MARTINE (DEMOCRAT), OF NEW JERSEY, DECLARES THAT "SOME INFLUENCE, UNCANNY, DANGEROUS," CHANGED THE "ANTITRUST BILL" UNTIL IT TENDS "TO ADVANCE THE SUPREMACY OF GIANT MONOPOLIES" WE "HAVE PLEDGED OURSELVES TO DESTROY."

* * * I oppose this measure because I believe that some influence—I can not say what influence, but some influence, it seems to me uncanny, dangerous to the Republic—has changed the text and character of the bill until it does not stand for the smaller man or the middle man, but tends to advance to further supremacy the giant monopolies that you and I, in both platforms, have pledged ourself to destroy, and for whose destruction these many years we have struggled. (Hon. JAMES E. MARTINE, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 17696.)

CONGRESSMAN WITHERSPOON (DEMOCRAT), OF MISSISSIPPI, COULD NOT SURRENDER HIS CONVICTIONS TO VOTE FOR A BILL TO INCREASE THE MONOPOLY OF MONEY "BECAUSE SOMEBODY TOLD ME TO DO IT."

* * * To vote for a bill which increases the monopoly of money meant a surrender of all my conceptions of the functions of money and banks and the abandonment of all my convictions as to the political evils of the day and of the proper remedy therefor. I could not do this because somebody told me to do it. (Hon. S. A. WITHERSPOON, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 1733.)

SENATOR VARDAMAN (DEMOCRAT), OF MISSISSIPPI, DENOUNCES THE APPOINTMENT BY PRESIDENT WILSON OF THOMAS D. JONES TO THE FEDERAL RESERVE BOARD AS AN "ACT THAT CAN NOT BE DEFENDED BEFORE THE AMERICAN PEOPLE."

* * * No; I have no objection to the man personally, but his mental attitude, his "big-business" morals totally unfit him for the great constructive, altruistic work to which the President would call him.

The most iniquitous, obnoxious, outrageous, indefensible, predatory trust in all America, a trust that the national Democratic organization denounced, a trust that has laid its predatory hand upon the earnings of every farmer in this country, a trust that we promised as a national political organization to destroy—the International Harvester Trust—we are now to take one of the favorite directors of that iniquitous court-denounced concern and put him at the head of the Federal Reserve Board, or a member of it, which is to prescribe the rules and make the laws for the Government and control of the great banking system of America, which was originally designed to take the money of the country out of the hands of the Money Trust. This is an act that can not be defended before the American people. To my mind it involves a violation of our plighted faith as a party to the people.

* * * My vote against the nomination can not be taken as an affront to the President. It might be taken as a declaration of senatorial independence and intellectual self-respect, which I submit would not be out of place now, but it is not in any respect an affront. (Hon. J. K. VARDAMAN interview in the Washington Post, July 22, 1914.)

SENATOR THORNTON (DEMOCRAT), OF LOUISIANA, SAYS THE SUGAR TRUST, THROUGH "GRATITUDE" OR "SELF-INTEREST" WILL CONTRIBUTE HEAVILY TO THE DEMOCRATIC CAMPAIGN FUND.

The report says "the industrial position of refining requires primary consideration."

Certainly, in so far as the position of the eastern cane-sugar refiners is concerned, they received "primary consideration" in the last sugar-tariff bill and in the present one. They have been given all they asked, and they could not well expect more.

This is the same Mr. Claus Spreckels who contributed $5,000 to the Democratic campaign fund last year, just 50 times what I felt able to contribute, and then compelled to give it in two monthly instalments; but he had a great special interest to be subserved by the success of the Democratic Party, while I had only the general interest of a citizen.

Moreover, he naturally felt sore against the Republican Party, it being through that party he had been sued to return to the Government $119,000 of the sum it claimed his company had defrauded it out of through false sugar weights, as has been shown by my colleague, and besides he knew he could not expect free sugar from the Republican Party. How much more was subscribed by the Sugar Trust under various names I do not know.

It can safely be assumed that these eastern refiners will contribute heavily to the next national Democratic campaign fund, for if gratitude does not compel them to do so, self-interest certainly will. (Senator THORNTON, CONGRESSIONAL RECORD.)

THE BROKEN PROMISE TO KEEP EACH GREAT BRANCH OF GOVERNMENT WITHIN ITS OWN BOUNDS. (EXECUTIVE DICTATION.)

We believe in the preservation and maintenance in their full strength and integrity of the three coordinate branches of the Federal Government—the executive, the legislative, and the judiciary—each keeping within its own bounds and not encroaching upon the just powers of either of the others. (Democratic platform, 1912.)

SENATOR O'GORMAN (DEMOCRAT), OF NEW YORK, REBELS AT EXECUTIVE DICTATION TO CONGRESS AND SEES "GRAVE PERIL" IN IT THAT MAY PRODUCE A "NATIONAL CATASTROPHE."

Those who say we must act because the President so advises have a very erroneous conception of the senatorial office. They forget our powers and responsibilities, as well as the limitation imposed by the Constitution on the Executive. We are too important a branch of the Government to allow our action to be controlled by the request, caprice, or dictation of any other branch of the Government.

Of all the departments the Senate is the only body possessing legislative, executive, and judicial functions. With the House we legislate; with the President we share the duty of making appointments and adopting treaties; and in the impeachment of public officers we perform judicial functions. I shall never tolerate the degradation of the Senate. I shall never consent to making it subordinate or subject to another branch of the Government. The President is discharging his duty as he sees it. He has his duties to perform under the Constitution and I have mine. No one impugns his honor or patriotism. I simply challenge his judgment. It can not be vindicated, and posterity will condemn it.

* * * * * * *

If the Congress of the United States is to vote blindly with regard to great public questions, trusting alone to the Executive, and acting on his judgment, whether right or wrong, we invite a danger which may involve this country in grave peril and which may at any time produce a national catastrophe.

No Senator questions the patriotism and high purposes of the President, but if legislation is to be made dependent upon his will alone, no one can predict the mischief to which such a precedent will expose this Government in future years. The welfare of one hundred millions of freemen can not be dependent upon the judgment of one man. For

the making of the laws of the Nation Congress is responsible, and this responsibility can not be evaded. The fathers of the Republic wisely placed a limitation on the power of the Executive, and these limitations can not be disregarded without doing violence to the Constitution which we have all solemnly sworn to uphold. (63d Cong., 2d sess., CONGRESSIONAL RECORD, p. 8539.)

SPEAKER CLARK REFUSES TO BE A "RUBBER-STAMP" REPRESENTATIVE, AND SAYS THE PRESIDENT'S LEADERSHIP HAS ITS LIMITATIONS.

I assume that every Member will vote honestly the way dictated by his intellect and his conscience; but why should I be denied the same privilege? No man here should be a "rubber-stamp" Congressman. I refuse absolutely to be either a "rubber-stamp" Representative or a "rubber-stamp" Speaker. [Applause.] If I did, you would have no respect for me. I stand for the dignity, the privileges, the immunities, the prerogatives, and the good name of the House of Representatives. I do not want to see this House degraded by passing, right or wrong, without any tenable reason, a bill which reverses our solemnly recorded action of two years ago, and which the Democrats indorsed at Baltimore. * * *

* * * * * * *

One of the wisest things the fathers did was to distribute the powers of government among three departments—legislative, judicial, and executive; and they endeavored to so arrange things that no one department should encroach upon the prerogatives of the others.

Under this system of checks and balances certain duties are devolved upon the President which he is sworn to discharge, and, truth to tell, President Wilson shows no reluctance in discharging his duties and exercising his powers to the utmost.

When he was elected governor of New Jersey he declared that he had been elected leader of the people of that State. When he was elected President he declared that he had become, ipso facto, leader of the people of the United States. In both declarations he was correct, but even leadership has its limitations.

I am willing to follow where he leads so long as he is in the White House and so long as he does not ask us to repudiate a plain platform declaration, and there I draw the line.

Under our system a national convention is the grand inquest of a political party, the highest authority for the declaration of party principles, higher than President or congressional caucuses; indeed, higher than President and congressional causes combined. There is no question about that.

The fathers also devolved upon Congress certain duties which we are sworn to discharge faithfully and well, duties which we can not shirk or fail to discharge without self-stultification and the condemnation of the people and of our own consciences.

The President discharges his duties. The question is, Have we the wisdom, the courage, and the patriotism to discharge ours? If not, we should make way for men imbued with the spirit of '76, to the end that we may transmit our priceless heritage of liberty to our children and our children's children unimpaired. (Speaker CLARK, CONGRESSIONAL RECORD, Mar. 31, 1914.)

CONGRESSMAN MOON (DEMOCRAT), OF TENNESSEE, BECOMES IMPATIENT OF EXECUTIVE CONTROL OF CONGRESS AND THE DICTATION OF A DEPARTMENT.

I do not know the origin of that objection. It has been stated upon the floor of this House and elsewhere that the President was utterly opposed to it, and therefore the Members under his direction and control have offered opposition before the Committee on Rules, or before the Democratic portion of it, to the consideration of this question. I do not know whether that is true or not. I am inclined to think that perhaps it is not true. I hope that the President of the United States has not descended to the point where he will demand, as the Executive of this Government, that men shall vote in accordance with his will and not in accordance with their own on this floor. I can not believe that to be true.

But, sir, there have been other influences. There is nobody in public life that I think more of, personally, than the Postmaster General. He is a most estimable, conscientious, and able man, and he has made a splendid Postmaster General, and I have upheld him in the past and propose in the future to uphold and sustain him wherever I can. But I think that when we consider the differences between the coordinate branches of this Government, the power of each, and the necessity of each to refrain from interfering with the functions of each other under the Constitution, the Postmaster General made a slight mistake when he addressed an open letter to me, as chairman of this committee, in opposition to that section. It was well that he might voice to me personally or by letter, or to members of the committee, his objection; but when that objection has gone so far that the Committee on Rules, or the Democratic part of it, shall make a visit to him and take the dictation of the department and decline to report a rule here, it is going a little further than I am willing to see a Democrat or anybody else go.

* * * Let me tell you that no President, however great, however powerful, can, for the purpose of enforcing his policies, directly or indirectly, for a moment attempt to influence, according to his will, another coordinate branch of the Government, without bringing his administration into disrepute.

* * * The great questions upon which the battle between the parties was fought, in my opinion, had no more effect than that one proposition that the Government of the people of the United States was being administered by one man instead of one executive, one legislative, and one judicial branch of the Government.

* * * * * * *

Whether there is any merit in the proposition or not, we must preserve the integrity, the dignity, and power of the legislative branch of the Government or you will sink lower in the estimation of a great and virtuous people than you are now. (Hon. JOHN A. MOON, CONGRESSIONAL RECORD, 2d sess. 63d Cong., pp. 2279, 2280.)

SENATOR SHIELDS (DEMOCRAT), OF TENNESSEE, AGAINST A "CHANGE OF FRONT" AND "REPUDIATION" OF THE DEMOCRATIC DOCTRINE OF STATE RIGHTS DECLARED FOR IN THE DEMOCRATIC PLATFORM.

And the last announcement of the party, in the platform adopted at the convention held at Baltimore in 1912, is in these words:

"Believing that the most efficient results under our system of government are to be obtained by the full exercise by the States of their reserved sovereign powers, we denounce as usurpation the efforts of our opponents to deprive the States of any of the rights reserved to them and to enlarge and magnify by indirection the powers of the Federal Government."

* * * It is now proposed that the Senate, in which the Democratic Party has a majority and under a Democratic administration, enact a law controlling the nomination of candidates for the office of Senator to represent the several States, and thus go far beyond anything that has heretofore ever been even proposed in the interference of the domestic and local affairs of the States. It remains to be seen whether Senators, whose predecessors fought such measures for more than half a century, will change front upon this question, and whether the Democratic Party will repudiate its doctrine that "the Federal Government is one of limited powers, derived solely from the Constitution," and that it is "inexpedient and dangerous to exercise doubtful constitutional powers." (Hon. JOHN K. SHIELDS, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 3412.)

THE BROKEN PROMISE TO MAKE PUBLIC THE RECOMMENDATIONS ON WHICH PRESIDENTIAL APPOINTMENTS ARE MADE.

We commend the Democratic House of Representatives for extending the doctrine of publicity to recommendations, verbal and written, upon which presidential appointments are made. (Democratic Platform, 1912.)

NOTE.—On the vote on the Senate amendment striking out the Cullop amendment, providing for publicity of judgship indorsements, the yeas were 145, nays 137. One hundred and one Democrats voted against publicity. (CONGRESSIONAL RECORD, Feb. 9, 1914, p. 3348.)

CONGRESSMAN SAUNDERS (DEMOCRAT), OF VIRGINIA, ON THE "PUBLICITY" PLANK, SAYS DEMOCRATS ARE TOO READY TO ABANDON THEIR PRINCIPLES AND PROMISES.

Permit me to call the attention of the Democrats of this Chamber to this feature of our party platform. After commending the Democratic House of Representatives for quite a number of things, the platform proceeded to say:

"We commend the Democratic House of Representatives for extending the doctrine of publicity to recommendations, verbal and written, upon which presidential appointments are made."

Nor was the platform limited to a specific indorsement of the Democratic attitude in this respect, but, in order to assure the country that what we had declared that we would do would be done if the opportunity for action was afforded, we concluded that platform in the following terms:

"Our platform is one of the principles which we believe to be essential to our national welfare. Our pledges are made to be kept when in office as well as relied upon during the campaign, and we invite the cooperation of all citizens, regardless of party, who believe in maintaining unimpaired the institutions and traditions of our country."

After emphasizing the things that we commended in the record of the Democratic Party by reciting them in orderly succession, we held out to the people of the entire United States the assurance that if the opportunity for action was given our party would afford to the world an exemplification of a party that not only made promises with a view to getting into power, but of a party that kept and maintained those promises when once this power was attained.

Mr. CAMPBELL. Will the gentleman yield?

Mr. SAUNDERS. Yes.

Mr. CAMPBELL. Has there been any publicity yet of any indorsements that have been made to the President, either written or verbal, for any appointments that he has so far made?

Mr. SAUNDERS. I do not know whether there has been or not.

Mr. CAMPBELL. I ask for information.

Mr. SAUNDERS. I can only reply that I do not know; but the proposition before the House is one which requires a recession on our part from an attitude which we deliberately and with full knowledge assumed on several occasions. I take it that, unless this House is going to make itself ridiculous before the country, we will not yield merely because the Senate stands pat. No sufficient reasons have been afforded why this recession on our part should take place. I am not discussing in this connection the right of Congress to enact a publicity law, for the simple reason that this ground has been covered heretofore; * * * but confine myself for the present to the proposition that when the Democratic Party takes an attitude in a party platform they have pledged their faith to the people of the United States, and that pledge is not to be lightly withdrawn. There is too much present talk about abandoning and too much apparent readiness to abandon the principles and promises that we included in our platform of 1912. "Pledges are made to be kept when in office as well as relied upon during the campaign." (Hon. E. W. SAUNDERS, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 3345.)

CONGRESSMAN THOMPSON (DEMOCRAT), OF OKLAHOMA, DOES NOT UNDERSTAND HOW DEMOCRATIC LEADERS UNDERWOOD AND PALMER CAN ASK DEMOCRATS TO VIOLATE THE "PUBLICITY" PLANK OF THE DEMOCRATIC PLATFORM.

I note, Mr. Speaker, that the distinguished gentleman from Pennsylvania [Mr. PALMER] and the great leader of this House [Mr. UNDERWOOD] voted in favor of the Cullop amendment at that time. I do not understand with what consistency they can come before the House at this time and ask the Democrats to violate a platform pledge made at the Baltimore convention in favor of publicity. Mr. Bryan, the great leader of our party in three great national campaigns—1896, 1900, and 1908—had this to say with reference to the votes of Democrats on that Democratic amendment offered in the Sixty-second Congress by the distinguished gentleman from Indiana [Mr. CULLOP].

The Cullop amendment reads as follows:

"Hereafter, before the President shall appoint any district, circuit, or supreme judge, he shall make public all indorsements made in behalf of any applicant."

* * * * * * *

The distinguished gentleman from Pennsylvania [Mr. PALMER] and the leader of this House [Mr UNDERWOOD] advise us that we have performed our whole duty in voting in favor of the Cullop amendment during the Sixty-third Congress. I am a little slow to follow the leadership of these distinguished gentlemen, in view of the fact that they have consistently voted against publicity during a Democratic administration, while always voting for it when it was impossible during a Republican administration.

For myself, I do not intend to make a promise to the people before election and refuse to live up to it after the election. I think Mr. Bryan more clearly and forcibly stated this proposition than I possibly can when he said:

"A man who really believes that the President should be permitted to make his appointments on secret recommendations can not be trusted

to represent a Democratic constituency." (Hon. J. B. THOMPSON, CONGRESSIONAL RECORD, 63d Cong., 2d sess., pp. 3346, 3347.)

CONGRESSMEN THOMAS (DEMOCRAT), OF KENTUCKY, AND BURGESS (DEMOCRAT), OF TEXAS, ON THE DEMOCRATIC "PUBLICITY" PLANK AND ITS VIOLATION.

Mr. THOMAS. Will the gentleman yield?

Mr. BURGESS. Yes.

Mr. THOMAS. I want to ask the gentleman if it is not a fact that the Baltimore platform specifically declares that the President shall make public all indorsements for district judge?

Mr. BURGESS. Oh, that has nothing to do with this question. I want to talk about the Alaskan railroad.

Mr. THOMAS. Is it not a fact?

Mr. BURGESS. I will not yield for that.

Mr. THOMAS. In other words, the gentleman will not yield when he is asked about anything that violates the Democratic platform.

Mr. BURGESS. Mr. Chairman, I want to say that every Democrat must be bound by every declaration in his platform. If he is not bound, then nobody is bound; and what is the use of making it? (CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 3496.)

SENATOR JAMES (DEMOCRAT), OF KENTUCKY, AND SENATOR O'GORMAN (DEMOCRAT), OF NEW YORK, CHIDE EACH OTHER ON "DISLOYALTY" TO DEMOCRATIC PARTY OBLIGATIONS.

Mr. JAMES. If I recollect the Democratic national platform of 1912 correctly, there is a provision in it which says that all recommendations of judges made to the President should be made public. My understanding is that a report was made by the committee of which the Senator from New York is a member, which struck that provision from the law; and I should like to ask the Senator whether or not he adhered to the Baltimore platform upon that provision?

Mr. O'GORMAN. * * * It is a poor defense of disloyalty to a party obligation to call attention to the fact that there have been other departures from the pledges made by the party.

Mr. JAMES. It may be a poor defense, but it seems to me that it is quite as poor a defense upon the part of the Senator from New York to cling tenaciously to one principle in the Democratic platform and neglect in legislation other principles in the Democratic platform. (CONGRESSIONAL RECORD, Mar. 27, 1914.)

THE BROKEN PROMISE OF "FREEDOM OF SPEECH" IN THE HOUSE OF REPRESENTATIVES.

It has, among other achievements, revised the rules of the House of Representatives so as to give to the Representatives of the American people freedom of speech and of action in advocating, proposing, and perfecting remedial legislation. (Democratic platform, 1912.)

NOTE.—The Democratic caucus, on April 8, 1913, by a vote of 167 to 84, decided that its sessions should be in secret behind closed doors.

MR. UNDERWOOD, DEMOCRATIC LEADER OF THE HOUSE, PROTESTS AGAINST A DEMOCRATIC "GAG" RULE.

I regret, of course, that I differ with the President of the United States and that I am compelled to differ with many of my colleagues here. But I say to you if either you or I are to make a mistake in this matter let it be one mistake. Let us not to-day turn our faces against the principles we fought for; let us not close our ears against a battle cry that first made a Democratic majority in this House possible.

There are 50 men facing me on the floor of this House to-day whose seats would be occupied by Republicans if it had not been for the fight the Democratic Party made in the Sixty-first Congress against an unreasonable exercise of the power of cloture. * * * The American people believe in what I say, and they showed their belief by electing a Democratic Sixty-second Congress.

The majority of this House has the right to legislate, but the minority has a right to be heard and to propose reasonable amendments. When you deny that right to the minority, you deny it in the face of the action of the constituencies that sent you here. * * * You are asked to foreclose your judgment on one of the most important questions that has ever confronted the American people before you have heard the debate and before you have seen the proposed amendments. You are not only asked to adopt a rule that will pass in this House what the President of the United States asks for, to cut away from our coastwise ships the right of free tolls, but you are asked to foreclose this question as to all shipping for all time to come.

I regret to differ with my colleagues, the men on this side of the House who have upheld my hands. I do not question your honesty, because I know that no man ever faced a set of men who possess more honesty and courage than the men I am facing to-day; but, in my judgment, you are making a serious mistake to adopt this cloture rule, and I would not be worthy to hold your commission as the leader on this side of the House if, believing that you are making a serious mistake, I did not have the courage to stand here and tell you so, in spite of everything. (Hon. OSCAR W. UNDERWOOD, CONGRESSIONAL RECORD, 2d sess. 63d Cong., pp. 2956, 2957.)

SENATOR HITCHCOCK (DEMOCRAT), OF NEBRASKA, BELIEVES THAT THE "DEMOCRATIC CAUCUS HAS DEGENERATED INTO A POLITICAL MACHINE."

To my mind it was, to say the least, a mistake to endeavor in a Democratic caucus to bind the individual to the details, for instance, of the pending section providing an income tax.

It seems to me that the individual Democrat, like the individual Republican, ought to be permitted by his party to stand here and vote for his convictions.

After all, Senators here were elected to the Senate, not to a caucus, and it is in the interest of the public welfare that great questions of this sort be debated in public and decided in public, particularly when we are engaged in formative, fundamental legislation of this sort.

So, Mr. President, it seemed to me a mistake when my party undertook to decide the details of the income-tax bill in the caucus. Still, I did not leave the caucus on that account. I left the caucus when I asked the privilege of being permitted in the open Senate to introduce a legitimate amendment for the taxation of trusts, and that privilege was denied me. I asked it not only for myself but I asked it for other Democrats on this side of the Chamber who believe in the principle and want to see it engrafted upon the pending bill. Those men, if compelled to vote against my amendment, which I am here to-day to urge, will have difficulty in explaining to their constituents why they have done so. It is not right for the party to put them in that position when no great party issue is involved.

It has been an unpleasant sight to me, as it has been to many Democrats during the last few days in this Chamber, when Senators on the Republican side of the Chamber have proposed amendments to the income-tax provision that appeal to the sense of justice and appeal to the judgment of Senators on this side, but who, because of caucus rule, were compelled to vote against such amendments. I do not think that is a worthy sight in the Senate of the United States. I do not believe it is right to bind individual Senators and compel them to vote against their conscience and their judgment upon such amendments when no party policy is involved.

Mr. President, in order to justify myself for the position I am taking, I shall go a little further, and perhaps verge upon the improper in reference to the Democratic caucus of which I was a part. Like all caucuses, I believe the fact to be that our Democratic caucus degenerated into a political machine.

I did not, however, ask the caucus to approve my amendment; I asked to be left free to offer it here in the Senate, and I asked that other Democratic Senators be left free to vote for it according to their consciences and their judgment. I was refused.

The votes have been published, so I am revealing none of the secrets of that caucus when I say that 18 Members of the Senate voted for my amendment and 23 appeared to vote against it. I say "appeared" because it is a fact, which I shall take the liberty of stating, that the nine Democratic members of the Committee on Finance voted as a unit, regardless of their convictions. So we have a wheel within a wheel, a machine within a machine. The inner machine controlled the caucus. The vote cast was not the correct expression even of the caucus. (Senator HITCHCOCK, CONGRESSIONAL RECORD, Aug. 29, 1913.)

CONGRESSMAN MURRAY (DEMOCRAT), OF OKLAHOMA, DENIES THE RIGHT OF THE PRESIDENT TO DETERMINE WHAT IS DEMOCRACY, AND OPPOSES THE DEMOCRATIC "GAG" RULE ON THE TOLLS REPEAL BILL.

Mr. MURRAY of Oklahoma. Mr. Speaker, like the gentleman from Alabama [Mr. Clayton], I take this position because I am a Democrat. Evidently between us there is a difference in the definition of "Democracy." He doubtless takes the Democracy of this Nation to be the President. I do not. I deny the right either of the President or of this Congress to determine what is Democracy. Democracy is made in a representative convention duly assembled by the people.

We are here asked to violate our pledges twice in the same transaction—first, by a "gag" rule that will not permit the bill to be amended or an amendment to be offered, a thing that every Democratic nominee down to road overseer denounced in the campaign of 1912.

I am opposed to this "gag" rule, moreover, because if we are to stab our own party to death and a national policy of free "sees" of 100 years, we ought to have more time in which to commit the murder. (Hon. WILLIAM H. MURRAY, CONGRESSIONAL RECORD, Mar. 27, 1914.)

CONGRESSMAN THOMPSON (DEMOCRAT), OF OKLAHOMA, WANTS TO LET IN THE LIGHT ON THE DEMOCRATIC SECRET CAUCUS.

Mr. Speaker, I am in favor of the widest publicity of the actions of this Congress. I am in favor of letting the people know what we do in caucus as well as in Congress. If what I do does not respond to the best interests of the common people—the farmers and the laboring people—they ought to know it, and they ought to send a man here who will in truth and in fact represent their views.

In conclusion, let me say that there ought to be no secret caucus, no vote except when a record is made. The people are entitled to know what we are doing. If we do the right thing, we ought to be glad to let the people know we have done right. If we behind closed doors and without a roll call do the wrong thing, the people ought to kick down the doors and find what we are doing. I for one am willing to stand or fall by what is right. Can those who vote against me say as much? I challenge them to the contest. (Hon. J. B. THOMPSON, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 3347.)

THE BROKEN PROMISE TO RETURN TO "ECONOMY."

We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which befits a democratic government, and a reduction in the number of useless offices, the salaries of which drain the substance of the people. (Democratic platform, 1912.)

SENATOR TILLMAN (DEMOCRAT), OF SOUTH CAROLINA, WARNED THE PRESIDENT EARLY AGAINST DEMOCRATIC EXTRAVAGANCE.

Senator TILLMAN, in a letter to Gov. Wilson, January 21, 1913, said: "This I do know, Mr. President, that if the Democrats are in earnest about reducing expenditures, it is an easy matter to do it, and that, too, without crippling the Government. It will mean the selection of Cabinet officers who will not be complaisant, but intent only on having the Government machine work smoothly, accurately, and effectively for the people's benefit and not for the benefit of the officeholders. The estimates are all made up by the Cabinet officers, and appropriations are always based on estimates, or supposed to be, unless they come as independent propositions from the floor of the Senate itself. I know you understand the importance of a loyal Cabinet in sympathy with this idea of economy." (CONGRESSIONAL RECORD, 1st sess. 63d Cong., p. 31.)

PRESIDENT (THEN GOVERNOR) WILSON, THE FIRST, LAST, AND ONLY TIME HE IS ON RECORD (ON ECONOMY) SINCE HIS ELECTION AS PRESIDENT, PROMISED TO CONFER WITH HIS "LEGISLATIVE COLLEAGUES," WITH A VIEW TO BRINGING SOME BUDGET SYSTEM INTO EXISTENCE—HIS "LEGISLATIVE COLLEAGUES" TURNED DOWN THE PROPOSITION FOR A BUDGET SYSTEM IN A SECRET DEMOCRATIC CAUCUS.

In his reply to Senator TILLMAN, Gov. Wilson, after naming the Appropriations Committee as the committee on which the Senator, as its head, could "be of the greatest and most constant service," said:

"Ever since I was a youngster I have been deeply interested in our methods of financial legislation. Ever since then I have insisted upon the absolute necessity of a carefully considered and wisely planned budget, and one of the objects I shall have most in mind when I get to Washington will be conferences with my legislative colleagues there with a view to bringing some budget system into existence." (CONGRESSIONAL RECORD, 1st sess. 63d Cong., p. 31.)

SENATOR WILLIAMS (DEMOCRAT), OF MISSISSIPPI, OBSERVES SOME DEMOCRATIC ACROBATIC STUNTS WITH THE "ECONOMY" PLANK.

The Democratic Party gallivanted around the country through its stump speakers and has announced that it proposes to economize in

governmental expenditures. * * * And the minute we have a change in the administration you begin to crowd us to increase the expenditures instead of cutting them off. (CONGRESSIONAL RECORD, 1st sess. 63d Cong., p. 273.)

SENATOR THOMAS (DEMOCRAT), OF COLORADO, NOT ONLY WOULD APOLOGIZE TO THE REPUBLICAN PARTY, BUT WOULD ACKNOWLEDGE AND CONFESS THAT THE DEMOCRATIC PARTY WAS ENGAGED IN A CAMPAIGN OF DECEPTION IN REGARD TO PUBLIC EXPENDITURES.

* * * If I had been here, I would have said then what I am saying now, my purpose being, so far as I am individually concerned, to record a protest against what seems to me to be a disregard, if not a violation, of one of the planks of the Baltimore platform upon which the Democratic Party came into power. We either meant what we said then or we did not. If we meant what we said, let us try to live up to it; if we did not, the sooner we acknowledge the fact and confess that the Democratic Party was engaged in a campaign of deception in so far as public expenditures are concerned, the better it will be for us and for the country. * * *

The aggregate appropriations of the United States Government are appalling, and they are increasing by leaps and bounds. In fact, the tendency everywhere seems to be to make demands upon the Treasury of the United States, not only for public but for private purposes. The Treasury is regarded as a fountain of mercy, free to all. * * *

* * * I realize the tendency and the direction of the Democratic majority. Unless we place some restriction upon our wholesale and indefinite appropriations—because some of these items are indefinite, as I may show hereafter—the people will very justly and very properly hold us to account, and our opponents will be able to draw a contrast between their own administration of public affairs and ours that will not in the slightest degree be favorable or flattering to us.

* * * We not only accused them [the Republican Party], we denounced them for a "profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations * * * which have kept taxes high and reduced the purchasing power of the people's toil."

That was either true, Mr. President, or it was false. If it was true, we certainly should not pay the Republican Party the compliment of servile imitation. If it was false, we should apologize to the Republican Party for this denunciation upon which we went to the people and asked for their votes.

Mr. SMOOT. Mr. President——

Mr. THOMAS. But we are imitating that policy by increasing all appropriations; in other words, to use a slang expression, we are "seeing the Republican Party and going them one better." I yield to the Senator from Utah.

Mr. SMOOT. Mr. President, I merely wish to suggest to the Senator in that connection that perhaps it would be well to state that the appropriations this year will be at least $100,000,000 more than the appropriations for any one year in the history of this country.

Mr. OVERMAN. How does the Senator know that when the appropriation bills have not been passed?

Mr. SMOOT. I will say to the Senator that if after all the appropriation bills have been passed it turns out that I am mistaken, I would like him to call my attention and also the attention of the Senate to it.

Mr. OVERMAN. I will do so, and I think the Senator will need to make an apology then, because I do not think the appropriations will be anything like the amount he suggests.

Mr. THOMAS. If it should so turn out, I presume we will have to take refuge in Lord Clive's celebrated apology and "stand astonished at our own moderation." (Hon. CHARLES S. THOMAS, CONGRESSIONAL RECORD, 2d sess. 63d Cong., pp. 4951, 4952, 4953.)

CONGRESSMAN SISSON (DEMOCRAT), OF MISSISSIPPI, PROPHESIES AND APOLOGIZES—"WE WILL EXPEND MORE MONEY THIS YEAR THAN EVER BEFORE IN ANY ONE YEAR"—"WE HAVE WRONGFULLY CRITICIZED THE REPUBLICAN PARTY AND OUGHT TO APOLOGIZE TO THEM."

You all recall that some years ago, within the recollection of every man on the floor of this House, the newspapers headlined a billion-dollar Congress, and it was like a fire bell at night. Mr. Reed was Speaker, and we were spending a billion dollars in one Congress, or $500,000,000 a year. You Republicans will remember how the changes were rung then all over the country against you. You will remember Mr. Reed's laconic reply, to the effect that we had a billion-dollar Government. That was the only answer that could be made to the proposition. Now the Democrats are in power, and I am afraid, gentlemen of the House, that we will expend more money this year than has ever been expended in the history of this Government before in any one year. Perhaps it may be necessary and the people may be demanding it, but if that is true, we have wrongfully criticized the Republican Party, and we ought to apologize to them for charging them with spending money and being criminally extravagant in the administration of the affairs of this Government. (Hon. T. U. SISSON, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 178.)

CONGRESSMAN SISSON (DEMOCRAT), OF MISSISSIPPI, AGAIN APOLOGIZES, AND CAN NOT FIND AN ADJECTIVE STRONG ENOUGH TO APPLY TO DEMOCRATIC EXTRAVAGANCE.

Principle has gone to the four winds of the earth, and we are writing ourselves down in the history of the country as being the most outrageously and most criminally extravagant Congress that ever sat on the American Continent * * *. I said that in a speech before in the last session, and when I made that speech Members of the Democratic House came to me and asked me not to put it into the RECORD because it would be used by the Republicans in their campaign book. Let them use it. * * * You may use the statement now, gentlemen, because when Democrats get to be so violently extravagant that it makes its own record look bad as compared to the very marked record of the Republicans, I must apologize to you Republicans for having ever used the words "criminally extravagant" in criticizing the appropriations that you made, for if that expression "criminally extravagant" was proper to apply to you, my God, the English language has never found an adjective strong enough to apply to Democratic extravagance. (Hon. T. U. SISSON, CONGRESSIONAL RECORD, Apr. 2, 1914, p. 6845.)

SENATOR THOMAS (DEMOCRAT), OF COLORADO, LEARNS THAT THERE WAS NO DISSENT FROM THE "ECONOMY" PLANK OF THE DEMOCRATIC PLATFORM.

Mr. THOMAS. Mr. President, I merely wish to ask the Senator from New York a question. I have discovered in the Democratic platform a plank pledging the party to rigid economy in public expenditures, and I should like to inquire whether at Baltimore there any dissent from that plank in the platform when it was reported out of the committee?

Mr. O'GORMAN. None at all. (CONGRESSIONAL RECORD, Mar. 27, 1914.)

SENATOR VARDAMAN (DEMOCRAT), OF MISSISSIPPI, SAYS "LITTLE REGARD HAS BEEN SHOWN FOR THE DEMOCRATIC PLATFORM PROMISES ON THE SUBJECT OF ECONOMY."

* * * The high cost of living, the depression in business, and the general demoralization of trade throughout the entire country should cause the Congress to hesitate before taking action and to consider carefully what the effect upon the already overburdened taxpayers will be if this additional tax shall be levied.

The Congress has already appropriated more money than it should have appropriated. Little regard has been shown for the Democratic platform promises on the subject of economy. (Hon. J. K. VARDAMAN, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 17676.)

CONGRESSMAN COX (DEMOCRAT), OF INDIANA, PREDICTS DIRECT TAXES AS THE RESULT OF DEMOCRATIC EXTRAVAGANCE, AND SAYS, "THESE APPROPRIATIONS ARE COMING HOME TO ROOST UPON US. THEY ARE GOING TO ROOST ON OUR HEADS."

In the appropriation of $500,000 last year that was the regulation required by the Agricultural Department and the Post Office Department, whereby the Government put in a dollar and the State or subdivisions thereof put in $2. These appropriations are coming home to roost upon us. They are going to roost on our heads. Mark what I tell you. Even the Republican Party back in 1908 found that they did not have enough ground on which to stand and meet the expenses of the Government, and so they enacted a corporation tax which brought in $30,000,000 in the way of revenue to the United States. We have revised the tariff, and how large a revenue it is going to bring I do not know. We have enacted an income tax, and as for the amount of revenue that is an experiment, and how much it will bring I do not know, neither does anyone else. We are going to come to this point in a very few years if we adopt this policy of the Government paying half and the State paying half—we are coming to direct taxes. There is absolutely no escape from it, and whenever that time comes the people will ask us, What has become of these appropriations—what have you got to show for it? The moment we reach direct taxation for the support of the Federal Government there will not be a Member of Congress left to tell the tale. Every man will be defeated. (Hon. W. E. COX, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 3366.)

CONGRESSMAN FITZGERALD (DEMOCRAT), OF NEW YORK, CHAIRMAN OF THE COMMITTEE OF APPROPRIATIONS, IS TEMPTED TO QUIT CONGRESS WHEN HE THINKS OF THE "HORRIBLE MESS" "THIS BAND OF TREASURY LOOTERS" HAS MADE.

Mr. Chairman, it may seem somewhat strange, but I hope it is not out of place, to remind Members on this side of the House that the Democratic platform pledged us in favor of economy and to the abolishment of useless offices; but it did not declare, Mr. Chairman, that the party favored economy at the expense of Republicans and the abolition of useless offices in territory represented in this House by Republicans while favoring a different doctrine wherever a Democratic Representative would be affected. In a few months I shall be called upon in the discharge of my official duties to review the record that this Democratic House shall have made in its authorization of the expenditure of the public moneys. Whenever I think of the horrible mess that I shall be called upon to present to the country on behalf of the Democratic Party I am tempted to quit my place. I am looking now at Democrats who seem to take amusement in soliciting votes on the floor of this House to overturn the Committee on Appropriations in its efforts to carry out the pledges of the Democratic platform. They seem to take it to be a huge joke not to obey their platform and to make ridiculous the efforts of the members of our party who do try to live up to the promises they made to the people. I know that some Members on this side are voting continually for appropriations because they fear the wrath of the public if they do not vote out of the Public Treasury assistance for everything anyone suggests. I have in my hand a letter which is somewhat characteristic of the correspondence which I receive daily.

If I placed my political fortunes above my sworn duty under the law, I would not attempt to carry out the promises of the Democratic platform, but I should place myself at the head of this band of Treasury looters upon every occasion. * * *

It is some effort for me to speak, and I should not attempt to do so if I did not feel that my colleagues upon the floor seem either to be so indifferent to a very perilous situation for our party, or else, which I do not wish to believe, have so far forsaken Democratic practices and Democratic principles as not to deserve to continue in control of this Government. I would not attempt to speak under these circumstances if I did not hope, Mr. Chairman, to awaken them to a realization of what the situation is. * * * If we are to be swayed from our duty by the appeal of every misinformed or misguided man, or if we are to vote appropriations merely because some popular, well-liked, attractive Member of the House urges us to do so, then we shall surely, Mr. Chairman, make such a record in this House as not only to invite but to deserve the condemnation of the country.

We charged the Republicans for 12 years of my service in the House under Republican administration with being grossly extravagant and reckless in the expenditure of the public money. I believed that charge to be true. I believed that my party, when placed in power, would demonstrate that the charges we had made in good faith were true. We are entitled to the help and to the support of the Members on this side of the House in honest efforts to carry out the pledges of the Democratic Party, and in our attempts to show that what we charged in order to get in power was true. We have not had that support. Our Democratic colleagues have not given that support to us thus far during this session of Congress. They have voted against recommendations they should not have voted against. They have unnecessarily piled up the public expenditures until the Democratic Party is becoming the laughing stock of the country. (Hon. JOHN J. FITZGERALD, CONGRESSIONAL RECORD, Apr. 10, 1914.)

CONGRESSMAN FITZGERALD (DEMOCRAT), OF NEW YORK, UPBRAIDS HIS DEMOCRATIC COLLEAGUES ELECTED ON A DEMOCRATIC "ECONOMY" PLANK WHO PROPOSE AN ENORMOUS INCREASE OF OFFICES AND OF SALARIES.

* * * At least it is true on this side of the House, because the burden is upon our shoulders, gentlemen, and I would like to call atten-

tion to the platform on which we ran the last time, and I would like to call attention to the platform of 1908, when we deliberately burned the Republican Party in words for its extravagance; and yet men who were elected upon that platform last fall come upon the floor of this House here and propose to increase the number of clerks from 2,000 to 7,000, and increase the pay $100 per man. There is no need of it; there is no necessity for it. * * * (Hon. JOHN J. FITZGERALD, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 2055.)

—

CONGRESSMAN PAGE (DEMOCRAT), OF NORTH CAROLINA, IN DISGUST AT THE EXTRAVAGANCE OF HIS DEMOCRATIC COLLEAGUES SUGGESTS THE "RECALL" OF THE COMMITTEES HANDLING APPROPRIATIONS.

It seems to me it is time that gentlemen on this side of the House stand by those committees that are endeavoring to carry out the party's pledges, and it is time that Members and organizations, often on the part of men on this side of the House, should cease to attempt to break up an effort to economize in the expenditure of the public funds. I think it is time that some one should say it to the Democratic membership of this House; and I say if the gentleman from Oklahoma [Mr. FERRIS], chairman of the Committee on Public Lands, or any other Member as an individual or representing an organization, can come in here and overthrow the recommendations of the committees that have investigated the needs of the public service, then it is time that you dismiss us; then it is time that you dismiss those committees that have supervision of these appropriations and take the estimates that are sent here by the executive departments of the Government and enact them directly into law. (Hon. R. N. PAGE, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 11879.)

—

CONGRESSMAN RODDENBERY (DEMOCRAT), OF GEORGIA, SINCE DECEASED, PROPHETICALLY DECLARED THAT THE DEMOCRATIC PARTY WOULD DEMONSTRATE "THAT WE CAN REDUCE THE TARIFF AND AT THE SAME TIME INCREASE APPROPRIATIONS."

We have reformed the rules of the House so that the people of this country can get action from their Representatives. Why, the gentleman from Illinois, Mr. Foss, who presided over the Committee on Naval Affairs on the Republican side for many years, was never able to get over $123,000,000 for the Navy, and before our President comes into office we have got $140,000,000 under our reformed rules, and we are legislating for the people on economical lines. We are going to demonstrate to the great ex-chairman of the Ways and Means Committee [Mr. PAYNE] that we can reduce the tariff and at the same time increase the appropriations. * * * Oh, do not go about chiding us for discarding our economy platform that said: "We denounce the Republican Party's reckless and profligate expenditure of the people's money." That platform was made * * * to get into office on—and we have won. (Hon. S. A. RODDENBERY, CONGRESSIONAL RECORD, 3d sess. 62d Cong., p. 4618.)

—

CONGRESSMAN FITZGERALD (DEMOCRAT), OF NEW YORK, CHAIRMAN OF THE HOUSE COMMITTEE ON APPROPRIATIONS, LECTURES THE EXECUTIVE DEPARTMENTS ON ECONOMY, AND SAYS IF INCREASING EXPENDITURES ARE NOT CURTAILED DEMOCRATS WILL BECOME "THE LAUGHINGSTOCK OF THE COUNTRY."

If that declaration was good Democratic doctrine before election day, Mr. Chairman, it is good Democratic doctrine now that the Democratic Party has come into power. Such promises, however, can not be performed and this pledge can not be kept unless those in the executive branches of the Government cooperate with the legislative branch and conduct the Government efficiently and economically. It is the duty of this House, more than of any other branch of the Government, to scrutinize with care the estimates that are submitted for the conduct of the public service, and to insist that officials in the executive departments shall conduct their various services within the amounts determined by the Congress to be sufficient to meet their needs. Any other system in this country means extravagance run riot.

* * * The control of the purse under the Constitution is primarily in this House, the body which represents most directly the people of the country, and the responsibility is primarily upon this House to see to it that moneys shall only be appropriated for legitimate functions of the Federal Government and shall be expended with that care and frugality which befits a democratic government.

I make this statement at this time, Mr. Chairman, because the time is at hand when the Members of this House, particularly those in the majority, must take some effective steps to curtail the rapidly increasing expenditures of the Government if the party, in view of the declaration in the platform I have just read, is not to become the laughingstock of the country.

Mr. COX. If this extravagance—if it may be called extravagance—these enormous appropriations are not stopped in some way, does not the gentleman believe that in the course of a short period of time the Government will have to come to a system of direct taxation, such as it had in 1861 to carry on the war?

Mr. FITZGERALD. Mr. Chairman, while I do not desire to commit myself to the form of taxation to which it would be necessary to resort in order to meet these increased obligations, I am of the opinion that the Government would not speedily resort to direct taxation. The ingenuity of legislators has not yet been exhausted in devising means to extract money from the people in taxation by such indirect methods that they will not realize that they are paying taxes. * * *

The only unpopular tax is the tax that the individual is convinced he pays himself. He is indifferent to taxation so long as he believes or is convinced that some one else must bear the burden. (Hon. J. J. FITZGERALD, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 4015.)

—

SENATOR JOHN SHARP WILLIAMS (DEMOCRAT), OF MISSISSIPPI, SAYS IF THE ALASKAN RAILROAD BILL IS THE MARCH OF DEMOCRATIC ECONOMICAL PROGRESS, HOW ARE INCREASED TAXES TO BE AVOIDED?

Mr. President, I want to say a few words especially to this side of the Chamber. The Democratic Party has just gone into power, and among other things that it has promised is an economical administration of the Government of the United States, as economical as possible consonant with efficiency and consonant with progressive legislation.

Here is a bill to devote $40,000,000—four-fifths of the entire income tax of the United States—to one outlying and poor and unpopulated Territory. If that is the march of economical progress you are going to start upon, where are you going to stop, and when and how are you going to avoid increasing either tariff taxes or income taxes in this country?

I know that in this bill it is covered up, that it is proposed to issue bonds to do it; that you shall tax posterity upon the general principle that "posterity never did anything for you, and therefore you do not need to do anything for posterity." If you are going to pay out money, it ought to be paid out of the money now on deposit in the national banks to the credit of the United States Government. No sensible, sane individual who wanted to spend $40,000,000 and had the $40,000,000 lying in hand would go out and borrow it and pay interest for it. The sole object of the bond provision is to conceal the cost from the present generation—to cover it up and hide it and fool the American people. So much for that branch of the question. (Hon. JOHN SHARP WILLIAMS, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 2174.)

—

CONGRESSMAN SHERLEY (DEMOCRAT), OF KENTUCKY, FEARS THE DEMOCRATIC LEADER, MR. UNDERWOOD, IS QUALIFYING FOR SERVICE IN THE SENATE, "WHOSE CHIEF WORK IS NOT IN THE INTEREST OF ECONOMY."

The gentleman from Alabama [Mr. UNDERWOOD] undertakes to make a comparison between the District of Columbia and the Hot Springs Reservation. There is no real, just basis for such a comparison. * * * I fear that the gentleman from Alabama is qualifying himself for service in that other body, whose chief work is not in the interest of economy; and I ask this body, which is charged with the duty of holding down expenditures—I ask those on this side, who have made some claim to economical tendencies—to hesitate before we agree to lay on the Government the entire cost of an elaborate sewerage system, a system more elaborate than is necessary, even if one is built. (Hon. SWAGAR SHERLEY, CONGRESSIONAL RECORD, July 21, 1914.)

—

CONGRESSMAN FITZGERALD (DEMOCRAT), OF NEW YORK, SAYS THAT SOMETIMES SOMEBODY SHOULD REMEMBER THE DEMOCRATIC ECONOMY PLEDGE.

I do not believe, Mr. Chairman, that this is the year for the Democratic Party to be indulging in wholesale increase of compensation. This provision only meant a difference of $50 a year to each individual, but it meant $2,700,000 added to the expense of the Postal Department. Among the pledges made by the Democratic Party in the last campaign sometimes somebody should remember that one of them was a pledge to conduct the Government economically. I hope it will be thought of more and more before the session is ended. (Hon. JOHN J. FITZGERALD, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 2282.)

—

CONGRESSMAN COX (DEMOCRAT), OF INDIANA, DOES NOT BELIEVE DEMOCRATS "CAN JUSTIFY THIS WILD EXTRAVAGANCE WITH THE PEOPLE'S MONEY."

* * * I have given this question thorough study, and, as a result of my investigations, I unhesitatingly state that the increase in salary is unjustifiable, can not be defended; and, in my judgment, when the people of the Nation wake up to the situation they will hold us responsible for it.

* * * * * * *

I do not believe we can justify this wild extravagance with the people's money. While the political exigencies of our party may be great in the way of procuring nominations and reelections to Congress, yet I oppose this way of making appropriations. It is unfair to the taxpayers of this country, and I desire to protest against it in the most vigorous and positive language possible. If I were talking for home consumption, I would keep my mouth shut and say nothing about it, because I have a large number of rural-route carriers traveling all over my district six days in every week, and no doubt they will be electioneering against me. But I can not, in the discharge of my duty, remain idly by and see the people burdened to the extent of practically four and a half millions a year by a class of people that, in my judgment, are already receiving a sufficient salary. Two or three years ago we were denouncing the Republican Party on the floor of the House as plundering the Treasury of the United States in their wild, extravagant appropriations, and we have denounced them time and time again in the most vehement language in our platforms, and I am wondering whether this denunciation upon the floor of the House of the Republican Party for their appropriations and our denunciation of their course in our party's platform were solely for the purpose of getting into power. If the denunciation was in good faith, we ought to live up to it, and live up to our platform promises and pledges. (Hon. W. E. COX, CONGRESSIONAL RECORD, Mar. 6, 1914, 63d Cong., 2d sess., p. 4675.)

—

CONGRESSMAN MURRAY (DEMOCRAT) OF OKLAHOMA WOULD NOT "BOW TO THE WISHES OF ANY MAN, HOWEVER GREAT," AND VOTE TO CREATE TWO OFFICES OF MINISTER TO PARAGUAY AND URUGUAY AT $10,000 EACH, FOR "MERE SHOW."

* * * Therefore for one I shall vote against this bill. I happen to know a good deal about that country, because there are men, citizens of my section, who live there now. Others have gone and have returned during the present year. I understand that country thoroughly, and, knowing it, I do not bow to the wishes of any man, however great, who requests me to vote for this bill when I know that it is an expenditure of money for a mere show without any beneficial return therefor. (Hon. WILLIAM H. MURRAY, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 92.)

—

CONGRESSMAN SISSON (DEMOCRAT), OF MISSISSIPPI, PLEADS PATHETICALLY, BUT IN VAIN, FOR "A HALT ON APPROPRIATIONS."

* * * The United States now owes nearly $3,000,000,000, upon which our people pay interest, and unless Congress calls a halt on appropriations we will have to add to our bonded indebtedness, and soon our children will be enslaved by the fortunate bondholding class. * * * Let me appeal to Congress in the name of the masses who bear this great burden not to make the load heavier. Let me appeal to our great President and his Democratic Cabinet to aid and assist in carrying out the one plank that has always been in Democratic platforms from its birth, "Economy in public expense, that labor may be lightly burdened." This is the touchstone and true test of Democracy. Do you respect the man that toils? If so, let him keep what he earns. Do not take it from him in excessive taxation. Let us by legislation keep our pledges. This is the plain duty of the party to-day. Will we live up to it? If we will, the Democratic Party will have a long lease of power. If we do not, we will surely go out of power, as we should. (Hon. T. U. SISSON, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 4260.)

CONGRESSMAN HARDWICK (DEMOCRAT), OF GEORGIA, ASKS "WHY SPEND $36,000,000 AT THE NORTH POLE?"—SAYS ALASKA RAILROAD BILL SOCIALISTIC AND NOT DEMANDED BY DEMOCRATIC PLATFORM.

What about this bill? Is it necessary; is it wise; is it a step in the right direction, or is it a step in the wrong direction? If you are to spend $36,000,000, why spend it at the North Pole? Why not spend it at home? Have we so much money, are we so rich, that we would rather send it to the North Pole than send it to the people of our districts? Are we so rich that we can afford to develop Alaska while America languishes? Are we so rich that we can not build battleships and yet can develop a possible coal mine in Alaska, with a view to future Government ownership and operation of coal mines as well as railroad and telegraph lines? I challenge any gentleman who favors this bill to point out, either now or later, what Democratic platform, what Democratic principle, he pins his faith to when he advocates this measure. You can not point it out in the last platform on which we were elected. That platform demanded the opening up of Alaska. That platform when it came to the railroad question was, as it should have been, silent as the tomb. * * *

* * * * * * * *

It is Socialist propaganda. It rests on the same principle that the Socialists advocate; it rests on the same foundation stones on which they build; but so far as the platform declarations are concerned, I challenge anybody, either now or later, to show a Democratic platform on which it rests. Oh, but they say, the Democratic Party gave subsidies in the past of either money or lands to the great transcontinental railroads. So we may have done. Whether it was wise or not I can not say. (Hon. T. W. HARDWICK, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 3492.)

—

CONGRESSMAN FITZGERALD (DEMOCRAT), OF NEW YORK, POINTS OUT SOME INACCURACIES IN OFFICIAL ESTIMATES OF RECEIPTS AND EXPENDITURES AND PREDICTS THAT INCREASED APPROPRIATIONS WILL LEAVE FEW DEMOCRATS IN THE NEXT CONGRESS.

The gentleman says this is only the amount of the estimates for this service. The estimates of money required to conduct the public service during the next fiscal year were $73,681,000 in excess of the estimated revenues of the Government in the next fiscal year. Recently the Secretary of the Treasury pointed out that he had overestimated our revenues by about $20,000,000, so that the estimated sums required to conduct the Government during the next fiscal year are about $100,000,000 over the estimated revenues. This committee did not reduce the appropriation for these services. It continued the amounts that had been carried for a number of years. The gentleman from Oklahoma [Mr. FERRIS] has already increased one item 33 per cent. He proposes to increase this item 33 per cent. If he offers many other amendments, as he promises to do, increasing other items in the same ratio, there will not be many of us on this side of the House in the conduct of the public business in the next Congress. (Hon. J. J. FITZGERALD, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 11880.)

—

CONGRESSMAN FITZGERALD (DEMOCRAT), OF NEW YORK, PROPHESIED ACCURATELY THAT "A REVISION OF THE TARIFF DOWNWARD WILL BE THE MOST HOLLOW MOCKERY" ON ACCOUNT OF GROSSLY EXTRAVAGANT APPROPRIATIONS.

I believe that there is in the contingent fund of the House to-day, or there was about a week ago, $100, and there are requests pending for $100,000 to supply the deficiencies for the balance of this fiscal year.

The gentleman from Illinois [Mr. MANN] has not overexaggerated the picture as to what is likely to happen at this session of Congress. No one can tell just how much the appropriations at this session will be, but I think it is a conservative estimate to say, Mr. Speaker, that they will far exceed the appropriations that have been made at any session in the history of the Government.

I have done my part and have done my best in some way to curtail the expenditures; not to interfere with the legitimate functions and services of the Government, but to stop the expenditure of public moneys to gratify every whim and to please every fancy, either of individuals or of Members. Everyone seems possessed, however, of a determination to obtain moneys to maintain and extend that particular branch of the public service in which he or his constituents is particularly interested and then to make fragmentary, spasmodic efforts to save in some other direction in which neither he nor his constituents will be affected.

Such a condition can not long continue. I understand that the bills reported at this session of Congress will probably provide for the expenditure of the $100,000,000 which it is anticipated will be raised by an income tax. It reminds me somewhat of an incident that occurred in the Committee on Appropriations when $27,000 was requested for a certain public service in anticipation of the enactment of some legislation at the next session of Congress.

I want to say, Mr. Speaker, that unless this side of the House wakes up to a sense of its responsibility, not only will the appropriations be grossly extravagant, but they will amount to so much that talk of a revision downward of the tariff will be the most hollow mockery. (Hon. JOHN J. FITZGERALD, CONGRESSIONAL RECORD, 3d sess. 62d Cong., Feb. 11, 1913.)

—

CONGRESSMAN BARTLETT (DEMOCRAT), OF GEORGIA, HAS TO PLEAD FOR ECONOMY EVEN AFTER THE HOUSE PASSED THE DEMOCRATIC "WAR" REVENUE BILL "IMPOSING TAXES THAT MUST NECESSARILY BE ONEROUS AND UNUSUAL."

* * * I withhold my support from this bill reluctantly. But this is an effort to increase by one-third the amount originally estimated for by the Department of Commerce for this vessel and authorized by Congress. Now, a vessel may be needed, but the mail of every Congressman, I apprehend, is filled with protests, and the telegraph wires are constantly bringing protests against increased taxation upon the citizens of the country. * * * Let us in this time of stress realize and emphasize that part of the Democratic platform formulated at Baltimore which pledged the people that we would return to the ancient economy of the Democratic Party and not needlessly expend the money of the people. Certainly we ought not needlessly to expend the money of the people when we have within a few days passed through this House a bill, which will soon be a law upon the statute books, imposing upon the country taxes that must necessarily be onerous and unusual. (Hon. C. L. BARTLETT, Oct. 5, 1914, CONGRESSIONAL RECORD, 2d. sess. 63d Cong., p. 17714.)

CONGRESSMAN SISSON (DEMOCRAT), OF MISSISSIPPI, DESCRIBES HIS EXTRAVAGANT BRETHREN AS "CHITLING DEMOCRATS" WHO MAKE THE REPUBLICANS LOOK LIKE THOROUGHBRED ECONOMISTS.

It comes with poor grace from a Democrat to criticize the chairman of the Committee on Appropriations and the committee, who are endeavoring to install and carry out the pledge of the platform. If that criticism came from Republicans, it would be different, but it does not come from them; it comes from Democrats here who in their extravagance make the Republicans look like thoroughbred economists. Ex-Congressman Dickson, of my State, called these Democrats who were of this extravagant type "Chitling Democrats."

Mr. REED (Democrat, of New Hampshire). Mr. Chairman, I would like to ask the gentleman a question. The gentleman has referred to Democrats as a hungry lot of fellows who have just got their noses up to the trough. I want to ask him if the bill is not filled with all sorts of things that seem to indicate that the committee has had its nose to the trough and excluded every other Democrat? (CONGRESSIONAL RECORD, Sept. 4, 1913.)

—

CONGRESSMAN SAUNDERS (DEMOCRAT), OF VIRGINIA, SAYS ALASKA RAILROAD BILL NOT JUSTIFIED BY DEMOCRATIC PLATFORM—IS "EXTRAVAGANCE RUN RIOT."

If limited to a cost of $48,000 a mile, this would make an aggregate of $480,000,000. I am unwilling to commit myself even partially to so gigantic a proposition. I am unwilling to go further than the requirements of our Baltimore platform, which merely requires us to open up the coal lands, so that they will not fall into the hands of monopolizing corporations. Even this plank does not commit us to the construction of railroads. The end sought may be effected by private capital under a reasonable leasing system. We are going headlong into a venture that holds out dazzling possibilities of unlimited expenditure by the Government.

* * * * * * *

Mr. Chairman, this proposition is fundamentally and radically unsound. It is not justified by our Democratic platform. Holding out no hopeful prospect of definite return, within any time to which we should limit our contemplation, as practical legislators, this measure is not entitled to our support. For one, I shall vote against it.

* * * The credit of the United States will not be strained to the breaking point should it spend $35,000,000 or $135,000,000 in railway construction in Alaska. It is rich enough to commit almost any folly. But why select Alaska as a field in which extravagance shall run riot? There are many States in the West that hold out a promise of "some mineral development," and are entitled to greater consideration than Alaska, if this House is anxious to make a record for chasing rainbows. (Hon. E. W. SAUNDERS, CONGRESSIONAL RECORD, 2d sess. 63d Cong., pp. 3758, 3760.)

—

CONGRESSMAN CALLAWAY (DEMOCRAT), OF TEXAS, CRITICIZES HIS DEMOCRATIC COLLEAGUES FOR USING "THE PEOPLE'S HARD-EARNED MONEY" FOR "PORK-BARREL" RIVER AND HARBOR APPROPRIATIONS.

The insincerity and ridiculousness of it all is demonstrated conclusively by the fact that while you are working through Congress and getting up to the White House for the President's final approval this bill appropriating $43,000,000 of the people's hard-earned money, presumably for the purpose of forcing lower freight rates, the administration is quoted in all the big daily papers as in favor of allowing the railroads to raise their freight rates 5 per cent.

In our platform of 1896 we said:

"We denounce the profligate waste of the money wrung from the people by oppressive taxation. We demand a return to that simplicity and economy which benefits a democratic Government."

The appropriation for that year was $457,088,344.72.

In our platform of 1904 we said:

"Large reductions can easily be made in the annual expenditures of the Government without impairing the efficiency of any branch of the public service, and we shall insist upon the strictest economy and frugality."

That year the Republicans appropriated $736,578,402.76.

In our platform of 1908 we said:

"We denounce the needless waste of the people's money as no less than a crime."

And that year the Republicans appropriated $918,362,329.07. In 1912 we denounced the profligate waste of the money wrung from the people by oppressive taxation, while according to the estimates submitted this year by a Democratic administration we will be called on to appropriate $1,250,000,000. Did we mean what we said in our repeated platform declarations? If so, let us do it.

* * * No man can say it will not be a waste. Commerce has left these rivers and canals. We realized that and appropriated a half a million dollars for a commission to make an investigation to see if any craft could be devised that could economically carry the traffic on these waters. That was an admission that we are in the woods at present and do not know that any commerce will be developed by these expenditures. That commission has not yet reported. Let us stop this until we know what we are doing. That is the only way to deal honestly with the public, and we ought to deal honestly with those whose money we are spending. (Hon. OSCAR CALLAWAY, Apr. 6, 1914, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 6752.)

—

CONGRESSMAN STEVENS (DEMOCRAT) OF NEW HAMPSHIRE WARNS HIS FELLOW DEMOCRATS AGAINST GOING BACK HOME TO THEIR CONSTITUENTS "WITH A CHUNK OF PORK IN ONE HAND AND A $50,000,000 DEFICIT IN THE OTHER HAND."

There is another reason why I am opposed to this bill, a reason which should appeal to every Member of this House, and particularly to every Democrat. When the revenue bill was reported at the beginning of the special session the Ways and Means Committee estimated that the revenue from the new tariff law and the income tax would give us about $18,000,000 above the estimated expenses of the Government. Now, there are two facts that have happened since that time that we are sure of. The first is that the estimated receipts from the Government are going to be less than were estimated by the Ways and Means Committee.

The second fact, which this House is proving every day, is that the estimated expenditures for the next fiscal year were altogether too low. Every general appropriation bill that will be reported and passed by this House will be above the estimates furnished by the Ways and Means Committee. We have already passed the Lever agricultural extension bill, which provides for an expenditure of $25,000,000. This bill

provides for an expenditure of $25,000,000 more. The increases in the general appropriation bills that are coming later will take up every cent of that $18,000,000, and the real objection to this bill at this time is that you have not got the money.

* * * * * * *

The revenues from the tariff law since it has been in force are less than were estimated by the Ways and Means Committee.

Mr. ASWELL. What is the gentleman's authority?

Mr. LANGLEY. If the gentleman will permit, I wish to say that the figures show that the revenues are not as much as were estimated. The gentleman could easily answer that, and he could further reply that we on this side of the House told the gentleman that that would be so.

Mr. STEVENS of New Hampshire. I have not the figures at hand, Mr. Chairman, but I understand it is a fact that the revenues are less than they were estimated to be, and it is an absolute fact that the expenditures are greater.

Now, a word as to the political considerations. This bill appeals to every man who is in favor of good roads. It appeals to every man who wants the support of his constituents. I have the honor to represent a rural community with a great many rural routes in it. If this bill were passed, we could go back to our homes and say to our constituents, "We have brought back so many thousands of dollars to be expended here for your benefit." That would be a great help to the individual Congressman seeking reelection. But, gentlemen, if you go back home to your constituents with a chunk of pork in one hand and a $50,000,000 deficit in the other hand, you will find it entirely different. (Hon. R. B. STEVENS, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 3423.)

—

CONGRESSMAN LONERGAN (DEMOCRAT), OF CONNECTICUT, OPPOSED SPENDING $25,000,000 ON ROADS AS UNNECESSARY AND UNJUSTIFIABLE.

Mr. Speaker, the Democratic platform of 1912 denounced the profligate waste of money taken from the people through lavish appropriations of recent Republican Congresses. I am opposed to the appropriation called for in the bill under consideration. In my opinion the already established appropriations impose enough responsibility upon the country, and the added burden which will result from this entering into new fields in road construction is unnecessary and inadvisable. I believe that I voice the sentiments of my constituents in opposing this bill; therefore I shall register my vote against it. (Hon. A. LONERGAN, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 3762.)

—

CONGRESSMAN COX (DEMOCRAT), OF INDIANA, CAN NOT BOAST OF THE DEMOCRATIC RECORD FOR ECONOMY, AND CALLS ATTENTION TO A FORGOTTEN SLOGAN.

The Democratic Party—and I claim to be a member of it—have assailed the Republican Party on every stump, on every occasion when the opportunity presented itself to us, and we have condemned you Republicans for extravagance. The press of the country have condemned you. * * * In the last session we can not boast of our record for economy.

Gentlemen, we are starting in early. Let us see if we can not make a record for economy, especially in view of the fact that the President of the United States recently announced, through the press of the country, that economy would be one of the slogans of his administration. (CONGRESSIONAL RECORD, 1st sess. 63d Cong., pp. 288, 291.)

—

CONGRESSMAN SISSON (DEMOCRAT), OF MISSISSIPPI, ASKS WHY DEMOCRATS HAVE THE RIGHT TO DENOUNCE REPUBLICANS FOR EXTRAVAGANCE.

But I want to say to my Democratic colleagues that if they do not want to put a check upon these appropriations to the income of the Treasury to-day, Woodrow Wilson during his second, if not the first, year of his administration will be confronted with a bond issue. * * *

We denounce you because you have expended $90,000,000 more than you expended in the preceding year. The question arises, Why on earth have the Democrats the right to denounce Republicans for extravagance in the future? For the life of me I can not see.

* * * * * * *

And be able to go home and look the honest electorate squarely in the face and say that we have kept the faith. (Hon. T. U. SISSON, CONGRESSIONAL RECORD, Feb. 24, 1913, 62d Cong., 3d sess., p. 2836.)

—

THE BROKEN PROMISE TO RETURN TO "SIMPLICITY."

We demand a return to that simplicity and economy which befits a democratic government, and a reduction in the number of useless offices, the salaries of which drain the substance of the people. (Democratic platform, 1912.)

—

CONGRESSMAN FITZGERALD (DEMOCRAT), OF NEW YORK, SAYS THE SECRETARY OF LABOR PURCHASED AN AUTOMOBILE FOR HIS PERSONAL USE WITHOUT AUTHORITY OF CONGRESS.

* * * At the last session of Congress it appeared that out of the appropriation of $60,000 for the contingent expenses of the Department of Commerce and Labor $26,100 was transferred to the Department of Labor. In addition to that Congress at the last session appropriated $5,000 additional for the contingent expenses of the Department of Labor. At that time a request was made by the Department of Labor to authorize the Secretary of Labor to purchase three automobiles—a seven-passenger touring car for himself, at $4,500; an electric runabout for the use of himself and others, for $2,500; and an automobile truck.

The committee declined to include that authority in the bill, based upon the fact that authority had never been given to any of the departments to purchase automobiles for the Secretary or others connected with the department. In some way or other the information got noised abroad that such a request had been made, and innumerable Members of this House served notice upon the committee that they would not tolerate such a situation. The authority was not given, and yet it appears that during this session of Congress an automobile has been purchased for the personal use of the Secretary of Labor.

Mr. BUCHANAN of Illinois. Would it not be fair for the gentleman to state that the Secretary of Labor explained that automobiles would be cheaper in operation and to purchase than it would be to purchase teams and rigs as the other departments had?

Mr. FITZGERALD. Suppose he did; Congress did not authorize it, and that is the point. No man in any department of the Government can do as he pleases because he thinks it is desirable. All he can do is to obey the law. (Hon. JOHN J. FITZGERALD, CONGRESSIONAL RECORD, 2d sess. 63d Cong., pp. 4123, 4124.)

MR. FITZGERALD STANDS BY HIS STATEMENT.

* * * I simply wish to add, Mr. Chairman, that every statement and every criticism that I made of the Department of Labor or of any other department of this Government during the conduct of the urgent deficiency bill in this House was thoroughly justified, and I do not retract in a single iota anything I said about them. * * * (CONGRESSIONAL RECORD, 2d sess. 63d Cong., Mar. 11, 1914.)

—

CONGRESSMAN HOWARD (DEMOCRAT), OF GEORGIA, SAYS THE PUBLIC PRINTER IS NOT THE ONLY PUBLIC OFFICIAL THAT IS ABUSING THE CONFIDENCE OF A DEMOCRATIC CONGRESS—THE WAR DEPARTMENT IS SHAMEFULLY USING PUBLIC MONEY FOR "SOCIETY STUNTS," HE SAYS.

It seems that under the Democratic economy of the Government Printing Office the present Public Printer was a little bit immodest, in that it took two automobiles to satisfy him. Since this matter was up I have investigated, and I know what these two Rauch & Lang cars cost that he has got down there. I know what they cost in upkeep to the Government, and I do not care what the Public Printer states about it, I am in a position to say that this new car is not used solely for official purposes.

I do not know what this man is doing with these automobiles, and I do not care what he is doing with them; but I lay it down here as a bald-headed proposition that no officer of this character has any right to appropriate the people's money for two electric automobiles that cost over $4,000 apiece. In fairness to the Public Printer, I may add that he is not the only public official that is abusing the confidence of a Democratic Congress. The War Department is shamefully, if not wantonly and willfully, using money appropriated by the people for useful purposes to put on "society stunts" and make a show of what it is to be a commissioned officer in the Army with a swivel-chair assignment. (Mr. HOWARD, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 15084.)

—

CONGRESSMAN DIES (DEMOCRAT), OF TEXAS, ON DEMOCRATIC "SIMPLICITY" AND "ECONOMY" IN GENERAL AND AUTOMOBILES FOR DEMOCRATIC CABINET OFFICERS IN PARTICULAR.

* * * * * * *

I would be ashamed of myself if I called the attention of this committee to the attempted raid upon the Treasury of $8,000 by a poor 70-year-old soldier out in Minnesota if I did not call their attention to the abstraction of $7,000 from the contingent fund of one of the departments of the Government in violation of the laws of this country by a Cabinet minister.

* * * * * * *

I think he is an honest man, I think he was a good legislator, and I think probably he is making a good Cabinet minister; but no man in this Government is great enough—no man should ever become great enough—to violate the laws of this country and usurp the functions of this body to appropriate the revenues of the Government for its maintenance.

* * * * * * *

The Secretary of Labor and the Secretary of Commerce and Labor did not have any right or any business, in the first instance, to have a crippled-up team to drive around at the public expense. They got it in tacit violation of the laws of the country, and they ought not to have used the money of the people for that purpose.

* * * * * * *

Do you know I feel sorry for my friend the Secretary of Labor in his ambition to have a seven-seated touring car and a $2,500 electric? Because we are setting a mad pace in this simple republican capital. * * *

When a man undertakes to indulge one of these limousine, or "limozeen"—which is it [laughter]—one of these limousine habits with a Ford salary [laughter] he has either got to come to Congress for more money or else he has got to take it out of the contingent fund in defiance of the edict of Congress. * * *

You know we ride around here in these limousines and in these seven-seated touring cars, paid for out of the taxes wrung from toil in this country, and we run over the fellow with the little Ford car; and the man walking on foot, the pedestrian, he has just simply got to hear one honk of the honk-honk and run for his life; and the most ridiculous feature of it all is that when one of these Cabinet ministers alights from his vehicle, paid for by the people, drawn by two snorting bay horses, or alights from his limousine, paid for by the people of this country, he dusts himself and says, "Let the people rule."

Mr. Chairman, this patient will either get better or get worse. If a man to-day, in defiance of Congress, can take $1,600 out of the contingent fund appropriated by Congress for the legitimate functions of government to carry on the government of the people, to-morrow he can take $10,000 as well; and if the Secretary of Labor can buy himself an automobile, then the Fish Commissioner can buy himself an automobile. If one of the dignitaries of this Government can take the funds of the people taken from their taxes to buy an automobile, he can buy a yacht upon the same principle. And if any of our Cabinet ministers or Fish Commissioners or the Commissioner of Education wants to do it he can use this precedent to buy himself an airship.

Oh I wish, Mr. Chairman, that we might return to the simple democracy under which this Government grew so great and so grand. * * * I would not be ashamed to see our Secretary of Labor walk up and down the streets of Washington. Why, do you know just a few months ago, on account of the terrible pace that somebody has been setting here in Washington, we heard another Cabinet officer, the great Secretary of State, exclaim in anguish that he could not live on a thousand dollars a month. I am sure he told the truth when he said it. I have great faith in our commoner.

Somebody has made the pace so high in this Capital of our Republic, somebody has set the gauge at so exalted an altitude in this citadel, that one of our servants, the great commoner of the Republic, can not live in this city in befitting style for $12,000 a year. It looks to me, Mr. Chairman, like it is a good time for Cabinet ministers, Senators, and Congressmen to set for the people in this city and Nation the example of old-time simplicity and democracy.

If a Cabinet minister can take a given sum of money in defiance of Congress and buy himself an automobile, what example and what lesson does that teach to the smaller officer, the clerk, and dignitaries around this city? What is the example to a little $1,500 or $2,000 clerk who handles funds and papers and affairs of the Government? Is it not saying to him, "Mr. Clerk, you are authorized to pad your expense bills when traveling for the Government; you are authorized to put in $2 where you spend $1 on the affairs of the Nation, because our Cabinet ministers are settling their accounts by taking money out of the contingent fund for the purchase of automobiles"? If this is peanut

politics, make the most of it. In my humble judgment it is simply old-fashioned democracy, simply old-time honest dealing with our constituents, to say that we will not allow this thing to continue.

If ever my cheeks were mantled with the blushes of shame, it was when I read in the RECORD that every Democrat voted for the taking of an automobile from a Republican Speaker and a Republican Vice President, and that we have not raised our voice against the same things when Democrats occupy these powerful positions. (Hon. MARTIN DIES, Feb. 27, 1914, CONGRESSIONAL RECORD, 2d sess. 63d Cong., pp. 4332, 4334, 4335.)

—

CONGRESSMAN DIES (DEMOCRAT), OF TEXAS, TALKS SOME MORE ABOUT AUTOMOBILES AND DEMOCRATIC "SIMPLICITY."

* * * It is being booted about the Chamber that the Public Printer has a couple of passenger automobiles which are not altogether in consonance with the laws of our country. * * *

* * * I would not vote against this increase because the Public Printer has a couple of passenger automobiles to which he is not entitled, but what I desired to find out was if that practice is being continued in that department. That is why I interrogated the gentleman from New Jersey [Mr. KINKEAD]. In response to a letter I addressed to the Auditor for the Treasury Department, he informed me the Public Printer had two passenger automobiles. * * *

* * * I have searched the statutes of the United States carefully, and I found they were not authorized by law; that no vehicle except only for public use is authorized to the Public Printer; and when I found he was supporting two passenger automobiles I had hoped that my friend from New Jersey would be able to say that under the Democratice régime we had cast off these illegal garments and that now we transact the public business in a legal way. I had hoped that I was mistaken, and therefore I appealed in vain to the gentleman from New Jersey, who offered this amendment, to know if this illegal abstraction of public funds had not ceased under Democratic administration.

Mr. KINKEAD of New Jersey. Mr. Chairman, I will answer my friend from Texas by saying the Public Printer has done nothing illegal since he has been in office. I hope I have answered the gentleman's question.

Mr. DIES. Well, I will say to my friend from New Jersey that he is still maintaining two passenger automobiles at public expense, and that is illegal. I challenge the gentleman to find one particle of statute law in this country that justifies the Public Printer in having two passenger automobiles.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. DIES. Yes.

Mr. HUMPHREY of Washington. What does he use the automobiles for?

Mr. DIES. What could he use two passenger automobiles for except to go to theaters and entertainments?

Mr. KINKEAD of New Jersey. Now, my friend is wrong, and I know that he uses these cars in performing his duties as Public Printer.

Mr. DIES. I am a printer myself, and I know that if he wants to carry stationery about he would not want two passenger automobiles to carry it in. Now, if he has to transport heavy products, such as paper and pasteboards, he should get a truck to carry them in.

* * * I know that hundreds of passenger automobiles are being used in this city, according to the Auditor of the Treasury Department, in direct violation of the law.

* * * I can understand, of course, that in paying his respects to Cabinet officers and their families and "crooking the pregnant hinges of the knee where thrift may follow fawning" he might use one, but I wondered how he could use two passenger automobiles in transacting this business of printing letterheads for Congressmen and in printing names for Congressmen on envelopes.

Certainly in all my poor and humble experience as a printer, getting out letterheads and getting out envelopes and pasteboard cards, and handling them around in wheelbarrows, I never dreamed that an humble servant in this Republic would demand, not one passenger automobile to hand them around, but two passenger automobiles. (Hon. MARTIN DIES, CONGRESSIONAL RECORD, 2d sess. 63d Cong., pp. 15981, 15982.)

* * * * * * * *

Mr. HOWARD. * * * He is no great big "bear cat" in politics, that he should have special privileges that nobody else has. Even if he did come from the great city of Hoboken, N. J., and if he was a union printer at $26 a week before he got this job, why should he have two automobiles? (CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 15984.)

—

THE BROKEN PROMISE TO UPHOLD THE MERIT SYSTEM.

The law pertaining to the civil service should be honestly and rigidly enforced to the end that merit and ability shall be the standard of appointment and promotion rather than service rendered to a political party. (Democratic platform, 1912.)

—

CONGRESSMAN MOON (DEMOCRAT), OF TENNESSEE, OPENLY ADVOCATES VIOLATION OF CIVIL-SERVICE PLANK OF THE DEMOCRATIC PLATFORM.

I have come now, Mr. Chairman, to a question that from many viewpoints is a delicate proposition. It is not delicate to me. If it were, I would not discuss it here. But it is a proposition concerning which many of us are tender, because of platforms and political promises. I am going to discuss this question in a partisan spirit for a moment or two. * * *

There is a provision in this bill whereby—

"Hereafter any assistant postmaster who may be required by law or by authority or direction of the Postmaster General to execute a bond to the Postmaster General to secure faithful performance of official duty may be appointed by said Postmaster General, who may require such bond, without regard to the provisions of an act of Congress entitled 'An act to regulate and improve the civil service of the United States,' approved January 16, 1883, and amendments thereto, or any rule or regulation made in pursuance thereof, and the Postmaster General shall have power to revoke the appointment of any assistant postmaster and appoint his successor at his discretion without regard to the act, amendments, rules, or regulations aforesaid."

That is what I call a Democratic section of this bill. * * * It is Democratic not in a partisan sense, but Democratic because it is right in view of the conditions that exist on this question. (Hon. J. W. MOON, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 1753.)

* * * * * * * *

CONGRESSMAN O'SHAUNESSY (DEMOCRAT), OF RHODE ISLAND, REMINDS THE DEMOCRATIC PARTY THAT IT IS A MINORITY PARTY; THAT "POWER DOES NOT GIVE UNBRIDLED LICENSE" TO DO AS THEY PLEASE AND "PROVE ITSELF A DEFAULTER TO ITS PROMISES."

Gentlemen upon this side, we speak about our party being in power. We must remember the fact that power does not give unbridled license to do as we please; and if we are in power we must remember that we are a minority party. The Progressives and the Republicans combined would have left us no opportunity to obtain the power that we possess to-day. * * *

In the last Democratic platform it was said that merit and ability should be the standard of appointment and promotion, rather than service rendered to a political party. Promises must not be like pie crust, easily broken. We must remember that a pledge is a pledge and a promise is a promise. * * *

I believe the Democratic Party should be true to its pledges. I believe the Democratic Party made its latest declaration in the platform at Baltimore, and that it is about to prove itself a defaulter to its promises. (Hon. G. F. O'SHAUNESSY, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 2209.)

—

CONGRESSMAN RUCKER, (DEMOCRAT), OF MISSOURI, SAYS HE IS A "SPOILSMAN," AND HAS NO APOLOGY TO MAKE FOR IT.

* * * There are Democrats growing up in the country everywhere who are entitled under a Democratic administration to recognition; and if that means going back to the spoils system, then I am a spoilsman and I have no apology to make for it. [Applause.]

—

This committee is not here to bow to the will of the President or to the will of the Postmaster General upon a question upon which they differ. We perform our functions as legislators. If in our wisdom that law ought to be changed, no domination from the Postmaster General nor threat of veto from the President ought to swerve us from the course which we believe to be right.

* * * * * * *

If the power were mine, I would put none but Democrats on guard. (Hon. J. W. MOON, CONGRESSIONAL RECORD, 2d sess. 63d Cong., pp. 1750, 1751.)

—

THE BROKEN PROMISE OF "FREE TOLLS" TO AMERICAN COASTWISE SHIPS.

We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal. (Democratic platform, 1912.)

—

DEMOCRATIC LEADER UNDERWOOD SAYS PRESIDENT'S BILL TO REPEAL FREE TOLLS IS IN DIRECT CONFLICT WITH THE DEMOCRATIC PLATFORM.

The Democratic convention that met in Baltimore and named Woodrow Wilson for President and Thomas R. Marshall for Vice President on the 2d day of July, 1912, promulgated the platform of the national Democratic Party and made the following declaration in reference to the tolls of American ships passing through the Panama Canal:

"We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal. We also favor legislation forbidding the use of the Panama Canal by ships owned or controlled by railroad carriers engaged in transportation competitive with the canal."

There can be no contention as to the meaning of this language. No one can raise the issue that the bill now pending before the House, introduced by the gentleman from Tennessee [Mr. SIMS], is not in direct conflict with the declaration of the Democratic platform. Personally I believe that the party pledge should be lived up to in good faith by those who claim allegiance to party principles. * * *

Let us resolve the issue into the question as to whether the platform of the Democratic Party favoring exemption of tolls of American ships engaged in coastwise trade passing through the Panama Canal is best for the Nation and the people of our country, or whether the gentleman from Tennessee [Mr. SIMS], in the bill now pending before the House repudiating the declaration of the Democratic Party, is proposing legislation that will be most beneficial to our Nation and our people. (Hon. OSCAR W. UNDERWOOD, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 5964.)

—

SENATOR O'GORMAN (DEMOCRAT), OF NEW YORK, ON THE VIOLATION AND REPUDIATION OF THE "FREE TOLLS" PLANK OF THE DEMOCRATIC PLATFORM.

I can not stop to contemplate what would have become of Democratic prospects in the last presidential campaign if the free-toll plank of the platform had been rejected or repudiated before the election; but it was not rejected. It was approved and pressed upon the attention of the public in every section of the country. Its economic advantages were pointed out by the nominees of the party and the thousands of public speakers who advocated their cause. It was given prominence in the campaign textbook which was distributed throughout the country by the national Democratic campaign committee, and yet it was as much a subsidy in 1912 as it is now.

Let us not deceive ourselves, Senators. The free-toll plank was the one dominant American note in the campaign of 1912, and its value to the Democratic Party can not be disparaged when it is recalled that the convention of the Progressive Party adopted the same plank, that the nominee of the Republican Party had already pledged himself to the same principle, and that 14,000,000 citizens of this country by their votes have declared their adherence to this principle. We are now asked to repudiate their declaration, to ignore their rights, and to treat them with a contempt to which American citizens will never submit.

When we talk of national honor we may be suspected of insincerity if we do not recognize that a violated party pledge is the rankest kind of political perfidy. We surely owe at least the same good faith to the American people that we profess to feel for a foreign nation.

* * * A party platform should be regarded as a confession of faith by the party promulgating it and should be held sacred and inviolate.

How can we hope to retain the confidence of the American people when we have no respect for our party pledges? To what sinister influence will the people attribute this duplicity on the part of a great political party? It is no defense to say that delicate foreign relations justify the repudiation. There can be no condition in our foreign affairs that can excuse the abandonment of vital national rights. If, as the result of war, a conqueror imposed such terms upon us, we could accept

them as the issue of a struggle, but a self-respecting people can not freely submit to such conditions. Is the Democratic Party prepared to confess itself guilty of a betrayal of a public trust? Will it admit to the country that it secured office by false pretense? What confidence can the people have in such a party so devoid of respect for its own pledges? We secured office under a solemn promise to the American people which we are now asked to repudiate.

For nearly a century the national convention has been the highest authority for the declaration of party principles—the promulgation of the party creed, binding upon all alike. The party doctrine as pronounced by a national convention can be changed only by another national convention. The power is not lodged with a President or a congressional caucus to regulate or modify.

I should prefer to stand with the President, but I have never bolted a Democratic candidate nor a Democratic platform, and I do not intend now to take my place with the repudiators of party pledges. In this emergency every Senator will act according to his own lights. Some may find an excuse for the disregard of party obligations, but as I view it, a party platform is the plighted word of men of honor declaring what their policies will be if they attain power. It is either that or a shifting, dishonest, unconscionable pretense whereby a confiding electorate is misled.

Never until now has the party of Jefferson been exposed to this base imputation upon its honor and integrity. And those who clung to the old Democratic Party in its days of adversity—those who, undismayed by repeated defeats, remained loyal to its candidates and its principles—should not now be asked to do it a wrong greater than any which its avowed opponents are capable of inflicting upon it.

Senators, I beg you to pause while there is still time and avert a disaster which now threatens the party and the Nation. (Senator O'GORMAN, of New York, in CONGRESSIONAL RECORD, 2d sess. 63d Cong., pp. 8537–8538.)

SPEAKER CLARK SAYS THE AMAZING REQUEST OF THE PRESIDENT FOR THE REPEAL OF "FREE TOLLS, LIKE THE PEACE OF GOD, PASSETH ALL UNDERSTANDING."

We went to the people on that platform containing the free-tolls plank; headed by President Wilson himself we all indorsed it; standing on it we appealed to the voters of the land for their support; and they, responding to our Macedonian cry for help, enabled us to sweep the land from sea to sea by amazing majorities in the Electoral Colleges. And now it is proposed that we reward their faith in us and their support of us by repudiating one of the planks of that platform on which we achieved that astounding victory, a plank so clear that there could be no misunderstanding about it, no possible misconstruction of it. I refuse absolutely to be a party to any such performance. Tell it not in Gath, proclaim it not in the streets of Askalon, that the Democratic Party will not keep faith with a confiding public.

The amazing request of the President for the repeal, like the peace of God, passeth all understanding. If he has any reasons which are not utterly untenable and which impelled him to make the request, he has not vouchsafed them to us as a body or, so far as I am informed, to any Member of the House. If he has adequate reasons and did not deem it prudent to make them known to the world at large, he could have communicated them to us in secret session. With all due deference to the President, it seems to me that we are entitled to those reasons before bolting a Democratic platform, which is generally considered an indefensible, an extra-hazardous performance, frequently fatal in its results. (Speaker CHAMP CLARK, CONGRESSIONAL RECORD, Mar. 31, 1914.)

SENATOR CHAMBERLAIN (DEMOCRAT), OF OREGON, IN OPPOSING REPEAL OF FREE TOLLS, SAYS DEMOCRATS WENT OVER THE COUNTRY DECLARING FOR FREE TOLLS. "IF PLATFORMS MEAN ANYTHING, IF THEY ARE INTENDED TO STAND ON RATHER THAN TO GET IN ON," THE DECLARATION FOR FREE TOLLS IS A DEMOCRATIC DOCTRINE.

As to being a Democratic doctrine, Mr. President, if platforms mean anything, if they are intended to stand on rather than to get in on, then this declaration of free tolls for coastwise vessels is a Democratic doctrine. It was declared for in the Democratic platform in Baltimore. There is no question about that. If it does not bind the Democratic Party, Mr. President, there is not a single declaration in it that does bind the party. Not only that, but if the expression of opinion by Democrats on the floor of the Senate and on the floor of the House of Representatives means anything at all, it means that they have indorsed this declaration in the platform of the Democratic Party, because clearly all the Democrats in the Senate, and I think probably a majority of the Democrats in the House, voted for this clause of the Panama Canal act.

I may say, further, that in the campaign which followed that declaration in the platform at Baltimore Democrats went over the country and declared in favor of it, and it is impossible to know how many votes were influenced by such declarations.

* * * * * * *

Who can say, Mr. President, that many of the voters of my State were not influenced by that declaration in the platform? I for one want to say that I do not propose to stultify myself in reference to this subject now nor at any time in the future. I do not propose to go back to my people and say to them that because the distinguished President of the United States happens to differ from me I am going to yield my convictions, my judgment, my conscience, to his view of this subject. * * * I do not know how my friends on this side of the Chamber intend to square themselves with their constituents when they go back to them and say that they have been induced to change their attitude with reference to the Panama-tolls question—I do not mean to say that any of them are going to do so—but I, for one, am not going to do so, Mr. President.

* * * * * * *

I would rather be a subject of a conquered nation, Mr. President, if you please, with honor, than to enjoy freedom and feel that I had sacrificed every sense of propriety and honor in my action upon any legislation that comes before Congress. (Hon. GEORGE E. CHAMBERLAIN, CONGRESSIONAL RECORD, 63d Cong., 2d sess., p. 3842.)

CONGRESSMAN HARRISON (DEMOCRAT), OF MISSISSIPPI, CRITICIZES DEMOCRATIC "GAG" RULE ON FREE-TOLLS REPEAL BILL, AND SAYS FREE-TOLLS PLANK WAS NOT "SNEAKED" INTO DEMOCRATIC PLATFORM—PROTESTS AGAINST "SURRENDER" TO THE PRESIDENT.

Mr. Speaker, I had hoped that in the discussion of this very important question sufficient time would be allotted to those who desired to take part in the debate so that they could discuss it fully; but because of the "generous" action of the Rules Committee, sanctioned by this House on yesterday in forcing their rule through, I am forced to content myself with answering only partly and briefly some of the arguments. * * *

I had hoped that in the discussion of this question my Democratic colleagues, at least, would discuss it in such a dispassionate and cool manner as would cause no ill feeling and impute no bad motives to any of their colleagues in this House. But the discussion has taken such a wide range that, forsooth, they have seen fit not only to indict the distinguished committee on resolutions of the Baltimore convention, but they have impunged the motives of those men who in the Sixty-second Congress voted for free tolls with an honest conviction. They have gone further than that, and they have impeached the good intentions of the leaders of our party here. I can not believe that the plank with respect to free tolls was sneaked into the Baltimore platform. I have too much faith in the intelligence and the integrity of the members of my party who made up that committee, dominated by its chairman, the present Secretary of State, Mr. Bryan, to believe any such action was taken.

The report of that committee was sanctioned by that convention, and I can not understand why, when my good friends the distinguished gentleman from Texas [MR. HENRY] and the distinguished gentleman from Georgia [MR. HARDWICK] spoke in many parts of this country in the last campaign asking the people to place the Democratic Party in power, and promising them that if they should that party would redeem every pledge of its platform, they did not then raise their voice against this particular plank of the platform. It would, indeed, have come with better grace if they had at that time said that the Democratic Party in convention assembled at Baltimore had played some skin game upon the American people. It comes with bad grace for them to say it now.

* * * * * * *

I have never heard a more eloquent speech delivered in this House than that delivered by the gentleman from Pennsylvania [Mr. PALMER] on yesterday. But when he says that the Congress of the United States, made up of the representatives of the American people, should surrender to the President in matters that affect our treaty relations with a foreign country, when that treaty affects the domestic affairs of this Nation, I say he goes too far, indeed. (Hon. B. P. HARRISON, Mar. 28, 1914, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 6048–6049.)

GENERAL INCOMPETENCY OF THE DEMOCRATIC PARTY.

Our platform is one of principles which we believe to be essential to our national welfare. Our pledges are made to be kept when in office as well as relied upon during the campaign. (Democratic platform, 1912.)

SENATOR WILLIAMS (DEMOCRAT), OF MISSISSIPPI, SAYS, "THE POOR, DEAR OLD FOOLISH DEMOCRATIC PARTY IS GOING THROUGH THE SAME GAME," AND QUOTES "TOM REED" APPROVINGLY.

The poor, dear old foolish Democratic Party is going through the same game that she can be generally trusted to go through soon after she gets into power.

* * * * * * *

That is the Democratic Party, true enough. That is its history. That is what led Speaker Tom Reed to say in 1894 and 1895: "You can't last long, because you are not accustomed to governing anybody or anything; you can not govern the country, because you can not govern yourselves. You are incompetent." (Hon. JOHN SHARP WILLIAMS, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 6853.)

SENATOR TILLMAN (DEMOCRAT), OF SOUTH CAROLINA, LIKENS THE DEMOCRATS TO "WILD ASSES" WHO HAVE "BROKEN INTO THE GREEN CORN."

The Biblical quotation I used a few days ago will become historical. The "wild asses of the desert, athirst and hungry, have broken into the green corn." That applies all along the line from top to bottom. The Senators themselves are green, and the Democrats of the country have been "out in the cold" so long and have had so little hope or opportunity to get patronage or any of the offices that they are simply wild. (Senator TILLMAN, CONGRESSIONAL RECORD, 1st sess. 63d Cong., pp. 32, 33.)

CONGRESSMAN FITZGERALD (DEMOCRAT), OF NEW YORK, POINTED OUT THAT THE ESTIMATES OF THE DEMOCRATIC SECRETARY OF THE TREASURY SHOWING AN APPARENT SURPLUS OF $26,000,000 WERE "GROSSLY MISLEADING."

I pointed out early in the session that the estimates of the Secretary of the Treasury, while showing an apparent surplus of $26,000,000 for the next fiscal year, were grossly misleading, because they eliminated all provisions for the sinking-fund requirements, eliminated all provision for deficiencies, and placed to the credit of the Government $13,000,000 which the Secretary of the Treasury estimated had been appropriated, but could not be expended, so that even according to his own figures the surplus revenues for the next fiscal year are but $13,000,000. His estimate eliminated $10,500,000 of deficiency estimates, which are now pending before the Committee on Appropriations. The estimate took no account of the authorization for the Alaskan railroad, $1,000,000 of which is asked at this time, with authorizations up to $35,000,000. It took no account of authorizations for good roads, with a bill pending here for the expenditure of $25,000,000 for that purpose. (Hon. JOHN J. FITZGERALD, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 2055.)

SENATOR TILLMAN (DEMOCRAT), OF SOUTH CAROLINA, COMPARES DEMOCRATS TO AN "UNTRAINED MOB."

As compared with the Republicans we are an untrained mob with little knowledge of parliamentary law and very little effective knowledge of the rules of the Senate. (Senator TILLMAN, CONGRESSIONAL RECORD, 1st sess. 63d Cong., p. 32.)

SPEAKER CLARK (DEMOCRAT), OF MISSOURI, DOES NOT KNOW WHETHER THE STATE DEPARTMENT KNOWS WHAT ITS FUTURE POLICY IS GOING TO BE.

The SPEAKER. * * * The Chair does not know whether the State Department knows what its future policy is going to be, and it does not make a bit of difference whether it does or does not. If it should undertake to state what it was going to be, then it would be the expression of opinion and not the statement of a fact, and therefore

obnoxious to the rule. * * * (Hon. CHAMP CLARK, Speaker of the House, CONGRESSIONAL RECORD, Mar. 21, 1914, p. 5611.)

CONGRESSMAN KINDEL (DEMOCRAT), OF COLORADO, REGRETS THAT THE PRESIDENT IS NOT A BUSINESS MAN, SO THAT HE COULD BE CONVINCED OF THE "SUICIDAL POLICY" OF THE DEMOCRATIC PARTY AS TO THE PARCEL POST.

I was inspired by all that I had read and heard of Mr. Wilson from the declarations made by the President before the election. I was in hopes that the country might depend upon him for wise and conservative action, and thus endeavor to promote legislation that would take into certain consideration the general welfare of the entire body of merchants, manufacturers, and laborers of the country; but regret to find that the tendencies that have thus far been shown are more scholastic than businesslike, as is evidenced by this botch parcel post and the restrictive orders now prevailing in the coal fields of my State. Wherefore, I regret the loss of time that I could not convince him and the Democratic Party of its suicidal policy. Our President is undoubtedly a good man and well-meaning man, but it would have been a blessing to the country if he had had more business experience before he assumed the grave responsibility of the office with which he has been honored and which I took great delight to assist him in. * * * (Hon. GEORGE J. KINDEL, CONGRESSIONAL RECORD, Aug. 11, 1914.)

CONGRESSMAN BUCHANAN (DEMOCRAT), OF ILLINOIS, THINKS DEMOCRATS OUGHT TO BE AS CONSIDERATE TO THE LABORING PEOPLE AS THE REPUBLICANS WERE.

Mr. CAMPBELL. Has the gentleman any proposition to make as to this—how he can get laboring men to read these reports? I have a great many of them, and I find it difficult to get the men to read, for instance, in relation to mine accidents.

Mr. BUCHANAN of Illinois. I will say this to the gentleman: When I was a laboring man I appreciated information of this sort, and I asked for and got it, even under Republican administration, and it seems to me that the Democratic Party, that has made the declaration that it is for the laboring people, ought at least to be as considerate to the laboring people as the Republicans were. (Hon. FRANK BUCHANAN, CONGRESSIONAL RECORD, 2d sess. 63d Cong., p. 4246.)

SENATOR WILLIAMS (DEMOCRAT), OF MISSISSIPPI, SEES THE DEMOCRATIC PARTY EMBRACING SOCIALISM AND SIGHS FOR THE OLD-TIME DEMOCRACY.

* * * Here are Democrats who 20 years ago were fighting populites all over this country when the populites were demanding Government ownership of railroads. We fought them in Mississippi on every hilltop and down in every shadow of every valley, and we whipped them to a finish, because we fought them in the open. Now, here are Democrats standing around and wanting to do just what the populites then asked, wanting to turn this Government over to State socialism—not the socialism of Marx, not the socialism of the French socialists, in which there is some reason, but State socialism—upon the theory that a State can manage transportation, industry, manufacturing, and other things better than they can be managed by private enterprise.
